CHAPTER I.

GEOGRAPHICAL POSITION AND NATURAL RESOURCES OF THE TURKISH OR OTTOMAN EMPIRE.

The Ottoman Empire, including Turkey in Europe, Asia Minor, Syria, Egypt, and the other tributary states of Africa and Asia, possesses, in the highest degree, all the natural elements of wealth and power;—all the natural advantages of geographical position and command.

Before the revolt of Greece, Turkey in Europe, had, for nearly two-thirds of her boundary, a maritime coast, abounding with excellent seaports. The revolt of Greece, the cession of Bessarabia and a part of Moldavia to Russia, have greatly reduced the limits of her empire in Europe. The almost independent sovereignty of Ali Pacha over Egypt and until lately over Syria;—the Arabians having for a long time scarcely acknowledged the Sultan, even as the *Caliph*, or as the head of their religion; the French possessing Algiers; and the mere payment of a tribute only being acknowledged by the other states of Barbary, have almost annihilated his power in Africa, and greatly weakened his jurisdiction in Asia. We will, however, notice the national resources, and population of the Ottoman Empire, without regarding, under this head, the actual extent of the Sultan's sovereignty.

Turkey in Europe (extending from 38 deg. 25 min. to 48 deg. 20 min. north latitude, and from 15 deg. 10 min. to 29 deg. 50 min. east longitude) has, with

a soil in most parts remarkably fertile, a highly favoured climate, which ripens in perfection the vine, olive, maize, wheat, and rice; most culinary vegetables: delicious fruits; tobacco, flax, hemp; the mulberry; the *Cistus Creticus* (which produces the gum ladanum); the *Astragalus Tragacantha* and *Astragalus Creticus* (both which yield the gum tragacanth of commerce); the *Pistacia Lentiscus* and the *Pistacia Terebinthus*, yielding the gum resins, mastic, and terebinth of commerce; and, in the southern provinces, the sugar-cane and cotton-tree. Excellent durable timber for ship-building, and other wood for useful and ornamental purposes, are also abundant. Add to which, rich pasturages for horses, horned cattle, and sheep; plenty of fish abounding along the coasts and in the rivers, game in the forests, and the abundance, from the little trouble in rearing bees, of honey; with the mineral riches (little however explored); then, the excellent harbours and admirable position of European Turkey, and we may have a general idea of her great natural resources.

Gold, silver, tin, lead, iron, salt, marble (the latter very fine and chiefly in Albania), and coal in transition strata, are all found. The horses of Albania, Walachia, and Moldavia, are much renowned; which, with horned cattle, sheep, and goats form the principal riches of the inhabitants.

The physical aspect of European Turkey is exceedingly diversified with arms of the sea, islands, rivers, mountains, valleys, and woods. It presents the fertile plains or valleys of Roumelia, or Romania, Bulgaria, Servia, and Bosnia,—separated by the Balkan, Dag, Argentin, and Despoto, chains of mountains, which intersect the country from the Black Sea to the Adriatic; and the low plains of Moldavia and Walachia to the north of the Danube, west of the Eastern Alps, and south of the Carpathian mountains.

The advantages of the Danube, so admirably, with its numerous tributaries, adapted for internal navigation, we have already detailed.* The Maritza is the only large river falling into the Archipelago, but there are several other considerable streams. It flows from the Despoto-Dagh mountains, receiving numerous streams, some of which rise in the Balkan, and watering and draining fertile plains, until it falls into the Ægean. It has the cities of Philippolis, Adrianople, and several others on its banks, along which, and in the valleys and hills, oak, elm, fir, and other timber abounds.

It is navigable for long flat vessels of 250 tons as far as Adrianople, except during the dry season, but always as far up as Demotica, about 60 miles from the sea. The *Varda* and several other streams water and drain the valley or valleys extending from the Gulf of Salonica, north to the Despoto-Dagh, and west to the Alpine range which separates Herzegovena, Montenegro, and Albania from Macedonia and Roumelia. The Moruva, Mirza, and numerous other rivers flow down from the Alps and Balkan into the Danube, and several

* See Austria, vol. i., p. 32.

large streams flowing through Albania, and Montenegro fall into the Adriatic. Every part of Turkey in Europe is abundantly watered. It has few lakes: that of Oehrida, Scutare, Yanena, in Abbenia, and one or two in Boleyocia, are the principal. The agricultural and other productions of Turkey in Europe will be found noticed hereafter.

TURKEY IN ASIA.—Were we to include Arabia, the Sultan's dominions in Asia would extend from the Black Sea, south to the Persian Gulf, Red Sea, and Indian Ocean, a region of far greater surface than the British possessions and dependencies in India. His power may, however, be considered as completely overthrown in Arabia, where he has long only been acknowledged merely as the head of the Mahommedan religion, much in the same way as the Pope of Rome is looked up to by the Catholics of Switzerland or Germany. Even this acknowledgment ceases with his losing possession of the *holy* cities of Mecca and Medina. This division therefore of the Ottoman empire, still of vast magnitude, must be considered as only including Asia Minor, traversed by the Taurus mountains; Syria, in which are the lofty range of Lebanon; Armenia, over which rise the ramifications of the Caucasus and Taurus; the lower basins of the Euphrates and Tigris, which inclose the regions of Kurdistan—a mountainous country bordering on Persia; El-djezireeh and the fertile plain of Irak-Araby.

The sea-coast and inland boundaries of Asiatic Turkey, and the superficial aspect, exhibits the greatest irregularity. Its mountain ranges are second only to the Himalaya and Andes. Ararat, Lebanon, and others, are covered with eternal snow. Asia Minor is nearly surrounded by mountains, which recede only to leave a small stripe of cultivable land between them and the sea-coast. Here we find Ida, Olympus; the high and extensive table lands, fertile plains, forests, the classic hills and streams of antiquity. Judea is a district of mountains and narrow valleys. Armenia presents high ridges, valleys, and torrents.

The Euphrates and Tigris are, properly speaking, the only great rivers; but the Meander, Sakaria, Kizil-Irmak, Jordan, and Aazy, are, however, streams of considerable magnitude.

From the inequality of surface, the geographical position, and the elevations of this part of Asia, the soil will yield every known production. The climate is remarkably varied in its temperature. At times extremely cold in situations where the heat at other times is oppressive. Wheat, rye, barley, maize, and rice; the Alpine pine-firs and cedars; the oak, in many varieties; the beech, walnut, peach, fig, mulberry, sugar-cane, date, orange, lemon, pistachio, olive, tamarind, almond, cotton-tree, and terebith; tobacco and indigo plant, with all the forest and fruit trees of Europe, find a congenial climate and soil at various elevations.

Palestine, especially, although bleak and barren mountains occupy many parts, has the vegetation of hot and temperate countries.

The mineralogy of Asiatic Turkey is so imperfectly known, that we can say little further on the subject than that copper, iron, lead, and salt, are sufficiently abundant.

With, however, nearly every natural element of power and advantage for commerce, there is scarcely any country in Europe or Asia, so ill cultivated as, or where industry is farther in arrear than, in Asiatic Turkey.

ARABIA, which extends from 12 deg. 22 min. to 33 deg. 45 min. north latitude, and from 32 deg. 50 min. to 58 deg. 42 min. east longitude, occupies a superficies of 410 English square miles, or nearly twice the extent of all France. The Arabs, according to Niebuhr, Burckhardt, and others, divide this vast region into seven great divisions.

1. *Hadramaut*, or the south-east, which fronts on the Indian Ocean.

2. *Yemen*, or the south, which extends along the strait of Bab-El-Mandel, Indian Ocean, and part of the Red Sea. These two divisions comprise nearly the Arabia Felix of the ancients.

3. *El-Hejar* extending along the Red Sea; the holy cities of Mecca and Medina are in this division.

4. *Nedsched*, or Central Arabia.

5. *Bar-El-Tour Sinai*, or Arabia Petrea.

6. *El-Hassa-Lachsa*, which extends along the Persian Gulf north to *Irak-Arabi*.

7. *Oman*, which extends along the Persian Gulf to the Indian Sea.

As a general rule, Arabia must be considered as an *arid barren country*, having the Indian Ocean on the south, the Red Sea on the west, the Persian Gulf on the east, and Palestine and Syria on the north.

There are, however, small numerous fertile exceptions to its vast sandy deserts, mountains, and rocky districts. Coffee is indigenous; olives, sugar-canes, gum-trees, bannanas, cotton, indigo, and various fruits thrive on all *the good soils*. Very little grain, either maize, rice, or wheat, is produced. *Dhourah*, a coarse grain is that chiefly given for food. The Arabian Mohammedan considers agriculture a degrading employment, and robbing an honourable pursuit.

The breeding of horses, camels, horned-cattle, and sheep, are the chief occupations of the Arabs. They are generally a wandering pastoral people; hospitable, yet by descent and custom, formidable marauders.

There are neither rivers nor lakes, as far as we know, of any magnitude in Arabia. A few small streams fall into the Persian Gulf, and two or three nameless streams fall into the sea. Scarcely any have water during the whole year. Arabia has, however, its dry and rainy seasons.

EGYPT is considered to extend from the Mediterranean in 31 deg. 57 min. to the frontier of Nubia in 23 deg. 20 min. north; and from the Red Sea, in about longitude 35 deg. 30 min. east, along the Mediterranean, west to the confines of

Tripoli, and the deserts of Libya and Zahara (about longitude 27 east). Of the extensive surface of Egypt, that portion only which the overflowings of the Nile irrigates, is productive. All the rest, about nine-tenths of the whole, is absolutely steril, yet the crops which the alluvial lands of the Nile yield, are exceedingly rich and abundant, forming, with various commodities that pass through Egypt from Arabia, India, and Nubia, the elements of a considerable export trade. The soil of Egypt yields in perfection, wheat, maize, rice, flax, hemp, clover, cotton, indigo, sugar-cane, tobacco, oranges, and various delicious fruits. The horse, dromedary, ox, camel, sheep, and goat, are the principal domestic animals. Bees are reared with great care in all the inhabited parts of the country. Fish abounds on the sea-coasts, and in the Nile; wild ducks, plovers, quails, and pigeons, are very plentiful. In Upper Egypt the crocodile and hypopotamus are met with. The minerals of Egypt are little known. Iron and copper are abundant in the vicinity of Seyout. Nitre is another production. The granite, sienite, and porphery quarries of Upper Egypt, have been too long renowned to require notice. Sea salt is collected, and might be manufactured to any extent, along the shores of the Mediterranean.

Arabia, Nubia, Kordofan, and even parts of Abyssinia may be considered as politically dependent on whoever rules over Egypt—notwithstanding the late submission of Mehemet Ali.

Seaports of the Ottoman Empire.—In enumerating the seaports of the Ottoman Empire, we will, to avoid repetition, include under this head those of Egypt and Arabia.

Turkey in Europe.—1. Constantinople, called by the Turks Stamboul or Istamboul, is one of the safest ports in the world, and capable of affording shelter to 1200 ships of the largest class.

2. Salonica, at the bottom of the gulf of the same name, is, properly speaking, a good roadstead, much frequented.

3. Enos is a good harbour, and may be considered the port of Adrianople, on the Maritza.

4. Gallipoli, a vast port, with an active trade and populous town.

5. Rodosto, or Rodosjig, on the sea of Marmora, is a good roadstead, but intricate.

6. Varna, on the Black Sea, is a tolerable harbour, with rather an active export trade.

7. Kara Kermin is a central entrepôt, and a rather safe port, north of Varna.

8, 9, 10, and 11. Ibrahilow, Toultcha, Galatz, and Iassaktchi are ports of some activity on the Danube.

12, 13, 14 and 15. The islands Thasos, Imbros, Samothrace or Semendrek, and Lemnos, have all ports and roadsteads.

16 and 17. The ports of Candia and Canea, in the island of Candia, are

indifferent harbours. Besides these seventeen enumerated ports, there are many others which afford excellent shelter, and would be important, if a more industrious and commercial people than the Turks possessed the country.

SEAPORTS OF TURKEY IN ASIA.—1. Ereckli, on the Black Sea, a safe port, except with strong north winds.

2. Amasserah, a small intricate port, east of the former.

3. Sinope, a safe road and port, little frequented by merchants, but important in its naval dockyards.

4. Samsoun, lies east of Sinope, and forms a tolerable harbour.

5. Tribizonde, or Trabazan, near the eastern extremity of the Euxine, is a good port, which has of late years become an entrepôt of much consequence in the trade between the east of Europe and Asia.

6. Scutari, opposite Constantinople, is a port of great commercial activity.

7 and 8. Ismid or Necodemea, and Mondanin are small ill-sheltered ports on the sea of Marmora.

9. Smyrna, the principal port in Asia Minor, and the most important in its foreign commerce.

10. Scala-Nova—Couch Adassi, an excellent port with a considerable trade, at the bottom of the gulf of the same name.

11, 12, and 13. Marmoria Anthalia, and Tarsus, are the principal harbours on the south coast of Asia Minor.

14, 15, 16, 17, 18, 19, and 20. Iskenderoon, Latacia, Tripoli, Bayrout, Seide, (or Sidon), St. Jean d'Acre, and Jaffa, are the principal ports (but not very good harbours) in Syria.

21, 22, 23, 24, and 25. The islands of Scio, Metelin (Lesbos), Rhodes, and Cyprus, have all harbours; and the Turks still possess the commanding port of Bassora in the Persian Gulf.

THE SEAPORTS OF ARABIA ARE—1. Djedda, on the Red Sea, a good port, but its entrance, on account of coral rocks, is intricate. It forms the central point of the interior commerce of Arabia.

2. Moka, an excellent harbour, and the entrepôt of the trade of Arabia with Europe and the East.

3 to 15. Rabuh, Al Giar, Islabel, Kallah, Mollah, El Akalba, Serain, Caurbdia, Ali, Loheiah, Hodeiah, and Aden, are small ports with some trade on the Red Sea.

16, 17, and 18. Kerem, Hash, and Mascat, are small ports on the south coast.

18 to 23. El-Katy and El-Koueyt, are active ports in the Persian Gulf, and the isles of Socotora, Mazeira, and Bahrein, have all harbours and roadsteads.

IN EGYPT THE SEAPORTS ARE—1, 2, 3, and 4. Alexandria, Rosetta, Damietta, and Cairo, at or near the mouths of the Nile, and Suez, and Cosseir, on the Red Sea. The commerce of the most important of the ports of all these countries will be found hereafter elucidated.

POPULATION OF THE OTTOMAN EMPIRE.

THE races of inhabitants under the present and *ci-devant* Ottoman empire, are numerous, and no greater error can be entertained than to consider all those, who profess the Mohammedan religion, Turks.

The absence of official returns, the internal dissensions, and the plague, cholera, &c. leave us no data on which we can rely with confidence in respect of the population. The statements made by the French mission sent to Egypt; the computations of M. Malte-Brun, M. Balbi, Mr. Urquhart, Mr. Thornton, and some others, can only be considered estimates, which we adopt to fill up our general outline. The same observation applies to all the African and Asiatic states. The following computation, therefore, chiefly from M. Balbi's authorities, is all we can, on the subject of population, offer.

SUPERFICIES AND POPULATION OF THE TURKISH EMPIRE.

STATES.	English Square Miles.	Population.	Inhabitants to sq. mile.	Capitals.	Inhabitants.
Turkey in Europe	130,000	7,100,000	54 07	Constantinople	500,000
Servia	12,000	300 000	31 66	Belgrade	30 000
Wallachia	28,700	970 000	53 80	Bucharest	80,000
Moldavia	13,100	450,000	29 80	Jassy	10,000
Arabia	410,000	12,000,000	29 26	Morea	60 000
Asia Minor and Syria	211,000	10,500,000	49 76	Damascus Aleppo	200,000 130,000
Egypt, including part of the Arab country and 100,000 Arabs	189,000	3,100 000	6 33	Cairo	330,000
Total	1 304,800	34,500,000	26 44		

The above estimates appear exceedingly vague; the population of Arabia and Asia Minor, is from M. Bottin's "Almanach du Commerce;" that of Egypt, from various reports, may be considered a fair estimate: which, with that of Turkey in Europe and Asia Minor, are of the chief importance, as entering into the calculations of the Political Economist and Statesman: deducting the tributary states of Servia, Wallachia, and Moldavia, which will as readily adhere to the czar as to the sultan; and Arabia, Syria, and Egypt, we will not greatly diminish or exaggerate, by estimating the population actually subject to the Ottoman government at 7,000,000 in Europe, and 6 to 7,000,000 in Asia, and in the isles of the Mediterranean and Archipelago: amounting in all to about 14,000,000.

THE following population is attributed to the principal towns of the Ottoman Empire, by the annexed authorities:

TURKEY IN EUROPE.

NAMES.	Population.	Authorities.	NAMES.	Population.	Authorities.
Constantinople (capital)	600,000	Balbi and Reinaud	Vidin	25 000	Balbi
Adrianople	100 000	Balbi	Sistova	21,000	do. &c.
Salonica	70,000	do.	Islemje	20,000	do.
Sophia	50,000	do.	Seres	15 000	do.

Van	30,000	Schuta	Satalia	20,000	Estimate
Mouch	18,000	do.	Ereklı	3,000	Balbi
Kutaieh	30,000	Balbi	Latakiek	3,000	do.
Tarsus	30,000	Castellane	Jaffa	4,000	do.
Gurel Hissar	30 000	Balbi	Ak cheher	30 000	Kinneer

IN ARABIA.

Mecca	60 000	Reinaud, &c.	Fouf	15,000	Chiefly from Balbi.
Muscat	50 000	Balbi, &c.	El Katif	6 000	
Zanna	30,000	Various	El Kouest	6,000	
Damar	25,000	Travellers	Djedda	5,000	
Ras El Khyma seaport	20,000	Chiefly	Moka	5,000	
Derla	15,000	French	Medina	5,000	

IN EGYPT.

Cairo (El Kahra)	330,000	Balbi	Rosetta	15,000	Balbi
	250,000	Jomard	Asayout, cap. of Upper Egypt	12 000	Jomard
	300,000	Gn. Minutoli	Medynet El Fayoum	12,000	Rifaud
	150,000	Rifaud	Achmouneyn	10 000	Richardson
Alexandria (Iscanderia)	25,000	Balbi	Akmym	10,000	Balbi
Damietta	20,000	do.	Djerdjeh	7,000	do.
Mahallet El Keleyer	17,000	do.			

Besides the above, we find more than 200 towns enumerated by various geographers and travellers, with populations of from 2000 to 30,000, but too vaguely stated to be enumerated in this work.

CHAPTER II.

GOVERNMENT OF THE OTTOMAN EMPIRE.

This government is absolute. The Sultan is supreme head of all temporal and spiritual power.* But, openly, he dare not disregard the general feelings of the nation. And there is no reason to dispute the assertion of M. de Chateaubriand, that his authority is absolutely despotic, but limited by the counterpoise of regicide; as Caliph, he is the pope of Mohammedanism.

The Koran forms, not only the religious, but the civil and political code of the Ottoman Empire; and the Sultan, being regarded as successor of the ancient Caliphs, is invested thereby with absolute power. The Sultan has not, at least for the last two centuries, personally exercised the authorities with which he is empowered; but has two lieutenants, who are supposed to represent him.

The first, or Mufti, (Sheik-ul-Islam,) is chief of the ministers of religion and law, who

* The late Sultan, Mahamoud, and his two sons, were the only male remnants of this ancient line, with the existence of which the Turks believe their duration as a nation to be identified. The present Sultan, though still little more than a youth, has had a numerous progeny by his many wives.

are named Oulemas, or learned men. He is chief interpreter of the Koran, gives legal opinions (*fetwa*) to the Sultan, and nominates to places in religion and law. Those of religion are, however, all subordinate to the civil authorities.

The second, or Grand Vizir, directs the civil and military government. Under the late Sultan the place of Grand Vizir was held by the Sovereign. The present Sultan has restored the office.

Under the orders of these two great dignitaries are all the functionaries of the empire. The other ministers are, the Reis Effendi, for foreign affairs; Iftordar, for interior affairs, finance, and trade; Seraskier, commander in-chief of the army; Capitan Pacha, or admiral of the fleet. Those most often mentioned in the administrative relations are the Pachas.

The word Pacha, or Basha, is of Turkish origin, and signifies chief. It is equally the title of the Grand Vizir, and of the Capitan Pacha, who is the commander-in-chief of the naval forces of the empire. But the title is more general in its application to the governors of provinces. Of these there are three classes, regulated according to the extent of country submitted to their jurisdiction; and they receive, as an emblem of authority, a queue, or tail of horse hair, suspended at the end of a pike, terminated by a gilded pummel. The Pachas of the first rank have three tails; those of the second two; and those of the third one. The usage of these tails are of Tartaric origin.

The assemblage of the Grand Vizir, Mufti, Capitan Pacha, Reis Effendi, and all the administrative chiefs in council, form the supreme council of the empire, or divan: this word is of Arabian origin, and signifies assembly.

The government divides the subjects of the Sultan into two distinct classes—viz., Mussulmen, who pretend to represent the original conquerors; and those not Mussulmen, as Christians, Jews, and Pagans, who are considered to represent the conquered. The subjects not Mussulmen are called by the general name of Rayas, an Arab word, which signifies flock. The law has always placed them beneath the Mussulmen. They have retained, however, certain privileges: for example, in such localities as they are numerous, they form a community, presided in by one of themselves, called their Primat.

Slavery, as it existed at all times in the East, prevails extensively in all Mussulman countries. It is, however, an admitted principle, that a free-born Mussulman cannot be a slave; although, in political liberty, all, even the Sultan, may be considered little more than in bondage. A slave on embracing Islamism is usually emancipated. The Turks, as well as Asiatics in general, have always slaves of both sexes, either to relieve themselves from all laborious functions, or to gratify sensuality. There is hardly a Mussulman, who can afford the expense, that has not a female slave to partake of his bed, and several have ten, and even more. This eastern indulgence is common in those countries, both to Christians and Jews. Slaves, in Turkey, are either persons born in that condition, or individuals taken in war, or frequently beings who are bought from their unnatural parents. The number of slaves are supposed to diminish, for the Ottoman government has for some time observed greater regard towards prisoners of war; Circassia and Georgia, the special markets for purchasing young girls, being now in the power of Russia, the latter presents obstacles to parents selling their children. Slaves while in bondage have no political rights, but they have sometimes become Pachas and Grand Vizirs.

Sudden elevations to power, and as sudden disgrace and assassination have always been frequent in the history of Turkish government. Birth confers no privilege or rank, except on the family of the Sultan. All other Mussulmen are equal in the religion of the Koran, and all Rayas inferior.

The Ottoman Empire, in its vast augmentations by successive conquests, did not establish its general government in all the conquered states. The Crimea, Transylvania, the Regencies of Tunis, Tripoli, and Algiers, retained their particular governments. Several, even on receiving the governor named by the Sultan, insisted on distinct local institutions. Bosnia is still divided into hereditary captainships, in which the titulars, united in corps, represent the country. There are some countries where there are still seignorial families, whose power has existed for several centuries, and who have always maintained their possessions. The Ghaurini family have possessed, since 1427, several villages in Macedonia. A part of the neighbouring country of Angora, in Asia Minor,

appertains to the family of Tchapan-Oglou; and a section of the country of Pergama to that of Kara-Osman-Oglou. Several towns are the property of certain dignitaries; for example, the illustrious Athenes formed a fief, attached to the office of chief of eunuchs of the seraglio.

The Sultans anciently exercised their authority personally, and marched at the head of their armies. But for the last two centuries the princes of the royal family have been confined by the Sovereign to the seraglio, without intermeddling or officiating in affairs of state; so that when they succeeded to power, they found themselves strangers to all the details of government; and, consequently, all affairs have been conducted by ministers, while the Sultan lived amidst women and eunuchs.

The governors of provinces, especially those distant from the seat of the empire, have always taken extensive advantage of the negligence of their sovereign. Places were and are bought with money; and the governors, being invested with the civil and military authority, not only amass great treasures, but sometimes make war between themselves as between enemies. When the late Sultan, Mahmoud II., ascended the throne in 1808, the vast government of Bagdad had been more than fifty years in the hands of Pachas, who had bequeathed it from one to the other. The famous Ali Pacha, of Janina, not being content with having obtained for his son the government of a part of Greece Proper, conquered several towns of Albania, which he added to his Pachalic.

The municipal institutions of Turkey have been greatly extolled. Their local governments are no doubt among the best in the empire as far as they are elective, and have the power to assess the taxes which the communities are compelled to pay; but as far as our information goes, they have been greatly overrated; and signalized quite as much by ignorance and mismanagement as by wisdom or justice.

One of the principal causes of weakness in the Ottoman government, and of the anarchy which prevailed in the administration, was the insubordination and arrogance of the Janizaries.

The *Janizaries* created in the fourteenth century, were named from two Turkish words, which signify *new troops*. They were at first chosen from among Christians in Bosnia, Albania, and Bulgaria: men, robust and martial. It was decreed that they should not marry; be constantly under arms, and that they should at all times be under the absolute orders of government. When Europe had no permanent armies, the Janizaries were greatly superior to troops suddenly raised. To the name of Janizary was attached numerous privileges, and the revenues of very considerable estates. The first people in Turkey were soon eager to have their favourites admitted into that privileged corps. The title of Janizary became hereditary: even children were decorated with the name. Meanwhile Europe formed regular armies; and, from that time, the Janizaries were unable to compete with the Christian forces. The Sultans, at divers epochs, attempted to replace the Janizaries by stronger and more docile troops; but abuses had so long taken root, that individuals of all classes opposed the Sultans: several of whom were strangled for their intentions.

The late Sovereign, on succeeding to power, found his empire in a very critical condition. Several of the Pachas had rendered themselves nearly independent; and the spirit of anarchy had disordered the greatest part of the population. Terrified by the misfortunes of his predecessors, he at first observed the greatest circumspection. "He conducted himself," observes Balbi, "with mildness to those who were only wavering—he confirmed, or opposed one to the other of those who were not in a state to destroy his power. Towards those who seemed untractable, he had recourse to the oriental policy: the poniard, the prison, or the *cordon*. Ali Pacha, of Janina, who did not dissimulate his projects of independence, was exterminated with his family, and Albania was subjected to the laws of the empire."

During the war against Greece, 1826, the Janizaries announcing new projects for revolt, he abolished the institution altogether, and massacred all those suspected to resist. At Constantinople, more than 20,000 men were shot, burnt, or drowned. In imitation of what had then been successfully attempted in Egypt, standing regular troops were enrolled.

By the treaty of the 14th of September, 1829, the Russians have been acknowledged masters of Anapa, and of all the south coast of the Black Sea, from the mouth of

the Black Sea, and from the mouth of the Danube to that of Batoumi; also of the strongholds of Walachia, Moldavia, and Silistria, until the Sultan had discharged the stipulated contributions. Walachia, Moldavia, and Servia, have re-obtained local administrations; Greece has assumed independence; and the Christians of Bulgaria, have been allowed the right of submitting their grievances to the Russian consuls. Mehemet Ali, Pacha of Egypt, who had accorded to his son Ibrahim, the government of Gedda, and a part of Arabia, as a recompence for his zeal against the Wahhabites, received the government of the important island of Crete, as a compensation for his sacrifices in the Grecian war; finally, the regency of Algiers, which, like Tripoli and Tunis, had by tribute acknowledged the sovereignty of the Sultan, has passed under the domination of France. One of the most efficacious measures, which the late Sultan has taken for to abridge the authority of the pachas, was the separation of the civil from the military authorities. He also abolished the barbarous privilege of confiscation; the prospect of which frequently led to the innocent condemnation and execution of rich individuals. During the last war, the Ayans, or notables of all the provinces, were invited to Constantinople to deliberate on the situation of the empire; a college of medicine, and military and naval schools, have been founded; and in imitation of the Pacha of Egypt, the Sultan sent to Paris several young Turks to be educated. The military and naval regulations of France have also been translated into Turkish.

By an edict, he declared 'all his subjects, of whatever religion they may be, and to whatever class they may belong, equal before the law, and subjected to the same code.' 'Difference of religion' is declared in this decree 'to be an affair of conscience which only concerns God.' Henceforth, the magistrates cannot inflict any punishment on the Rayas, without the consent of the Primat to which they belong. As to the islands, and other places, exclusively occupied by Christians, who are still under the immediate authority of the Sultan, the Turkish governors shall be obliged to submit all their acts to the approbation of the Primate. 'The inhabitants cannot be judged but by their own laws: they shall never be withdrawn from their own natural judges. The inhabitants of the island of Samos shall neither have a Turkish cadi (judge), or governor in their island. They shall be free to demand a Greek, their countryman, to govern them. They are also permitted to carry a particular flag, in which may be introduced the cross.

ADMINISTRATIVE DIVISIONS.

The Turks are unacquainted with the divisions adopted by our geographers. According to the Mussulman geographers, Hadgi-Khalfa and Hezar-Fenn, the Turks separate their European and Asiatic possessions into two grand divisions: each under a general commandant, or Beylerbey, that is to say, the Bey of Beys. The first resides, sometimes at Monastir and sometimes at Sophia; the second, sometimes at Angora and sometimes at Kutahya. The two general divisions, divided into governments (Eyalet), or principalities, are further subdivided into livas or sangiaks, that is to say, banners. The eyalets, or governments are under Vizirs or Pachas, with three tails, and the livas, under those of the Mirmirans, or Pachas, with two tails. These jurisdictions disregard geographical boundaries: for example, the governments of the Djazayrs, or the isles, which belong to the Capitan Pacha, not only composed the Turkish isles of Europe and of Asia, but the Morea, the province of Gallipoli, and the coast of Smyrna: the Sultan having thought proper to place under the immediate authority of the Grand Admiral, all the countries which were not accessible but by sea, or which, by their position, could contribute to the armament and supply of the fleet. At the beginning of the 17th century, when the Ottoman Empire embraced in its limits the greatest part of Hungary, Transylvania, Circassia, and Aberbaidjan, there were 44 eyalets and 220 livas. At present no more than half of those governments belongs to Turkey, and the limits of each province are greatly changed. The eyalets of European Turkey, with the dependent livas, are arranged by Balbi from the work of Mouradgea d'Ohsson on the Ottoman empire, as follows:—

EYALETS IN EUROPE

Eyalet of Roum-ili; capital, sometimes Sophia, sometimes Monastir.—The Livas, dependent, and which have the name of their respective chief towns, are:—Jania (Janina), Salonika, Tirhala (Tirkala), Eskendereye (Scutari), Okhri (Ochrida), Abloniya (Avlone), Kustendil (Giustendil), Il-Bassan, Perzerin (Prisrendri), Ducakin (Dukagin), Uskiup (Useup), Delvino (Delonia), Velitschterin (Veldgeterin, less the part which is to be returned to Servia) Cavala, Aladja-Hissar (Krouchevacz, less the part which is to be returned to Servia).

Eyalet of Bosnia; capital, Bosna-Serai; but the Pacha resides at Travnik.—The Livas, dependent, and chief towns, are:—Vidin, Kiliss-Bosna, Izvernik (Zvornik), Ada-i-Kébir, Trebigna (chief town of Hersek, or Herzegovina).

Eyalet of Silistria; capital, Silistria.—The Livas, dependent, and chief towns, are:—Nicopolia, Tchernen, Viza, Kirkilissa, then the fortress of Belgrade.

Eyalet of Djezayrs, or the islands; capital, Gallipoli.—The Livas, dependent, and chief towns are:—Iznikmid (Nicomedia, in Bythinia), Castle of the Dardanelles, Odoukhor (in the Careli-Ili, or Acarnania), Mazosteré, Smyrna, Bigha, Metelin, Rhodes, Lefkousha (Nicosia in the isle of Cyprus), Chio, Samos, and other islands of the Archipelago.

EYALETS IN ASIA.

Asia Minor, or Anadolia, comprises the following eyalets and livas:

Eyalet of Anadolia; capital, Koutaieh.—The Livas, dependent, and chief towns, are:—Izuik-mid, Brousse, Moudania, Kidonia or Haivalia, Porgame, Sart, Smyrna, Guzel-Hissar, Ayasalouk (Ephesa) Antalia or Adalia, Kara-hissar, Angora, Kanghri, Kastemouni, Sinope, Boli, and Bartine or Bartan.

Eyalet of Adana; capital, Adana.—The Livas, dependent, and chief towns, are:—Tarsous, Sis, Paias, Anemour, Selefkeh, and Alaïe, or Alaïa.

Eyalet of Caramania; capital, Konieh.—The Livas, dependent, and chief towns, are:—Larenda, or Karaman. Ak-Cheher, Ak-serai, Nikdé, Gourouk, Maden, Kircher or Kirchehr, and Kai-arieh.

Eyalet of Marach; capital Merach, or Marach.—The Livas, dependent, and chief towns are:—Albostan, Aintab, and Malathia

Eyalet of Sivas; capital Sivas.—The Livas, dependent, and chief towns, are:—Tokat, Ouseat or Ieuzgat, Amasia, Merzifoun, Tchoroum, Vezir, and Urieh.

Eyalet of Trebizonde; capital, Trebizonde or Trabezun.—The Livas, dependent, and chief towns, are:—Kerasun, the countries of Lazas, with a part of Ghouria, are nearly all independent: we find Irizeh and Batoum.

Armenia, with a part of Kurdistan and of Georgia, comprises the following Eyalets and Livas:

Eyalet of Erzeroum; capital, Erzeroum.—The Livas, dependent, and chief towns, are:—Kamakh, Maden, Erzindjan, Kara-Hissar, Gumuch-Khane, Baibourd, and Toprak-Kalah.

Eyalet of Van; capital, Van.—The Livas, dependent, and chief towns, are:—Mouch, Betlis, Khochab, and Bayazid.

Eyalet of Kars; capital, Kars.—The Livas, dependent, and chief towns, are:—Ani.—Ardanoudji or Erdenoutch, in the part of Georgia, which still belongs to the Ottoman Empire.

Ottoman Kurdistan, properly speaking, comprises the following Eyalet and Livas:

Eyalet or Chehrezour; capital, Kerkouk.—The Livas, dependent, and chief towns, are:—Chehrezour (formerly the seat of the Pacha), Erbil and Baïan.

Mesopotamia, or Al-Dejezyreh, with the Irak-Arabi of the moderns, comprises the following Eyalets and Livas:

Eyalet of Bagdad; capital, Bagdad.—The Livas, dependent, and chief towns, are:—

Mechhed-Ali, Hilla, Mechhed-Hossein, Ana Nisibin, Mardin, Bassorah or Basra, and Corna.

Eyalet of Diarbekir; capital, Diarbekir or Kara-Hamid.—The Livas, dependent, and chief towns, are:—Maden and Siverek.

Eyalet of Rakka; capital Rakka.—The Livas, dependent, and chief towns, are:—Orfa, Bir, Tor, and Khabour.

Eyalet of Mossoul; capital, Mossoul.—The Liva, dependent, or chief town, is:—Elkoch.

Syria or Scham, comprises the following Eyalets and Livas:

Eyalet of Alep; capital, Alep or Haleb.—The Livas, dependent, and chief towns, are:—Killis, Alexandrette or Scanderoun, Bailan, Antakia or Antioche, Chogr or Djesr-Chogr.

Eyalet of Damascus; capital, Damascus or Damas.—The Livas, dependent, and chief towns, are:—Hamah, Hems, Tadmor or Palmyre, Jerusalem, Bethlehem, Kalil or Hebron, Rayh or Jerico, Nablous or Sichem, Gaza, Ramla, and Jafa or Joppe.

Eyalet of Acre; capital, Acre or Akka.—The Livas, dependent, and chief towns, are:—Vairout, Sidon or Saide, Sour or Tyr, Nazareth or Nasra, and Tubarieh.

Eyalet of Tripoli; capital, Tripoli or Tarablous.—The Liva, dependent, or chief town is:—Latakia.

In the principalities of *Walachia*, *Moldavia*, and *Servia*, the governments are no further than in a tributary acknowledgment dependent upon the port. The administrations of Tripoli and Tunis may be considered as left to the absolute will of the Pachas, who may be deposed or put to death by the Sultan, but who are replaced by others who usually pursue the same course of injustice and extortion as has been practised by their predecessors.

CHAPTER III.

COMMERCIAL AND FISCAL REGULATIONS OF TURKEY.

The Ottomans, in their commercial regulations, adopted the extreme reverse of the Spanish fallacies for enriching and aggrandizing a nation. If Spain determined to admit nothing produced by any other country than her own colonies, Turkey seized upon the fanciful idea of becoming rich, prosperous, and mighty, by letting nothing go out of, and to let every thing come freely into, her dominions: a very acquisitive legislation, truly! Pity for the Turks, its advantageous realization was, and shall ever be, impossible. We *must give, if we mean honestly to receive, and buy as well as sell*, is a commercial maxim that will ever hold true. It requires little more than a full knowledge of how this maxim is to be judiciously put into practice, to legislate for trade, or to negotiate the best possible treaty of international commerce.

Turkey, therefore, gave up, tacitly, at least, as hopeless, receiving all foreign products, and giving none of her own in return; she would not, or at least all the subjects of the Sublime Porte would not, give a temperance pledge to consume none of the goods of other nations. If, however, they gave none of the products of Turkey for them in exchange, they must either give gold or silver, or they must submit to the anti-sumptuary law of necessity, not to use any of the good things which they desired, but which other countries could supply. The supply of gold and silver was not at any time sufficient to pay for foreign commodities. It was therefore either all drained off, or what remained was alloyed and debased so as to be nearly valueless except in Turkey. The goods of other nations, however, the Turks would have; and the Porte, either negligently or by necessity, abandoned the restrictions upon exportation, except by a prohibition of the exportation of corn and other articles of necessary food. On the other hand, the Turkish government, in tolerance and hospitality, opened her ports and dominions to the people and merchandize of all countries. How

different are the ideas and principles of the Moslems to those of the Chinese; upon whose darkening, cowardly, and unsound policy we will, hereafter, take occasion to make some remarks. A moderate duty of three per cent *ad valorem* on goods, and a small anchorage charge on ships, formed the only tax or restriction imposed on importations and navigation by Turkey, from the days of Solyman the Magnificent, to the year 1838—a period of more than 300 years.

But though the commodities of other countries thus found easy ingress to, and generally ready markets in, the Turkish empire, yet the commercial policy of the Porte, especially in regard to the produce of her soil, was narrow, impolitic, and unjust. Turkish subjects were chiefly either cultivators of the land, or pastoral races, yet the policy of the government was to prevent the exportation of the products which were considered essential to the sustenance of life.

While this wretched policy, with the view of securing abundance of food, paralyzed agricultural industry by destroying the natural demand, the cultivation of the soil was subjected at the same time to insecurity and tyranny by the *extorters* of the revenue—the corrupt *employés* of pachas, or local governors: the latter were, for fiscal, military, or administrative purposes, invested, as agents of the Sultan, with despotic authority.

Monopolies of trading, not only in the commodities which were allowed to be exported, but in the corn and other articles of food which were purchased in the provinces in order to be conveyed to the capital or to the principal towns, were granted to agents or privileged persons, on their paying certain fines or duties to the treasury.

These exactions were exceedingly vexatious and arbitrary. The *fiscal policy* of the Turkish government *was not to borrow money*; and when the public income was not sufficient to meet the expenditure, which often occurred, two chief and absolute expedients were resorted to:—*first, debasing the coin; second, increasing the exactions from the agents of the Porte*, who again *extorted* the sum wanted from the people; the burden falling chiefly on the cultivators of the soil, and in the towns on those engaged in trade or manufactures. Whole towns and villages have frequently been ruined by those absolute *contingent extortions*, beginning with those exacted by the Porte from the governors of provinces, and thence downwards by the Pacha from inferior agents, and by the latter from towns, villages, and the simple cultivators of the soil. In short, were it not for the free intercourse with foreign countries, and the relief afforded, under the *municipalities*, by the whole village or district taxing themselves equally, however high the exaction, the corrupt and tyrannical *fiscal* administration of the interior would have utterly ruined the empire.

Owing to the pernicious fiscal system alluded to, and the prohibitions as to exportation, the trade of Constantinople, though considerable, has hitherto been greatly limited; while the exports have been comparatively of small value, and confined chiefly to wool, silk, carpets, goats'-hair, and wax: bullion and diamonds making up the difference in payment for the goods imported; the latter being woollens, cottons, hardware, &c., to a very considerable amount, from England; sugar and coffee from the West Indies and Brazils, in which trade American ships have been far more extensively engaged than those of England; jewellery, clocks, watches, &c., chiefly from France, and by Trieste and the Danube from Vienna. Printed cottons, chiefly those termed Turkey reds, have also for several years been extensively imported from the Austrian dominions.

Ships have seldom found return cargoes at Constantinople, although no port in the world can naturally be more favourably situated for a great *entrepôt*. This has been caused by the policy of the Porte and her agents in regard to the export trade, and during late years by the regulations and tariff of Russia, in respect to the commerce of the Black Sea. Lately, however, wool and hair, imported in the first instance chiefly from the Principalities and Asia Minor, have formed export articles of considerable value. Previous to 1831 no wool was imported into England from Turkey. Since that period the quantity imported from Turkey, and also from Russia (chiefly from Odessa,) has greatly increased.

The legal duty on articles allowed to be exported was formerly fixed at 3 per cent, but the exactions of agents and farmers of purchases often imposed, especially in Roumelia, and even in the Principalities, from 10 to 15 per cent. on commodities purchased for exportation. This formed one of the chief evils which were complained of by the *Frank merchants*.

Macedonia, a country greatly neglected, but rich in commercial resources, having Salonica, with a population of more than 70,000 inhabitants, for an outport, was never so much restricted in her export trade as Roumelia: raw cotton, tobacco, sheep's wool of very fine quality, wheat, barley, Indian corn, and silk, have long been exported from Salonica in large quantities to various countries; the Greeks being chiefly those who have carried on the trade of Salonica and the interior country.

In Albania, from the nature and position of the country, and the character of the inhabitants, it was found almost impossible to prevent an export trade,—which, with the importation of foreign commodities, has been carried on in small vessels by the inhabitants of the country, chiefly with Trieste, Venice, and Corfu, by the port of Scutari; yet this trade has been crippled by various extortions, and the want of good harbours along the coast.

In respect to Smyrna, as the chief outlet for the produce of Asia Minor, the duties on exports have not, until lately, exceeded from 1 to 2 per cent. The internal exactions were, however, vexatious.

In Egypt, the whole trade has been monopolized by Mehemet Ali. Revenue, cultivation, manufactures, and trade have all been seized by him.

With respect to Tunis and Tripoli, countries through which a commercial intercourse might be opened with the interior of Africa, trade has been, like man, enslaved and restricted by the vicious administration of the Turkish governors.

We now come to the principalities forming that vast and fertile region comprehending the basin of the Danube, and lying between the Balkan and the frontiers of the Austrian and Russian dominions. The commerce of these countries, in early ages of vast importance, especially the export trade, has nearly at all times been reduced to little value under Turkish rule. All exportation but to Constantinople was prohibited, except that of wool, hare-skins, and berries; the revenues and administration at the same time having been, it may be said, farmed out to avaricious and tyrannical governors of Greek (Fanariote) birth or race. The inhabitants, chiefly of Sclavonic origin, and nearly all professing the Greek religion, were naturally separated in their social position from the Moslems, whose arbitrary government over the former was often moderated by the intervention of Russia, although the people of the Principalities were never inclined to become subject to, although their country has more than once been overrun by, and in the occupation of, the latter.

The commercial resources of Turkey in Europe are themselves of very great value, if the exportation of her productions be hereafter as unrestricted as the freedom of importation has been: corn, wool, silk, cotton, timber, flax, hemp, tallow, and numerous other articles, she can furnish in great abundance, in exchange for the commodities of foreign nations. Her Asiatic and African countries are naturally as rich, if not more so, than her European states. All have their respective advantages and resources, and it is by connecting her material and political interests inseparably with those of other friendly great powers, who can have no view to breaking up the integrity of her empire, that Turkey can have any hope of existence among the great powers of Europe. To this we must add the indispensable necessity of financial reform in Turkey; and the establishment of national credit upon the basis of certain and not arbitrary revenue.

These conclusions lead us to consider the practical effects likely to be produced by the commercial treaty recently concluded with the Porte,—and how far it is applicable to the various nations of the empire.

From the abuses under the old system, especially the exactions of the government agents, and the restriction upon exportation, the just and uncorrupt application of the second, fourth, and sixth articles to all Turkey in Europe south of the Balkan, and to Asia Minor, must be of great advantage to trade, and especially to British commerce.

In regard to Tripoli and Tunis, we are lately informed that the strict application of the treaty would enable England to open with those countries a most advantageous trade, and, through them, with the interior of Africa; as British subjects and their agents may, under the treaty, proceed inland to meet the caravans, and sell great quantities of British wares in exchange for ivory, gold dust, ostrich-feathers, skins, oils, &c. We are also informed that an adventurous, active extension of our trade with Tunis, Tripoli, and the interior country, would soon neutralize a rapidly-growing influence which the French

have acquired in those states. We are, however, far from wishing any favour for England that shall not be on the same terms extended to all other countries.

The first great obstacle to the application of the treaty, is the authority and power of Mehemet Ali in Egypt. He has not, we believe, openly declared that he would not submit to its provisions and abolish his monopolies; but has rather given the Porte and the consuls of European powers a promise that he would do so, and submit to the arrangements agreed to by the Sultan.

He may be induced to abolish his monopolies on the condition of his retaining the independence of Egypt; but taking all circumstances into deliberate consideration, we do not see the practicability of the treaty becoming conveniently practical in that country; in Syria it may, now that the country is restored to the Sultan: but the resources of that region will never be available until anarchy be suppressed, and order and security be established. We can scarcely hope for these blessings under the feeble power of the Sultan, and the extortion of a Pasha's administration.

There are also other countries comprised within the general stipulations of this convention, to which their application, if possible, would be highly impolitic. Those are the regions through which the Danube flows down from the Austrian dominions to the Black Sea.

Taking up the position of an alliance of material and political interests with Austria, as bearing upon the trade and navigation of the Danube, and British trade and power in the East, the principle of the 3d and 4th articles of the treaty between England and Austria requires to be carried into full and faithful execution. England has on her part done so; but Austria has, in her recent treaty with Russia, given up the vital principle of her treaty with England, in respect to the navigation of the Danube.*

The vast fertile and populous regions which are watered and drained by the Danube and its tributary streams; the villages, plains, and channels of these great arteries of intercourse and commerce, form a great broad highway of civilization and trade from west to east across Europe to the Black Sea, to Constantinople, Asia Minor, and Persia: thus extending a chain of communication, binding from one to another the national, and consequently the political interests of probably more than 100,000,000 Europeans and Asiatics.

Steam navigation and trade would carry eastward the intelligence, the merchandise, the enterprise, and the civilization of the west. Open the Danube thoroughly to the Black Sea; let trade, and industry, and enterprise, bring forth the natural riches of the countries between the Adriatic and the Euxine, between the Balkan and the Carpathians—let the inhabitants see their material interests invaded by Russia, or any other power, attempting to close the mouths of the Danube against foreign navigation and trade, and the event would prove that the power of the czar, or any other sovereign, would vanish before that of the nations inhabiting the banks of this great river and its branches.

Having thus given a general view of the *Resources, Government*, and *Commercial and Fiscal Legislation* of the OTTOMAN EMPIRE, we will next introduce her commercial treaties and tariffs, and then give condensed details of the *agricultural* products of her principal *divisions* and *districts*, and the *manufactures, trade*, and *navigation* of her *towns* and *seaports*.

* It is stipulated in the fourth article of the treaty between England and Austria, and legalised by Act of Parliament, that Austrian vessels arriving in British ports with cargoes, from the Danube, shall be placed upon the same footing with regard to charges, as if they arrived direct from Austrian ports; British ships and cargoes in like manner, on entering and departing from the Danube, as far as Galacz inclusive, to be placed on the same footing as Austrian vessels. The second article of the treaty signed at St Petersburg, in July, 1840, between Austria and Russia, stipulates—" *Les navires marchands Autrichiens, ainsi que ceux de tout autre nation ayant le droit de naviguer dans la Mer Noire, et qui est en paix avec la Russie, pourront entrer librement dans l s embouchures navigables du Danube, le remonter, le descendre, &c.*"—Russia, therefore, assumes the sovereign right, even in regard to Austria, over the Danube, by declaring that the ships of nations which have the right to navigate the Black Sea, *and which are at peace with Russia, are those which shall enter or depart from the Danube.*

CHAPTER IV.

TURKISH TREATIES.

QUEEN Elizabeth, James I., and Charles I. entered into specific agreements with the Sublime Porte for the regulation of trade and the protection of their subjects. The provisions of those agreements were afterwards embodied in a treaty, or rather Hatti-Sheriff, dated Adrianople, in the middle of the moon, GEMAZIEL AKIR, 1086, or September, 1675, in the reign of Charles the Second. The provisions of any importance in the foregoing agreements and treaty were embraced in the following capitulations and articles of peace concluded at the Dardanelles in 1809.

SULTAN MEHEMED, *may he live for ever!*

"*Let every thing be observed in conformity to these capitulations, and contrary thereto let nothing be done.*"

The command, under the sublime and lofty signet, which imparts sublimity to every place, and under the imperial and noble cypher, whose glory is renowned throughout all the world, by the emperor and conqueror of the earth, achieved with the assistance of the Omnipotent, and by the special grace of God, is this:

We, who by Divine grace, assistance, will, and benevolence, now are the king of kings of the world, the prince of emperors of every age, the dispenser of crowns to monarchs, and the champion Sultan Mehemed, son of Sultan Ibrahim Chan, son of Sultan Ahmed Chan, son of Sultan Mahomet Chan, son of Sultan Murad Chan, son of Sultan Selim Chan, son of Sultan Solyman Chan, son of Sultan Selim Chan.

The most glorious amongst the great princes professing the faith of Jesus, and the most conspicuous amongst the potentates of the nation of the Messiah, and the umpire of public differences that exist between Christian nations, clothed with the mantle of magnificence and majesty, Charles the Second, King of England, Scotland, France, and Ireland, (whose end terminate in bliss!) having sent an ambassador to the Sublime Porte in the time of our grandfather Sultan Murad (whose tomb be ever resplendent!) of glorious memory and full of divine mercy and pity, with professions of friendship, sincerity, devotion, partiality, and benevolence, and demanding that his subjects might be at liberty to come and go into these parts, which permission was granted to them in the reign of the monarch aforesaid, in addition to various other special commands, to the end that on coming or going, either by land or sea, in their way, passage, and lodging, they might not experience any molestation or hindrance from any one.

He represented, in the reign of our grandfather Sultan Mehemed Chan, (whose tomb be ever resplendent!) to our just and overshadowing Porte, his cordial esteem, alliance, sincere friendship, and partiality thereto. As such privilege, therefore, had been granted to the Kings and Sovereigns of France, Venice, and Poland, who profess the most profound devotion for our most eminent throne, and to others between whom and the Sublime Porte there exists a sincere amity and good understanding, so was the same, through friendship, in like manner granted to the said king; and it was granted him that his subjects and their interpreters might safely and securely come and trade in these our sacred dominions.

The capitulations of sublime dignity and our noble commands having been, through friendship, thus granted to the kings aforesaid, and the queen of the aforementioned kingdoms having heretofore also sent a noble personage with presents to this victorious

Porte, which is the refuge and retreat of the kings of the world, the most exalted place, and the asylum of the emperors of the universe, (which gifts were graciously accepted), and she having earnestly implored the privilege in question, her entreaties were acceded to and these our high commands conceded to her.

I. That the English nation and merchants, and all other merchants sailing under the English flag, with their ships and vessels, and merchandize of all descriptions, shall and may pass safely by sea, and go and come into our dominions, without any the least prejudice or molestation being given to their persons, property, or effects, by any person whatsoever, but that they shall be left in the undisturbed enjoyment of their privileges, and be at liberty to attend to their affairs.

II. That if any of the English coming into our dominions by land be molested or detained, such persons shall be instantly released, without any further obstruction being given to them.

III. That English ships and vessels entering the ports and harbours of our dominions shall and may at all times safely and securely abide and remain therein, and at their free will and pleasure depart therefrom, without any opposition or hindrance from any one.

IV. That if it shall happen that any of their ships suffer by stress of weather, and not be provided with necessary stores and requisites, they shall be assisted by all who happen to be present, whether the crews of our imperial ships, or others, both by sea and land.

V. That being come into the ports and harbours of our dominions, they shall and may be at liberty to purchase at their pleasure, with their own money, provisions and all other necessary articles, and to provide themselves with water without interruption or hindrance from any one.

VI. That if any of their ships be wrecked upon any of the coasts of our dominions, all beys, cadis, governors, commandants, and others our servants, who may be near or present, shall give them all help, protection, and assistance, and restore to them whatsoever goods and effects may be driven ashore: and in the event of any plunder being committed, they shall make diligent search and inquiry to find out the property, which, when recovered, shall be wholly restored by them.

VII. That the merchants, interpreters, brokers, and others of the said nation, shall and may, both by sea and land, come into our dominions, and there trade with the most perfect security; and in coming and going, neither they nor their attendants shall receive any the least obstruction, molestation, or injury, either in their persons or property, from the beys, cadis, sea-captains, soldiers, and others our slaves.

VIII. That if an Englishman, either for his own debt, or as surety for another, shall abscond, or become bankrupt, the debt shall be demanded from the real debtor only; and unless the creditor be in possession of some security given by another, such person shall not be arrested, nor the payment of such debt be demanded of him.

IX. That in all transactions, matters, and business occurring between the English and merchants of the countries to them subject, their attendants, interpreters, and brokers, and any other persons in our dominions, with regard to sales and purchases, credits, traffic, or security, and all other legal matters, they shall be at liberty to repair to the judge, and there make a hoget, or public authentic act, with witness, and register the suit, to the end that if in future any difference or dispute shall arise, they may both observe the said register and hoget; and when the suit shall be found conformable thereto, it shall be observed accordingly.

Should no such hoget, however, have been obtained from the judge, and false witnesses only are produced, their suit shall not be listened to, but justice be always administered according to the legal hoget.

X. That if any shall calumniate an Englishman, by asserting that he hath been injured by him, and producing false witnesses against him, our judges shall not give ear unto them, but the cause shall be referred to his ambassador, in order to his deciding the same, and that he may always have recourse to his protection.

XI. That if an Englishman, having committed an offence, shall make his escape, no other Englishman, not being security for him, shall, under such pretext, be taken or molested.

XII. That if an Englishman, or subject of England, be found to be a slave in our States, and be demanded by the English ambassador or consul, due inquiry and examina-

tion shall be made into the causes there of, and such person being found to be English, shall be immediately released, and delivered up to the ambassador or consul.

XIII. That all Englishmen, and subjects of England, who shall dwell or reside in our dominions, whether they be married or single, artisans or merchants, shall be exempt from all tribute.

XV. That the English ambassadors shall and may, at their pleasure, establish consuls in the ports of Aleppo, Alexandria, Tripoli, Barbary, Tunis, Tripoli of Syria and Barbary, Scio, Smyrna, and Egypt, and in like manner remove them, and appoint others in their stead, without any one opposing them.

XV. That in all litigations occurring between the English, or subjects of England, and any other person, the judges shall not proceed to hear the cause without the presence of an interpreter, or one of his deputies.

XVI. That if there happen any suit, or other difference or dispute, among the English themselves, the decision thereof shall be left to their own ambassador or consul, according to their custom, without the judge or other governors, our slaves, intermeddling therein.

XVII. That our ships and galleys, and all other vessels which may fall in with any English ships in the seas of our dominions, shall not give them any molestation, nor detain them by demanding any thing, but shall show good and mutual friendship the one to the other, without occasioning them any prejudice.

XVIII. That all the capitulations, privileges, and articles, granted to the French, Venetian, and other princes, who are in amity with the Sublime Porte, having been in like manner, through favour granted to the English, by virtue of our special command, the same shall be always observed according to the form and tenour thereof, so that no one in future do presume to violate the same, or act in contravention thereof.

XIX. That if the corsairs or galliots of the Levant shall be found to have taken any English vessels, or robbed or plundered them of their goods and effects, also if any one shall have forcibly taken any thing from the English, all possible diligence and exertion shall be used and employed for the discovery of the property, and inflicting condign punishment on those who may have committed such depredations; and their ships, goods, and effects shall be restored to them without delay or intrigue.

XX. That all our Beglerbeys, imperial and private captains, governors, commandants, and other administrators, shall always strictly observe the tenour of these imperial capitulations, and respect the friendship and correspondence established on both sides, every one in particular taking special care not to let any thing be done contrary thereto; as long as the said monarch shall continue to evince true and sincere friendship, by a strict observance of the articles and conditions herein stipulated, these articles and conditions of peace and friendship shall, in like manner, be observed and kept on our part. To the end, therefore, that no act might be committed in contravention thereof, certain clear and distinct capitulations were conceded in the reign of our late grandfather, of happy memory (whose tomb be ever resplendent!)

Since which, in the time of our said grandfather, of happy memory, Sultan Ahmed, (whose tomb be blessed!) James, King of England, sent an ambassador with letters and presents (which were accepted), and requested that the friendship and good understanding which existed between him and the Porte in the days of our grandfather, of happy memory, as also the stipulations and conditions of the august capitulations, might be ratified and confirmed, and certain articles added thereto; which request being represented to the imperial throne, express commands were given, that in consideration of the existing friendship and good understanding, and in conformity to the capitulations conceded to other princes in amity with the Sublime Porte, the articles and stipulations of the sacred capitulations should be renewed and confirmed, and the tenour thereof be for ever observed; and amongst the articles added to the capitulations conceded by the command aforesaid, at the request of the said king, were the following:

XXI. That duties shall not be demanded or taken of the English, or the merchants sailing under the flag of that nation, on any piastres and sequins they may import into our sacred dominions, or on those they may transport to any other place.

XXII. That our Beglerbeys, judges, defterdars, and masters of the mint shall not interpose any hindrance or obstacle thereto, by demanding either dollars or sequins from them,

under the pretence of having them recoined and exchanged into other money, nor shall give them any molestation or trouble whatever with regard thereto.

XXIII. That the English nation, and all ships belonging to places subject thereto, shall and may buy, sell, and trade in our sacred dominions, and (except arms, gunpowder, and other prohibited commodities), load and transport in their ships every kind of merchandize, at their own pleasure, without experiencing any the least obstacle or hindrance from any one; and their ships and vessels shall and may at all times safely and securely come, abide, and trade in the ports and harbours of our sacred dominions, and with their own money buy provisions and take in water, without any hindrance or molestation from any one.

XXIV. That if an Englishman, or other subject of that nation, shall be involved in any law-suit, or other affair connected with law, the judge shall not hear nor decide thereon until the ambassador, consul, or interpreter, shall be present; and suits exceeding the value of 4000 aspers shall be heard at the Sublime Porte, and nowhere else.

XXV. That the consuls appointed by the English ambassador in our sacred dominions, for the protection of their merchants, shall never, under any pretence, be imprisoned, nor their houses sealed up, nor themselves sent away; but all suits or differences in which they may be involved shall be represented to our Sublime Porte, where their ambassadors will answer for them.

XXVI. That in case any Englishman, or other person subject to that nation, or navigating under its flag, should happen to die in our sacred dominions, our fiscal and other officers shall not, upon pretence of its not being known to whom the property belongs, interpose any opposition or violence, by taking or seizing the effects that may be found at his death, but they shall be delivered up to such Englishman, whoever he may be, to whom the deceased may have left them by his will: and should he have died intestate, then the property shall be delivered up to the English consul, or his representative, who may be there present: and in case there be no consul, or consular representative, they shall be sequestered by the judge, in order to his delivering up the whole thereof, whenever any ship shall be sent by the ambassador to receive the same.

XXVII. That all the privileges, and other liberties already conceded, or hereafter to be conceded to the English, and other subjects of that nation sailing under their flag, by divers imperial commands, shall be always obeyed, and observed, and interpreted in their favour, according to the tenour and true intent and meaning thereof; neither shall any fees be demanded by the fiscal officers and judges in the distribution of their property and effects.

XXVIII. That the ambassadors and consuls shall and may take into their service any janizary or interpreter they please, without any other janizary, or other of our slaves, intruding themselves into their service against their will and consent.

XXIX. That no obstruction or hindrance shall be given to the ambassadors, consuls, and other Englishmen, who may be desirous of making wine in their own houses, for the consumption of themselves and families; neither shall the janizaries our slaves, or others, presume to demand or exact any thing from them, or do them any injustice or injury.

XXX. That the English merchants having once paid the customs at Constantinople, Aleppo, Alexandria, Scio, Smyrna, and other ports of our sacred dominions, not an asper more shall be taken or demanded from them at any other place, nor shall any obstacle be interposed to the exit of their merchandize.

XXXI. That having landed the merchandize imported by their ships into our sacred dominions, and paid in any port the customs thereon, and being obliged, from the impossibility of selling the same there, to transport them to another port, the commandants or governors shall not, on the landing of such merchandize, exact from them any new custom or duty thereon, but shall suffer them, freely and unrestrictedly, to trade, without any molestation or obstruction whatsoever.

XXXII. That no excise or duty on animal food shall be demanded of the English, or any subjects of that nation.

XXXIII. That differences and disputes having heretofore arisen between the ambassadors of the Queen of England and King of France, touching the affairs of the Flemish

merchants, and both of them having presented memorials at our imperial stirrup, praying that such of the said merchants as should come into our sacred dominions might navigate under their flag, hatti-sheriffs were granted to both parties: but the Captain Pacha, Sinan, the son of Cigala, now deceased, who was formerly Vizier, and well versed in maritime affairs, having represented that it was expedient that such privilege should be granted to the Queen of England, and that the Flemish merchants should place themselves under her flag, as also the merchants of the four provinces of Holland, Zealand, Friesland, and Guelderland, and all the other Viziers being likewise of opinion that they should all navigate under the queen's flag, and, like all the other English, pay the consulage and other duties, as well on their own merchandize as on those of others loaded by them in their ships, to the queen's ambassadors or consuls, it was, by express order and imperial authority, accordingly commanded, that the French ambassador or consul should never hereafter oppose or intermeddle herein, but in future act conformably to the tenour of the present capitulation.

After which, another ambassador arrived from the said queen, with the gifts and presents sent by her, which being graciously accepted, the said ambassador represented that the queen desired that certain other privileges might be added to the imperial capitulations, whereof he furnished a list; one of which was, that certain capitulations having been granted in the days of our grandfather, of happy memory (whose tomb be ever blessed!), to the end that the merchants of Spain, Portugal, Ancona, Sicily, Florence, Catalonia, Flanders, and all other merchant-strangers might go and come to our sacred dominions, and manage their trade, it was stipulated, in such capitulations, that they should be at liberty to appoint consuls; but each nation being unable to defray the charge and maintenance of a consul, they were left at liberty to place themselves under the flag of any of the kings in peace and amity with the Sublime Porte, and to have recourse to the protection of any of their consuls, touching which privilege divers commands and capitulations were repeatedly granted, and the said merchants having, by virtue thereof, chosen to navigate under the English flag, and to have recourse in our harbours to the protection of the English consuls, the French ambassadors contended that the said merchant-strangers were entitled to the privilege of their capitulations, and forced them to have recourse in all ports to their consuls, which being represented by the said nations to our august tribunal, and their cause duly heard and decided, they were, for a second time, left to their free choice, when again having recourse to the protection of the English ambassadors and consuls, they were continually molested and opposed by the French ambassador, which being represented by the English with a request that we would not accept the articles added to the French capitulations respecting the nations of merchant-strangers, but that it should be again inserted in the capitulations, that the said nations should, in the manner prescribed, have recourse to the protection of the English consuls, and that hereafter they should never be vexed or molested by the French on this point, it was, by the imperial authority, accordingly commanded that the merchants of the countries aforesaid, should, in the manner prescribed, have recourse to the protection of the English ambassadors and consuls, conformably to the imperial commands to them conceded, and which particular was again registered in the imperial capitulations; viz., that there should never be issued any commands, contrary to the tenour of these capitulations which might tend to the prejudice or breach of our sincere friendship and good understanding; but that on such occasions the cause thereof should first be certified to the ambassador of England residing at our Sublime Porte, in order to his answering and objecting to any thing that might tend to a breach of the articles of peace.

XXXIV. That the English merchants, and other subjects of that nation, shall and may, according to their condition, trade at Aleppo, Egypt, and other ports of our sacred dominions, on paying (according to ancient custom) a duty of three per cent on all their merchandize, without being bound to the disbursement of an asper more

XXXV. That, in addition to the duty hitherto uniformly exacted on all merchandize, laden, imported and transported in English ships, they shall also pay the whole of the consulage to the English ambassadors and consuls.

XXXVI. That the English merchants, and all others sailing under their flag, shall and may, freely and unrestrictedly, trade and purchase all sorts of merchandize (prohibited

commodities alone excepted), and convey them either by land or sea, or by way of the river Tanais, to the countries of Muscovy or Russia, and bring back from thence other merchandize into our sacred dominions, for the purposes of traffic, and also transport others to Persia and other conquered countries.

XXXVII. That such customs only shall be demanded on the said goods in the conquered countries as have always been received there, without any thing more being exacted.

XXXVIII. That should the ships bound for Constantinople be forced by contrary winds to put into Caffa, or any other place of those parts, and not be disposed to buy or sell any thing, no one shall presume forcibly to take out or seize any part of their merchandize, or give to the ships or crews any molestation, or obstruct the vessels that are bound to those ports; but our governors shall always protect and defend them, and all their crews, goods, and effects, and not permit any damage or injury to be done to them: and should be desirous of purchasing, with their own money, any provisions in the places where they may happen to be, o. of hiring any carts or vessels (not before hired by others), for the transportation of their goods, no one shall hinder or obstruct them therein.

XXXIX. That customs shall not be demanded or taken on the merchandize brought by them in their ships to Constantinople, or any other port of our sacred dominions, which they shall not, of their own free will, land with a view to sale.

XL. That on their ships arriving at any port, and landing their goods and merchandizes, they shall and may, after having paid their duties, safely and securely depart, without experiencing any molestation or obstruction from any one.

XLI. That English ships coming into our sacred dominions, and touching at the ports of Barbary and of the western coast, used oftentimes to take on board pilgrims and other Turkish passengers, with the intention of landing them at Alexandria, and other ports of our sacred dominions; on their arrival at which ports the commandants and governors demanded of them customs on the whole of their goods before they were landed, by reason of which outrage they have forborne receiving on board any more pilgrims; the more so as they were forced to take out of the ships that were bound to Constantinople the merchandize destined for other places, besides exacting the duties on those that were not landed: all English ships, therefore, bound to Constantinople, Alexandria, Tripoli of Syria, Scanderoon, or other ports of our sacred dominions, shall in future be bound to pay duties, according to custom, on such goods only as they shall, of their own free will, land with a view to sale; and for such merchandize as they shall not discharge, no custom or duty shall be demanded of them, neither shall the least molestation or hindrance be given to them, but they shall and may freely transport them wherever they please.

XLII. That in case any Englishman, or other person navigating under their flag, should happen to commit manslaughter, or any other crime, or be thereby involved in a lawsuit, the governors in our sacred dominions shall not proceed to the cause until the ambassador or consul shall be present, but they shall hear and decide it together without their presuming to give them any the least molestation, by hearing it alone, contrary to holy law and these capitulations.

XLIII. That notwithstanding it is stipulated by the imperial capitulations, that the merchandize laden on board all English ships proceeding to our sacred dominions shall moreover pay consulage to the ambassador or consul for those goods on which customs are payable, certain Mahometan merchants, Sciots, Franks, and ill-disposed persons, object to the payment thereof; wherefore it is hereby commanded, that all the merchandize, unto whomsoever belonging, which shall be laden on board their ships, and have been used to pay custom, shall in future pay the consulage, without any resistance or opposition.

XLIV. That the English and other merchants navigating under their flag, who trade to Aleppo, shall pay such customs and other duties on the silks, brought and laden by them on board their ships, as are paid by the French and Venetians, and not one asper more.

XLV. That the ambassadors of the King of England, residing at the Sublime Porte, being the representatives of his majesty, and the interpreters the representatives of the ambassadors for such matters, therefore as the latter shall translate or speak, or for whatever sealed letter or memorial they may convey to any place in the name of their ambas-

sador, it being found, that that which they have interpreted or translated is a true interpretation of the words and answers of the ambassador or consul, they shall be always free from all imputation of fault or punishment; and in case they shall commit any offence, our judges and governors shall not reprove, beat, or put any of the said interpreters in prison, without the knowledge of the ambassador or consul.

XLVI. That in case any of the interpreters shall happen to die, if he be an Englishman proceeding from England, all his effects shall be taken possession of by the ambassador or consul; but should he be a subject of our dominions, they shall be delivered up to his next heir; and having no heir they shall be confiscated by our fiscal officers.

And it was expressly commanded and ordained, that the above-mentioned articles and privileges should in future be strictly observed and performed, according to the form and tenour thereof.

Since which time, an ambassador from the King of England came to the Sublime Porte, and represented that laws had been oftentimes promulgated contrary to the tenour of the sacred capitulations, which being produced without their knowledge to our judges, and the dates of such laws being posterior to those of our capitulations, the latter could not be carried into execution; his sovereign, therefore, wished that such laws might not be executed, but that the imperial capitulations should be always observed and maintained according to the form and tenour thereof; all which being represented to the imperial throne, such request was acceded to, and conformably thereto, it was expressly ordained and commanded, that all such laws as had already been, or should thereafter be, promulgated contrary to the tenour of these imperial capitulations, should, when pleaded or quoted before our judges, never be admitted or carried into execution, but that the said judges should ever obey and observe the tenour of the imperial capitulations. In the time of our glorious forefathers and most august predecessors of happy memory, therefore, clear and distinct capitulations were granted, which annulled such laws, and directed them to be taken from those who produced them.

After which, Sultan Osman Chan having ascended the imperial throne, the King of England sent another ambassador with letters and presents, which were graciously accepted, requesting that the imperial capitulations granted in splendid and happy times, by the singular justice of our glorious forefathers, and by them confirmed and granted, might be renewed.

And some time after his august coronation, the King of England again sent unto this Sublime Porte one of his most distinguished and wise personages as his ambassador, with a letter and presents, which were graciously accepted, professing and demonstrating the most sincere friendship for the said Porte; and the said ambassador having desired, on the part of the king, that the capitulations granted in the happy time of our glorious forefathers and august predecessors, as also those granted by the aforesaid sultan might be renewed and confirmed, and certain important and necessary articles added to the imperial capitulations, and that others already granted might be amended and more clearly expressed; such his request was acceded to, and the imperial capitulations granted in the time of our most glorious and august forefathers were confirmed, the articles and stipulations renewed, and the conditions and conventions observed. Whereupon express commands were given that the tenour of the sacred capitulations should be strictly performed, and that no one should presume to contravene the same. And the said ambassador having represented and notified to the Sublime throne, that governors and commandants of many places had, contrary to the tenour of the imperial capitulations, molested and vexed with various inventions and innovations the English and other merchants, subjects of that nation, trading to these our sacred dominions, and desired that they might be prohibited from so doing, and some new articles be added to the imperial capitulations, an imperial order was accordingly granted, whereby it was expressly commanded, that the articles newly added should be for ever strictly executed, without any one ever presuming to violate the same.

XLVII. That whereas the corsairs of Tunis and Barbary having, contrary to the tenour of the capitulations and our imperial licence, molested the merchants and other subjects of the King of England, as also those of other kings in amity with the Sublime Porte, and plundered and pillaged their goods and property, it was expressly ordained and commanded, that the goods so plundered should be restored, and the captives released; and

that if after such commands the Tunisians and Algerines should, contrary to the tenour of our capitulations, again molest the said merchants, and pillage their goods and property, and not restore the same, but convey them to the countries and ports of our sacred dominions, and especially to Tunis, Barbary, Modon, or Coron, the beglerbeys, governors, and commandants of such places should in future banish and punish them, and not permit them to sell the same.

XLVIII. That it is written and registered in the capitulations, that the governors and officers of Aleppo, and other ports of our sacred dominions, should not, contrary to the tenour of the said capitulations, forcibly take from the English merchants any money for their silk, under the pretence of custom or other duty, but that the said merchants should pay for the silk, by them purchased at Aleppo, the same as the French and Venetians do, and no more. Notwithstanding which, the commandants of Aleppo have, under colour of custom and duty, demanded two and a half per cent for their silk, and thereby taken their money: wherefore we command that this matter be investigated and inquired into, in order that such money may be refunded to them by those who have taken the same; and for the future, the duty exacted from them shall be according to ancient custom, and as the Venetians and French were accustomed to pay, so that not a single asper more be taken by any new imposition.

XLIX. That the merchants of the aforesaid nation, resident at Galata, buy and receive divers goods, wares, and merchandizes, and after having paid to our customer the duties thereon, and received a tescaré, ascertaining their having paid the same, preparatory to loading such goods in due time on board their ships, it sometimes happens that, in the interim, the customer either dies, or is removed from his situation, and his successor will not accept of the said tescaré, but demands a fresh duty from the said merchants, thereby molesting them in various ways; wherefore we do command, that on its really and truly appearing that they have once paid the duties on the goods purchased, the customer shall receive the said tescaré without demanding any fresh duty.

L. That the merchants of the aforesaid nation, after having once paid the duties, and received the tescaré, for the camlets, mohair, silk, and other merchandize, purchased by them at Angora, and transported to Constantinople and other ports of our sacred dominions, and having deposited such goods in their own warehouses, have been again applied to for duties thereon; we do therefore hereby command that they shall no longer be molested or vexed on that head, but that when the said merchants shall be desirous of loading such goods on board their ships, and on its appearing by the tescaré that they have already paid the duties thereon, no fresh custom or duty shall be demanded for the said goods, provided that the said merchants do not blend or intermix the goods which have not paid custom with those which have.

LI. That the merchants of the aforesaid nation, having once paid the customs on the merchandize imported into Constantinople, and other ports of our sacred dominions, and on those exported therefrom, as silks, camlets, and other goods, and being unable to sell the said goods, are under the necessity of transporting them to Smirna, Scio, and other ports; on their arrival there the governors and custom-house officers of such ports shall always accept their tescares, and forbear exacting any further duty on the said merchandize.

LII. That for the goods which the merchants of the nation aforesaid shall bring to Constantinople, and other ports of our sacred dominions, and for those they shall export from the said places, the Mastariagi of Galata and Constantinople shall take their mastaria, according to the old canon and ancient usage, that is to say, for those merchandizes only whereon it was usually paid: but for such merchandizes as have not been accustomed to pay the same, nothing shall be taken contrary to the said canon, neither shall any innovations be made in future with regard to English merchandize, nor shall one asper more be taken than is warranted by custom.

LIII. That the merchants of the aforesaid nation shall and may always come and go into the ports and harbours of our sacred dominions, and trade, without experiencing any obstacle from any one, with the cloths, kerseies, spice, tin, lead, and other merchandize they may bring, and, with the exception of prohibited goods, shall and may, in like manner, buy and export all sorts of merchandize, without any one presuming to prohibit or molest them: and our customers and other officers, after having received the duties thereon, ac-

cording to ancient custom and the tenour of these sacred capitulations, shall not demand of them any thing more, touching which point, certain clear and distinct capitulations were granted, to the end that the beglerbeys and other commandants, our subjects, as also the commandants and lieutenants of our harbours, might always act in conformity to these our imperial commands, and let nothing be done contrary thereto.

After which, in the time of our uncle, deceased, blessed and translated to Paradise, Sultan Murad Chan (whose tomb be ever resplendent!) the aforesaid King of England sent Sir Sackville Crow, Baronet, as his ambassador, with a letter and presents, which were graciously accepted; but the time of his embassy being expired, another ambassador, named Sir Thomas Bendish, arrived to reside at the Porte in his stead, with his presents, and a courteous letter, professing the utmost friendship, devotion, and sincerity; and the said ambassador having brought the capitulations formerly granted to the English, and requested they might be renewed according to custom, he represented the damage and injury sustained by the English, contrary to the tenour of various articles of the capitulations—viz.,

That before the English merchants repaired to the custom-house, some one went on board the ship, and forcibly took out their goods; and before any price could be fixed on the best and most valuable articles, or the accounts made out, he took and carried them away; and that the said merchants, having punctually paid the duties thereon in one port, and being desirous of transporting the same goods to another port, the customer detained them, and would not suffer them to depart until they had paid the duties a second time: and whereas it is specified in the capitulations, that in all suits wherein the English are parties, our judges are not to hear or decide the same, unless their ambassador or consul be present; notwithstanding which, our judges, without the knowledge of their ambassador, have proceeded to imprison and exact presents from the English merchants, and other subjects of that nation, besides being guilty of other oppressions: and whereas it is further ordered in the capitulations, that no duties shall be taken on such sequins and piasters as by the English merchants shall be brought in, or carried out of, our imperial dominions, and that a duty of three per cent only shall be demanded on their goods: notwithstanding which, the customers have exacted duties on the sequins and dollars, and demanded more duties than were due on the silk bought by them, besides demanding six per cent on the goods transported from Alexandria to Aleppo, which abuses were heretofore rectified by an express hatti-sheriff; notwithstanding which, the English merchants still continued to experience some molestation, by the customers valuing their goods at more than they were worth, so that although it was the custom to receive but three per cent only, the latter exacted six per cent from them, and the servants of the custom house, under colour of certain petty charges, took from them various sums of money, and that a greater number of waiters were put on board their ships than usual, the expenses attending which were a great burden to the merchants and masters of ships who sustained it.

That the customers, desirous to value goods at more than their worth, were not satisfied with the merchants paying them duties on the same goods at the rate of three per cent, but interposed numerous difficulties and obstacles:

The said ambassador having requested, therefore, that such abuses might be rectified, and the laws of the imperial capitulations be duly executed, his request was represented to the imperial throne, when we were graciously pleased to order:

LIV. That the English merchants having once paid the duties on their merchandize, at the rate of three per cent, and taken them out of their ship, no one shall demand or exact from them any thing more without their consent: and it was moreover expressly commanded, that the English merchants should not be molested or vexed in manner aforesaid, contrary to the articles of the capitulations.

Since which, another ambassador of the King of England, Sir Heneage Finch, Knight, Earl of Winchilsea, Viscount Maidstone, and Baron Fitzherbert of Eastwell, arrived to reside at the Sublime Porte, with presents and a courteous letter, demonstrating his sincere friendship, and professing the utmost cordiality and devotion; which ambassador also presented the capitulations, and requested that the most necessary and important articles thereof might be renewed and confirmed, according to custom, which request was graciously acceded to, and the desired privileges granted to him—viz.,

LV. That the imperial fleets, galleys, and other vessels, departing from our sacred dominions, and falling in with English ships at sea, shall in nowise molest or detain them, nor take from them any thing whatsoever, but always show to one another good friendship, without occasioning them the least damage or injury; and notwithstanding it is thus declared in the imperial capitulations, the said English ships are still molested by the ships of the imperial fleet, and by the beys and captains who navigate the seas, as also by those of Algiers, Tunis, and Barbary, who falling in with them whilst sailing from one port to another, detain them for the mere purpose of plunder, under colour of searching for enemy's property, and under that pretence prevent them from prosecuting their voyage; now we do hereby expressly command, that the provisions of the old canon be executed at the castles and in the ports only, and no where else, and that they shall no longer be liable to any further search or exaction at sea, under colour of search or examination.

LVI. That the said ambassador having represented that our customers, after having been fully paid the proper duties by the English merchants on their goods, delayed, contrary to the articles and stipulations of the capitulations, to give them the *teskerés* of the goods for which they had already received the duty, with the sole view of oppressing and doing them injustice; we do hereby strictly command that the said customers do never act so by granting them the *teskeré*, and the goods whereon they have once paid the duty being transported to another port, in consequence of no opportunity of sale having occurred in the former port, entire credit shall be given to the *teskerés*, ascertaining the payment already made, agreeably to the capitulations granted to them, and no molestation shall be given to them, nor any new duty demanded.

LVII. That notwithstanding it is stipulated by the capitulations that the English merchants, and other subjects of that nation, shall and may, according to their rank and condition, trade to Aleppo, Egypt, and other parts of our Imperial Dominions, and for all their goods, wares, and merchandize, pay a duty of three per cent only, and nothing more, according to ancient custom, the customers have molested the English merchants, with a view to oppress them and the subjects of that nation, on their arrival with their goods laden on board their ships, whether conveyed by sea or land, at our ports and harbours, under pretence of the goods so brought by them not belonging to the English; and that for goods brought from England they demanded three per cent only, but for those brought by them from Venice and other ports, they exacted more; wherefore, on this point, let the imperial capitulations granted in former times be observed, and our governors and officers in nowise permit or consent to the same being infringed.

LVIII. That whereas it is specified in the capitulations, that in case an Englishman should become a debtor or surety, and run away or fail, the debt shall be demanded of the debtor; and if the creditor be not in possession of some legal document given by the surety, he shall not be arrested, nor such debt be demanded of him; should an English merchant, resident in another country, with the sole view of freeing himself from the payment of a debt, draw a bill of exchange from another merchant, living in Turkey, and the person to whom the same is payable, being a man of power and authority, should molest such merchant who had contracted no debt to the drawer, and oppress him, contrary to law and the sacred capitulations, by contending that the bill was drawn upon him, and that he was bound to pay the debt of the other merchant; now we do hereby expressly command, that no such molestation be given in future, but if such merchant shall accept the bill, they shall proceed in manner and form therein pointed out; but should he refuse to accept it, he shall be liable to no further trouble.

LIX. That the interpreters of the English ambassadors, having always been free and exempt from all contributions and impositions whatever, respect shall in future be paid to the articles of the capitulations stipulated in ancient times, without the fiscal officers intermeddling with the effects of any of the interpreters who may happen to die, which effects shall be distributed among his heirs.

LX. That the aforesaid King, having been a true friend of our Sublime Porte, his ambassador, who resides here, shall be allowed ten servants, of any nation whatsoever, who shall be exempt from impositions, and in no manner molested.

LXI. That if any Englishman should turn Turk, and it should be represented and

proved, that, besides his own goods, he has in his hands any property belonging to another person in England, such property shall be taken from him, and delivered up to the ambassador or consul, that they may convey the same to the owner thereof.

The ambassador of the aforesaid King, who resided in our Sublime Porte, named Sir John Finch, Knight, a prudent man, was sent as ambassador to the imperial throne, and to reside at our Sublime Porte, with a letter and presents, which, on arrival and presentation to our glorious and imperial presence, were graciously accepted; and the said ambassador, having brought with him the sacred capitulations, heretofore granted by our august person, and represented to us, on the part of the aforesaid king, his majesty's desire that they should be renewed and confirmed, according to custom, and certain new articles added to them; to which request we most graciously acceded, by commanding that such additional articles be registered in the imperial capitulations, of which one was the imperial command, to which was affixed the hatti-sheriff, that is, the hand of our deceased glorious father, absolved by God, Sultan Ibrahim, whose soul rest in glory and divine mercy!) in the year 1053—to wit:

LXII. That for every piece of cloth, called Londra, which, from ancient times, was always brought by the British ships to Alexandria, there should be taken in that place a duty of forty paras, for every piece of kersey six paras, for every bale of hareskins six paras, and for every quintal of tin and lead, Damascus weight, fifty-seven paras and a half.

LXIII. That on afterwards transporting the said goods from Alexandria to Aleppo, there should be demanded, by the custom-house officers of Aleppo, for every piece of Londra eighty paras, for a piece of kersey eight paras and two aspers, for every bundle of hareskins eight paras and two aspers, and for every Aleppo weight of tin and lead, one para.

LXIV. That on the goods purchased by the aforesaid nation at Aleppo there should be paid for transport duty, on every bale of unbleached linen and cordovans, and chorasani-hindi, two dollars and a half, for every bale of cotton yarn one dollar and a quarter, for every bale of galls one quarter, for every bale of silk ten ozmars; and for rhubarb and other trifles, and various sorts of drugs, according to a valuation to be made by the appraiser, there should be taken a duty of three per cent.

LXV. That on carrying the said goods to Alexandria, and there loading them on board their ships, there should be taken for transport duty, on every bale of unbleached linen and cordovans one dollar and a half, for every bale of chorasani-hindi and cotton-yarn three-quarters, for every bale of galls one quarter; and for rhubarb and other trifles, and various sorts of drugs, after a valuation made thereof, there should be taken three quarters of a piastre; and that for the future, no demand whatever to the contrary should be submitted to.

LXVI. That all commands issued by the chamber contrary to the aforementioned articles should not be obeyed; but for the future, every thing be observed conformably to the tenour of the capitulations and the imperial signet.

LXVII. It being stipulated by the capitulations that the English merchants shall pay a duty of three per cent on all goods by them imported and exported, without being bound to pay an asper more; and disputes having arisen with the customers on this head, they shall continue to pay duty as heretofore paid by them, at a rate of three per cent only, neither more nor less.

LXVIII. That for the London and other cloths manufactured in England, whether fine or coarse, and of whatsoever price, imported by them into the ports of Constantinople and Galata, there shall be taken, according to the ancient canons, and as they have always hitherto paid, one hundred and forty-four aspers, computing the dollar at eighty aspers, and the leone at seventy, and nothing more shall be exacted from them; but the cloths of Holland and other countries, viz. serges, Londrina scarlets, and other cloths, shall pay, for the future, that which hitherto has been the accustomed duty; and at Smyrna likewise shall be paid according to ancient custom, calculated in dollars and leones, for every piece of London or other cloth of English fabric, whether fine or coarse, one hundred and twenty aspers; without an asper more being demanded, or any innovation being made therein.

LXIX. It being registered in the imperial capitulations, that all suits wherein the English are parties, and exceeding the sum of four thousand aspers, shall be heard in our Sublime Porte, and nowhere else.

That if at any time the commanders and governors should arrest any English merchant, or other Englishman, on the point of departure by any ship, by reason of any debt or demand upon him, if the consul of the place will give bail for him, by offering himself as surety until such suit shall be decided in our imperial divan, such person so arrested shall be released, and not imprisoned or prevented from prosecuting his voyage; and they who claim anything from them shall present themselves in our imperial divan, and there submit their claims, in order that the ambassador may furnish an answer thereto. With regard to those for whom the consul shall not have given bail, the commandant may act as he shall think proper.

LXX. That all English ships coming to the ports of Constantinople, Alexandria, Smyrna, Cyprus, and other ports of our sacred dominions, shall pay three hundred aspers for anchorage duty, without an asper more being demanded from them.

LXXI. That should any Englishman coming with merchandize turn Turk, and the goods so imported by him be proved to belong to merchants of his own country, from whom he had taken them, the whole shall be detained, with the ready money, and delivered up to the ambassador, in order to his transmitting the same to the right owners, without any of our judges or officers interposing any obstacle or hindrance thereto.

LXXII. That no molestation shall be given to any of the aforesaid nation buying camlets, mohairs, or grogram yarn, at Angora and Beghbazar, and desirous of exporting the same from thence, after having paid the duty of three per cent by any demand of customs for the exportation thereof, neither shall one asper more be demanded of them.

LXXIII. That should any suit be instituted by an English merchant for the amount of a debt, and the same be recovered by means of the assistance of a chiaux, he shall pay him out of the money recovered two per cent, and what is usually paid for fees in the *mehkemé*, or court of justice, and not an asper more.

LXXIV. That the king, having always been a friend to the Sublime Porte, out of regard to such good friendship, his majesty shall and may, with his own money, purchase for his own kitchen at Smyrna, Salonica, or any other port of our sacred dominions, in fertile and abundant years, and not in times of dearth or scarcity, two cargoes of figs and raisins, and after having paid a duty of three per cent thereon, no obstacle or hindrance shall be given thereto.

LXXV. That it being represented to us that the English merchants have been accustomed hitherto to pay no custom or scale duty, either on the silks bought by them at Brussa and Constantinople, or on those which come from Persia and Georgia, and are purchased by them at Smyrna from the Armenians; if such usage or custom really exists, and the same be not prejudicial to the empire, such duty shall not be paid in future: and the said ambassador, having requested that the aforegoing articles might be duly respected, and added to the Imperial capitulations, his request was acceded to; therefore, in the same manner as the capitulations were heretofore conceded by our Imperial hatti-sheriff, so are they now in like manner renewed by our Imperial command; wherefore, in conformity to the Imperial signet, we have again granted these sacred capitulations, which we command to be observed, so long as the said king shall continue to maintain that good friendship and understanding with our Sublime Porte, which was maintained in the happy time of our glorious ancestors, which friendship we, on our part, accept; and adhering to these articles and stipulations, we do hereby promise and swear, by the one Omnipotent God, the creator of heaven and earth, and of all creatures, that we will permit nothing to be done or transacted contrary to the tenour of the articles and stipulations heretofore made, and these Imperial capitulations; and accordingly every one is to yield implicit faith and obedience to this our Imperial signet, affixed in the middle of the month of Gamaziel, in the year 1086 (corresponding with the year of our Lord, 1675).

Treaty between Great Britain and the Sublime Porte. Concluded at the Dardanelles, the 5th of January, 1809.

(Translation.)

In the name of the Most Merciful God. The object of this faithful and authentic Instrument is as follows:

Notwithstanding the appearances of a misunderstanding between the court of Great Britain and the Sublime Ottoman Porte, consequent upon the occurrences of the moment,

the two Powers, equally animated with a sincere desire of re-establishing the ancient friendship which subsisted between them, and have agreed upon the following Articles:

ARTICLE I. From the moment of signing the present treaty, every act of hostility between England and Turkey shall cease; and in furtherance of this happy peace, the prisoners on both sides shall be exchanged without distinction, in thirty-one days from the signature of this treaty, or sooner if possible.

II. Should any fortresses belonging to the Sublime Porte be in the possession of Great Britain, they shall be restored to the Sublime Porte, and given up, with all the cannons, warlike stores, and other effects, in the condition in which they were found at the time of their being occupied by England, and this restitution shall be made in the space of thirty-one days from the signature of the present treaty.

III. Should there be any effects and property belonging to English merchants under sequestration, within the jurisdiction of the Sublime Porte, the same shall be entirely given up, and restored to the proprietors; and in like manner should there be any effects, property, and vessels, belonging to merchants, subjects of the Sublime Porte, under sequestration at Malta, or in any other islands and possessions of his Britannic Majesty, they also shall be entirely given up and restored to their proprietors.

IV. The treaty of capitulations agreed upon in the Turkish year 1086 (A.D. 1675), in the middle of the month Gemmaziel Akir, as also the act relating to the commerce of the Black Sea, and the other privileges (*Imtiāzat*) equally established by Acts at subsequent periods, shall continue to be observed and maintained as if they had suffered no interruption.

V. In return for the indulgence and good treatment afforded by the Sublime Porte to English merchants, with respect to their goods and property, as well as in all matters tending to facilitate their commerce, England shall reciprocally extend every indulgence and friendly treatment to the flag, subjects, and merchants of the Sublime Porte, which may hereafter frequent the dominions of his Britannic Majesty for the purposes of commerce.

VI. The last custom-house tariff established at Constantinople, at the ancient rate of three per cent and particularly the article relating to the interior commerce, shall continue to be observed, as they are at present regulated, and to which England promises to conform.

VII. Ambassadors from his Majesty the King of Great Britain shall enjoy all the honours enjoyed by ambassadors to the Sublime Porte from other nations: and ambassadors from the Sublime Porte at the court of London shall reciprocally enjoy all the honours granted to the ambassadors from Great Britain.

VIII. Consuls (*Shahbenders*) may be appointed at Malta, and in the dominions of his Britannic Majesty where it shall be necessary to manage and superintend the affairs and interests of merchants of the Sublime Porte, and similar privileges and immunities to those granted to English consuls resident in the Ottoman dominions, shall be duly afforded to the "*shahbenders*" of the Sublime Porte.

IX. English ambassadors and consuls may supply themselves, according to custom, with such dragomen as they shall stand in need of, but as it has already been mutually agreed upon, that the Sublime Porte shall not grant the "*barat*" of dragoman in favour of individuals who do not execute that duty in the place of their destination, it is settled, in conformity with this principle, that in future, the "*barat*" shall not be granted to any person of the class of tradesmen or bankers, nor to any shopkeeper or manufacturer in the public markets, or to one who is engaged in any matters of this description; nor shall English consuls be named from among the subjects of the Sublime Porte.

X. English patents of protection shall not be granted to dependants, or merchants who are subjects of the Sublime Porte, nor shall any passport be delivered to such persons, on the part of ambassadors or consuls, without permission previously obtained from the Sublime Porte.

XI. As ships of war have at all times been prohibited from entering the canal of Constantinople—viz, in the straits of the Dardanelles and of the Black Sea; and as this ancient regulation of the Ottoman empire is in future to be observed by every power in time of peace, the court of Great Britain promises on its part to conform to this principle.

XII. The ratifications of the present treaty of peace between the high contracting parties shall be exchanged at Constantinople in the space of 91 days from the date of this treaty, or sooner if possible. In faith of which, and in order that the ratification of the twelve articles of this treaty (which has been happily concluded, by the assistance of God, and in the sincerity and good faith of the two parties) may be exchanged: I, Plenipotentiary of the Sublime Porte, have, in virtue of my full-powers, signed and sealed this instrument, which I have delivered to the Plenipotentiary of his Britannic Majesty, in exchange for another instrument exactly conformable thereto, written in the French language, with a translation thereof, which has been delivered to me on his part, agreeably to his full powers.

Done near the castles of the Dardanelles, the 5th of January, 1809, which corresponds with the year of the Hegira 1223, the 19th day of the Moon *Zilkaade*.

Act of the Sublime Porte, granting to English Merchant Vessels the privileges of Commerce in the Black Sea. 30th October, 1799.

(Translation.)

The friendship and concord which, since time immemorial, have subsisted between the Sublime Porte of steadfast glory, and the court of England, being now happily improved into an alliance established upon the firmest basis of truth and sincerity; and it being beyond doubt, that, in addition to the numerous advantages reaped hitherto by both countries from the new ties so strongly formed between the two courts, many more salutary effects will, by the pleasure of God, be witnessed in future:

Mature attention has, therefore, been paid to the representations, relative to the permission being graciously granted for the navigation of English merchant-vessels in the Black Sea, which have been of late made, both verbally and in writing, by the English minister of this court, Mr. Spencer Smith, our most esteemed friend, in conformity to his instructions, and consistently with the confidence he is ever ambitious to manifest in the inviolable attachment which the Sublime Porte, of everlasting duration, professes towards his court.

In fact, this being a means whereby to evince, in a still further degree, the attachment, the regard, and fidelity which are professed towards the court of Great Britain by the Sublime Porte, of steadfast glory, whose adherence to the obligations of treaties, as well as faithful attention to fulfil the duties of friendship, are unexceptionable; and it being sincerely hoped, that many more salutary effects will henceforward accrue from the close connexion so firmly contracted between the two courts; a cordial grant of the above point is hereby made, as an act springing from the sovereign breast of his imperial majesty himself.

This privilege shall take effect with respect to the merchant-vessels of Great Britain, exactly on the same footing observed with those of the most favoured powers; it being understood, that its execution be proceeded upon, immediately after the burthen of the said vessels, the mode of their transit through the Straits of Constantinople, and such other arrangements as appertain to this matter, shall have been settled in proper detail by friendly communication with the minister beforenamed: and that the same minister, our friend, may notify this valuable concession to his court, the present memorial is written, and delivered to him by express command. Certified, SPENCER SMITH.

1 of Gemaziellevvel, 1214. (30 October, 1799.)

Act of the British Parliament, "to enable his Majesty to make Regulations for the better defining and establishing the Powers and Jurisdiction of his Majesty's Consuls in the Ottoman Dominions."

[6 & 7 Will. IV., cap. 78.] [13th August, 1836.]

Whereas by the treaties and capitulations subsisting between his Majesty and the Sublime Ottoman Porte, full and entire jurisdiction and control over British subjects

within the Ottoman dominions in matters in which such British subjects are exclusively concerned, is conferred upon the British ambassadors and consuls appointed to reside within the said dominions: and whereas it is expedient for the protection of British subjects within the dominions of the Sublime Porte in Europe, Asia, and Africa, and likewise in the States of Barbary, as well as for the protection of his Majesty's ambassadors, consuls, or other officers appointed or to be appointed by his Majesty for the protection of the trade of his Majesty's subjects in the said ports and places, that provision should be made for defining and establishing the authority of the said ambassadors, consuls, and other officers: be it therefore enacted by the King's most excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, that it shall and may be lawful for his Majesty from time to time, by any order or orders of his Majesty in Council, to make and issue any directions and regulations touching and concerning the rights and duties, jurisdiction, and authority, criminal as well as civil, over his Majesty's subjects residing at or resorting to the ports or other places within the dominions of the Sublime Ottoman Porte in Europe, Asia, and Africa, and likewise in the States of Barbary, to be exercised and performed by his Majesty's ambassadors, consuls, or other officers appointed or to be appointed by his Majesty for the protection of the trade of his Majesty's subjects in the ports and places before mentioned, and to establish forms of proceeding in all matters coming under the cognizance of the said ambassadors, consuls, or other officers in virtue of such order or orders in council; and to impose penalties, forfeitures, or imprisonments for the breach of any such directions or regulations to be enforced in such manner as in the said order or orders shall be specified; and the said ambassadors, consuls, and other officers are hereby authorized and required to obey and enforce the said regulations and directions; and the same shall be effectual and binding upon all subjects of his Majesty residing at or resorting to the said ports and places for the purposes of trade or otherwise.

II. And whereas cases occasionally arise within the dominions of the *Ottoman* Porte above specified, and in the states of *Barbary*, wherein the interposition of his majesty's ambassadors, consuls, or other officers is required by the subjects of other Christian powers in the determination of differences or disputes between such persons and *British* subjects; be it therefore enacted, that it shall be lawful for his majesty, by any order or orders in council, to make and issue, in the same manner, directions and regulations for the guidance of his ambassadors, consuls, and other officers, and of all other subjects of his majesty, in cases in which the interposition of his majesty's ambassadors, consuls, or other officers may be so required for the settlement of any differences or disputes which may arise between *British* subjects and the subjects of any Christian power within the dominions of the Sublime Porte in *Europe*, *Asia*, and *Africa*, and in the states of *Barbary*: provided always, that every order in council issued by the authority of this act shall be published in the *London Gazette*, and shall be laid before both houses of parliament, and shall not be binding and effectual until six months after it shall have been so laid before both houses of parliament.

III. And be it further enacted, that if any suit or action shall be brought against any person or persons for any thing done in pursuance of this act, or of any orders or regulations made by virtue thereof, then and in every such case such action or suit shall be commenced or prosecuted within six months after the fact committed, and not afterwards, except where the cause of action shall have arisen in any place not within the jurisdiction of any of his majesty's courts having civil jurisdiction, and then within six months after the plaintiff or plaintiffs, the defendant or defendants, shall have been within the jurisdiction of any such court; and the same and every such action or suit shall be brought in the county or place where the cause of action shall have arisen, and not elsewhere, except where the cause of action shall have arisen in any place not within the jurisdiction of any of his majesty's courts having civil jurisdiction; and the defendant or defendants shall be entitled to the like notice, and shall have the like privilege of tendering amends to the plaintiff or plaintiffs, or their agent or attorney, as is provided in actions brought against any justice of the peace for acts done in the execution of his office, by an act passed in the 24th year of the reign of King *George* the Second, [Cap. 44.] intituled *An Act for the rendering justices of the peace more safe in the execution of their office, and for indemnifying constables and others acting in obedience to the warrants*; and if the plaintiff or

plaintiffs shall become nonsuit, or discontinue any such action after the defendant or defendants shall have appeared, or if a verdict shall pass against the plaintiff or plaintiffs, or if upon demurrer judgment shall be taken against the plaintiff or plaintiffs, the defendant or defendants shall and may recover treble costs, and have the like remedy for the recovery thereof as any defendant or defendants hath or have in any cases of law.

CONVENTION of Commerce and Navigation between Her Britannic Majesty and the Sultan of the Ottoman Empire. Signed at Balta-Liman, near Constantinople, 16th August, 1838, appended to the preceding Capitulations granted in 1809, to Great Britain by the Ottoman Porte, amending and altering certain Stipulations therein contained, as regards the Commerce and Navigation of the two Countries.

During the friendly intercourse which has happily subsisted so long between the Sublime Porte and the kings of Great Britain, capitulations granted by the Porte, and treaties concluded between the two powers, have regulated the rates of duties payable on merchandize exported from, and imported into, the dominions of the Sublime Porte, and have established and declared the rights, privileges, immunities, and obligations of British merchants trading to, or residing in, the imperial territories. But since the period when the above-mentioned stipulations were last revised, changes of various kinds have happened in the internal administration of the Ottoman empire, and in the external relations of that empire with other powers; and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Highness the Sultan, have therefore agreed now to regulate again, by a special and additional act, the commercial intercourse of their subjects, in order to increase the trade between their respective dominions, and to render more easy the exchange of the produce of the one country for that of the other. They have consequently named for their plenipotentiaries for this purpose, that is to say:

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, the Right Honourable John Brabazon, Lord Ponsonby, Baron of Imokilly, a peer of the United Kingdom of Great Britain and Ireland, Knight Grand Cross of the Most Honourable Order of the Bath, of the *Nishan* of Honour, &c &c. &c., her Majesty's ambassador extraordinary and plenipotentiary at the Sublime Porte, &c.

And his highness the Sultan, the most illustrious and most excellent vizir Mustapha Reshid Pacha, minister for foreign affairs, bearing the decoration belonging to his high rank, a Knight Grand Cross of the Legion of Honour of France, &c. &c.; the excellent and most distinguished Mustapha Kiamee Bey, a member of the Supreme Council of State, assistant to the prime minister, president of the council of Agriculture and Industry, a minister of state of the first class, bearing the two decorations belonging to his offices, &c.; and the excellent and most distinguished Mehemed Nouree Effendi, a councillor of state in the department for foreign affairs, bearing the *Nishan* of Honour of the first class, &c.

Who, after having communicated their respective full powers, found to be in due and proper form, have agreed upon and concluded the following Articles:

ARTICLE I. All rights, privileges, and immunities which have been conferred on the subjects or ships of Great Britain by the existing capitulations and treaties, are confirmed now and for ever, except in as far as they may be specifically altered by the present convention: and it is moreover expressly stipulated, that all rights, privileges, or immunities which the Sublime Porte now grants, or may hereafter grant, to the ships and subjects of any other foreign power to enjoy, shall be equally granted to, and exercised and enjoyed by, the subjects and ships of Great Britain.

II. The subjects of her Britannic majesty, or their agents, shall be permitted to purchase at all places in the Ottoman dominions (whether for the purpose of internal trade or exportation) all articles, without any exception whatsoever, the produce, growth, or manufacture of the said dominions; and the Sublime Porte formally engages to abolish all monopolies of agricultural produce, or of any other articles whatsoever, as well as all

permits from the local governors, either for the purchase of any article, or for its removal from one place to another when purchased: and any attempt to compel the subjects of her Britannic Majesty to receive such *permits* from the local governors, shall be considered as an infraction of treaties, and the Sublime Porte shall immediately punish with severity any viziers and other officers who shall have been guilty of such misconduct, and render full justice to British subjects for all injuries or losses which they may duly prove themselves to have suffered.

III. If any article of Turkish produce, growth, or manufacture, be purchased by the British merchant or his agent, for the purpose of selling the same for internal consumption in Turkey, the British merchant or his agent shall pay, at the purchase and sale of such articles, and in any manner of trade therein, the same duties that are paid, in similar circumstances, by the most favoured class of Turkish subjects engaged in the internal trade of Turkey, whether mussulmans or rayahs.

IV. If any article of Turkish produce, growth, or manufacture, be purchased for exportation, the same shall be conveyed by the British merchant or his agent, free of any kind of charge or duty whatsoever, to a convenient place of shipment, on its entry into which it shall be liable to one fixed duty of nine per cent *ad valorem*, in lieu of all other interior duties.

Subsequently, on exportation, the duty of three per cent, as established and existing at present, shall be paid. But all articles bought in the shipping ports for exportation, and which have already paid the interior duty at entering into the same, will only pay the three per cent export duty.

V. The regulations under which firmans are issued to British merchant vessels for passing the Dardanelles and the Bosphorus, shall be so framed as to occasion to such vessels the least possible delay.

VI. It is agreed by the Turkish Government, that the regulations established in the present convention, shall be general throughout the Turkish Empire, whether in Turkey in Europe, or Turkey in Asia, in Egypt, or other African possessions belonging to the Sublime Porte, and shall be applicable to all the subjects, whatever their description, of the Ottoman dominions: and the Turkish Government also agrees not to object to other foreign powers settling their trade upon the basis of this present convention.

VII. It having been the custom of Great Britain and the Sublime Porte, with a view to prevent all difficulties and delay in estimating the value of articles imported into the Turkish dominions, or exported therefrom, by British subjects, to appoint, at intervals of fourteen years, a commission of men well acquainted with the traffic of both countries, who have fixed by a tariff the sum of money in the coin of the Grand Signior, which should be paid as duty on each article; and the term of fourteen years, during which the last adjustment of the said tariff was to remain in force, having expired, the high contracting parties have agreed to name conjointly, fresh commissioners to fix and determine the amount in money which is to be paid by British subjects, as the duty of three per cent upon the value of all commodities imported and exported by them; and the said commissioners shall establish an equitable arrangement for estimating the interior duties which, by the present treaty, are established on Turkish goods to be exported, and shall also determine on the places of shipment where it may be most convenient that such duties should be levied.

The new tariff thus established, to be in force for seven years after it has been fixed, at the end of which time it shall be in the power of either of the parties to demand a revision of that tariff; but if no such demand be made on either side, within the six months after the end of the first seven years, then the tariff shall remain in force for seven years more, reckoned from the end of the seven preceding years; and so it shall be at the end of each successive period of seven years.

VIII. The present convention shall be ratified, and the ratifications shall be exchanged at Constantinople, within the space of four months.

In witness whereof, the respective Plenipotentiaries have signed the same, and have affixed their seals thereunto.

Done at Balta-Liman, near Constantinople, on the 16th day of August, 1838.

(L.S.) MUSTAPHA RESHID.
(L.S.) MUSTAPHA KIANEE.
(L.S.) MEHEMED NOUREE.

Additional Articles.—Certain difficulties having arisen between the ambassador of her Britannic Majesty and the plenipotentiaries of the Sublime Porte, in fixing the new conditions which should regulate the commerce in British goods imported into the Turkish dominions, or passing through the same in transit; it is agreed between his Excellency the British Ambassador and the plenipotentiaries of the Sublime Porte, that the present convention should receive their signatures, without the articles which have reference to the above-mentioned subjects forming part of the body of the said convention.

But at the said time it is also agreed,—the following articles having been consented to by the Turkish Government,—that they shall be submitted to the approbation of her Majesty's Government, and should they be approved and accepted by her Majesty's Government, they shall then form an integral part of the treaty now concluded.

The articles in question are the following:

Art. I. All articles being the growth, produce, or manufacture of the United Kingdom of Great Britain and Ireland and its dependencies, and all merchandize, of whatsoever description, embarked in British vessels, and being the property of British subjects, or being brought over land, or by sea, from other countries by the same, shall be admitted, as heretofore, into all parts of the Ottoman dominions, without exception, on the payment of three per cent duty, calculated upon the value of such articles.

And in lieu of all other and interior duties, whether levied on the purchaser or seller, to which these articles are at present subject, it is agreed that the importer, after receiving his goods, shall pay, if he sells them, at the place of reception, or if he sends them thence to be sold elsewhere in the interior of the Turkish Empire, one fixed duty of two per cent; after which such goods may be sold and resold in the interior, or exported, without any further duty whatsoever being levied or demanded on them.

But all goods that have paid the three per cent import duty at one port, shall be sent to another free of any further duty, and it is only when sold there or transmitted thence into the interior, that the second duty shall be paid.

It is always understood that her Majesty's Government do not pretend, either by this Article or any other in the present treaty, to stipulate for more than the plain and fair construction of the terms employed; nor to preclude, in any manner, the Ottoman Government from the exercise of its rights of internal administration, where the exercise of those rights does not evidently infringe upon the privileges accorded by ancient treaties, or the present treaty, to British merchandize or British subjects.

II. All Foreign goods brought into Turkey from other countries, shall be freely purchased and traded in, in any manner, by the subjects of her Britannic Majesty or the agents of the same, at any place in the Ottoman dominions; and if such foreign goods have paid no other duty than the duty paid on importation, then the British subject or his agent shall be able to purchase such foreign goods on paying the extra duty of two per cent, which he will have to pay on the sale of his own imported goods, or on their transmission for sale into the interior: and after that, such foreign goods shall be resold in the interior, or exported, without further duty: or should such foreign goods have already paid the amount of the two duties (*i. e.* the import duty and the one fixed interior duty), then they shall be purchased by the British subject or his agent, and afterwards resold or exported, without being ever submitted to any further duty.

III. No charge whatsoever shall be made upon British goods—(such being the growth, produce, or manufacture of the United Kingdom or its dependencies, or the growth, pro-

duce, or manufacture of any foreign country, and charged in British vessels and belonging to British subjects)—passing through the Straits of the Dardanelles, of the Bosphorus, and of the Black Sea, whether such goods shall pass through those straits in the ships that brought them, or are transshipped in those straits, or, destined to be sold elsewhere, are landed with a view to their being transferred to other vessels (and thus to proceed on their voyage) within a reasonable time.

All merchandize imported into Turkey for the purpose of being transmitted to other countries, or which, remaining in the hands of the importer, shall be transmitted by him for sale to other countries, shall only pay the duty of three per cent paid on importation, and no other duty whatsoever.

Done at Balta Liman, near Constantinople, the 16th day of August, in the year 1838.

(L. S.) PONSONBY.

(L. S.) MUSTAPHA RESHID.
(L. S.) MUSTAPHA KIANEE.
(L. S.) MEHEMED NOUREE.

EXPLANATORY NOTE delivered to Lord Ponsonby by His Excellency Nouree Effendi, on the 27th of August, 1838, relative to the 2d Article of the preceding Convention.

(Translation.)

It is stipulated by the 2d Article of the Treaty of Commerce, concluded between the Sublime Porte and the British government, on the 25th Djemaziulevvel, 1254, (16th August, 1838,) that English merchants are at liberty to purchase all kinds of merchandize in the Ottoman Empire.

But in order that the right of English merchants to sell within the Ottoman Empire, or to export, the merchandize which they may purchase, may not be liable to misconception, the embassy of her Britannic Majesty has desired that an explanation should be given on this point, either in the treaty itself, or in a special note.

The meaning of the passage, of which an elucidation is requested, is clear, from the relation which the subsequent points in the 2d Article bear to each other. But we nevertheless repeat, that English merchants may, in virtue of the treaty, purchase within the Ottoman Empire, all kinds of merchandize, may, if they think proper, send the same abroad after having paid the duty thereon stipulated by the treaty; or may, if they think fit, resell the same within the Ottoman Empire, on conforming to the arrangements established by the said treaty with reference to internal commerce.

Such are the arrangements of the treaty; and we give this explanation to the Ambassador, renewing to his Excellency the assurances of our sincere and perfect friendship.

The 7th Djémaziul-akir, 1254, (27th August, 1838.)

DECLARATION agreed upon and signed by the respective Plenipotentiaries, upon the Exchange of the Ratifications of the preceding Convention, on the 16th of November, 1838.

WHEREAS it appears on examining the English translation of the 8th Article of the Turkish original of the Treaty signed at Balta-Liman on the 16th of August, 1838, that certain words are inserted in that Article, in the Turkish language, which have no equivalent words in the English original of the same Article of that Treaty signed by the British Plenipotentiary,—these words being to the effect, that the Treaty is not to come into operation until the 1st day of March, 1839; and whereas it is desirable to prevent all doubts which might arise in consequence of the difference between the texts of the English and Turkish originals of the Treaty; it is hereby declared to be the understanding of the Ple-

nipotentiaries on both sides, that the Treaty aforesaid shall begin to have effect on the 1st day of the month of March, 1839.

It is further agreed and declared,—the Turkish text of the first of the three additional Articles, containing the words, "*overland or by sea*," and the words "*or by sea*," having been omitted in the English text, but having been introduced into her Britannic Majesty's ratifications,—that these words shall be considered as having the same force and validity as if they had been inserted in the original Articles signed by the British and Turkish Plenipotentiaries respectively.

Done at Calender, on the 16th day of November, 1838.

(*Signed in the Turkish original.*)

(L.S.) PONSONBY. (L.S.) MUSTAPHA KIANEE.
(L.S.) MEHEMED NOUREE.

The terms of the above Treaty, and the Tariff of Duties which follows, have been acceded to by Austria, France, and Belgium:—Russia has lately negotiated a separate treaty and tariff with the Porte. A *précis* of this Treaty and Tariff, and of other Treaties between the Porte and Russia, will be found in the Supplementary Section of this Volume. The import and export duties in the tariff agreed to with Russia, are based upon the rate of 3 per cent, in both cases. Russia has not, however, entered into any stipulation for the abolition of the internal duties, in lieu of which, England and France have agreed to pay 9 *per cent on exports*.

TURKISH TARIFF

Agreed upon by the Commissioners appointed under the 7th Article of the Convention of Commerce and Navigation between Great Britain and the Sublime Porte, of the 16th August, 1838.

TARIFF of the Rates of Duty payable, according to the Capitulations and Treaties existing between Great Britain and the Sublime Ottoman Porte, on articles of the growth, produce, or manufacture of Great Britain and Ireland and its Dependencies, imported into the Ottoman Empire, and on all merchandize of whatsoever description brought by British subjects into the Ottoman dominions from other countries, and on articles of Turkish produce, growth, and manufacture, purchased by British subjects or their agents at places in the Ottoman dominions for exportation, as well as on articles of Turkish produce, growth, and manufacture exported by them from the Ottoman dominions to their own and other countries; which rates have been regulated by Commissioners appointed by his Excellency the Right Honourable Lord Ponsonby, her Britannic Majesty's ambassador on the one part, and by Commissioners appointed by the Sublime Porte on the other part.

The said Tariff is to commence to have effect and be observed on and from the 1st = 13th March, 1839.

DUTIES to be levied on Articles imported into the Ottoman Empire, based upon a Rate of Three per Cent *ad valorem*.

Articles not enumerated pay 3 per cent internal duty, and 3 per cent export duty.

Gazette de Commerce, April 22, 1838.

MONIES, WEIGHTS, AND MEASURES.

The piaster which was worth 3 francs, or 2*s.* 4*d.* in 1768, has been so far debased according to the *Dictionnaire du Commerçant*, that its value in 1820 was no more than 40 centimes, and in 1831 it sunk in value to 27 *centimes*. The same authority ranges the exchange as follows:

On London, 95 Turkish piasters = 1*l.* sterling; on Vienna and Trieste, 396 Turkish paras = 1 Austrian florin; on Paris and France, 150 Turkish paras = 1 franc. (See rates of exchange, hereafter, at different places, in abstracts from consular reports.)

The uncertain value of the money of Turkey has rendered it impossible for us to reduce the rates of duty in the foregoing tariffs to English money, which must be calculated according to the value of the piaster, para and asper, at the time of importation and exportation: this variable depreciation of the currency (the Finances of Turkey) has created a perpetual source of perplexity, uncertainty, and confusion, as respects shipping goods from England, and the sale or purchase of merchandize at the several Ottoman ports. There is neither *usance* nor *days of grace* observed at Constantinople.

Accounts are usually kept in piasters, which are divided into paras and aspers: 3 aspers make 1 para; 40 paras, or 120 aspers, 1 piaster; but for the convenience of reckoning accounts are often kept in piasters and centimes. Money is also reckoned by *silver purses* of 1 *kefer* = 500 piasters, and gold purses of 1 kutze = 30,000 piasters.

The mint at Constantinople coins annually very large quantities of greatly debased money. The pieces issued as gold and silver are scarcely more than washed with those metals. The old coinage has been from time to time called in, and new debased emissions made and paid out by the government at the same nominal value as the old.

The gold coins are the chequin or sequin of 5 piasters, with halves and quarters of the same: their value, like that of the piaster, varies according to their purity.

The cantar of cotton, in yarn or wool, is 45 okes. Silks from Persia are sold by the catman of 6 okes; and from Brussa, by the taffee of 610 drachms. The chequee of cotton is 250 drachms; and of goat's wool, 800 drachms.

Weights.—The oke, 2.272 rotoli, is the principal weight, and is equal to 2 lbs. 13 oz.

5 drachms avoirdupois. There is also the chequee, equal to 4967 grains; and the cantaro, or quintal of 100 rotoli, are equal to 124 lbs. 9 oz. 12 drachms avoirdupois. The subdivisions of the weights are:

64 grains or 16 killos = 1 drachm; 100 drachms = 1 chequee; 4 chequees = 1 oke; 6 okes = 1 batman; 44 okes = 1 cantaro, or quintal; 176 drachms = 1 rotolo; 100 rotoli = 1 cantaro, or $7\frac{1}{3}$ batmans; 1 cantaro or quintal = 124,457 lbs. avoirdupois = 56,437 kilogrammes.

Liquid Measure.—The metre, or almud, is equal to 1 gallon and 3 pints English wine measure, or about 6 litres. It is generally used for wine, oil, and other liquids. But the almud of oil is estimated to weigh 8 okes.

Long Measure.—The pic, or pike, is generally estimated in commerce as equivalent to $\frac{3}{4}$ of a yard, English. There are, however, the long pic, called *arshim*, or *kulchi*, with which silks and woollen cloths are measured; and the shorter pic, called endrezeh, for cottons and carpets. Of the *arshim*, 100 are equal to nearly $77\frac{1}{2}$ English yards; and of the *endezeh*, 100 are equal to $74\frac{1}{2}$ yards.

Dry Measure.—Four kisloz = 1 forteri, or fortin, and the forteri contains about $3\frac{1}{2}$ Winchester bushels, and weighs 240 lbs. The ki-loz of rice weighs 10 okes.

CHAPTER V.

AGRICULTURE PRODUCTIONS AND MANUFACTURES OF EUROPEAN TURKEY.

THE agriculture productions of the three *principalities* and the pachalics of BULGARIA and BOSNIA, we shall notice under the head of the respective *Danubian states* of the Ottoman empire.

ROUMELIA, MACEDONIA, ALBANIA, and MONTENEGRO, comprise, with the Island of CANDIA, the remaining regions of European Turkey.

PROPERTY in Turkey was held, after its conquest, by the military chiefs and soldiery, among whom it was distributed. The *Spahis* are still the chief feudal lords who hold the *estates* or *zaimets*. Of these there were at the time of Solyman the Magnificent, 3192 large *zaimets*, and 50,150 small *zaimets*, less in extent than about 500 acres. In 1816 the number of feudal estates in European Turkey were stated to be under 1000, and in Asia Minor under 1500. Exclusive of these, there are large estates which either belong positively, or pay a heavy *quit rent* to the Sultan or to the church. The pachas and their fiscal officers, who are the scourges of the feudal proprietors, extort from them and from the cultivators of the soil, the taxes either directly or through the municipalities. The consequence has been that agriculture and agricultural instruments in Turkey are generally in the most rude condition. In Thrace, cultivation is in a better state than elsewhere south of the Balkan. The valley of *Maritza* is fertile, producing rice, maize in plenty (south of the Balkan), wheat, millet, onions, artichokes, vines, various fruits and vegetables. Wheat, oats, barley, buckwheat, beans, turnips, flax, madder, tobacco, cotton, saffron, olives in the southerly parts, and various other crops, are grown generally, of various qualities and quantities of production, in all European Turkey south of the Balkan. The red wines of Mace-

donia and Albania would be good, or at least rich in quality, if prepared with care; but as made at present, they are either sweet or sour, never dry, and, to increase the quantity, often mixed with water. Notwithstanding the rude state of agriculture in European Turkey, there is less poverty than, or not so much destitution as to the means of sustaining life as, in many other European states. The absence of beggary, and the actual means of enjoying their daily bread, is conspicuous in Roumelia, Bulgaria, Macedonia, and Albania. The latter province is perhaps the most independent in this, as well as in other respects, of all European Turkey, although Bulgaria is by far the best cultivated. Sheep and goats of inferior breeds abound in Turkey. Oxen and cows are proportionably few in number, and equally degenerate or inferior in kind. Veal is never eaten by the Moslems; beef seldom; mutton and goats' flesh generally form the animal food of the people. Pork is held nearly in the same abhorrence by the Turk as by the Jew. The horses of European Turkey are small, strong, and hardy, but neither handsome nor fleet.

Of *wool*, *silk*, and the other productions of Turkey which enter into her export trade, we will speak hereafter in our detailed view of the trade and commerce of the principal marts of the empire.

Manufactures.—The manufactures of Turkey are more important for domestic use than for exportation. Among the most distinguished are the carpets of Smyrna; crapes and gauzes of Salonica,—silks of Brussa,—printed muslins and cottons of Constantinople,—tanneries and dressed leather of Adrianople,—coarse cottons and other coarse cloths of Roumelia, Thessaly, Albania, and even of Bosnia,—various works in metal, and gold and silver lace,—some works in hair and linen—the camlets and serges of Angora—and the works of smiths and ordinary handicraft, comprise most of the manufactured products of the empire. The iron-mines of Bosnia are worked to some extent for the use of that province, where arms and some iron and copper works are made. The mines of Samakoff, near Philippoli, have recently produced cheap common iron. It would appear that not only the manufactures of cotton and silk, which are stated to have been formerly of valuable importance, have greatly declined, but that the Turks have neither taste nor inclination for the arts nor for manufactures. As the population of Armenian, Greek, and Frank races are increasing rapidly, while those of the Turkish race appear to have been diminishing in numbers; and should there be security, hereafter, for investments in manufacturing industry, we see no obstacle to the growth and prosperity of various fabrics in Turkey, excepting, that it will long be more profitable for the several Ottoman provinces in Europe and in Asia to exchange their agriculture products, and raw materials for the manufactured goods of more populous and more advanced countries.

CHAPTER VI.

THE DANUBIAN COUNTRIES.

BULGARIA.—This province comprises the Pachalics of *Widdin* (which town being considered by some the capital), *Varna*, *Silistria*, and *Sophia*, the latter city being also considered the capital of the province. The inhabitants of this province are principally of the Greek church, and are an industrious and kindly disposed people, greatly oppressed by the Turkish pachas and inferior officers of the Porte. The following account translated from the French original, lately received by us, from Bulgaria, and drawn up by a creditable, scientific, and official traveller, appears to present the best description we can offer of this naturally rich section of European Turkey.

"This province is, with the exception of a large district, situated between Sistova and the Balkan Chain (which, although well covered with grass, is totally deficient of water) is generally fertile, and susceptible of good cultivation. It is well wooded, and the best system of cultivation is met with in those districts which are inhabited by the Bulgarians.—that is from Silistria to Widdin.

"That portion of the country governed by the Pacha of Varna, situated along the shores of the Black Sea, is generally peopled by Turks and Tatars, who are occupied in rearing cattle, and do little as regards agriculture. The fine plain of Baladah, is peopled by Russians (who have quitted Bessarabia) and by the natives. Its chief agricultural product is hard wheat, which is raised in large quantities. It is to be regretted that this province should be so remotely situated from the capital of the empire, and consequently become subject to a capricious system of government exercised by its pachas and *agas*. These, only attentive to their individual interests, prevent the peasantry from extending local industry, and instead of supporting the general improvement of trade and commerce, usually oppose every obstacle to its extension.

"The district of *Varna*, with its various ports upon the Black Sea, and its proximity to Constantinople, offers great facilities to commerce. Turkish and Greek vessels arrive at Varna, to be laden with grain and other products, and not being subjected to the difficulties of river navigation they carry the same at a moderate freight, and the merchants are consequently well able to pay a greater expense for land carriage, and to transport their produce farther from the interior. There is also at Varna a depot for the tallow and other products of the province, which is transported by land from Widdin, and shipped for Constantinople. The amount of the former article produced this year (1841), has been larger than usual, and judging by the number of cattle, may be annually augmented. The district of *Varna*, comprising *Schoumna*, has furnished the greater portion: about 1200 oxen having been killed for the purpose of obtaining their fat, &c. The tallow trade is entirely in the hands of Turkish merchants at Constantinople, who purchase in the spring herds of oxen (to the number of 40,000), which they fatten during the summer months. It is consequently difficult to meet with any tallow or fat in this district, the greater portion being sent to the capital, either for consumption there, or for exportation into the neighbouring provinces.

"*Kustendje** has this year exhibited signs of commercial activity: many large houses having sent hither their agents for the purchase of grain, but the exposed position of this port, formerly sheltered by a mole, offers a great obstacle to its trade. Its environs

* This port was used by the Romans, and the ruins of the mole, built by Constantine, are said to be still visible for a considerable distance into the sea.

furnish an abundant supply of grain, the districts near the plain of Babadah being highly cultivated. The late facility of steam navigation on the Danube as far as Cernowoda, also tends to render the position of this place very important, and it appears that notwithstanding the inconveniences above referred to, this port may become one of the principal seats of commerce, and the chief outlet for the productions of the district.

"The harvest of this year, although moderate in the immediate neighbourhood of *Kustendje*, is yet sufficiently abundant, taking into consideration the amount of land cultivated, and the grain produced is esteemed as superior to that grown near *Taganrog*.

"The *district of Silistria* is throughout well cultivated, and has this year produced a large supply of provisions of all kinds, it not having suffered from the effects of the droughts, which have been severely felt in the adjoining provinces. Two sorts of hard wheat are raised, one termed '*arnaut*,' the other '*coloss*;' the latter is the finest in appearance, but the former yields the best flour. The quantity of grain produced in this vicinity this year, may be estimated at 50,000 chilos, of which 25,000 are required for consumption in the district, the other 25,000 being exported. Besides this, about 30,000 chilos of barley were raised, being of very good quality. Maize, beans, and flax seed have not succeeded; 7000 head of oxen have been slaughtered in the *Salkanna* of *Silistria*, the tallow produced being sent to Constantinople. The city of Silistria and its environs are more peopled by Turks, Tartars, and Walachians, than with Bulgarians. The fortifications here are in a most wretched condition, although they have 360 pieces of artillery, partly placed on the ramparts and partly laid on the ground. There is no garrison, the 400 artillery men who should properly do duty here, being entirely occupied in various trades, &c., as ordinary citizens. *Silistria* is governed by an *Aga*.

The country between Silistria and *Roukschouk* is well wooded, and possesses abundant pasturage; it has, however, suffered so much this year from the dryness of the season as scarcely to have produced sufficient grain for its home consumption. It is peopled by Bulgarians, who are much more industrious than the Turks or Walachians. In ordinary years this district yields double the amount of produce that is raised in Silistria. Owing to the want of provisions, the trade this year has been insignificant. *Wood for building and oak planks* are obtained here of a superior quality, and at a moderate price. 6000 oxen were killed for the purpose of obtaining their fat for making tallow.

"The route from *Roukschouk* to *Varna* is the most frequented, and various descriptions of goods, as *tallow, honey, skins and hides, flour, &c.*, brought from Widdin, are sent by water, and afterwards forwarded by land carriage to Varna and Constantinople. In seasons when corn is sufficiently abundant to be exported, it is sent by the Danube, as far as *Matchin* or *Ibraila*, and there reshipped for Constantinople.

"*Roukschouk* is better peopled than Silistria, and is the residence of the *Vizier* of the *Pachalic of Silistria*, the latter having under his command three pachas, one of them being the Pacha of Varna. The merchants of this place, who carry on trade with the neighbouring provinces and the Austrian territory, are for the most part Jews and Greeks. The fortifications here are in a better state than those of Silistria, but equally deficient as regards artillery men.

"From Roukschouk to Sistova the country presents a very fertile and pleasing aspect, being exclusively occupied and cultivated by Bulgarians. The latter city is considered their capital, and is one of the most important towns on the right bank of the Danube. The harvest in this district having partially failed, the usually good supplies of grain have not been brought to market. There is no resident pacha at Sistova, and the merchants of this place enjoy certain privileges and facilities in regard to trade: they have a commercial treaty with Walachia, and carry on a considerable trade with that province. The chief products are *hemp* and *flax*, *hides* and *skins*, *attar of roses*, and *tallow*. In the vicinity of Widdin the face of the country changes, and from thence presents a continued succession of steppes, thinly peopled, and only in those places where water is found. In the more mountainous districts cultivation recommences, but, generally speaking, the quantity of agricultural produce raised in this neighbourhood is not more than sufficient for local consumption. The present *Vizier*, maintaining the ancient and restrictive system, will not permit the exportation of grain; and he personally appropriates any superabundant quantity of corn, which is manufactured into flour at his own mills, which he afterwards sends to Constantinople.

"The harvest has yielded an average crop, but the farmers are unable to sell their surplus produce, until they have received permission from the pacha to do so, and at a price which he arbitrarily fixes.

"The population consists of a mixed race of Bulgarians, Servians, Walachians, and Hungarians, and if the local government did not interfere as regards commercial enterprise, Widdin might become the seat of a considerable and active trade, and a large depot for the productions of the province. Some favour is shown by the Pacha, to the resident merchants at this place, who import manufactured articles from Austria.

"The greater portion of the trading class are Jews, with some few Turks, who trade with the towns in Roumelia, furnishing these places with various manufactured articles.

"Widdin is the capital of this province, and is governed by a vizier, who maintains good order in his administration of public affairs. The ancient fortress here is in excellent repair, and two others have been constructed by the vizier; they are well built, and effectively garrisoned by a good corps of artillery."

The canal projected in 1837 would have passed through this fertile province from Czernadovo to Kustendje, if the intended plan had been carried into execution, and it would have opened the traffic of the Danube and Black Sea by a short and direct route, avoiding the intricate navigation of the shoals and sand-bars in and off that river.

Bosnia.—This generally little known province of European Turkey, although in many parts mountainous, has extensive fruitful villages, producing wheat maize, barley, and various vegetables, sufficient for the consumption of the inhabitants: one half of whom are stated to be Mohammedans, one-fourth Greeks, and the remainder chiefly Roman catholics. There are among the whole, 16,000 gipsies, about 2000 Jews, and probably 1500 Armenians.

Pasturage, more than agriculture, constitutes the pursuit of the inhabitants. Fruits are abundant. The wines are rough and strong, and a liqueur is prepared from a spirit distilled from plums. Numerous rapid rivers traverse the country. The Save, one of the largest navigable branches of the Danube, divides Bosnia from the Austrian Empire, and might be rendered of great commercial importance to this province: from which the pine, oak, and linden timber, that abounds in the forests, might be floated down to the Danube for shipment.

The horses are strong and serviceable, and herds of cattle and sheep are continually met with: the wool of the latter is in high repute. Hogs are also numerous on the lands occupied by the Christian population. Bees are reared especially on the Croatian frontier. Goats are also bred. There are but few manufactures: they consist principally of coarse woollens for domestic wear,—common works of iron,—guns and other arms,—saltpetre and gunpowder. Notwithstanding the wretched roads, there is a considerable transit trade, in European and other articles, which centres in *Bosna-Serai*, the capital. This city has a population estimated at 55,000, and its import, transit, and export trade is carried on from, and diverges to Macedonia, Albania, Roumelia, Dalmatia, Servia, Hungary, and the Danube. The exports are chiefly *wool, skins and hides, hair, timber, cattle,* and *hogs*. The imports are principally *woven goods, hardwares, glass, sugar, coffee, spices, salt,* and *olive oil.*

The inhabitants of *Bosna-Serai* are described as industrious. The iron mines, and one lead mine in the neighbourhood, are allowed to be worked by the Turks. Quicksilver is found, and various minerals are said to abound in the mountains; but even the gold and silver, mixed with the sand and pebbles washed down by the torrents into the rivers, is prohibited by the Turks to be collected

Bosnia being under the government of a Pacha with three tails, and his subordinates, its administration is corrupt, and bigoted, and, consequently, its resources remain comparatively undeveloped.

CHAPTER VII.

DANUBIAN PRINCIPALITIES.

I.—SERVIA.

The three Danubian principalities, Servia, Moldavia, and Walachia, although usually included as portions of the Ottoman Empire, can only be considered *tributary*; and, at most, as acknowledging, by paying tribute, the Sultan for their *suzerain*. The principality of Servia is a mountainous country, but generally with a fertile soil, limited and rude in its agriculture. The lands of the extensive plain or valley of the Morava are remarkably productive when brought under cultivation. The population are chiefly of the Greek Church, and live by rearing cattle, and especially hogs. Maize is the principal grain raised, but all kinds, except rice, common to other parts of Europe, ripen in perfection. Vines are cultivated, but with little care, and the wine is rough, strong, and of a disagreeable flavour. Hemp, flax, tobacco, cotton, and most other crops are grown, but all rudely and not extensively. The horses and horned cattle are of inferior breeds. Hogs swarm in the woods, and over most parts of the country. In summer they fatten on acorns. In winter they are maintained chiefly on maize. Prince Milosch was considered rich, chiefly from the circumstance of his being the principal hog proprietor in Servia. The numbers exported, vaguely estimated at from 220,000 to 250,000 annually, are chiefly into the Austrian states. Minerals, especially iron, coal, copper, and lead, are known to abound. Oak timber of good quality for ship-building, staves, and other purposes, grows in most parts of Servia, and the Morava, Timok, and other streams falling into the Danube, extend from the interior great facilities for transporting the same as well as other produce to markets. Under a good and efficient government, Servia would no doubt improve rapidly. But disorder and insecurity have so long been prevalent, that many years will probably pass over before the resources of the country can be profitably developed. Belgrade, the capital, and Semendria are conveniently situated for trade. The Servians are chiefly a Slavonian race, and rather addicted to trade; we have frequently seen them in the markets of Vienna and Pest, and even at Leipsic.

The exports, exclusive of *hogs*, are *leeches*, a monopoly of the government, and some skins, wool, and wood. The imports are woven goods, some sugar and coffee, hardwares, &c.

The following is an extract from a consular letter, dated Semlin, December 31, 1842:

"The yearly average of entries at the Belgrade custom-house gives the following result:

"Four hundred sacks of ordinary wool, valued at 8½*d.* to 10*d.* per lb. 162,000 sheep-skins, dressed, at 1*s.* 3½*d.* each; 107,000 lamb-skins at 11½*d.* each: 5180 buffalo and cow-hides at 15*s.* 2*d.* each; 2000 quintals of wax at 1*s.* 9½*d* per lb. English; 980,000 lbs. of honey at 2*d.* per lb.; 1,398,000 cwt. of bark (tan), at 1*d.* per cwt.; 9200 lbs. of silk at 9*s.* 2*d.* per lb.; 3500 oxen and cows to Turkey and Austria, at 4*l.* 15*s.* the pair of oxen, and 2*l.* 0*s.* 6*d.* for cows; 169,000 pigs, for Austria, at 2*l.* 15*s.* the pair of fatted pigs, and 1*l.* 10*s.* for the lean ones. A great quantity of fine wool is sent into Austria, Hungary, and Walachia; and they take from Hungary, hardware, delft, porcelain, pottery, and salt. Semlin supplies nearly the whole of the wheat, flour, oats, meat, vegetables, and fruits, consumed at Belgrade.

"The Servian agriculturists make money by merely sending their herds of swine into the oak forests in the morning, and recalling them at sunset; the herds are highly paid, and the men employed upon the public roads receive a sum equal to eightpence sterling a day, and their food, for about seven hours' work."

2.—WALACHIA AND MOLDAVIA.

These two principalities are even more independent, than Servia, of the Porte: they acknowledge the Sultan as their *Suzerain*, but the influence of Russia has been sufficient to carry the appointment of the *hospodars*.

The following account of these principalities, and of their political relations with the Porte and with Russia, was drawn up for us in French by a distinguished Boyard, whose name we have not his authority to mention.

"WALACHIA, including the islands of the Danube, has a superficial extent of 1810 geographical square leagues, which total amount may be thus subdivided; viz., mountainous districts, 1685; plains, 3033; water, 49; or, by another arrangement: fields and meadows, 3230; woods, 1337; marsh lands, 158; vineyards, 31; rocks and sandy districts, 10.

"MOLDAVIA has an area equal to about two-thirds of that of Walachia.

"These principalities contain a population of 3,500,000 inhabitants, but are not peopled to more than one-fifth of their extent. Consequently they are by no means so important as they may one day become. The soil is excellent, and will yield all such produce, as France and England now seek from the ports of the Black Sea.

"The inhabitants, a very intelligent and sagacious race, apply themselves almost exclusively to agriculture, and future commerce will no doubt cause this branch of industry to be carried out to the highest degree of perfection. The laws of the country seem to have this object in view, for by recent enactments every attention has been shown towards the construction of bridges and roads, and every facility afforded for rendering the navigation of the greater number of the rivers, safe and expeditious.

"When these regulations were promulgated, and the general freedom of commerce declared, the joy of the inhabitants was universal; and almost immediately the ports of Ibraïloff and Giourgova were filled with various foreign vessels seeking wheat and other grain.

"The provincial government, however, imposed a very severe tax upon the exportation of grain. The amount of duty fixed by the tariff for the export generally of various descriptions of produce was three per cent, in regard to grain it was raised to eight per cent, under pretence of the danger which might result from granting an unlimited export of corn. Prices fell in consequence. The improvements in respect to roads, bridges, &c.,

were abandoned, and the measures decreed by the chambers, in consequence of the law relative to canalization, remained in abeyance.

"This fall in the price of corn was not followed by any reduction in the duty, which, on the contrary, was raised to 10½ per cent. Thus the expense of export was nearly in the following proportion: viz.

"Export duty, at least, nine per cent; expense of transport, three per cent; and interest, at least, six per cent.

"Added to this may be taken into consideration the difficulties experienced from Russia at the mouths of the Danube (at Soulina), which were not allowed to be removed.

"Thus, in order that foreign countries may carry on any commerce with the principalities, it follows that they must consent to pay 18 per cent more for such produce than they could procure it at in Russia; or, in other words, if Russian agriculture gain six per cent, that of these districts will have lost 12 per cent.

"The efforts of the Provincial chamber to induce the government to modify this exorbitant duty, have produced but a slight relaxation of it. They were secretly informed that if they became more pressing in their demands, Russia, in order to protect her own commerce would find herself obliged to restrict exportation entirely. This hint was wisely received.

"The Principalities of Walachia and Moldavia in order to preserve their liberty and nationality, both of which were much endangered by the success of the Turkish arms in the 14th century, judged it advisable, to avoid total conquest, to grant the *Suzerainty* of these territories to the Porte, and, consequently, to pay tribute to that power, Turkey: in return, guaranteeing to them those rights and privileges which alone constitute the sovereignty of a nation.

"The first Treaty was concluded in 1393 with Bajazet Ildé.im. Its terms were as follows:

"ART. I. We Bajazet, &c. &c. have decreed, out of our extreme clemency towards Walachia, which, with its reigning prince, has made just submission to our invincible empire, that the country shall continue to be governed by its own laws, and that the prince regent shall have the right to declare war against, or make peace with, the neighbouring states—having also, in his own hands, the power of life and death over his subjects.

"II. Walachian subjects arriving in, or residing in the territory of our empire for the purpose of carrying on their own affairs, shall be exempt from every description of taxation.

"III. The princes, who are to be of the Christian faith, shall be elected by the metropolitan and the boyards.

"The prince of Walachia shall pay into our imperial treasury 3000 piasters (*rouges*) of the country, or 500 silver piasters of our money.

"At the period of concluding this Treaty, which was signed at Nicopolis, Walachia still possessed, beyond the Danube, the city of Silistria, which they retained for two years afterwards.

"The second Treaty, in 1460, confirming the foregoing, raised the tribute to the sum of 10,000 ducats. Its provisions are:

"ART. I. The Sultan agrees on his own part, and also on the part of his successors, to protect and defend Walachia from all enemies, without requiring more than the sovereign supremacy, and that the Voïvodes shall be held responsible for the payment of a tribute of 10,000 ducats to the Sublime Porte.

"II. The Sublime Porte engages not to interfere, in any way in the internal administration of the Principality, nor to permit a single Turk to pass into Walachia, without his having some ostensible motive.

"III. The Voïvodes shall continue to be elected by the metropolitan, the bishops, and the boyards, the elections being confirmed by the Porte.

"IV. Walachia shall continue to enjoy the free exercise of its own laws; the Voïvodes shall still have the power of life and death over their subjects, also the right of declaring war, and making peace, without in these matters being in any way responsible to the Sublime Porte.

"This Treaty may, however, be viewed as one of unequal character, seeing that on the part of these provinces we find an honourable concession, together with tribute paid to Turkey; whilst, on the other hand, these acts of submission were not considered as taking from the former the *perfect independence* of their territories.

"Vatel says—'A feeble state, which for its own security voluntarily places itself under the protection of a more powerful one, giving in return certain equivalents in the shape of

concessions for such protection, without, however, yielding up its right of self government, does not, on that account, the less figure amongst these sovereign states, who only acknowledge the law of the rights of the people; and a tribute paid by a state to a foreign power, although diminishing in some measure its own dignity as an avowal of its weakness, does not cause it to forfeit its claim to *entire* sovereignty.'

"The various writers upon international law who have placed Walachia amongst the *partly sovereign states*, have not paid regard to her treaties with the Porte. M. Martens, in support of his own opinion, only cites, in his *Précis du droit des Gens*, the treaties of Kainardgi, the Explanatory Convention of 1779, the Hatti Sheriff of 1783, and the treaties of Yassi and Bucharest.

"MOLDAVIA is, in her relations with the Porte, precisely in the same position as Walachia.

"The treaty of Adrianople, after having, by Article V., adopted the principle of the capitulations, and by engaging the Porte to maintain the same, has caused them to be viewed as in force at the present time, and, consequently, acknowledges the independence and nationality of these provinces.

"1st, The Porte engages to confirm the administrative measures which have been decreed according to the voice of the Assembly of Notables during the occupation of the territory.

"2d, It is stipulated that the principalities may employ and pay an army for their own service, and also form quarantine establishments.

"3d, That they shall not be molested in their internal administration by any orders interfering with their local rights.

"4th, The privilege of travelling with passports in their own country is accorded to Moldavian and Walachian subjects.

"According to the laws, &c., framed during the occupation of the principalities by Russia, it was decreed *that no impost voted by the Assemblies and sanctioned by the reigning prince, should be levied until such vote had received the approbation of the two Imperial Courts, the Porte and Russia; and also that the appointed Chief Director of the quarantine establishments should be sanctioned* by the Russian Consul, as well *as by the* sovereign prince.

"*The first of these laws gives to the Two Courts, or rather to Russia, a leading control in the administration of the affairs of the principalities, and entirely neutralizes their power of raising as many troops* as they might consider requisite."

AGRICULTURE.—The climate is cold in winter,—the winds from the Carpathians often blow down at that season in bitter sharpness over the plains; but although the fig and olive do not thrive, all sorts of corn, except rice, are grown on the soil, which is generally fertile, and the natural resources, including salt of excellent quality, coal, iron, and other minerals are said to be all abundant, but the tyranny and extortion of the Faniarote governors, appointed from time to time by the Porte, reduced for centuries the population to the most wretched condition. Pasturage has, under such oppression, rather than agriculture, been followed by the peasantry. The lands belong chiefly to the *boyards*, who do not, or at least rarely cultivate it themselves, but let it for a *tithe*, or some payment or other acknowledgment to a cultivator, who pays also the taxes. The state of husbandry is rude—manure is seldom applied to the soil—the implements of husbandry are of the worst description; but in this, and some other respects, Moldavia is superior to Walachia. Oxen are used in the carts and ploughs, and for treading out the corn, which is preserved in pits, and has in consequence often an earthy and musty taste.

The cattle of Moldavia are superior to those generally of Eastern Europe, and are driven for sale as far as Vienna and even to Breslau in Silesia.

The following statistical return, which may be considered nearly correct, is abstracted from a recent account, transmitted us in manuscript, and drawn up, as we are informed, under Russian authority.

STATISTICS OF WALACHIA AND MOLDAVIA.

	WALACHIA.	MOLDAVIA.
Towns	22	21
Burgs	15	19
Villages	3,560	1,021
Monasteries	133	93

The *Pogoul* of vineyards is equal to 1296 square toises. The *Falleke* = 2880 ditto. The *Kylo* is = 240 oxca or okes.

There are three classes of peasants, the 1st *Troulache*, who possess 4 oxen; 2d, *Migelococke*, who own one pair; and the 3d, *Candachi*, who possess none.

NAVIGATION AND TRADE OF THE DANUBIAN PRINCIPALITIES.

THE Trade of the Principalities, as well as that of Bulgaria, is chiefly directed to, from, and by the Danube. The manufactures of those countries are nearly all coarse, and for home consumption, and supply but little for exterior commerce. The imports are the manufactured goods, the coffee, spices, and sugars of other countries; and the exports are chiefly cattle, wool, and corn, and other products of the soil. Before the demand for British fabrics can be of very great importance, the population must greatly increase, and the capabilities of the people to purchase and use our goods must greatly change. We shall close our details of the Danubian provinces by a few tabular and other statements.

In 1834, *M. Hagemeister*, an officer in the Russian service, was directed by the governor of New Russia to make a report on the commerce of the ports of the Black Sea and Danube. His account of the latter is as follows:

"Upwards of 600 vessels of from 100 to 300 tons* annually enter the Danube. The larger ones cannot proceed beyond Braïloff, and those of 200 tons can scarcely get as far as Rou-tchouk. That part of the Danube which lies between Vienna and Semlin, serves to convey the manufactured produce of Austria into Hungary, taking in exchange the corn destined for consumption in Vienna. That part of the river which is between Semlin and Orsova is only frequented by a few vessels. (The navigation of this part has since increased.) The rocks which interrupt the navigation of the Danube lie between Berszaszka and Skala-Kladowa. The most dangerous passage is called "The Iron Gate." The communication by steam established by Austria between Vienna and Galatz is interrupted between Moldava and Orsova, and goods are then carried in small vessels which only draw three or four feet of water. From Orsova, the Danube is much frequented by Turkish lighters, called *kirlaches*, of from 30 to 100 tons. Of these, 50 or 60 are at Rou-tchouk, 70 or 80 at Sistova, 15 to 20 at Nicopoli, and 30 or 40 at Widden, but this number is quite insufficient for the purposes of transport. The Servians and Walachians have lately commenced building similar vessels. All these lighters are employed in carrying to Galatz and Braïloff corn and other raw produce of Walachia, or salt to the ports of Bulgaria. Corn, the produce of Turkey, the export of which has been permitted for two years, but which, however, is all purchased by the Turkish government, at an arbitrary price, is conveyed in these small vessels to Matzini, a small town opposite Braïloff, to be there embarked in larger vessels, and then sent to Constantinople. The freight paid to the coasting vessels to Braïloff or Galatz was much increased in 1833, in consequence of the great activity of trade.

"The river between Braïloff and Soulinah is nowhere less than eighteen feet deep. Of the three mouths, that of Soulinah is the only one that is navigable, and there the water is as high as eleven or thirteen feet, according to winds. The entrance to the Danube is extremely difficult, the coast from Cape Caliaeri being very low, and the mouth within the sandbar being covered with reeds, vessels easily lose their way; the sand carried by the wind sometimes fills up this mouth, so that even vessels of small burden are obliged to discharge part of their cargoes. Vessels of more than 1000 or 1200 tchetwerts can seldom pass Soulinah without undergoing this operation, and it sometimes happens that being caught in a gale of wind, they are unable to re-enter the river, and are obliged to seek the open sea, and are thus separated from the boats which are carrying part of their cargoes, which often perish from being unable to resist the waves. Hence we see why the lighters

* The ton is equal to 5 tchetwerts.

stationed at the mouth of the river, which at the commencement of 1834 amounted to twelve, sometimes charge as much as 1000 Turkish piasters per cargo. In consequence of the winding of the river, the wind is rarely favourable for sailing, and hence vessels are often obliged to be towed, which requires a greater number of men. As all the vessels on the Danube are considered *infected they are not allowed to remain on the coast of Bessarabia, Moldavia, or Walachia, which are lower and less rocky than the coast of Turkey*, unless they have a sanitary guard on board. From *Matzini* upwards, the right bank of the Danube is so rocky as to be very dangerous, while the opposite bank is well adapted for lighters, but the supposed infected vessels dare not approach it. Vessels are sometimes fifty days in ascending the river, but the passage to Galatz is often made in three days. The Danube is usually frozen in December, and the frost lasts till March. In 1833 it was not frozen over at all. Freights in the ports of the Danube are always 20 or 25 per cent higher than at Odessa, while the premiums of insurance are increased only for those vessels which are obliged to unload at the mouth, on account of their size. The flags which usually enter the Danube are those of Turkey, Greece, Russia, Ionian Islands, Austria, and Sardinia. Vessels of other countries have seldom appeared (before 1835).

"Although the three chief mouths of the Danube are in the possession of Russia, very little of its produce passes through the ports of Bessarabia, *Ismaïl and Réni*; the cities of Galatz and Brailoff are the only ports of Moldavia and Walachia which pour the superfluity of these two rich provinces into the trade of the Black Sea. The protective sway of Russia has raised up against it formidable rivals. Equal in fertility to the most favoured portions of the South of Russia, these provinces are sheltered by the mountains which surround them, from the winds which dry up the immense plains of the latter country. Walachia and the south of Moldavia are covered with steppes, but the north of Moldavia is very woody. While it exports the same produce as the ports of the Black Sea, Moldavia, being very populous, offers a favourable market for foreign merchandize, there being no prohibitory laws (as in Russia) to prevent importation. Their whole industry having been paralyzed by the Turks, the inhabitants scarcely know the value of their produce. Turkish authorities each year arbitrarily used to fix the price of corn, tallow, butter, cattle, and wood; and whoever wished to dispose of his superfluous stock, was obliged to sell it to government at the fixed prices. It was only by smuggling that exports were ever made to foreign countries. The produce of the purchases made by government, and of the taxes levied in kind, was sent to Constantinople. *Thanks to Russia, the political fate of these principalities has been decided; the administration of government has taken a more regular form; the produce which till then remained of an inferior quality, will improve in proportion to the improvement in trade.* The *ad valorem* duty of three per cent levied on nearly all articles of import and export is never levied with the intention of influencing trade, but to meet the civil expenses. There were no restrictions upon trade, and nothing was wanting to cause a great increase, but some favourable opportunity, under the auspices of liberty and a rising spirit of order. Such an opportunity occurred in the year 1833, and the dearth experienced in South Russia has disclosed, especially in Walachia, resources before unknown.

"Of the large number of small ports on the Danube, that of Braïloff, in Walachia, is the only one frequented by foreign vessels: for this port being at the extremity of the principality, all the exported produce of the country is conveyed there for the most part by water. The port of *Brailoff* is defended by a small island from the ice drifted down in the spring by the current, and vessels can winter there in perfect security. The quarantine and custom-house arrangements are well organized, but here, as at Galatz, vessels are never permitted to enter in free pratique. The operations of lading and unlading are carried on with great facility, the more so because all the warehouses are on the banks of the river. This town, which was formerly the capital of a pachalic contains only 4000 or 5000 inhabitants, but owing to its good situation, and from being under an enlightened governor, presents the appearance of a European town. In 1832, 280 vessels of all sizes cleared from the port of Brailoff, while in 1833 there was a still greater number.

GALATZ.—"At a distance of twelve versts from *Brailoff* stands *Galatz*, the only port of Moldavia, which even under a Turkish government, had attained some importance, as, unlike Brailoff, it was not under the power of a pacha. There is no doubt that the backward state of cultivation in Walachia is owing to the want of a more convenient outlet, while Moldavia owes its greater prosperity to the trade of Galatz. The lower part of this city,

consisting almost entirely of warehouses, has from time immemorial possessed the right of a free port. From hence the entrance into the city was by two different roads: there being no visible mark to distinguish the city from the free port, and hence smuggling was very easily accomplished.

"Travellers were never stopped, and any foot-passenger might convey as much merchandize as he could carry into the city; and in fact nothing that was sold in Galatz paid duty, which was only levied on goods intended for the interior. This laxity of custom-house regulations is the more astonishing, when we consider that the duties are farmed in Moldavia as well as in Walachia.

"The right of a free port was granted to the whole city of Galatz by a law of the month of September, 1834. No article of import is prohibited, but the prince has reserved the right of prohibiting the export of such articles as he may think proper, having given the trade a month's notice.

"The government of Galatz is worse organized than that of Brailoff. The road near the quarantine establishment is impassable owing to the mud, and the places appropriated for lading and unlading are few in number. The city contains 12,000 inhabitants, but its narrow, dirty, and stinking streets continually remind us of its Turkish origin. The trade at Galatz, as at Brailoff, is in the hands of Greeks, and it is only lately that foreign houses have been established: their trade being with both of these cities. Besides, there was no post-office communication in 1834 between Brailoff and Galatz, but only between Galatz and Yassy; and between Bucharest and Brailoff. The communication between the two capitals of the principalities was carried on by means of the post between Russia and Turkey which passed these two towns." In 1832, 195 vessels entered at Galatz, and 193 in 1833, of which 87 were Russians, 31 Ionian, 4 Austrian, 6 French, 13 Sardinian, 49 Turkish, 1 Tuscan, 1 Neapolitan, and 1 Servian. In 1832, the freights were, to Marseilles, 5 to 5½ fr. per metric quintal; to Genoa, 4 to 4½ liras, per mina; to Trieste, 50 to 60 kreuzers, per stajo. At the end of the year 1833, the freight from Brailoff to the Russian ports on the Black Sea, was 7 to 8 roubles, per tchetwert, and in the month of April, 1834, only 1½ rouble.

Brailoff, which receives the produce of Walachia, might be expected to export much more than Galatz, which only receives that of Moldavia, the extent of which is much less. But the import trade of the latter city, which has always been greater than that of Brailoff, will become still more so in consequence of the steam communications which an Austrian company has established between Vienna and Constantinople. The *four vessels* to be employed in this trade will navigate between *Presburg and Pest,—Pest and Moldava,—Orsova and Galatz,—and Galatz and Constantinople.* Operations are in progress to blow up the rocks which impede the navigation between *Moldava and Orsova. The advantages to be derived from this navigation by the trade of the principalities, consisting chiefly of barter for the products of Austria, are incalculable. Galatz, especially, will gain much by becoming an entrepôt for Austrian merchandize, which will be thence sent to the Levant and the ports of the Black Sea. Austria will be even enabled to export, viâ the Danube, the corn of the Banat,* which only costs on the spot *eleven roubles* per *tchetwert*, and is considered of a superior quality. *Hungarian hemp, of which the English have already made large purchases, and formed depots at Apathan and Eszek (thence to be sent by water to Siszeck and Carlstadt, and afterwards to Trieste) will probably find a better outlet there than at Trieste, as well as wood for building, which is now sent with difficulty to Fiume. It is evident that the ports of* Ismail and Réni having no resource but a small part of Bessarabia, and reduced to the export of the single article of grain, and not being able to make large imports for want of a market, have little prospect of improvement before them. Odessa, which is 200 versts nearer the centre of the empire, will exclude them from all participation in the trade with Russia. Placed in competition, on the other hand, with Galatz and Brailoff, which are able to make the most of land which is now uncultivated and of vast extent, Ismail and Réni must necessarily attach themselves to the giants which threaten to overwhelm them.

* The law of September, 1834, decrees that a post-communication should be established between Galatz, Brailoff, Yassy, and Reni.

As long as those engaged in trade at Brailoff and Galatz are free from all duties, it will be at least necessary to preserve for the merchants of Bessarabia the same immunities, least they should abandon the country, as some have already done. Réni, which is only fifteen versts from Galatz, might form close relations with this place, if a four days' quarantine were established there for persons coming from Moldavia, as is done at the other points of the frontier, such as Léova and Scouliani. Even if the trade between these two places did not become extensive, the frequent communications established would be sufficient to relieve the small town of Réni, the inhabitants of which are actually deprived of all means of existence, and Russian speculators might easily find a market for their goods in Bulgaria, and this would best suit Réni and Ismail. This last city, the trade of which was very flourishing while the sanitary cordon placed on the Dniester caused all the produce of Bessarabia to pass through it, and while only three per cent was paid on the value of merchandize, attained in twenty-five years to a population of 12,000. The traders there, with the exception of one Italian and a few Slavonian houses, consist entirely of Greeks, as at Reni. There are also a few Russians, Armenians, and Jews there. The custom-house and quarantine at Ismail are of the first class, and the custom-house at Réni is of the third class. Vessels wishing to enter at Ismail are obliged to turn the island of Tchatal, which much impedes navigation. At Kilia, the mouth of the Danube which would lead straight up to Ismail, there is only six feet depth of water."*

In 1831 one British ship arrived at Galatz, laden with assorted goods. In 1835 there arrived at Brailoff 14 British ships, 12 of which with assorted cargoes of merchandize, 3 in ballast for corn, staves, hides, and tallow; 8 French, 14 Austrian, 28 Russian, 96 Turkish, 31 Greek, 4 Walachian, 2 French, and 1 Sardinian ship arrived the same year. At Galatz there arrived in 1835, 6 British ships, 45 Russian, 17 Austrian, 64 Greek, 49 Turkish, 17 Ionian, 1 Belgian, 1 Walachian, and 1 Sardinian, vessels. In 1837 there loaded in the ports of Galatz 879 vessels of all nations, of which 15 were British, and in 1838, there were loaded 968 vessels, of which only 6 were British.

Merchandize exported by Sea from Galatz, in the the Years, 1837, 1838, and 1839.

The Austrian and Leipzig fairs supply the Danubian principalities with the greater part of the dyed woollen cloths, white, dyed and printed cottons, linens, tools, furniture, glass, &c. The only good agricultural instruments found in Walachia are those imported from Styria.

MERCHANDIZE exported by Sea from Brailoff, in the Years 1837 and 1838.

The following extract gives a fair account of the Trade of Moldavia :

"This principality, offering by the constitution of its government, a separate and distinct character from the other provinces of the Turkish empire, is thereby placed out of the direct sphere of the commercial convention, signed at Balta Liman in 1838.

"Moldavia, by the establishment of a free port at Galatz, had preceded the convention in the encouragement of its commerce: the regulations which established its real franchise are of a recent date. The transit, according to the declaration of government, has been extended to all articles not destined for the consumption of the country which require no previous declaration before their admittance to the benefit.

"The duty on tallow has been reduced from 25 to 3 per cent; other articles of export and import are subjected to the duty of 3 per cent, except certain articles of which a list is annexed.

"Previous to the free port, the commercial system of this principality was one of monopoly, and separated from that of the Turkish empire in general. Placed by the treaty of Adrianople out of its former relations with the Russian power, a new system of commerce was induced over its former vicious one. Policy here assumed a principal part, and for the first time the flags of every nation were seen at Galatz, and Moldavia was enrolled among the free marts of commerce. In other respects its commerce was assimilated to that of the ports of Turkey in general, and the same abuses prevailed."

"The following tables show the increase of commerce at Galatz and Ibraila during the last four years :

GALATZ.

Years.	Imports.	Exports.	Years.	Imports.	Exports.
1837 value	£ 86,674	£360,567	1839 value	£146,160	£563,592
1838 "	136,99[illegible]	402,355	1840 "	202,294	504,474

IBRAILA.

1837 "	£ 10,731	£223,586	1839 "	£ 47,388	£197,711
1838 "	[illegible] given	216,972	1840 "	99,781	364,038

"The grain exported, included in the foregoing amount, is as follows:

	Wheat from Galatz.		From Ibraila.	
Years.	Quarters.	Value.	Quarters.	Value.
1837	134,000	£ 90,380	129,000	£ 75,792
1838	228,000	171,813	68,000	61,534
1839	200,000	148,117	171,150	142,270
1840	230,568	299,738	151,200	159,118
	Indian Corn from Galatz.		From Ibraila.	
1837	118,000	£ 86,996	42,000	£ 24,313
1838	77,000	58,374	41,000	37,200
1839	180,000	133,762	68,000	57,268
1840	189,937	160,682	77, 200	54,684

"The trade of the country is still considered in its infancy.

"This opinion embraces more the advantages which the country may reap at a future period from the entrepôt at Galatz, and its probable increasing importance as a free port.

"Jassy seems the line which marks the export trade of Moldavia by Galatz and the Danube, for beyond the products seldom reach the market of Galatz. The northern part of Moldavia is in its export commerce Austrian, and its pasturage must principally supply it, cattle forming the chief export.

"On examining the commerce of Moldavia in its more natural channel by the Danube, the increase during the last four years in its imports and exports has nearly doubled, and the same observations apply to Walachia. The whole of this commerce, however, is not more than the moiety of the resources of the country offer, for not one quarter of grain and pulse, which form the staple articles of export, is brought from the north of Jassy to Galatz. The cost of carriage does not permit it: a slow improvement of the high road from Galatz to the Austrian frontier is progressing. Germany and Austria require no supply of grain, but about 20,000 kilos of Indian corn pass over annually into Austrian Bukovina and Transylvania.

"The cost of a quarter of wheat at Botochany, the most northern town and district of Moldavia, is about eleven shillings, and the carriage about thirteen, and it will only be undertaken at a season when the peasantry are not occupied on the estates, or in the tilling of their own grounds.

"Grain pays an export duty per kilo, which will probably be seldom less than nine per cent. The salt-mines might furnish any amount for exportation; but are under the government-farmer, who imposes his own conditions; the salt from them costs twenty-five piasters per one hundred okes, and could be imported from the Mediterranean at nine piasters for the same quantity. Grain forms the principal article of exportation, being about two-thirds of the whole through Galatz, and cattle must form a considerable proportion of the same trade overland.

"The import trade is subjected to a regular duty of three per cent, and the government has promised that the transit trade shall be unrestricted. These are great advantages in favour of the import trade, but two per cent additional cannot much affect them, and this is all that the treaty of Balta Liman imposes.

"The import trade, *viâ* Galatz, may be estimated now, in 1841, at 250,000*l.*, an increase of two-thirds since 1837. By the frontiers of Austria and Russia the value of imports is officially given at 18,000,000 piasters, about 300,000*l.* sterling. This amount is little more than half the real value.

"The export trade, *viâ* Galatz, within four years has increased from 300,000*l.* to 500,000*l.* sterling. By the frontiers of Russia and Austria, it is stated at 12,000,000 piasters. Fifty thousand head of cattle pass annually the frontiers of Austria; the amount officially given is not 20,000. The sum of 250,000*l.* sterling underrates the value of cattle exported. The real amount of imports may safely be estimated at 650,000*l.*; exports 750,000*l.*

"Two-thirds of the imports are overland, and consist of all the articles received from Austria and the German fairs; and of the exports two-thirds find an outlet by Galatz.

"The import trade from Austria is undoubtedly beneficial and most important. Much of it may ultimately find its way by the cheaper route of Galatz. Placed by its merchant marine at that port on a distinguished footing, Austria has nominated a consul for Moldavia, and for the general surveillance of the Danube, and yet allows the obstacles to its free navigation to continue in the condition of the Bar of the Soulina.

"Austria profits the most of all nations, in a commercial point of view, from this country, and previous to the treaty of Adrianople it was almost exclusively the field of her commercial interests. The subsequent change has not much affected her profits, but greatly her position.

"Mr. Consul Gardiner states that Galatz now rivals the Port of Odessa, and that trade generally throughout Moldavia is improving; in fact, that the country is in a most promising position, as regards commerce and internal regulations and improvements.

"The amount of exportations from Moldavia was, in 1840, as follows:—To Austria, 11,485,174 piasters; to Russia, 375,805 piasters; to Turkey, 30,225,066 piasters; to Walachia 217,647 piasters. Importations—From Austria, 16,964,516 piasters; from Russia, 964,481 piasters; from Turkey, 5,047,484 piasters; from Walachia, 395,510 piasters.

"There is no transit or transhipment duty.

"On merchandize exported, grain pays an average duty of eight per cent.; other articles generally three per cent.; cattle pay half a ducat per head.

"The total amount of duties received on the above amounts of imports and exports, were:—On exports, 2,677,219 piasters; imports, 701,287 piasters. Total, 3,378, 506 piasters.

"The exports of Galatz alone are 504,474*l.*; imports of ditto, 202,294*l.*; and the amount of duties on imports and exports was 44,222*l.*

"The *fisheries* of the Danube, in which there are a great a variety of kinds, Hagemeister says 115, good eatable kinds, might be turned to profitable account at the mouths of the Danube, excellent herrings, mackerel, soles, salmon, sardines, perch, barbet, and many others, all of good quality, are caught. Sturgeon enter the river in great numbers in March to spawn; caviare is made but not in great quantities. In the Russian ports of the Black Sea, the *fishery* is made a source of considerable profit, and the caviare of the sturgeon caught at the mouths of the Don and other rivers is in great repute."

CHAPTER VIII.

TRADE OF ENGLAND WITH TURKEY.

Constantinople is said, even as far back as the time when it was founded by Byzas, 656 B. C., until it was destroyed by Severus, to have been an emporium for trade. From the time of its restoration by Constantine, who gave it his name, until its conquest by the Turks, it was certainly a mart of great commercial importance. Its situation, one of the most convenient in the world, should have always rendered it a vast emporium.

In 1084 the emperor granted warehouses and high privileges to the Venetian merchants at Constantinople.

In 1190 this city is described as only having been surpassed by Bagdad, and that it was resorted to by a concourse of merchants from all known parts, east and west, bringing with them the several wares of their own and of other nations for sale or interchange. The goods and spices of India were, at that time, brought up the Persian gulf and over land to the Levant. *Perà*, opposite to Constantinople, was built as a depot by the Genoese in 1304, and they retained their position and trade there until 1453, when Constantinople was taken by the Turks. Genoa had also at that time factories at, and held possession of Kaffa in the Crimea, and had consuls at *Trebisond*, *Sebastopol*, *Sinope*, and several places within the Black Sea, and were the first modern Europeans who traded with Circassia. The Döge of Genoa considered himself the guardian of the Euxine. England had no trade with the Levant from 1553 to 1575, nor any consul at Constantinople, although Genoa, France, and Venice had their consuls at the port. England carried on a trade with Morocco as far back as 1413, but it did not rise to much importance until 1490-2. It was, however, from the Morocco trade, that the trade to Turkey, and the Levant trade was extended in the reign of Elizabeth: she having settled preliminaries for the security of English commerce at Constantinople in 1579, and incorporated the Turkey or Levant Company in 1581. Their charter was renewed under various forms, afterwards by that sovereign and her successors; and an extensive export trade from England to the Levant, especially in woollen cloths, was carried on sometimes with great profits, and, occasionally, afterwards at considerable loss by the company and its members.

In 1666 an English ambassador was, for the first time, appointed to reside in Turkey, the grand seignior having some years previously extended to English

merchants the privilege of trading to all his dominions. He agreed also, to allow the residence of English consuls at the Turkish ports.

"Mr. Munn in his 'Discourse upon Trade from England to East India' says, that of all the nations in Europe, England drove the most profitable trade to Turkey, by reason of the vast quantity of broad cloth, tin, &c., which we export thither, enough to purchase all the wares we wanted in Turkey: and in particular three hundred great bales of Persian raw silk yearly. Whereas there is a balance in money paid by the other nations trading thither. Marseilles sends yearly to Aleppo and Alexandria, at least 500,000*l.* sterling, and little or no wares. France had not then an export trade in woollens.

"Venice sends about 400,000*l.* sterling yearly in money, and great value in wares besides; Holland about 50,000*l.* and but little wares; Messina 25,000*l.* in ready money: besides which great quantities of gold and dollars were sent from Germany, Poland, Hungary, &c.; and all these nations take of the Turks in return great quantities of camblets, grograms, raw silk, cotton wool, yarn, galls, flax, hemp, rice, hides, sheep's wool, wax, corn, &c."

In the year 1643 an ordinance of the Parliament in favour of the Levant or Turkey Company was passed, "for the encouragement of that *fellowship*, which, besides the building and maintaining of divers great ships, and the vending of kerseys, sayes, perpetuanas, and other commodities, hath been found very serviceable to this State, by advancing of navigation, and transporting into foreign parts, for several years together, above 20,000 broad cloths yearly, besides other commodities, dyed and dressed in their full manufacture."

In 1675 a Commercial Treaty was concluded at Adrianople, between Charles the Second (by his Ambassador, Sir John Finch) and the Sultan, Mahomet the Fourth: whereby

"All former Treaties, from Queen Elizabeth's time downward were confirmed: and certain new stipulations were superadded."*

The Levant Company in 1720 complained to Parliament against the Italian trade, and obtained an act for prohibiting the importation of raw silk and mohair yarn, the product or manufacture of Asia, from any port or places in the Straits or Levant seas, except from such ports or places as were within the dominions of the grand seignior.

"In 1730 the Turkey Company are said to have shipped ten thousand pieces of broad cloth in four ships in August for the Levant. It was alleged in 1744 that the French had gained considerably upon England in their trade to the Levant, not only by the shortness of the voyage thither from Marseilles, but also by judiciously studying the manufacturing of such kinds of goods as best suited the climate, and which were more flimsy than ours: besides supplying the Turks cheaper than we could with sugar, indigo, &c.

"It was at this time (1744) much discussed in public, whether the best way to regain our ascendant would not be to lay the Turkey trade entirely open to all British subjects.

"A bill was brought in for this purpose, but the Levant Company being heard at the bar of the house, gave such reasons against it that the bill was withdrawn.

"The company gave as reasons for the falling off in their trade.

"That during their most flourishing period the trade was principally carried on with a coarse cloth made of English wool, in which no other nation could vie with them; but the French, after the treaty of the Pyrenees, enjoying a long course of prosperity, turned their views to foreign commerce, and particularly to that of the Levant, which Colbert pushed forward at a vast public expense, till at length the cloth of Languedoc, made of two-thirds Spanish wool and one-third of the wool of that province, could afford to sell at

* See English Treaties with Turkey, in this work

the same price as the coarser cloths of England. The French also made cloths entirely of Spanish wool. The French also increased their trade to Turkey by carrying thither indigo and coffee, which we did not, as also sugar, which they sell much cheaper than we can. The wars between Peter the Great and Persia also obstructed the bringing of silk from the province of Ghilaun, through Turkey. The English before that period usually bought at Aleppo and Smyrna, at least one thousand bales annually, worth about 100*l.* per bale, and chiefly in barter for our cloth.

"The company go on to say that they are put to very great expense in supporting the charge of an ambassador and consuls in Turkey, and other charges; and that the bill, if passed, will nearly deprive them of their privileges, and perhaps occasion the total loss of their trade."

In 1753, however, an act was passed, in consequence of the French still gaining, as was asserted, upon the English trade with Turkey, enlarging and regulating the trade to the Levant, by reducing the price of admission to the company, from 25*l.* and 50*l.* to an uniform rate of 20*l.*, and other alterations.

Even with this new arrangement it was asserted to be doubtful, whether the trade could be recovered, as the French had such an advantage from the shortness of the voyage from Marseilles, &c. &c.

In 1758 an Act was passed "prohibiting the importation of French broad cloth into the ports of the Levant on behalf, or by British subjects, on account, not only of *hurting* British manufactures, but *encouraging* those of the *enemy*, and for more effectually preventing the illegal importation of raw silk and mohair into the kingdom." The Act says, "that no such woollen goods of French manufacture shall be imported within the limits of the Levant Company's charter on account of any British subject."

The Levant and Russian Companies were *regulated companies*, and not joint stock companies like the East India Company. A regulated company did not trade on its own account, but merely formed an association for protecting and regulating the trade, which its members carried on separately, and such members were admitted by paying a certain sum of money. Queen Elizabeth, on granting them a charter, even for seven years, added the following prudent *provisos*: viz.—

Proviso I.—"*That in case the exclusive grant shall hereafter appear to be inconvenient, the Queen may revoke the same, upon one year's previous notice.*"

II.—"The Queen, during the said term, may nominate two persons to be added to the said number of patentees, with the same privileges, &c., as the rest."

Lastly, "if at the end of the said seven years, these grantees desire it, the Queen will grant other seven *years to them; provided, as aforesaid, the said exclusive* trade shall not appear to be unprofitable to the kingdom."

Nothing can be more cautiously worded than this charter. But King James I., in the third year of his reign (1605), incorporated "*for ever, a new company by the designation of the Merchants of England trading to the Levant Seas.*" It was then called a Regulated *Company*, there not being at that time any joint-stock company established in England.

In a memorial presented to the Royal Council of France by the Council of Commerce in 1701, in speaking of the Levant trade,

They say, "that the English carry on that trade with much more advantage than the French, their woollen cloths being better and cheaper.

"The English also carry to the Levant, lead, pewter, copper, and logwood, which are goods they are masters of, together with a great deal of pepper; and that they may not drain their own country of its gold and silver, they take in dry fish of their own catching, sugar of their own colonies, and other goods of their own product, which they sell on the coasts of Portugal, Spain, and Italy, for pieces of eight, which they carry to the Levant, to make up a stock for purchasing their homeward cargoes. Upon this plan it would be more advantageous for France to permit her ports on the ocean to carry on a trade *direct* with the Levant, without being obliged to unlade at Marseilles, under the fear of bringing in the plague, which has obliged them to give up that trade entirely.

"And by the edict of 1685, twenty per cent was laid on all Levant merchandize imported, for preventing the western ports from being supplied therewith, as they had before been, from England and Holland. Thus Marseilles thrives alone in its commerce."

The Deputy from Marseilles disputed their statement, and the Deputies from the ocean ports confirmed the views of the Council of Commerce, and so the matter ended for the time. However, since this period the French commerce has gained ground, and the quantity of British woollens exported to Turkey has decreased.

French Levant Trade in 1787.

The foregoing are official values, and consequently only approximate as far as *quantities* enter into a comparative view of the imports and exports.

* After the year 1793, the prize goods taken are included in the exports to the different countries.

† The late Mr. Irving, the then inspector-general, states, that from a careful calculation of the value of the articles exported in virtue of the Convoy Act, and exempted from the convoy duty, the real marketable value of *British* merchandize exported this year amounted to 33,[illegible]6[illegible]. A sum almost equal to the *official* value of the whole exports.

‡ The real marketable value is stated by Mr. Irving, to total imports, 19,[illegible]07,[illegible]78*l.* 15*s.* 6*d.*, and the exports, 30,[illegible]90,[illegible]96*l.* 15*s.* 5*d.*; and in 1800 the real value was 35,[illegible]00 816*l.* 3*s.*; and the exports, 35,[illegible]30,[illegible]43*l.* 12*s.* Nothing can, however, be more erroneous than the official values of imports and exports.

VALUE of Woollen Manufactures exported to Turkey, and to all Countries, in the Ten Years ending 5th of January, 1800.

The Official Values of Imports and Exports for the following Three Years from and to Turkey, and all countries, are stated as follow:

		Imports. £	Exports. £
1801.	England and the Levant	141,137	172,198
	Great Britain and all countries	31,786,262	35,264,650
1802.	England and the Levant (peace)	182,424	180,000
	Great Britain and all countries	29,826,210	38,310,070
1803.	England and the Levant (war)	175,427	155,369
	Great Britain and all countries	26,622,696	28,500,174

The real values were much greater at that period. The real value exported of British merchandize during the year 1801 was 39,730,659*l.*; in 1802, 45,102,330*l.*; in 1803, 36,127,787*l.*

At this period the trade with Turkey became so hazardous on account of the war, that Mr. Oddy and others suggested its being carried on through Russia; and although but little of the import or export trade between England and the Levant was conducted by that route, the trade was carried on to a considerable extent by the channels of Gibraltar, Malta, Sicily, and various places in the Levant. Mr. George Chalmers,* in his work on the *Domestic Economy of Great Britain and Ireland*, states the real values of exports during the years 1805 to 1811 inclusive, as follow:

	1805	1806	1807	1808	1809	1810	1811
	£	£	£	£	£	£	£
To Gibraltar, Malta, Sicily, and the Levant	1,571,129	2,278,705	3,125,3 0	6,511,493	5,159,911	6,911,562	7,311,749
To all foreign countries	31,109,111	33,826,884	30,142,061	17,970,236	16,017,213	12,782,199	13,976,0 9

The above shows an extraordinary increase in the value of exports to the Mediterranean in defiance of Napoleon's decrees.

The value of imports during these years from Turkey cannot be satisfactorily ascertained, and the customs' accounts are exceedingly obscure on the subject. Mr. Moreau, of the Statistical Society of Paris, who compiled in England very elaborate tables from the British customs' returns, arranges the annual average values for the seven years, 1816 to 1822 inclusive, as follow: viz.—

	Imports.	Exports.
Great Britain and Turkey . .	£306,678	£764,116
Great Britain and all countries . .	31,921,558	53,126,195

Imports of Cotton Wool into the United Kingdom from Turkey and Egypt, 1820 to 1830.

	1820	1821	1822	1823	1824	
	lbs.	lbs.	lbs.	lbs.	lbs.	
Cotton wool	285,350	856,868	395,077	1,331,547	7,719,368	
	1825	1826	1827	1828	1829	1830
	lbs.	lbs.	lbs.	lbs.	lbs.	lbs.
Cotton wool.....	18,938,246	10,032,400	5,071,579	6,926,288	5,396,385	3,401,710

The increase of the quantity of cotton wool imported during the first six years, and the decrease, down to the end of 1830, seems unaccountable. See also, importations hereafter of cotton wool, 1831 to 1841, inclusive, from Turkey, Greece, and Egypt.

IMPORTS of Wool from Turkey in each of the undermentioned Years.

DECLARED Value of British manufactured Woollen Goods exported to Turkey and the Levant, from 1820 to 1830.

Years.	£	Years.	£
1820	12,871	1826	4,115
1821	3,772	1827	5,742
1822	1,744	1828	2,126
1823	4,[illegible]	1829	5,465
1824	10,778	1830	20,220
1825	8,318		

The trifling value of British Woollens exported to Turkey and the Levant is chiefly attributable to the competition of the beautifully dyed and very cheap woollen cloths of Carcassonne, in France,—and also to the competition of the Austrian woollen manufactures which are dyed and manufactured to suit the Turkish taste. In regard to colours, as well as the suitable adaptation of various woollen, cotton, and silk manufactures, the costumes and tastes of Oriental nations are certainly less studied by the British than by the French, Swiss, and Germans.

DECLARED Value of British Cotton Manufactures, exported to Turkey, &c., from 1821 to 1830.

TRADE OF CONSTANTINOPLE.

The present trade of the capital of the Ottoman empire is, comparatively, of limited importance—and confined chiefly to the actual consumption of the population, instead of its port enjoying also that magnificent commerce, which ought to flourish in a place, naturally situated for one of the greatest trading emporiums in the world. The spirit and the habits of the Turk are certainly not commercial; and until the Christian population increase greatly in number, and become so far predominant, as to be uncontrolled by the former, in their local affairs, and have also greater freedom, and extension, allowed them, in the scope, and in the *sites* of their trade, *Stamboul* will continue to be no more than a secondary commercial mart.

The harbour of Constantinople is deep, commodious, and completely sheltered. Above 1000 large ships can be conveniently anchored within the port. Ships can also discharge and load their cargoes alongside the quays. Scutari, on the Asiatic shore on the Bosphorus, one mile distant from Constantinople, is the place of assemblage for the caravans from Persia, Armenia, and other places

in Asia that trade with European Turkey. The great warehouses for corn are situated at Scutari, where there are also some fabrics of silk, and woven and printed cottons. During the continuance of Napoleon's continental system, British and colonial goods, even of heavy weight and great bulk, were introduced from the *dépôts*, at Constantinople and Salonica, into Austria and Russia. Into the latter they were smuggled by the agency of the Jews of Brody in Galicia,—a place still famous for its adventurous and successful contraband trade in all kinds of fabrics, into Russia. The late war, between Russia and Turkey, was highly injurious to British, as well as to the general, trade with Constantinople. It revived soon after the peace, and the consumption of the population, including its suburbs, variously stated at from 400,000 to 600,000 inhabitants, requires a large supply of food, drink, and clothing. *Galata*, which was first built by the Genoese, and now the principal residence of the *Franks*, or foreigners, is the place of discharge and loading for foreign ships, and where the custom-house is situated.

The total port charges are limited to the small amount on a British vessel of only 300 aspers. The commission and other charges for transacting business are also moderate, although the Jew brokers, who conduct most of the bargains, are not on all occasions scrupulously honest.

The imports consist of coffee, sugar, pepper, spices, rum, cochineal, indigo, logwood, cotton and woollen goods, cotton twist, cutlery, nails, furniture, butter, cheese, flour, paper, glass, watches, jewellery, &c. The exports are wool, silk, otto of roses, opium, wax, hides, goats' hair and skins, bullion, diamonds, valonia, boxwood, mohair, yarn, &c.

This market requires, annually, supplies of about 2,000 tons of coffee, 1,200,000 lbs. of sugar, 300,000 lbs. of pepper and spices, 2000 puncheons of rum, and very large quantities of low-priced cotton manufactures.

There is now a regular establishment of steamboats between Trieste, Constantinople, Smyrna, Odessa, the Danube, and Trebisond. These steam-packets do great honour to the company of the Austrian Lloyd's at Trieste, and to the Austrian Danube Steam Company, who have established and managed them with great credit to those associations, and, compared to the former uncertain and tedious means of conveyance, with the utmost convenience, and advantage, to the travelling and commercial public.

We have included the British trade with Constantinople in the foregoing general statement of British trade with the Ottoman empire. The following are details of the local trade and navigation of the capital, and of other towns of the empire, as far as we have been enabled to obtain, and to condense them from the returns of British, French, and Austrian consuls; and from the statistical publications of the Austrian Lloyd's, printed at Trieste.

Navigation of Constantinople in 1840.

N.B. The account of the value of goods imported in British ships during this year is stated at £1,169,901. The goods were imported by 170 vessels. The remainder, 97, were in transit to and from the Russian Ports in the Black Sea. It is impossible to obtain the Invoice value of the cargoes of the latter.

BRITISH TRADE WITH CONSTANTINOPLE IN 1841 AND 1842.

It is not possible to give a return of the invoice value of the cargoes, but the following remarks may serve to give some idea of the nature and extent of British trade to this port.

The number of British vessels which arrived at Constantinople from the United Kingdom in 1841 amounted to 186, and in 1842 to 250 vessels, of the

Vessels.	1841.	Tons.	Vessels.	1842.	Tons.
60	from Liverpool	19,054	60	from Liverpool	19,054

51	„ Foreign Ports	6,212	51	„ Foreign Ports	7,251
186 Vessels.		Tons... 52,358	250 Vessels.		Tons... 68,324

The articles imported in the Liverpool vessels were principally British cotton manufactured goods, some woollen goods, colonial produce, and a little iron and tin.

In the London vessels East and West India produce, and various articles of British manufacture.

Of the 60 vessels from Liverpool, in 1841, eight touched at Syra and delivered parts of their cargoes: the remaining 52 vessels brought full cargoes to this port, small portions of which were occasionally taken on to Odessa. Of the 60 vessels, in 1842, from Liverpool, five touched at Syra to deliver part of their cargoes: 12 of the remaining 61 carried part of their cargoes on to Odessa, Galatz, and Trebisond, and three went with full cargoes to Galatz.

Of the 24 vessels, in 1841, from London, five touched at Syra and delivered also portions of their cargoes, the remaining 19 vessels brought full cargoes to this port, small portions of which were also occasionally taken on to Odessa. In 1842, of the vessels from London, four touched at Syra and the Piræus and delivered part of their cargoes; 18 carried a part also to Odessa, and one went with her cargo to Trebisond.

The coals brought to this port from England in 1841 was about 29,080 tons, and, in 1842, 32,360 tons.

The quantity of iron from England was 1582 tons in 1841, and 3550 tons in 1842.

The cargoes from Liverpool may be estimated at an approximate average value of 18,000*l.* each, being chiefly composed of British cotton manufactured goods.

Those from London may be estimated at about 10,000*l.*

According to this calculation the value of the importations by the preceding vessels would be as follows for 1841.

	£	£
60 vessels from Liverpool at £16,080 each	1,044,120	
Deduct one-quarter of cargoes landed at Syra	240,000	
		1,044,000
24 vessels from London at £10,000 each	240,000	
Deduct one-quarter of 3 cargoes landed at Syra	12,000	
		227,000
Supposed value of 1 cargo from Bristol		10,000
Ditto from Glasgow		18,000
31 vessels with 20,000 tons of coals at 10s.		10,000
9 ditto with 1,067 tons of iron, at £7		9,674
		£1,319,174

The total values at the same rate of calculation of imports for 1842 would be 1,357,067*l.*

Thirty-one British vessels arrived from foreign ports in 1841, some with cargoes, others with parts of cargoes, and some in ballast: 35 British vessels arrived under similar circumstances in 1842. The value of the merchandise brought by them is not noticed, not being the produce of Great Britain, or of the colonies,—and only affording employment to British shipping.

Twenty-two vessels were loaded in this port during the year 1841 for Great Britain. The articles of Turkish produce, manifested and known to have been exported in them, was as follows: it is possible that more may have been exported than what has been declared, but it is believed not of any great amount.

Silk, bales and cases, 3888, part Persian; opium, 500 cases; Angora goats' wool, 5284 bales; sheep's wool, 578 bales; yellow berries, 422 sacks; galls, 647 sacks; lamb skins, 18 bales; boxwood, about, 300 tons; gums, 81 cases; tallow, 493 casks, and skins, supposed to be Russian; goats' hair, 72 bales; 1500 goat-skins; mohair yarn, 19 bales; salep, 14 cases; wheat, 3750 quarters, supposed to be Russian.

The following goods were also shipped by British vessels for Smyrna during the year: Sheep's wool, 356 bales; nuts, 368 quintals, from Trebisond; goats' wool, 12 bales; lamb-skins, 15 bales; yellow berries, 13 sacks; boxwood, 1500 quintals.

Ten vessels have also been loaded at the Turkish ports in the neighbourhood for England with full cargoes of bones and some timber for ship-building. And two vessels with cargoes of tallow and linseed loaded at Galatz and Ibraila for England. And two vessels with cargoes of valonia and linseed loaded at ports in the sea of Marmora for England.

Eighteen vessels were loaded in this port during the year 1842 for Great Britain; the articles of Turkish produce, manifested and known to have been exported in them, was nearly as follows:—Silk, 2877 bales and cases; opium, 65 cases; brass, 3 cases; tobacco, 10 cases; pipe-bowls, 4 cases; Angora goats' wool, 5469 bales; sheep's wool, 614 bales; mohair yarn, 173 bales; refuse silk, 12 bales; hare skins, 51 bales; ox hides, 10 bales; yellow berries, 568 sacks; galls, 554 sacks; linseed, 90 sacks; madder roots, 18 sacks; boxwood, 750 tons; valonia, 17 casks; mastick, 12 casks; jalep, 66 casks; copper, 19 pieces; wheat, 48,235 kilos.

The following goods were sent to Smyrna by British vessels: 200 tons of boxwood; 141 bales and 200 quintals of wool; 75 bales of sheep, and 37 bales of lamb-skins; 1 case of pipe-sticks; 1700 quintals of hazel-nuts from Trebisond; one vessel loaded valonia at Panormo, and one with bones at Boloste, both for England; five vessels loaded at Galatz and Ibraila the following articles for England:—731 kilos (Galatz measure) of wheat; 346 sacks of linseed; 101 sacks of ~~yellow~~ berries; 1355 casks of tallow; 52 casks of salt beef; 156 bales of wool; 7 bales of silk; five vessels loaded full cargoes of bones at Galatz, and 2 at Salonica for England.

In comparing this return with that of last year, there will appear a decrease in 1842 of about 1000 bales and cases of silk exported from this port direct to Great Britain.

The export of silk for Great Britain from Smyrna must, however, have increased in that year, as a good deal of silk has been sent to that port for transhipment for Great Britain, of which no exact account can be procured here, it having been conveyed in steamboats under foreign flags.—*Arranged from Consular returns, dated Constantinople, Dec.* 31, 1842.

ARRIVALS and Departures of British and Foreign Ships, at the Ports within the Consulate of Constantinople, during the Years ending Dec. 31, 1841 and 1842.

Arrived.—British, 570; Ionian, 296; American, 1; Austrian, 737; Belgian, 24; Danish, 1; French, 15; Greek, 2061; Neapolitan, 29; Prussian, 2; Russian, 855; Sardinian, 530; Swedish, 9; Tuscan, 4; Spanish, 0; Hanoverian, 5; Dutch, 3; total in 1842, 5142; total arrivals in 1841, 4092; British in 1841, 378.

Departed.—British, 568; Ionian, 291; American, 0; Austrian, 732; Belgian, 24; Danish, 0; French, 15; Greek, 2091; Neapolitan, 29; Prussian, 2; Russian, 899; Sardinian, 530; Swedish, 9; Tuscan, 4; Spanish, 0; Hanoverian, 5; Dutch, 5; total departures in 1842, 5205; total departures in 1841, 4133; British departures in 1841, 389.

Of the total 378 arrivals of British ships within the consulate in 1841, which discharged or touched on their way to or from the Black Sea, 78 had general cargoes, 35 were in ballast, 1 had Indian corn, 2 coffee and sugar, 1 seed, 1 oil, 4 sugar, 67 coals, 8 part cargoes, 1 caviare and anise-seed, 8 bones, 11 iron, 89 wheat, &c., 31 tallow, &c., 1 timber and bones, 3 goods, 4 manufactures, 10 rapeseed, 9 wool and tobacco, 14 linseed, &c.

Of the 379 departures in 1841, 12 had general cargoes, 10 rapeseed, 133 were in ballast, 1 had manufactures, 1 oil, 33 part cargoes, 1 arms, 1 sugar, 9 bones, 16 coals, 13 tallow, wool, wheat, &c., 2 lenwood, 1 cotton wool, &c., 1 valonia, 90 wheat, &c., 2 iron, 1 Indian corn, 1 barley and wheat, 1 seed, 13 linseed 7 in port.

ADRIANOPLE, although the river *Maritza*, during a portion of the year, is navigable from the sea, can scarcely be called a seaport—*Enos*, near the mouth of the *Maritza*, being in fact the Port of Adrianople. British goods, especially cottons, are carried to Adrianople for sale; but considering the beautiful and convenient situation of this city on the Maritza, and in the centre of a naturally rich country, its trade is comparatively insignificant. Adrianople has a population of from 90,000 to 100,000. About one-half are Turks, 31,000 are Greeks, and about 20,000 consist of Armenians and Jews. The streets are remarkably narrow and dirty. The houses and the customs are said to be more perfectly Turkish than in any other town in the empire. The following are extracts from consular returns.

"The country has this year (1838) been happily free from that dreadful scourge, the plague, which proved so fatal to the country and its commerce during the two preceding years. Consequently the consumption of goods, both foreign and British, has been regular, and notwithstanding the diminished population, nearly as great as on former years. It would have been quite as large but for the local government exacting heavy duties on all transactions that took place at the different *fairs* held in their neighbourhood.

"These exactions were certainly authorized by the Porte, and were they to be continued, they would soon have the effect of putting an end to the fairs, to the great prejudice of our trade.

"To Adrianople itself there can be no doubt that the late commercial treaty will be productive of advantage; for this city being the only one in Roumelia in which there is a custom-house, the dealers from the interior preferred going as far as Philippopoli to make their purchases, where they were free from those duties on the purchase which would have been exacted here. Now, that, by the new treaty, all places will be on a level, Adrianople will naturally resume its commercial importance as a central depot for goods destined for the consumption of Roumelia and Bulgaria.

"Our export trade, this year, has been very active; but the produce of two of our principal articles, silk, and otto of roses, proved very deficient: the former not being above half, and the latter two-thirds, of an average crop. The cultivators, however, have been somewhat recompensed by the prices, being about 50 per cent above those of last year. The improved manner of winding the silk is gradually becoming more general. The cultivation of linseed is increasing in this neighbourhood. Last year four English, and five foreign, vessels have been loaded with this article: there are yet several cargoes to embark, and from the high prices paid, there can be little doubt that the cultivation will be still further increased. The principal part of the wool of this neighbourhood was, last year, sent to France and America: very little to England."—*Adrianople, January* 8, 1839.

"The different fairs in Roumelia were, in general, well attended.

"The crops of linseed, wax, and valonia have proved almost entire failures. That of *corn*, hardly more than sufficient for the consumption of the country—and that of wool, owing to a mortality among the sheep, much less than usual. Thus our principal articles of export were confined to *silk* and *otto of roses*; both of which were abundant, but unfortunately those two articles are precisely the ones which are least influenced by the stipulations of the convention. *Silk*, being a produce of our immediate neighbourhood, was never subjected to any attempt at monopoly, but was, always, *free on sale*, and paid as nearly as possible the same duties as at present; and otto of roses, owing to the facility of smuggling it, and the little precaution taken by the Turkish authorities to prevent it, continues as formerly in the hands of contrabandists."—*Adrianople, June* 1, 1841.

"One of the principal articles of manufactures consumed here is gray calicoes: which, after being dyed by the dealers, are much used by the Bulgarians for summer dresses, &c.

The customs authorities pretending that these articles, having been dyed in this country, become Turkish goods, as such levy on them 12 per cent duty, in addition to the five per cent already paid on them. The same may be said of muslins, of which immense quantities are printed here for the purpose of serving as women's head-dresses, &c.; of sugar made into sweetmeats; and in fact of all articles on which the slightest labour has been bestowed. In spite of our remonstrances they still continue to levy these duties, and they have received direct orders from Constantinople to do so.

"All other European nations, except Russia, having adopted the commercial convention, the Turkish authorities abolished the internal duties that we in common with Russian subjects formerly paid, intending that the latter should either directly or indirectly be subjected to the nine per cent internal duties stipulated by the convention. On the new silk coming to market, the Russian Chargé d'Affaires at Constantinople succeeded in obtaining a vizerial letter directing that only three per cent was to be exacted from Russian subjects (according as the Russians say to their treaties with Turkey).

Since then a firman has been received directing that while three per cent only was to be demanded from Russians, the sellers of all goods to them were to be called upon to pay the nine per cent internal duties. The Russian consul here, however, continued to resist; a vizerial letter was again received, ordering that, though when they knew the sellers of goods, they might exact from them the nine per cent duties, they were not to insist on obtaining that knowledge from the Russian merchants.

"This completely renders null the previous firman, as it is impossible for the authorities here to know the sellers of goods unless they obtain that knowledge from the buyers.

"In the meantime, while these privileges continue, the export trade in this quarter may be considered as entirely lost to us, or on the average prices of this year I calculate that we have to pay on silk ten to fifteen per cent more duties than the Russians, and on all other articles about nine per cent more.

"The cultivation of linseed and sesame in this neighbourhood is annually increasing to the advantage of our trade this year; but, the heavy rains during the autumn destroyed about half the crops, damaging the remainder, notwithstanding which about 6500 quarters were bought principally for the French markets. None was sent to England, the English merchants thinking the quality not good enough for that market. A very large quantity of both these articles is consumed in this country.

"The crop of rice has been very abundant but of inferior quality: average price about 11*s.* per cwt."—*Adrianople, January* 12, 1842

Approximate Statement of the Quantities and Average Prices of the principal Articles of Turkish Produce annually brought to Adrianople for Sale.

Articles.	Quantities.	Average Prices.	Remarks.
		£ s. d.	
Hare-skins ..... doz.	35,000	0 1 0	The principal articles exported to England are hare-skins, otto of rose, silk, yellow berries and valonia. The trade in tobacco and bees' wax is confined to Germany. The silk is about 10 per cent inferior to that of Brusa, and is chiefly consumed in the silk factories at Constantinople. The sheep's wool is the least in Turkey, it has hitherto been sent exclusively to France.
Hides, ox and cow, salted ..... number	100,000	0 15 0

	6	1385	67		6	1385	67	13,430

A few British vessels have loaded occasionally at Enos, but owing to the total failure of the linseed crop, and the very small crop of valonia, no British vessel arrived in 1840. The invoice value of the cargoes exported has been calculated at the average exchange of 106 piasters per £ sterling. In 1837 there entered 3 British vessels (426 tons) in ballast, and sailed with cargoes valued at 3940*l.* sterling. In 1841 there arrived 2 British ships (617 tons) in ballast, and carried away cargoes of bones valued at 1105*l.* One Turkish 4 French, 4 Austrian, 3 Russian, 2 Greek, and 2 Sardinian vessels arrived in ballast the same year, and carried away assorted cargoes of linseed, silk, valonia, &c.

Salonica.—The roadstead of this city affords good anchorage, and, after Constantinople, it is the most commercial town in European Turkey. The population is estimated at nearly 75,000 inhabitants, consisting of about 5000 Turks, and 25,000 to 30,000 Jews, and the remainder Greeks, Franks, &c. The narrow streets of Salonica are somewhat cleaner than those of most Turkish towns, and its appearance, varied by monuments and domes, when viewed from the bay, is remarkably imposing. In order to exhibit the commerce of Salonica in 1832 and in 1842, we have taken the following abstracts from consular reports; the first, for 1832, abstracted from a report, drawn up officially for the government of the United States of America, and those for the latter period from the reports of the British consuls.

State of the Trade in Salonica in 1832.—"The sales of imports are confined exclusively to the Jew buyers, who purchase at long credit and protracted, though generally sure payment; they give prices from eight to twelve per cent higher than in Constantinople or in Smyrna.

"For *colonials* the credit allowed to bazaar dealers is from thirty-one to ninety-one days, and sometimes sales in them are made for a bill on Constantinople at sixty-one to ninety-one days' sight. For manufactures, four to six months' credit is exacted. No exchange for bills on Europe exists at Salonica, and all money, as well as bill negotiations, are in the hands of the Jew bankers, who employ their surplus capital in purchasing old Turkish or foreign coins, which they forward to their agents in Constantinople, and reimburse themselves afterwards by selling their bills at par to those in want of paper to remit. Sometimes these bankers purchase, at their own risk for the solvency of debtors, outstanding bazaar bonds for import sales, at the rate of two per cent per month, for the period the bonds may have to run, against drafts on Constantinople at thirty-one days' sight; a sale operation thus effected would result in an immediate remittance by a one month's bill, at the same prices as at Constantinople or Smyrna at credit.

"The export trade belongs exclusively to the Turk and Greek cultivators; who, from their indigent circumstances, require either advances on making a conditional contract, or borrow money at high interest to enable them to prepare their harvests, the parties advancing or lending having the preference of the produce as it comes to market,

with a deduction for interest on the current prices paid by other purchasers. The only opulent cultivators are five or six *beys*, or native princes, who produce corn and cotton wool, and do not require advances. It happens, though rarely, that a small barter against produce (with the exception of grain,) is made in taking it at five per cent advance on market prices, and by giving in exchange, one third amount in outstanding bazaar bonds, one third in bills at thirty-one days' sight, and the balance in cash. The Jew bankers never allow discount, on selling their paper, and invariably demand two per cent discount on purchasing the paper of others: thereupon, in giving an order to buy produce, Turkish firman money or Spanish dollars should be sent.

"The trade of Salonica in itself is considerable, as regards the daily wants of its inhabitants, computed at 100,000,*—viz., Jews, 50,000; Turks, 30,000; and Greeks, including a few Frank families, 20,000, all of which, more or less, require supplies, in *colonials*, manufactures, and metals; added to which, the city furnishes a large portion of goods for the extensive fairs of Parlepe in July, of Lucca in November, and of SERES in February, of each year, where all transactions are for cash.

"In 1830 the imports were only 3,000,000 piasters, and the exports 500,000. In 1831 the former exceeded 7,000,000, and the latter 1,000,000. In 1832, up to the 30th of June, the custom-house registers showed the imports to have increased to nearly 6,000,000, and the exports to upwards of 1,000,000 piasters.

"Supplies in *colonials* and manufactures have been furnished for the last twenty years through indirect channels, at heavy additional expenses and with much delay, from Smyrna, Constantinople, Marseilles, Leghorn, Trieste, and Venice. Latterly, as respects manufactures, *England* and *Austria* have furnished the greater part, but colonial produce continues to be received from second and third hands, whilst it could be imported direct.

"The United States having great capital, together with extraordinary commercial enterprise, no country could probably employ its wealth and industry in monopolizing that part of the commerce of Salonica, which refers to imports of *colonials*, and cheap white and printed cottons. If the Porte were to do away with its injurious system of throwing every possible difficulty in the way of the needy cultivators, and diminish the heavy taxes imposed upon them, the export trade might be very much extended, considering the vast quantity of fine low land yet uncultivated, the extraordinary fertility of the soil, the cheapness of manual labour, and the disposition of the inhabitants to cultivate, if only a little encouraged by exemption from insupportable contributions, so frequently levied by their rapacious and tyrannical Turkish *agas*, and other petty governors, who endeavour to enrich themselves at the expense of the necessitous farmer, whose subsistence for himself, family, and labourers, depends upon the reduction he may be able to effect in bargaining for the taxes on his produce.

"*Exports.—Sheep's Wool.*—Annual average produce, 600 to 700 tons; price, first cost in 1831, 272 dollars per oke.

"The season for receiving commences in April. In the months of November, December, and January, the shepherds bring their flocks from the mountains to feed in the plains near the town, and then make contracts with purchasers, who advance them from 25 to 30 per cent upon the probable quantity likely to be produced.

"Last year they were forced to sell their fleeces at 60 paras the oke to government, whilst merchants would have given 90. The present year (1833) 80 paras were given by the Turkish agent, although purchasers would readily have paid 100. These arbitrary measures have had the natural effect of diminishing the quantity received by the agents, to 90,000 instead of 600,000.

"*Sponges.*—Average annual produce 20,000 okes. This article seldom comes direct to Salonica for sale. It is fished in the gulfs of Mount Athos and Kontessa, during summer and early in autumn. The manner here for procuring sponges is by making a contract with, and giving advances to the owners of the fishing boats, who engage to deliver the quantity they may procure, with the condition that the quality is approved of.

"*Raw Silk.*—Annual average produce, as regards receipts at Salonica, as follows:

Fine imitation Piedmonts, 5000 okes; Second imitation Piedmonts, 11,000 okes; third imitation Piedmonts, 5000 okes.

* This estimate of the population and the number of Jews appears to us exaggerated

"Season of delivery from the country, and of working in town, from June to October.

"First quality village silk, 110; second quality village, 90; third quality village, 80.

"Generally, an imitation of Piedmont silk is that exported: sometimes the first and second quality of village silk also, but the latter, as well as the third quality, is chiefly confined to the country, to Smyrna, and to Greece; for the purpose of being manufactured, mixed with cotton twist, into different kinds of stuffs worn by the inhabitants. Those who wind the cocoon in town always make advances to the villages from October to April, of 30 to 40 paras, for the amount of cocoons likely to be produced. This produce only requires encouragement, and a diminution in taxes, to be increased tenfold, and to become an article of great importance.

"*Wine.*—It is quite impossible to calculate the extent of the produce of wine; but it may be estimated at from 10,000 to 20,000 tons annually—average price 15 to 20 paras per oke. The country being particularly favourable for cultivating vines, there does not appear any reason for supposing that with proper care and management, the wines made in the numerous adjacent villages might not be rendered fit to support a long sea voyage, in giving two or three paras more the oke, on condition that no water should be mixed with the grape. The general flavour of the wine made, when unadulterated with *water* and *lime*, resembles port or strong claret. A village, distant from Salonica about 30 miles, called Mariste, produces a limited quantity of wine, not exceeding 100 tons, of very superior quality; but the producers, from the scantiness of the crop of grapes, generally demand 50 to 60 paras the oke for the wine they produce, and even then mix it with water, otherwise it would be fully equal to the best Burgundy in flavour, and not much inferior to port in strength. By giving 10 paras more for the oke than the usual price, this taste and strength might be insured.

"*Timber.*—Quantity incalculable, as there are many hundred acres of fine forest trees, (pine, beech, oak, and walnut,) still untouched; 300 small cargoes, forty to fifty tons each, are generally shipped to Smyrna, and other places, in the shape of staves for fruit, wine, and oil casks. The pacha of Egypt sent large orders here to buy timber for shipbuilding, and the finest description of masts and spars, large enough for a three-decker, could be procured in abundance and cheap.

"*Corn.*—Season of produce from June to August. The wheat is composed of the hard and tender quality of fair description, though not very clean. The same may be said of the other grains. This produce is mostly in the hands of a few opulent Turkish noblemen, and the greater part is generally required for government; but a considerable quantity, except in cases of scarcity, is allowed to be exported. The kilo of Salonica is equal in weight to four kilos of Constantinople.

"*Salted Codfish and Salmon*, as well as other descriptions of cheap salted and dried fish, are largely consumed at Salonica and in the vicinity: the fisheries having of late years entirely failed, the wants of the place are furnished from other markets to the extent of 500 tons annually."

Navigation of Salonica in the Year 1837.

Extract from Report of British Consul, 31st July, 1841:—"As regards the import of British manufactured goods, and the produce of British colonies, the undersigned is not aware of any infraction of the treaty, except a few trifling irregularities in demanding fees upon goods crossing mountain passes, the which, however, have always been refunded upon application to the proper authorities.

"There being no British agents at any of the dependencies (of this consulate) and no British, and only a few Ionian, merchants, upon a very limited scale, it is impossible to arrive at any certain facts. Merchants of the country, rayahs, are the principal importers of British manufactures at Salonica.

"Respecting exports, those articles which may still be considered as monopolies or subject to vexations, are *salt, snuff, timber, staves, and abbas*, a *coarse cloth* of the country.

"*Salt* is a monopoly. The evils arising from this monopoly are certainly great when it is considered that were the salt trade free, the inhabitants generally of these parts of Turkey would purchase their salt at 7 piasters 40 paras per oke, or 22*s*. 10½*d*. per ton (ex. 110), instead of paying as they now are obliged to do by firman granted to the purchaser of the monopoly 10 piasters 40 paras, or 34*s*. 1½*d*. per ton.

"The quantity of salt yearly rendered from the salt pans in the Gulf of Salonica, is estimated at eleven millions of okes, or 13,950 tons.

"If the cost of *all* salt delivered to the *Miree* be taken at the rate of salt imported from other parts of Turkey, which is, all charges included, 7 piasters 40 paras per oke, or 52*s*. 10½*d*. per ton, the profit to the miree upon the produce of the salt pans of Salonica alone is about 825,000 piasters or 7500*l*. (ex. 110), but, strictly speaking, the profit is far more considerable, for the salt from the pans of Salonica (a brown salt much esteemed by the people of the country) does not cost, delivered to the miree, 7 piasters 10 paras per oke, more probably 5 piasters 40 paras per oke, but it is difficult to arrive at the fact. The purchaser of the monopoly receives also the customs duties upon all salt delivered to the miree; he enjoys, therefore, a profit considerably above 11*s*. 2½*d*. per ton derived from difference of price, which explains why it is generally estimated that the purchaser of this monopoly gains 100 per cent, but at the rate at which it has been disposed of this year, the profit will be nearer 200 per cent.

"In a country like Turkey, where the lower orders are so much subjected to oppression from the rapacity of the *minor* authorities; and whose very existence depends upon salt, owing to the injunctions of the clergy to enforce a strict observance of ecclesiastical ordinances, as regards their *Rhamazan*, or Lent, the fact of their being plundered of so large a sum is a grievous oppression.

"The *timber trade* is subject to certain restrictions at variance with the sense of the treaty. Merchants who wish to purchase timber for ship building must now apply to the pacha for a permit to cut the timber, which application must be sent to Constantinople for approval.

"*Staves*.—There has been an endeavour to put on a tax, but on the representation of the consul it has been generally waived.

"*Snuff* is a monopoly to the prejudice of the foreign merchant.

"The *abbas coarse cloths* are used entirely by the majority of the people.

"*Silk*.—Although the convention has proved greatly beneficial to the silk trade, and has caused a very considerable increase in its production, still complaints are made against the rates at which the duties are paid, all silks being valued at 200 per oke (ex. 110), 13*s*. 7½*d*. per lb., the relative value of silk in these parts being—1st, 185 to 200 per oke = 12*s*. 5*d*. to 13*s*. 7½*d*. per lb.; 2d, 125 to 130 per oke = 8*s*. 6½*d*. to 8*s*. 10½*d*. per lb.; 3d, 110 to 115 per oke = 7*s*. 6*d*. to 7*s*. 10½*d*. per lb.

"The first quality, called *Façon Piedmontese*, is manufactured entirely for exportation; only a small quantity of the second quality is sent to Europe; the greater part of this and the third quality is consumed in Turkey.

"The rayahs engaged in the trade of British manufactures have suffered lately from failures at Vienna and Trieste, as they managed their bill operations with England through these places, there being no direct exchange.

"*Exports*.—As regards exports from Salonica to England, the amount is trifling.

"The only article purchased for England during the last year at Salonica and the dependencies of the consulate has been bones for manure.

"*Imports.*—The trade from Britain to Salonica is so limited, arising from the small capital for commercial enterprise, that it is next to impossible to adduce proofs in support of the advantages derived."

The gross returns of trade for the year 1842 show some improvement in the commerce of Salonica, when compared with the year preceding.

		Tonnage.	Value.		Tonnage.	Value.
In 1842 . . .	Imports	41,590	£165,908	Exports	40,497	£163,293
1841	..	36,524	135,956	..	36,275	140,170
Showing an increase of . .		5,070	29,954		4,222	23,123

The above increase of trade may be attributed to a more correct system of administering the local government,—less oppression,—less plundering,—and to every one being free under the treaty, it may be said, to dispose of his own. Much credit is therefore due to the local government of Salonica, and the more so, when it is considered that the same system of honesty and philanthropy is not general throughout the country.

British Capital.—The only British capital employed at Salonica during the year that the undersigned is aware of, has been, for wheat, 1286*l.*; bones, 1100*l.* Total, 2386*l.*

Coals.—Those imported during the year were for the Danube Steam Company.

Tonnage.—The increase in the amount of British tonnage may be attributed to two causes. 1st. An increased demand for British goods. 2d. The resolution come to by the importers to receive goods direct, owing to the vexatious delays which occur at the custom-house at Syra, and the inefficient state of the Greek vessels, by which they are transported from that island. The increase of foreign tonnage arises from the number of vessels arriving during the autumn for grain freights.

British Manufactures.—The increase in the value imported during the year is by no means inconsiderable; viz.—In 1842, imported direct, 61,165*l.*; in Greek vessels, *viâ* Syra, 12,000*l.* Total, 73,165*l.* In 1841, direct, 6380*l.*; by Greek vessels, *viâ* Syra, 35,270*l.* Total, 41,650. Showing an increase of 31,515.

The demand for, and consumption of, cotton twist, gray calicoes, prints, shawls, and madapollams, have considerably increased: the improvement is at the same time general, though to a less extent in the articles noted in the list of prices.

The only article which is on the decline is cotton velvet, which at one time it was expected would have superseded nankins; the latter, however, have regained in some degree the favour which they formerly enjoyed, the people of the country finding that these are more durable and more cleanly for wear than the velvets. British nankin is preferred to Saxon. British nankins have, it may be said, entirely superseded the foreign. All British manufactures imported during the year have been for foreign account. This trade continues entirely in the hands of the people of the country, and will continue to be so until the spirit of enterprise leads some one to supply Salonica as a depot. The people of the country would find it to their advantage to purchase on the spot, instead of addressing themselves as they now do to the Greek agents at Liverpool and Manchester. The whole of the manufactures, or at least by far the greater part of them, imported during the year, have been disposed of at the minor markets and fairs in the interior, at a profit of from 10 to 15 per cent. As no trifling portion is given on credit, the deduction of interest thereon will leave the net profit at from 7 to 12 per cent.

Foreign Manufactures.—Those in repute are the *demi-cotton*, which arrive in large quantities through Belgrade by land, and through Trieste by sea. *Merinos* are rather more esteemed and more in demand in the fall of the year; which may be attributed to the general change, at that time, in the costume of the female class.

Fancy Goods.—This trade increases and several retail shops have been opened; formerly there was only one at Salonica: there are now five. The freedom of trading, which they now enjoy, enables them to supply their wants without fear of persecution.

British Iron.—The consumption of this article has decreased, owing to greater supplies being sent from the mines of *Samakoff* near *Philippopolis*, which are now more extensively worked. This iron is cheaper, which is the chief cause of its being preferred to British. *Colonials* are chiefly supplied from Trieste and the Italian ports.

The Export Trade has not been so active as in former years. The *grain* markets have

been very fair; the crops have been abundant; but the prices demanded exorbitant. The chief demand was on the part of the Greek captains for the Grecian Archipelago.

Wheat.—One cargo of wheat has been exported this year from Salonica to Liverpool, the first that has been sent for many years. The stocks remaining on hand are considerable. The total export of wheat during the year has been 9795 quarters.

Barley.—The largest quantity exported has been for Algiers. There are still heavy stocks in first hands: the total exported during the year 1842 was 15,215 quarters.

Rye.—The export has been trifling. It is consumed in the country.

Maize.—Total quantity exported during the year, 10,549 quarters. Chiefly to Italian ports.

Sesamum Seed.—The demand for this seed has been very extensive for Marseilles, (the orders coming for the most part from the Greek houses of that place), and the prices considerably increased in consequence. There was an effort made on the part of the authorities to prohibit the export of more than a certain quantity, under the pretence that it was required for the consumption of the place, but they found upon inquiry that the quantity of the crop was fully adequate to meet even a greater demand.

Cotton.—This article was in demand in the fall of the year for Italian ports.

Wool.—Nothing has been done in wool during the year, even the usual small purchases for the American markets have not been made.

Tobacco.—Only about 6000 bales have been purchased for export to Trieste. The crop has been abundant, and there are heavy stocks remaining in first hands, which will in part be consumed in Turkey, and the rest sent to Egypt and the Grecian Archipelago.

Silk.—The mode of winding this article has been greatly improved within the last two years by a person from Sicily, who had under his direction the royal silk-factory at Catania. Some of this new silk has been bought by the silk manufacturers of Lyons, who have willingly paid 20 per cent above the other fine qualities of Salonica. The latter are *drawn* under the superintendence of the Jews, to whom the greater part of the factories belong, and who keep them in an excessively filthy state, and pay no attention to the conveyance of either the steam or smoke from the caldrons or fires; the quality of the silk is thereby greatly deteriorated. The advantages to the silk trade of this place would be considerable, were the duties fixed according to the different qualities. The duties now paid are the same upon the low as upon the high qualities.

Staves.—The demand for the Smyrna market where they are for the most part sent from the coast near Salonica, has been trifling during the year, and the falling off in the export this year is full 75 per cent.—*Salonica, Dec.* 31, 1842.

CHAPTER IX.

TRADE OF ALBANIA.

The trade of this extensive section of European Turkey is chiefly important as regards the intercourse between its ports and the Ionian Islands, and the trade between Scutari and the ports of Venice, and Trieste. The ports of Prevesa Durazzo, and Scutari, might become important, if any great practical improvement in agriculture or trade were made. Under the existing government we do not expect any favourable progress. Albania, including ancient Epirus, possesses a climate and soils capable of producing valuable crops of corn, hemp, vines, currants, and various other fruits and productions. The *Bocca di Cattaro*, belonging to Austria, has one of the safest harbours within the Adriatic, and

forms the principal inlet and outlet of trade for the wild, and almost independent country of *Montenegro*.

PREVESA is conveniently situated for trade at the entrance, and on the north side of the Ambracian Gulf. It has a population of only 4000 inhabitants, and was formerly the entrepôt of Epirus. DURAZZO is admirably situated, and its harbour might be well sheltered by constructing a mole at no important expense, so as to render its port safe with all winds. Population estimated at 5000.

AVOLONA is a deep, commodious, and well sheltered port, insalubrious from neglecting its drainage. Goods for Berat, a considerable inland town, are imported into Avolona.

SCUTARI, in Albania, has a population of about 20,000. It exports timber, for which vessels ascend by the river to its lake. It has also some manufactures of cottons, fire-arms, &c., and yards for building vessels, which are engaged chiefly in the coasting trade, and in the trade with Venice and Trieste.

ARTA, though nearly demolished during the Greek insurrection, is still a place of some importance, with several bazaars and some manufactures of cotton, wool, and leather, *flaccatas*, or shaggy *capotes*, embroidery, &c. It is situated on the river Arta, about six miles from its junction with the gulf.

The following extracts from consular returns, will illustrate the present commercial state of Albania, and especially of Prevesa:

"The Turkish financial year extending from the 1st-13th of March, 1841, to the 1st-13th of March, 1842, has offered the first example, in this province, of the public revenues being directly collected on account of the government. The system has effected various changes in the local usages and regulations, by which different branches of trade were previously governed. The new tariff of duties on importation and exportation has been put into operation within the same period.

"In the general import and export trade of this province, vessels under the British and Ionian, the Greek, and Ottoman flags, are almost the only ones engaged. A few Austrians forming occasional exceptions; while only one vessel under the French flag has appeared here within the last ten years, and very rarely any under the Russian.

"With regard to the tariff valuations of 1838, wool and valonia, being the only articles of any importance upon which the computation of duty according to the tariff, had been found to bear an unfavourable application to the produce of this province.

"This year the customs duties being farmed out to parties who are at liberty to make a general application of any exceptional rules which they may think conducive to their own interests, within the limits of the tariff, they fixed the duty on wool at 6½ paras per pound, equal to 21⅛ piasters per quintal, instead of 24½ piasters, which will prove as nearly as possible equal in amount to what was formerly levied on the export of this article previously to the introduction of the tariff of 1838.

"On Valonia, also, a reduction of duty has been conceded—namely, for every 1000 pounds, Venetian weight (equal to about 8½ quintals), 40 piasters for all qualities, instead of 68 piasters as established by the tariff.

"The liberal manner in which these Albanian contractors have determined to act in this respect, is the more creditable to them, from their having paid an extra price for their contract, as may be observed by the following table, showing the amount received by the government for farming the customs duties in Epirus, during each of the last five years; which, as compared with the trade under the British and Ionian flags at Prevesa, may afford some guide to the practical effects of the new system in this district; the difficulty of obtaining any precise data with regard to the other ports of Epirus and foreign flags rendering it impossible to carry out the comparison to a fuller extent

YEARS.	Contract Price for farming Customs and Excise Duties	Approximate value of Cargoes under British and Ionian Flags imported into and exported from Prevesa.		REMARKS.
		Inwards.	Outwards.	
	Turkish piasters	dollars.	dollars.	
1838	1,920,000	98,000	40,562	Contract price, 160,000 piasters per month, equal to about 18,000*l.* for the whole term.
1839	1,800,000	113,725	53,113	New Convention in partial operation from August, when the farmers of Customs threw up their contract, leaving the Pasha to collect on his own account.
1840	1,356,000	129,083	66,891	Contract price fallen from 150,000 to 125,000 piasters per month.
1841	1,100,000	141,158	52,078	Customs collected on account of Government, producing from 90,000 to 93,000 per month. Depressing arising, amongst other causes, from estimated Loss of about 300,000 piasters, by abolition of salt monopoly.
1842	1,380,000	...	...	Contract price, 115,000 piasters per month, equal to about 11,500*l.* for the whole term.

"The duties upon Ottomans, during the last year, were levied in conformity with a tariff which put them very nearly upon an equal footing with the subjects of foreign powers.

"The abolition of the salt monopoly, by a special order from Constantinople in 1840, has occasioned a loss to the government of about 300,000 piasters, or nearly one-fourth of the net proceeds of the customs and excise duties in this province.

"The selling price under the monopoly was usually from 30 to 32 piasters per horse-load of 500 pounds; and taking the average consumption at about 18,000 horseloads, there remained a net profit of from 380,000 to 400,000 piasters per annum.

"This year a different system has been adopted, the custom-house officers having stipulated to receive from the salt works 11,000 horseloads; paying for the whole quantity 7 piasters per load and 3 piasters land carriage, the selling price will be 14 piasters per load.

"By the abolition of this monopoly, the profits on the importation of Ionian salt are now thrown into the hands of our own people.

"Snuff, which is extensively manufactured in this province, formerly ranked as a monopoly; no one being allowed to purchase this article, excepting through the medium of the party who held his privilege from the government where the *appalto* of snuff for the whole of Roumelia is still farmed out, from August to August, in each successive year.

"In the several districts of Roumelia, however, the subordinate agents charged with the direction of this *appalto* are accustomed to control the trade in snuff. The same thing happens, generally, where an *appalto* of Turkish produce is conceded, all distinctions being lost sight of, when the parties are beyond the reach of immediate control.

"The trade in leeches, which is a source of considerable profit to the population of these parts, was formerly a monopoly; the fishing of which is now an *iltizam*, or farm, sold by the government in the same manner as the other fisheries, from year to year.

"As, however, all the peasantry are allowed to fish for leeches, indiscriminately, without any special licence or authority, the contractors employing guards for the prevention of contraband, and allowing a specific sum for the quantities delivered; but the fishers sell leeches to other parties, who are ready to offer them a higher price for the same;—and as every landed proprietor may be considered free to dispose of the produce of his own estates, as well in the case of leeches, as with respect to other private fisheries, the contractors have never been allowed to interfere with British protected subjects, to whom the liberty to purchase, and export all articles, without any exception whatever, is secured. Thus the trade in leeches is free to British subjects in this province, being expressly set forth as such in the pasha's orders to the custom-house officers.

"*Kermes* was frequently subjected to monopoly; and during the past year an Armenian merchant came here from Constantinople provided with an express *firman* for the purpose of collecting the whole produce of this district, under the pretext that the article was required for the dyeing of red caps in the government manufactories.

"This restriction was not extended to British protected subjects, who continue to purchase as before.

"In conclusion, it may be proper to advert to the abolition of road tolls on horned cattle, by which a considerable advantage has been secured in favour of the commissariat

supplies for the British garrison at Corfu. These supplies of cattle are all drawn from the neighbourhood of Monastir, on the confines of Roumelia and Upper Albania, whither the contractors, or their agents, are accustomed to proceed occasionally for the purpose; and the road tolls frequently recurring (about once in each day's journey) were heavy charges on the conveyance of cattle by way of Yanina to the coast."—*Perrott, July* 1. 1842.

REGULATIONS issued by the *Malié Nazir* (Superintendent of Finances), for the Collectors of Customs in Epirus, Yanina, 27th March, (8th April) 1841.

1.—"British, French, and Austrian merchants importing goods from Europe into the Ottoman dominions will pay on arriving at the ports, for customs duties three per cent, and for interior duties on the sale or transport of such goods, two per cent, in conformity with the tariff and treaty in our possession.

2.—"Having obtained the proper teskaré's for the aforesaid goods, neither the buyers nor the sellers of such goods shall be required to pay any other duty for the same, to whatsoever part of the empire they may desire to convey them.

3.—"In the same manner the merchants, subjects of the empire, whether Turks, Christians, Jews, Beratlis or not Beratlis, importing merchandize at the several ports, will pay the same duties.

4.—"All Europeans and others conveying from Albania cattle and other articles, will pay nine per cent for interior duties, and three per cent for export duty, making in all 12 per cent.

5.—"On all live stock, the produce of this district, conveyed to the ports by subjects of the beforementioned three powers, there will be paid nine per cent and three per cent, as for all other articles the produce of the empire.

6.—"All goods bought in the province of Tricala, or in Roumelia, and conveyed to the shipping ports of Arta, Prevesa, and Zamouria, whether by a subject of the Ottoman empire or by a European, on arrival at the place of embarkation, will pay nine per cent for interior duties, and three per cent for export duty.

7.—"All Hellenic merchants and other subjects of foreign powers, who are not comprised in the new treaty, purchasing merchandize in Turkey for Europe, or importing from Europe into Turkey, will pay according to former usage; that is to say, the sum which may be wanting to complete the 12 per cent export duty on articles the produce and manufacture of the Ottoman territory, shall be levied on the Ottoman vender of such merchandize; and on articles imported from Europe, the difference wanting to make up the 5½ per cent shall be paid by the buyers. Hellenic subjects shall pay on Ottoman produce an export duty of 5½ per cent, and the venders 6½ per cent, and it shall be incumbent upon them to produce the parties in order that the public treasury may in no wise be subjected to loss, paying on European produce three per cent, and the buyers 2½ per cent, to make up in all 5½ per cent import duty.

8.—"All grain, vegetables, and other articles of food, including live stock, together with building materials brought from the villages into Yanina for internal consumption, will pay according to former usage; the same rule to apply to all the other towns and districts of Epirus.

9.—"All European goods conveyed into the town of Yanina, when on the aforesaid customs' duties have been paid, and such articles being converted into another form, as, for example, silk into ribbon and the like, these, when conveyed to the villages of the same town, or to other towns, will pay three per cent; or if conveyed by former usage to other towns, will pay nine per cent for interior duties, and three per cent export duty.

10.—"In the same manner, all articles of Turkish produce entering from the villages into the towns, and on becoming converted into another form, as for example, wool into cloth, cotton into thread, &c., if afterwards sent out to other towns and villages, will pay according to former usage.

11.—"All merchandize coming into Epirus by land from Constantinople, Smyrna, Salonica, and Larissa, accompanied by proper teskaré, will not be liable to any duty; but

not having the said teskares will pay, if the produce of the Ottoman empire, nine per cent for interior duties, and three per cent on subsequent exportation; or if European produce two per cent and three per cent, making in all five per cent.

12.—" Goods, viz., articles of Turkish produce, destined for internal consumption, introduced into the towns of Epirus from Tricala, Bitolia, and other parts of Roumelia where the duty of Iktisap continues to be taken, will pay according to former usage.

13.—" All grain, provisions, and live stock, coming from the direction of Tricala, Elasona, Domico, and Roumelia, will pay according to former usage.

14.—" All grain, provisions, live stock, and other articles, which may be taken in or out of the towns of Grivena and Lesovico, will pay according to former usage

" The produce of the tithes of crown lands, and of the Spahi tithes conveyed into the towns, will not be liable to any duty."

NAVIGATION and Trade of Prevesa during the Turkish Financial Years 1840-41.

DESCRIPTION.	ARRIVED.				DEPARTED.

Total	531	12,515	2056	...	524	12,384	2134	...

Of the 531 arrivals, 170 were in ballast, 86 had wine, 23 wine, salt, spirits, cheese, and soap, 15 had soap, 4 wheat, salt, and wine, 56 manufactures, 1 manufactures and Indian corn, 10 wheat, 2 wheat, timber, and staves, 21 Indian corn, 3 Indian corn and manufactures, 3 onions, 1 onions and spirits, 2 rice, 1 rice and spirits, 62 salt, 1 salt, wheat, and 72 had cargoes of spirits, spirits of wine, iron, charcoal, deals, staves, coffee, and salted skins, barley, cheese, wolf, and other skins, vinegar, tobacco, leeches, apples, snuff, honey, flour, salt-fish, figs, &c., raisins, cottons, millstones and 1 horse.

Of the 532 departures, 50 had salt fish, 11 cheese, salt fish, olives, timber, and garlic, 4 charcoal, 4 valonia, 2 valonia, and cheese and timber, 7 leeches, 6 leeches, cheese, olives, bullocks, and valonia, 44 bullocks, 18 bullocks and pigs, mules, salt-fish, olives, tobacco, sheep, lambs, and staves; 160 in ballast, 15 had cheese, 11 cheese and butter, fish, bullocks, tobacco, lambs, and beans, 44 shellfish, 16 staves, 9 woollen cloths, 13 Indian corn, 16 timber, 4 wood, &c., skins, 9 salt, 5 salt eels, 1 fustic, 1 wooden hoops, 7 firewood, &c., 7 with horses, mules, and loads, 8 oats, wheat, and cheese, 6 pigs, cheese, salt fish, and staves; and 57 had linseed, geese, reeds, soap, barley, wheat, fishing tackle, salt fish, coals, cucumbers, beans, valonia, butter, garlic, olives, wool, buffaloes, buffaloes' hides, oranges, and lemons, fish, cotton, tobacco, melons, fresh meat, wine, olive kernels, figs, sheep, and lambs, salted hides, and manure.

Number and tonnage of British and Ionian vessels that arrived at the port of Prevesa in the following years:—1838, 400 arrivals, 5117 tonnage; 1839, 486 arrivals, 5983 tonnage; 1840, 550 arrivals, 6196 tonnage. In the year ending 31st of December, 1842, there arrived 535 British and Ionian vessels, and 528 departed.

Of the 535 arrivals, 186 were in ballast, 78 had manufactures 42 salt, 18 salt and cheese, wine, spirits, soap, and oil; 57 wine, 29 wine and spirits, soap, and oil; 2 gunpowder, hides, and spirits; 1 rum, 1 Malta stone, 3 honey, 5 snuff, 5 wheat, 3 Indian corn, 5 spirits, 3 sugar and coffee, 23 soap, 4 soap, tiles, barilla, and wheat; 3 coffee, 1 dried fish, 1 currants, 5 tiles, 1 pipe-staves, 5 oil, 5 earthenware, 3 rice, 4 fruit, 1 macaroni, 2 flour, 4 bones, 5 vinegar and tar, 3 tobacco, 4 leeches, 1 wolf-skins, 1 codfish, 2 apples, 3 mill stones, 1 timber, 1 garlic and tiles, 1 aniseed, 1 salt fish, 3 almonds, 1 oil of almonds, 2 iron, 1 incense, 3 figs and sugar, 1 ships' stores, 1 onions, 1 wax and candles, 1 rum.

Of 528 departures, 115 were in ballast, 5 had barley, 4 beans, 1 bones, 38 bullocks, 9

bullocks, salt fish, buffaloes, pigs, lambs, and oats; 20 cheese, 12 cheese, salt fish, poultry, eggs, snuff, lambs, &c.; 1 charcoal, 1 canes, 2 dried fruits, 3 eggs, poultry, and shellfish, 1 eels; 3 firewood, 5 fustic wood, 2 fresh fish, 1 goats, 1 honey, barley, chestnuts, and olives; 2 hoops, 1 horses, 91 Indian corn, 8 leeches, 5 leeches, oats, timber, olives, and oil; 5 lambs, sheep, and oats; 2 lemons and oranges, 1 mules, 3 nuts, beans, and olives; 1 oats, 3 oats, onions, flour, beans, 8 olives, 4 olives, sheep, beans, wool, and pigs; 11 pigs and swine, 1 rice, 22 staves, 2 staves, lemons, and lambskins; 2 sheep and timber 2 salt eels, 7 salt, 38 shellfish, 1 snuff and butter, 23 salt fish, 2 soap and tobacco, 3 skins and butter, 1 spirits, 11 valonia, 1 valonia and pigs, 1 wine, 3 wheat, 1 wheat and barley, 7 woollen cloths, 8 timber.

CHAPTER X.

ASIATIC TURKEY.

This extensive region comprises Anatolia or Asia Minor, which is traversed by mountains, of which the most conspicuous is the Taurus chain, and amidst which are the Ida, Olympus, and Lebanon; of part of Armenia,—part of Kurdestan,—the vast pachalics of Bagdad and Syria,—and, nominally, Arabia. The population has been variously estimated, exclusive of Arabia, at from 8,000,000 to 12,000,000.

Anatolia, or Natolia, comprehends nearly all the peninsula, greater in extent than Spain and Portugal, situated between the Black Sea and Mediterranean, and extending from Armenia to the Dardanelles. The military governor or pacha has under him the beglerbeys of Anatolia, Sivat, Karast, Karamania, and Trebisond. Population chiefly Turks and Greeks.

The climate is exceedingly variable, but the soil, as well as climate, are capable of rendering this country of mountains, valleys, and tablelands, a most productive, rich, populous, and powerful empire.

The towns of the interior are numerous, but generally ill built and dirty. The principal seaports and places of commerce along the coast are *Smyrna*, *Brussa*, and *Trebisond*, with many lesser harbours on the Levant, Mediterranean, and Black Sea.

TRADE OF SMYRNA.

Smyrna.—The port, situated at the bottom of a long deep inlet of the Levant, extends into the city, the population of which is stated to be between 130,000 and 150,000; half of whom are Turks, the rest Greeks, Jews, Armenians, &c. There is deep water for ships close to the quays. The town, which is of great antiquity is filthy in the extreme, and not only generally unhealthy in consequence of its narrow and dirty streets, but when visited by the plague, the mor-

tality has been proportionably greater than in any other town on the Levant: from 55,000 to 60,000 are stated to have been carried off by that pestilence in 1814. The commerce of Smyrna has long been of great importance. Its trade has been carried on as well by shipping as by the caravans of Asia Minor Syria, Bagdad, and Persia. Here as well as at Constantinople, and most of the Turkish towns, the Jews have managed to become the principal managers in the purchase and sale of commodities.

The following account of the trade of Smyrna, is condensed from private communications, from the information supplied by the British, French, and American consuls, and from statements published in the "Austrian Lloyds" at Trieste.

Report drawn up officially at Smyrna in 1833-4 for the American government. (We have omitted a few passages which do not now apply, in consequence of the treaty of 1838.)

"The port and import duties are so light, and so little attention do the Turkish authorities give to commerce, that Smyrna may in fact be called a free port. The import duties (now 5 per cent,) are, however, rigidly exacted, and the lighters which transport merchandize to and from the shipping, stop at the custom-house, which is on the harbour, where the goods are examined by the proper officers. The monopoly (now abolished) of silk and some other articles seized by the Porte are exceptions to the freedom of trade.

"In coming to anchor, each vessel is bound not to interfere with any other that may have already obtained its position; and if interference takes place so as to cause damage, the offender must pay the award given by the consuls of their respective nations.

"There are no lighthouse or harbour dues. The only charges to which vessels are subjected, are those paid to the consuls: viz.—

"Deposit of papers, 2 dollars; clearance, 2 dollars; anchorage, 1 dollar; bill of health, 2 dollars; *teskaré* from the Turkish authorities, 1 dollar. Total, 8 dollars, or about 1*l.* 14*s.*

"There are no established pilots, but there are persons who are sufficiently acquainted with the navigation to act as such. It is not usual for vessels entering the port to take a pilot, but it is sometimes done when departing. The masters of vessels make their own bargains with the pilots before they sail. The usual charge for piloting a vessel out is from 3 to 5 dollars, or about 10*s.* to 16*s.* 4*d.* American vessels proceeding from Smyrna to Constantinople generally take pilots, who are paid about 25 dollars, for which sum they navigate the vessel to Constantinople, remain on board whilst there, act as the captain's interpreter, and bring her back to Smyrna if required.

"The annual importation of coffee from the United states, is about 2,000,000 lbs., and the annual consumption is near 6,000,000 lbs. The importations of sugar (refined or Havana) amount to about 1,500,000 lbs., of which a very large proportion is carried here by the vessels of the United States.

"The *cotton manufactures* of New England termed *bleached sheetings* or *domestics*, were, some time ago, from their superior texture, in great demand, and met with a ready sale throughout the Turkish possessions. But their reputation was soon destroyed by the introduction from England of immense quantities of an imitation of this article, of a quality however, so inferior as to exclude fair competition, and to efface the distinctive character of the strong American fabric.

"This market, now (in 1833) receives an annual supply of 100 chests of indigo, 10,000 lbs. of cochineal, 300 puncheons of rum, besides iron, tin, lead, brandy, &c.

"The export of opium to China, chiefly by Americans, varies from 300,000 lbs. to 400,000 lbs. It is superior to the opium of Hindostan, and commands a readier sale.

"The other exports are, 500,000 lbs. of silk, 60,000 quintals of raw cotton, 100,000 pieces of carpets, 70,000 lbs. of old copper, 400,000 horse-hides, 1,500,000 lbs. madder-roots, 25,000 quintals wool, besides goats' wool and skins, valonia, olive oil, drugs, sponges, figs, and raisins in large quantities, &c.

"The wool exported to the United States amounts annually to about 4000 square bales, weighing from 300 to 600 lbs. The figs to 130,000 drums, and the raisins to 200 tons.

"On an average of the exports and imports, the charges on sales amount to about 12 per cent, and on purchases to about 8 per cent. (These rates are still about the same.)

"The French enjoyed a valuable trade with Turkey prior to their revolution. It was prosecuted chiefly from Marseilles to Constantinople, Smyrna, Salonica, Candia, Cyprus, Aleppo, and other ports of Syria. The revolution, however, followed by Napoleon's hostility to commerce, broke up the whole of this lucrative intercourse, and the resumption of it is but of recent date. It seems to be rapidly advancing, and if no untoward event should again interrupt its course, there seems to be good reason to believe that it will soon outstrip its ancient magnitude.

"In 1783 the annual imports into Marseilles from Turkey amounted to 32,760,000 francs, and the exports to 21,440,000 francs.

"In 1832 the importations from Turkey amounted to 23,874,830 francs, and the exportations thither from Marseilles to 16,738,035 francs. In 1784 there sailed from Marseilles for Turkey 187 vessels, and there entered from the Turkish ports 145 vessels. The state of French navigation with Turkey from 1825, the period at which the commercial relations between the two countries were being resumed, to 1833, is as follows:

	ENTERED, vessels.	DEPARTED, vessels.		ENTERED, vessels.	DEPARTED, vessels.
1825	90	79	1830	67	90
1826	87	113	1831	44	74
1827	52	62	1832	124	114
1829	78	62	1833	66	64

"The principal imports into Smyrna, in vessels of the United States, are coffee, sugar, spices, dyestuffs, rum, coarse cottons, and furniture. And they take away return cargoes of wool, opium, old copper, drugs, fruit, wine, oil of roses, and some few other articles."

The Treaty of 1838 between Great Britain, with the Tariff of duties annexed, (which see,) have been extended to Smyrna, as well as to other ports of Asia Minor. The following extracts from the Consular Report, are introduced to show the operation of that Tariff and Treaty.

"The stipulations of the treaty, so far as they relate to the export trade, and to the abolition of monopolies of agricultural produce, have been carried into execution at nearly all the places within the district of this Consulate. The traffic in mastic is now free, but it is not yet decided whether any sum may be demanded for the mastic grounds for rent, as they are the property of the Sultan. Meanwhile the market price of the gum at Scio, is now as high as it was during the existence of the monopoly. The exclusive privilege of manufacturing barrels at *Chisme*, for the packing of fruits, which was granted a few years ago to an Ottoman subject residing at that place has been withdrawn. Several infractions of the treaty, in respect to the import trade, have been committed, and notwithstanding the remonstrances against them, in every instance, to the local authorities, no redress has hitherto been obtained from the Porte. Among the most glaring infractions, is the imposition of a duty on British cotton goods (imported in the gray) after they are printed here. This duty was 7½ per cent on the value, but it has since been increased to 12 per cent. The consequence is that the demand for goods of this description has ceased, and an article imported from Switzerland, on which no extra duty is levied, is extensively used, as a substitute for them, to the great detriment of British trade.

"The trade in tobacco received from Europe, after the payment of the duties at its im-

portation and sale, is not free, inasmuch as the exclusive privilege of manufacturing snuff (for which purpose only such tobacco is adapted) has been granted by a firman to one person, who is consequently the only buyer of the raw material. The *Mohassil* of Scala-Nuova has established a monopoly of lead shot, and though protested against, still continues it. The intentions of the Porte appear to be sincere in endeavouring to carry all the provisions of the treaty into effect, but the *Mohassils* (in all the places where there are no British agents) study their own interests more than the orders of the government, and in general are very ignorant and rapacious. In some cases they have added the *new duties* to *the old* and collected double. Their victims are often afraid to complain, but lately several *Mohassils* have been massacred by the people for this conduct. There is good reason to suppose that the surplus goes into their private coffers. All other nations have participated in the advantages consequent upon the treaty, and Russia takes advantage of it by her subjects entering their imports in the names of subjects of the Powers who are on the same footing as Great Britain, and on exports pays less duty by a separate treaty between her and the Porte, which she adheres to in this respect."—*Smyrna, July* 31, 1840.

Of the exports from Smyrna, *Silk*, is the most important and valuable. It is sorted into three different qualities all of which are exported to England in assorted proportions. Opium has, after silk, constituted the second article in point of value. *Fruit*—viz., figs and raisins; *Drugs* and *Gums, Galls, Mastic, Valonia, Olive Oil*, (the produce chiefly of the Islands.) *Sponges, Hare Skins, Cotton Wool, Goats' Wool*, &c., are among the other articles *exported*.

Of *Manufactures*, carpets alone are of any important value among the exports.

Usages of Trade.—In commercial transactions, the Armenians are considered in their dealings and obligations far more honourable than the Greeks or Jews. The latter support each other by guarantees, and being often rich, monopolize the brokerage on sales and purchases. The Greeks are slow and evasive payers; but there are honourable exceptions to be found to this rather general character.

Sales of imported goods are usually made on credits, (seldom for cash,) by the *house broker* to the *street broker*, that is by the merchant's broker, to the outdoor, or buyer's broker. Sales and bargains are made under some bond, writing, or other guarantee. The credits are for periods (called courier or post days), each *courier* being 15 days—payments become by agreement by instalments. Credits for six months, are paid by one-sixth each month, beginning at th end of the first until the whole amount is paid. Sales and purchases are also made partly for cash and partly on credit. *Barter*, which is tedious in its process, must be considered as a speculative trade depending on the sale of the articles exchanged. Transactions, partly in cash and partly in barter, are also common.

Monies, Weights, and *Measures*, are the same as at Constantinople.

Arrivals in 1839: 91 British vessels, 17,760 tons, 75 French, 53 Austrian, 16 American, 8 Dutch, and 21 Belgian.

The British consul does not state the value of, nor the articles composing the cargoes: for which see French consul's account hereafter.

The British Consul states that he cannot ascertain the value of the Cargoes in 1840.

VOYAGES and Tonnage of Vessels engaged in the Sea-Caravan or Levant Coasting-trade, which entered at, and cleared from the Port of Smyrna in the Year 1839.

COUNTRIES.	ENTERED. Number.	Tons.	CLEARED. Number.	Tons.
Constantinople	185	28,036	240	27,360
Black Sea and Roumelia	132	8,250	136	12,452
Candia, Archipelago, and Anatolia	314	7,845	323	8,436
Cyprus and Syria	30	1,048	20	3,360
Egypt	28	4,845	16	2,486
Greece and the Morea	203	11,404	131	5,695
Ionian Islands	9	1,034	2	40
Total voyages and tonnage	881	62,461	838	59,829

"The above trade is carried on from the Mediterranean and the Danube to Smyrna, and between the coast of Asia Minor and the Black Sea, almost exclusively by Austrian steam-vessels; and by Greek, Ionian, and Arab vessels between Asia Minor and Egypt. A few English, French, Sardinian, and American vessels are also engaged in this latter trade.

"The coasting trade carried on between the different ports of the Levant is universally known by the name of 'caravan trade,' which is a kind of coasting trade between the countries, which either do, or did, form part of the Turkish empire—viz., between Constantinople, and Anatolia, Syria, Egypt, the east coast of Barbary, Candia, Cyprus, Greece, and the Archipelago. It is, in fact, the trade of the eastern Mediterranean, exclusive of the trade carried on, by it, with the west of Europe. It includes not only native, but also foreign produce, which is conveyed from one point of the coast to the other."

The following account (by far the most distinct in its details) of the trade of Smyrna, for the year 1839, is translated from the bulletin of the Minister of Commerce (Paris).

COUNTRIES TRADED WITH.	Imports.	Exports.
	£	£
England	189,160	418,076

"By comparing 1839 with 1838 we find an increase in the total navigation of 17,659 tons, and in the total value of trade of 407,912*l.*, of which 298,320*l.* was in the exports; but this comparison, which only relates to two years, does not prove that there has been a regular and definite increase in the trade between Smyrna and foreign countries; for, as will be seen hereafter, the total amount of tonnage in 1834 was equal to that in 1839, and the value of imports and exports in the former year was only 40,000*l.* less than in the

latter. It is to be hoped that the treaties of commerce concluded in 1838 between France, England, and Turkey, and to which other states have adhered, will have the effect of increasing the commercial relations of the Ottoman empire with foreign countries.

"The first consequence resulting from the change in the political and administrative system in Turkey, was the abolition of monopolies. Before the abovementioned treaties were concluded, all or nearly all the produce of the soil was monopolized, either by the government itself, the governors of provinces, or the agents of minor localities, who only permitted sales to be made to privileged buyers, who were made to pay dearly for this privilege. *Now* the law authorizes neither preference nor exclusion. Such a state of things cannot but develop the elements of commercial prosperity which already exist in the country.

"STATEMENT of the Trade of Smyrna with Foreign Countries from 1834 to 1839.

YEARS.	NAVIGATION.			TRADE.		
	Entered.	Cleared.	TOTAL.	Imports.	Exports.	TOTAL.
	tons.	tons.	tons.	£	£	£
1834	48,567	47,581	96,148	1,057,458	1,471,000	2,528,458
1835	35,774	50,657	86,431	670,144	1,041,896	1,712,040
1836	31,335	45,726	77,061	1,278,641	1,144,883	2,423,524
1837	50,399	44,731	95,130	1,222,072	1,267,436	2,489,508
1838	44,123	43,870	87,993	871,436	1,119,953	1,991,389
1839	52,297	51,113	103,410	1,081,104	1,151,249	2,232,353

"By this account we see that taken all together there has been no general progress made, but there is an improvement in the two last years.

"For many years, four-fifths of the trade of Smyrna has been carried on with England, Austria, France, and the United States.

"ARTICLES in which there was an Increase or a Decrease in the Year 1839.

INCREASE.	£	DECREASE.	£
Imports.—Corn and flour	24,108	Imports.—Indigo	1,568
Tissues, not classed	22,196	Cloth	3,616

Opium	32,696		
Oil	17,168		

"The direct trade between Smyrna and France exhibits the same variations as apply to the general trade. The following table shows the trade between Smyrna and France in each year from 1834 to 1839.

YEARS.	Entered.	Cleared.	TOTAL.	Imports.	Exports.	TOTAL.
	tons.	tons.	tons.	£	£	£
1834	5105	8303	13,408	62,416	325,968	388,384
1835	5672	4852	10,524	96,616	181,772	278,388
1836	5221	4360	9,581	39,092	163,892	202,984
1837	7664	7073	14,737	33,728	231,660	265,388
1838	5080	5254	10,334	64,460	245,524	309,984
1839	7666	7879	15,545	45,376	306,472	351,748

"In 1839 there was an increase over 1838, in navigation of 5211 tons, and in commerce of 41,764*l.*; but by comparing the mean of the five years with 1834, we find a decrease of 1266 tons, and of 106,684*l.*

"The chief articles composing the trade between Smyrna and France, in 1839, were—

Imported into Smyrna from France.	£	£	Exported from Smyrna to France.	£
Tissues of Wool (Cloth)	11,760	29,180	Oil	147,416
Tissues of Wool (Capes, &c.)	3,294		Cotton wool	59,425
Tissues of Silk	3,528		Brass	35,944
Tissues of Not described	1755		Wool (Striped)	5,072
Hides and Skins (Raw)	4,032	4,804	Wool (Other kinds)	16,720
Skins (Manufactured, boots, &c.)	756		Silk	10,618
Coffee		1,288	Dyestuffs (Yellow berries)	7,980
Haberdashery		2,304	Dyestuffs (Gall nuts)	2,560
Hardware and cutlery		2,592	Wax	3,570
Sugar		1,296	Grain	4,068
Pepper and cloves		1,029	Opium	3,528
Cochineal		1,458	Sponge	3,412
Metals (Lead)	700	836	Skins, hare	3,060
Metals (Iron nails)	136		Gums	2,172
Pottery and glassware		711	Leeches	2,032
Fish (cod)		648	Linseed	764
			Horned Animals	860

"There was a decrease in the following articles of import from France into Smyrna: Tissues, hides and skins, coffee, cochineal, haberdashery, and metals. The remaining articles experienced very little change.

"In articles exported from Smyrna to France there was an increase on oils, cotton wool, brass, wool, and silk; and a decrease in sponge, gums, and goats' hair."

Arrivals and Departures at Smyrna in 1841.

The French and Austrian consuls give the values of the imports, but the British consul states that it is impossible to ascertain the invoice value of the cargoes, and no entry of the same is made at the consular office, nor is any record of the kind kept in the custom-house in this city.

No English mercantile steamers are in these seas. Of the 129 arrivals—viz., 65 vessels were in ballast; 15 had coals; 38 general cargoes of British produce; 1 manufactures; 2 part cargoes for England; 1 coffee; 5 iron; 1 bones; and 1 boxwood.

Of the departures 119 are named, but the consul's return shows 126—viz., 10 with general cargoes of Turkey produce; 24 with madder-root, yellow berries, sulphur, galls, opium, and scammony; 3 with bones; 18 in ballast; 11 with valonia, &c.; 23 with fruit, &c.; 1 with raisins; 1 with wheat and barley; 1 with Indian corn; 1 with coals; 1 with cotton wool; 1 with fox wool; and 1 with galls."

TRADE OF BRUSSA.

Brussa is an important commercial city of Anatolia, at the foot of the Olympus, 22 leagues from Constantinople. Population estimated at 60,000 (by Balbi at 100,000) It is one of the most flourishing towns in the Ottoman

empire in regard to commerce, industry, and expert artisans. The satins and tapestry are among the most esteemed of its fabrics. Gauzes, taffetas, and cottons are also manufactured. The trade with the interior is facilitated by the caravans which pass through Brussa, in the line between Constantinople and Smyrna, and other Asiatic towns. The trade by sea is carried on by the shallow port of Mondania on the Gulf of Marmora.

The clay called Meerschwaum, or *sea froth*, abounds in a neighbouring mountain. The monies and weights are the same as those of Constantinople (*Dictionnaire du Commerçant*). Brussa is said not to be clean; and yet that it is the cleanest of the Turkish cities. The following abstracts of consular letters contain recent information relative to the products and trade of Brussa and its surrounding districts.

"It was customary in many cases to collect the *saliane* or communal tax by instalments. It is now exacted at one full payment, and causes general pressure throughout the district. The *Mohassil*, or superintendent, has, however, acted considerately and equitably in fixing the assessments, as far as circumstances permitted.

"This tax is nominally rated on individual property, without clear distinction between capital and income. Real property is taken generally at a very reduced valuation, and the means or profit of each person is kept in view, as well as his previous assessment.

"Mussulmans pay rather less than the Rayas, but not in any excessive disproportion, and the wealthier classes are often surcharged, which relieves the poorer. The *Haratch*, or *Raya's* capitation-tax, is maintained at the same aggregate rate for their part of the country. It is said that after payment of 120,000 piasters, or about 1100*l.* sterling for their commune, the Greeks could not complete the demand on them for 140,000 piasters, without including the infants and superannuated males in their villages, as contributors in the highest class charged sixty piasters (about 11*s.*) per head, and the deputies would have to call anew on those within the town to make up the deficit, if no deduction was allowed by the government.

"It may be observed, that whilst other duties and imposts have all been increased, those on imports have been reduced to 5 per cent. according to the new treaty, and that an abatement of 5 per cent was allowed last year to the producers on the silk duties.

"The damage arising from the river overflowing its banks and inundating the whole plain has been very great. It is one of the richest in this part of Asia Minor for the production of corn and the breeding of cattle. Their farms formerly constituted the principal wealth of the most considerable families: few of whom now remain possessed of any substantial property.

"Many villages are abandoned from the submersion of the lands belonging to them.

"The bridges on the road to this place have been destroyed by floods within these few years, or otherwise completely dilapidated and neglected.

"Fresh inducements by foreign markets are presented annually for the culture of mulberries. This growth of these trees is in consequence followed up in the direction of Mohalitz with increased attention, and replacing many of the corn lands.

"*Linseed* is found to be very profitable to the proprietors of newly-cultivated lands.

"The little Greek village of *Demirdesh*, near this place, reputed for its silks, is in a thriving state. The inhabitants, with their neighbours, are devoting their labour and grounds to the increase of this product, and reducing their cornfields and vineyards to the narrowest compass.

"Mohalitz, about 40 miles to the north-west of Brussa, contains 2000 houses, and about 11,000 inhabitants. It is chiefly supplied with British and other foreign manufactures from Smyrna by purchasers (on credit) at the fair of *Balu-kissar* on the route to that city. Some small quantities come also from the capital, together with most of the *colonials*, and other heavy articles consumed. *Mohalitz* is not a manufacturing town, and its trade in

imports, on which no precise data could be obtained, does not probably, from its range, exceed 6000*l.*, with the proportion of about three-fourths in British goods.

"On the Eastern border of the lake of Apolonia, large quantities of *melons* and other *vegetables* are raised, which are conveyed by water direct to the capital by the river passing by Mohalitz from the lake to the sea. These are grown on the lands inundated in the winter, and form a very extensive traffic, in which a great portion of the inhabitants in that vicinity participate. In addition, eatable preparations from grapes, raised on the higher grounds, and forming an essential article of subsistence for the lower classes, are sent to the same market from some of the villages. Among these, that of Apolonia is particularly distinguished, as having attained a state of opulence, including silk, in its resources, as almost universally applies to this part of the country.

"The product of Mohalitz last season in silk, jointly with a neighbouring market-town, amounted to 30,000 okes, a little short of 500 bales of 170 lbs. each, or 85,000 lbs. The *Wool* furnished within the immediate jurisdiction of Mohalitz does not usually exceed 25,000 to 30,000 okes, but it is increased by collections from other parts of the interior to 40,000 to 50,000 okes, or 110,000 to 137,500 lbs. Last year it amounted only to one-third of the quantity. The product of *valonia*, on the coast of the sea of Marmora, more to the west, and for which Banderina, beyond the limits of this district, is the shipping port, is, this year, of very large if not unprecedented amount; and this, owing to the freedom of sale and title to the full price, after the deduction of duties now enjoyed by the peasantry, instead of the pittance which fell to their share under the system of special permits and monopolies, by the local authorities. The time of shipment has not yet commenced, to judge of the quantities to be obtained in the quarter mentioned, which, as rendering the supply, is one of the most extensive in Turkey. This, however, takes in a range of country whence a considerable part of the product may be conveyed to the Dardanelles and Smyrna.

"No *Linseed* was raised last year for sale at Mohalitz. There is little contraband from that place in silk, but the east is different from the villages immediately on the coast.

"Moundania has no separate silk-market, and its product comes here for payment of the 10 per cent tithe duty, when this is not evaded. The traffic of *Moundania* with the capital consists of inferior wines, costing *3d.* to *5d.* per gallon. *Rakee*, or common brandy of the country, costing 1*s.* 8*d.* to 2*s.* 3*d.* per gallon, and a little olive oil, at the actual rate coming to about 45*l.* per ton prime cost; but in lieu of oil, the chief part of the olives are used and sent as black olives for common food, costing 55 to 60 paras per oke, or 10*s.* to 11*s.* per cwt.

"Ghio.—The position of *Ghio* or *Ghemlek*, is favourable for rendering it a depot for the circulation of import goods, yet this is a very limited branch of its trade, and in which few of the inhabitants are engaged. Its amount is not easy to ascertain, from its being partly conducted by itinerant venders, chiefly Ionians, who bring over assortments of manufactured articles from the capital, which they distribute in the town and vicinity. This place is the main port for the reception of corn from this part of Anatolia, when the deficiency of the crops for its own consumption render necessary importations of Black Sea grain, as at present, from the capital, and this branch of its trade is of considerable importance. Some of the dealers, part of whom are Ionians, established at *Ghio*, have now stocks on hand of 2000 to 5000 quarters of Wheat. It is chiefly Danube *soft*, and partly *hard*, from the principalities, and occasionally the same sorts of Russian growth.

"The same culture is taking place in the vicinity of *Ghio*. In regard to the present taxes and duties, their pressure at *Ghio* has been carried to an extreme pitch. For the communal tax, property was rated at 87½ per 1000, but premises in the town were estimated at only $\frac{1}{10}$ to $\frac{1}{6}$ of their real value. Grounds in the vicinity, in a state of culture, were, however, rated at their full disposable value. *Olives*, which never before paid any tithe, are now subjected to 10 per cent of their value for tithe, and 12 per cent of customs duty is levied also at the place of consumption. This burden is exorbitant.

"*Vineyards* are subjected to the like imposts. In addition to the tithe, the owners have to support the communal contribution on them; and a new rate of 25 per cent on the wines when made, besides the duty on consumption of 12 per cent, payable by the purchasers. Fortunately, in this quarter they have one great source of livelihood (silk) which can prosper

under its burdens. The communal tax was this year extended, for the first time, to mulberry grounds, but the tithe was not superadded to that on silk.

"At various places, and according to circumstances, the returns vary for labour and outlay in raising silk. The lowest estimate is 20 to 25 per cent profit on purchasing plantations, which have arrived at maturity, and erecting buildings for rearing the worms; all the rest of the labour is paid for in wages. An Ionian, who had bought a mulberry garden a few miles from his residence at *Ghio*, measuring about an English acre, and costing 5*l.* sterling, but said to be worth 30*l.* to 40*l.*, calculated by his other grounds, could, with the leaves, from this obtain 42 lbs. of Silk, worth 22*l.* sterling—all expenses, including taxes and duties might be 15*l.*, and the clear profit 7*l.*

"Silk of a superior quality, and where the labour, including the reeling, is performed by the owner or his family, yields a much higher return.

"The traffic in olives is very extensive at *Ghio*, whence they are carried to different parts of the empire as far as Alexandria. In supplying purchasers 160 warehouses are engaged, each of which furnishes on an average 15,000 okes, making a total of 2,400,000 okes, or 3000 tons of the value of 30,000 to 33,000*l.* From one to two shillings a day of wages are paid to the labourers employed in gathering the olives from the trees, which at that season brings in numbers of people to assist from the more inland villages. *Ghio* participates also in the export of low wines and common spirits for the capital. The town contains near 600 houses all Greek, save 25 Turkish; and it is increasing in population and property, as the inhabitants are industrious, with the advantage of possessing a safe and commodious harbour, the only one in the gulf of Mondania.

"Some families raise 160 to 170 lbs. of silk; and the product within the town was, on an allowed medium for each house, estimated to me at 20,000 lbs. for the last favourable year, and jointly with its dependent villages, containing 2400 houses, to make a total of 80,000 to 85,000 lbs. for 1840. It has a public market, and is the shipping place for the silks of two others, more to the eastward, within the district, each with their dependencies serving for a larger population.

"Ghio is the great place of resort for smuggling in the article of silk, for which an open beach around offers peculiar facility, and the several duties in all to be evaded amount to 22 per cent. Notwithstanding the notoriety of the practice, there was no instance of its successful detection. There is no doubt but the owners and crews of smallcraft under Ionian colours, frequenting the port, have a large share in this contraband traffic. To prevent or repress it, is, properly, the business of the Turkish authorities and their officers. Complaints were, however, made by the Douanier at Ghio of Ionians forcibly resisting the custom-house servants, in the attempt to examine packages along-side the wharf, embarked without having been cleared. And not long since, under the previous Douanier, the crew of a small Ionian vessel had been observed taking off, in open day, from the shore some smuggled goods, which could only be silk, and when the Turkish guard cutter approached their vessel, they kept her off by threatening to fire into her. The Ionian vessel immediately sailed for Constantinople, whence she returned to Ghio under the same master, and continues her voyages as usual.

"The Austrian Danube Company's steamer performs the voyage regularly once a week between Constantinople and Ghio, and the conveyance by her of goods and passengers is rapidly increasing."—*Brussa, March* 18, 1841.

"Samples and every information on manufactured goods have been given to the principal of a Glasgow house in the trade who was lately here. He stated his intention of supplying this market direct with all British cotton goods suited for it, to which would be added imitations of various articles made here, *besides these* such as are sent from *Saxony and Switzerland*, which he expects to produce and send out to advantage.

"The silk product of this district is not fully equal in quality or quantity to that of last year in this district, owing to disease among the worms, which destroyed many and stained the cocoons. But in the next principal silk district, the result is reported as more favourable."—*Brussa, August* 27, 1841.

"The revival of trade in imports has been followed by a favourable demand, and prices for British manufactures and twist have risen 5 to 10 per cent. Latter advices from the fair of *Balu-kissar* in the return are less favourable, the demand there [illegible]

and cotton stuffs of local manufacture. Of these, the quantity sent to the fair this year was 2000 to 2500 pieces, being 1000 pieces short of last year's mission. The raw silks of this district continue to sell readily for export at 140 to 230 piasters per oke 2¾ lbs., being 9*s.* 4*d.* to 15*s.* 3*d.* per lb. prime cost, according to quality, or 11*s.* 4*d.* to 17*s.* 6*d.* per lb., free on board at Constantinople.

"The prices of wheat are from 18 to 23 piasters, and of barley 7½ to 8 piasters per kilo of Constantinople, recently introduced here as the sole legal measure for grain (about an English bushel) which rates are equal to 26*s.* 2*d.* to 33*s.* 5*d.* for wheat, and 11*s.* to 11*s.* 8*d.* for barley, per quarter. The duties now levied on the seller are equal to 7½ per cent on wheat, and 10 per cent on barley.

"At *Ghio* good wheat is selling at the highest rate paying here, but I understand the crops have been good about *Konia* and the country on this side, from whence this market is chiefly supplied. The cost *there*, on the eve of getting in the crops of grain, is said to be sufficiently moderate to make wheat come to about 26*s.* per quarter including the expensive carriage hither on the back of camels."—*September* 17, 1841.

"With reference to teskèrès (or certificates), the Douaniers agree that it is not obligatory on purchase, for British account, to take out certificates of the payment of tithe on silk, or any other Turkish product to accompany the exportation of the merchandize, and that the usage should be dispensed with where British subjects are concerned.

"The customary teskère only is to be provided, ensuring the payment of duties on the goods according to treaty at the places of exportation. Some silks were sent to an English house at Constantinople by their (foreign) agent in conformity with this arrangement, which is to be general throughout the district."—*September* 30, 1841.

"The crops of wheat and other grain, have, with few exceptions, turned out favourably, and more abundant than in any of the preceding two or three years. Maize from want of water for sufficient irrigation has partially failed.

"In consequence of the good crops, the wheat has fallen to 13 to 17 paras per kilo or bushel, equal to 18*s.* to 23*s.* 7*d.* per quarter; barley to 5½ to 7 paras per kilo, or 9*s.* 9*d.* to 7*s.* 10*d.* per quarter; flour has been reduced to 37 paras (40 to the piaster) per oke by the assize fixed by the new pacha. This season so generally propitious to farmers, has proved otherwise on an estate near *Ghio*, belonging to two English gentlemen, in consequence of the destruction by locusts which are indigenous to that spot.

"The cultivation of rice in this vicinity, after the present year, is prohibited by a special firman, on account of the insalubrity of the atmosphere, attributed to the marshy effluvia from the rice-fields after inundation."—*September* 30, 1842.

Tobacco cultivation is increasing, but the quality is inferior.

Mulberry seedlings are raised for sale. A great number have been sent to the estates of Redchid Pacha, and other Turks of high rank in Roumelia: price 2*s.* 6*d.* per 1000 for seedlings, and 2*s.* 2*d.* per 100 for young trees.

Sheep.—3600 Merino sheep have been this year imported by the Turkish government from the Crimea and put to pasture in the Mohalitz district.

The *Silk* and *Grape* crops have failed in 1842.

A *Swiss* house has established, on an extensive scale, a white wine manufactory. There has not been sufficient time to ascertain the quality.

The government has introduced a woollen felt manufactory at Balu kissar for clothing the troops. The common wool of the country is used.

In 1842 the consumption of British gray long cloths (cotton) has increased, 6000 pieces sold in the district of Brussa. Dyed sarcenets, 24 yards long by 6-4 of a yard wide, cotton shirtings and cambrics, were also in demand at remunerating prices. The process of sale, chiefly by retail, is slow. The business is carried on by a Swiss house, and by Greek rayas. Cotton twist about 270,000 lbs. British sold. Of *woollens*, British *chalés*, or thin figured, flowered, woollen dresses, are the only kind sold. All other British woollens are supplanted in cheapness by those of Germany, Verviers, and France; the two former are generally marked, as those of England were formerly, when the woollen-cloth trade was chiefly in British hands. The marks are usually "extra fine," "extra Mahouts," "London," &c.

The sale of Saxon and Swiss cotton goods made in imitation of the Brussa and Aleppo stuffs, did not exceed the value of 2000 to 4000*l.* The patterns are taken from native

fabrics. Swiss chintz, *printaniers*, and French *sprig prints*, are preferred to those of England. Paisley shawls, called *zebras*, which are very generally worn as sashes or other parts of dress; common *Tangil* muslin for printing, to make handkerchiefs, &c., gray and white cotton long cloths, printed and white calicoes, muslins, power-loom shirtings, and dyed sarcenets, are the articles of British manufacture which still compete with those of Germany and Switzerland in the market of Asia Minor. *Red Caps* are supplied by Italy, France and even Tunis. Nankins and printaniers, by Germany and Switzerland; glass and glasswares are supplied by Bohemia, either by the way of the Danube or by the Port of Trieste; gold-thread by Russia, Constantinople, and Italy; cordage, butter, caviare, and some iron by Russia. The *duties* are often evaded, either by smuggling or by *compounding* with the customs officers for a less sum either before or after seizure. It is said that instead of 12 per cent paid on exports by British subjects, 3 per cent only is paid by those of Russia. (See treaties between Russia and Turkey hereafter.) This is stated to be the case now, wherever Russian subjects are engaged in trade within the Ottoman empire; and that instead of 5 per cent import duty paid by British subjects, Russians pay only 3 per cent.

There are about 200 looms for weaving silk and cotton dresses at Brussa. These manufactures, about 18,000 pieces, valued by the consul at 21,540*l.*, each piece contains about 12 ounces of British twist, or in all 13,500 lbs. The chief part of the cotton twist imported is woven or worked by the women in their own houses, and into various stuffs for domestic use. The foregoing remarks apply generally to Anatolia.

GENERAL Prices Current of Merchandize at Brussa, during the Year 1841.

CHAPTER XI.

TURKISH ARMENIA.

A GREAT portion of Armenia is under Turkish rule—the remaining part, with Georgia, is under that of Russia. The improvement and security of the country under the latter is conspicuous, while that under the Turkish government is much the same as in Asia Minor. The soil and climate are variable; the higher table-lands produce corn and other crops,—the valleys, tobacco, vines, &c. Agriculture is in a rude state, and the country thinly inhabited. The original race of Armenians are an industrious, agricultural, and hardy people; the Turks are indolent and corrupt. The Kurds and Turcomans are a wandering, pastoral, and thievish people.

TREBISOND is situated near the south-eastern extremity of the Black Sea. Its population is estimated at from 18,000 to 32,000; ships anchor on the east, and also on the west of a small point projecting into the sea. Vessels, though not well sheltered, except from southerly winds, ride generally with safety at anchor. This town has long been famous as an entrepôt for trade; and were peace, regularity of intercourse, and the protection of person and property, thoroughly established in Armenia and Persia, this port would again become of great commercial importance

The following extract from a recent French report, gives some useful details of the trade, and rising importance of Trebisond.

"On the application of the system of prohibitions in the Russian tariff, Trebisond became of increased importance, as a place of trade.

"Foreign commerce with Georgia was before then of little or no value. Refined sugar and the wines of France are almost the only articles that can be carried thither for the consumption of the country. Nevertheless, although inflicting serious injury upon direct operations with Tifflis, the tariff has had but little positive influence upon commerce generally in this part of the Black Sea. Large portions of the articles introduced heretofore into Georgia, was by the way of *Redout-kalé*: these articles were chiefly printed cottons, gauzes, silks, cloths, and a variety of other goods, intended for the consumption of Persia; this commerce naturally changed its course towards the port of Trebisond, which for this purpose, could the more advantageously be substituted for that of *Redout-kalé*, as the transportation by land from Trebisond to Tauris was exposed to much risk.

"A Swiss house established for several years at Tifflis, and whose commerce was principally in French manufactures, has already determined to send one of its partners to Tauris, for the purpose of forming there a new establishment. It is probably by the way of Trebisond, that it will henceforth receive the articles prohibited by the Russian tariff.

"Trebisond has become the only point of reunion for the merchants of Georgia and Persia, who go from their country to Constantinople, or who are returning from that capital. Now, if they go to Constantinople for their supplies, it cannot be doubted that they will prefer making their purchases at Trebisond; inasmuch as they will avoid crossing the Black Sea, and the heavy expenses which would attend the voyage and their sojourn in the capital; besides the saving of much time.

"All then that is requisite to render commerce flourishing at Trebisond, is peace, security, and the erecting of sufficiently large *entrepôts*. To be convinced of this it is only necessary to consider, that situated almost in the centre of an immense extent of country, where there are no European entrepôts, this town could not fail, very soon, to see the various and numerous population coming to seek their supplies there. These are not speculative conjectures. They are the result of an examination of facts and localities.

"An English house established at Trebisond has done an excellent business. No doubt much more would have been done, if there had been likewise established there merchants of France and other nations. In fact, several Persian and Georgian merchants who sought their supplies at Trebisond, have been obliged to proceed to Constantinople.

"Another advantage would result from commerce with Persia, as that kingdom offers to speculators, merchandize in return for those they send there; whereas, they can draw *nothing* of importance from Georgia, which country, however, might supply large quantities of raw materials, especially silk, for foreign manufactures.

"This market, it cannot be too often repeated, is capable of becoming a very large depot for articles of French industry and manufactures; and especially for its tissues, such as the cloths of Elbeuf, merino stuffs with red stripes, the silk of Lyons, satins, brocades, velvets, printed calicoes, muslins, cotton shawls, imitation cachemeres.

"Among articles other than tissues, are refined sugar, rum, wines, principally champagne, iron, hardware. The following articles ought to be mentioned as part of those which are brought by the merchants of Persia, Georgia, and the interior of Asia Minor.

"*Silk*, of which there are three qualities—viz., of the country, of Persia, and of Georgia; *gall-nuts, yellow wax;* the gums of *Persia*, and of *Kurdistan*; *woods* of Asia Minor; *orpiment, rhubarb, tobacco, tombike, nuts.*

"*Copper in pigs* is also to be had here, but it is impossible to elude the vigilance with which the Turkish government maintains the prohibition of this metal.

"*Manufacturing industry* is at a very low ebb in this *pachalic*. It is confined to a few coarse tissues of cotton, flax, and silk; a part of which is consumed in the country, and the rest sent into the Crimea and Abasia.

"*Agriculture*, oppressed with taxes, and deficient in good cultivators, is far from deriving what ought to be yielded by a soil naturally productive. To the articles already mentioned may be added, *wheat, corn, flax, oil, and wine*, of ordinary quality. The

orange and lemon trees, which at one time supplied largely the commerce of Trebisond, have greatly suffered from the rigours of recent winters.

"The English have not failed with their accustomed spirit to enter on this new career, and they are now prosecuting an extensive trade through Trebisond. Their packages of manufactured goods are made up into parcels, weighing 150 lbs., so that four of them are equal to the usual load of a camel."

In 1832 there arrived 6 British, and 19 foreign ships at the port of Trebisond.

TRADE of the Port of Trebisond, in the Years 1837 and 1840.

By comparing the above returns with those of preceding years, it will be seen that there has been a considerable decrease in the trade of Trebisond since the year 1837. This is explained by the crisis of 1837, by the troubles which have recently agitated Persia, and by the late events in Turkey.

In 1839 a rise of 30 per cent took place in the price of corn, so that though the value of corn imported was little less, the quantities were much less than in 1838.

Some Russian iron was imported in the year 1839, by the house charged with the depot.

The exportation of *leeches* to Samsoun was, in 1839, the object of numerous speculations, being encouraged by the success experienced in the preceding year.

Extract from Consular Return, dated Trebisond, 31st of Dec. 1841.—"Throughout the winter and spring, much distress prevailed in Trebisond and its neighbourhood, from the scarcity and high price of grain.

"Forage in general was so extravagantly dear, that many muleteers ceased to carry goods, and the cost of transport rose so high, that few merchants forwarded goods into the interior, and they accumulated in Trebisond.

"The paper-money circulation in Constantinople, as well as the failure at Trieste of houses connected with the Levant trade, occasioned a great want of confidence, and a restriction of credit; in consequence of which, the traders here could not carry on their business, from the withholding of the facilities which they were accustomed to receive from their connexions at Constantinople.

"The crop of Indian corn was bad in consequence of the drought, and from the want of this article to pay for manufactures required for the consumption of the people, that branch of our trade was suspended. The crop of nuts was very scanty; the peasants were bound to fulfil their engagements to those who had advanced money on their crops at a fixed low price, and, therefore, although it rose, the rise did not benefit the grower. The abundance or scarcity of this crop has an important influence on the lot of the peasantry, as almost all of them have nut plantations. The trade with Abasia may be considered

as quite stopped by the vigilance of the Russian consuls at Trebisond and Sinope. The owner of a boat now and then tries the passage, tempted by the price of salt in Abasia, but the chances of being taken by the cruisers, and their property confiscated, and themselves punished, prevents all but a very few from trying the experiment.

"The Russian government continues to send iron here, but there is little sold.

"Last year the importations were valued at 1,452,219*l.*, and this year at 1,701,977*l.*, showing an excess of 249,758*l.*

"The exportations last year were valued at 365,822*l.*, and this year at 396,898*l.*, showing an excess of 31,076*l.*

"The number of packages in transit for Persia shows a considerable excess over last year, and the number of packages from Persia shows a still more remarkable increase.

"No ships load here direct for England. Goods are sent there through Constantinople and Smyrna, this arises from a want of a sufficient quantity of goods to load at any one time a vessel direct for England.

"About 1200 packages have been brought here in transit for Georgia, of colonial articles and French wines, while about 600 packages have come from Georgia for transmission to Constantinople, consisting of silk, hides, and salted fish.

"Two steamers have plied regularly between this port and Constantinople; one, an Austrian of 120, and the other a Turkish boat of 140 horse-power. Several smaller boats belonging to the Austrian Danube Company have made occasional trips. The regular boats have realized very large profits, and they have scarce sufficed for the trade which offered, notwithstanding the check which the plague occasioned, as well to the transit of goods as passengers. The number of passengers who embarked from Trebisond for Constantinople, amounted in the year to about 15,000.

"The specie conveyed by the steamers is estimated to have been about 360,000*l.*, of which about 300,000*l.* on Persian account, and 60,000*l.* on account of native traders.

"The carrying trade from this port is on the increase, and would afford employment to two steamers capable of carrying 3000 to 4000 packages, and 800 to 1000 passengers.

"The commercial convention of August, 1838, has been beneficial to trade, and I have much satisfaction in stating that it is observed properly at Trebisond."

The *monies, weights, measures,* and *import* and *export duties* of Trebisond are the same as those of Constantinople.

Trade of Trebisond in 1842.—Ten British vessels arrived at and cleared from Trebisond in 1842, registering 2394 tons, and with 111 seamen. Six from Newcastle were loaded with 2680 tons of coals; 3 from Liverpool were loaded with 1250 bales manufactured goods for Persia, and with 216 cases of sugar and 15 chests of tea, and same in ballast from Constantinople: value of cargoes, 48,340*l.* Nine departed in ballast for Kertch and Odessa to take in cargoes: 1 loaded for Liverpool with 2300 kilos of nuts: value 1150*l.*

Fifty-two Austrian vessels arrived with cargoes of manufactures, &c., valued at 949,157*l.*; and 90 Turkish, 9 Russian, and 4 other vessels arrived: total value of all cargoes estimated at 1,221,873*l.*, and of exports 317,611*l.* The former valuation was found to be at a higher rate than the real value—viz., 50*l.* per bale. The bale in 1842, has been valued at 33*l.* The number of bales imported in 1841 amounted to 29,802, and in 1842 to 32,248. The import of iron from Russia had overstocked the market, and Armenia has required 175,000 kilos, 21,150 imperial quarters of corn from Russia and the Danube—a much less quantity than usual. For the steamboat navigation of Trebisond, see general head hereafter of the Steam Navigation of the Mediterranean, Levant, and Black Sea.

Export of Specie.—About 460,000*l.* value of specie was exported to Constantinople, of which 390,000*l.* came from Persia. 10,780 passengers embarked by the steamer in 1842, and 15,000 in 1841, exclusive of troops: the consul attributes the falling off to quarantine impediments.

Native Coal, dug at Penderaclia, was used by the Turkish steamers: the quality is very inferior; but they are forbid to consume any other kind.

ERZEROOM.—This city may be considered the capital of Armenia, as well as of the whole pachalic of Erzeroom. Its population had greatly decreased in conse-

quence of the plague of 1826, and the evils of the Turkish administration. In 1829 it was invaded and taken by Russia, and on its being afterwards ceded to Turkey most of the Armenians abandoned it. Previous to that period it had a population estimated at 80,000, of whom about 25,000 were Armenians, the rest were nearly all Turks. The present population is said to be under 30,000. The pachalic includes that of Kars. *Erzeroom* is chiefly important as one of the great halting places for the pilgrim caravans, and it has numerous *khans*, or inns. It had formerly manufactures of copper, &c. These have nearly all disappeared. There is a British consul here, with dependent vice-consuls at Batoom, &c. As a place of transit it is still important, and its commerce is said to have greatly increased since the establishment of steamboats from Constantinople to Trebisond. The following are extracts from the consular returns:

"The commercial convention of 1838 has produced no remarkable effects here, because it was mainly calculated to benefit those parts, which abound in exportable products. In this neighbourhood no article is grown, which forms an object of exportation to foreign countries. The produce of the country is confined to grain and cattle. The heavy carriage to the coast renders all kinds of grain too costly to export, notwithstanding their cheapness in abundant seasons. Cattle and sheep are sent to Constantinople and to Syria, either alive or in the shape of *dried meats*. A few furs, collected about the rivers and lakes, are exported to Russia; but this part of the country produces nothing else which it does not need for its own consumption.—*Erzeroom, September* 4, 1841.

"The close of the last and the commencement of the present year were accompanied by famine, and, with the summer, the plague made its appearance in its epidemic form, spreading itself generally throughout the pachalic and its dependencies, and committing in most places great ravages; but the greatest in Erzeroom and the city of Moosh: the small towns and the villages having suffered less.

"The climate here is so dry and cool, and there exist so few causes for the production of miasma, that it appears the disease cannot be endemic.

"The last great plague here occurred in 1826, and the preceding in 1814. The people appear to have a superstitious objection to avow that their relatives die of plague, and they are averse from mentioning the disease by name.

"*Quarantine regulations* are regarded by all classes as useless, and by the Mohammedans as impious. The Mollahs preached up that doctrine, as well as the merit of persons accompanying the dead to the grave, and of assisting to bear the corpse, and which is usually practised in all Mahomedan burials.

"After the plague was universally spread, most of the Armenians in easy circumstances, retired to the villages, and even many Mahomedans followed their example. The pacha kept strict quarantine himself, as did his harem and personal attendants; but although no precautions were taken by the numerous attendants of the lower class at the palace, only one or two deaths occurred among them. The *cadi* is said to have been greatly enriched by his fees on the transfer of property consequent on the death of the owners. Very few attacks occurred among the priesthood, though much exposed, and even the *Mollahs*, whose business it is to wash the corpses before burial, were, I am informed, entirely exempt from the disease. The higher classes likewise suffered but slightly.

"From my experience, I do not believe the disease contagious, as many instances occurred where an individual amidst large families was attacked, and all the rest remained untouched. Although constant intercourse took place between the large towns and the surrounding villages, yet the disease did not rage in both places.

"A great deal of distress exists now, as the consequence of the last famine, followed by the plague; and it will take some time before the effects are removed. The total cessation of all trades, during the plague, caused actual penury among the labouring classes, severe distress among the small traders, and great inconvenience to all.

"Many persons who formerly followed a trade in articles of the country manufacture, such as the stuffs of Damascus, Aleppo, Moossul, Diarbekir, and Arapkir, have lately turned their attention to the importation of European manufactures from Constantinople, and European goods are gradually superseding the use of Turkish manufactures.

"No change has taken place in the nature of the relations of this city with Georgia as to European articles, and the prohibitory Russian system is still in full force there. There has been from thence a larger importation than usual of hides, in consequence of a demand from Europe.

"Up to this period, the silk from Persia entered at the custom-house has not much exceeded 1000 *baltas*; the demand for Europe being dull. Kiamilee pacha abolished the ki-hlak, or winter quartering of the koords on the Armenians in Moosh; an act of disinterestedness, for every preceding pacha appropriated to himself the money paid.

"They have been located in villages and lands vacated by the Armenian emigrants.

"The abolition of the Kishlak induced many of the Armenian emigrants to return to their homes. It was estimated that 5000 families were driven by famine from *Moosh* last year, either to Persia or Georgia, or to various districts of Turkey."

The pacha would gladly commence many public works, but he says as he is not sure of keeping his office for one day, that he cannot commence that which might be discontinued by his successor. If the sultan gave him the government for a certain number of years, then he would make several improvements, as roads, public buildings, &c.

"The objection on the part of the Porte might be the fear that the pacha would make himself independent, but situated as this pachalic is, so easily attackable by Russia, and so approachable by the facility which steam navigation affords of speedily conveying troops hither from Constantinople, I consider the pacha too shrewd to entertain such a project.

"The favourable harvest of the last year has reduced the price of bread to nearly its former rate, and should the crops prove good next autumn, the return to the old and very moderate price of this chief article of food will go far to remove the effects of the late severe distress on the well being of the population."—*Erzeroom, January* 20, 1842.

The consul at Erzeroom reports that, during the year 1842, the price of wheat had fallen as low as before the famine of 1840—viz., to about 31*s.* 6*d.* per imperial quarter;—that the interruption of trade with Persia had ceased; that rice was in consequence imported into Armenia from Erivan; that some improvement was visible in the demand for British manufactures, of which above 3000 bales were retailed during the year in the bazaars; that a decided taste for them exists, but that the poverty of the people impedes their use; that there is no road from the capital, Erzeroom, to the coast; that the inhabitants, being unable to pay the taxes imposed by the Turkish pacha, are fast sinking into poverty and destitution; that the pacha has imposed 4 per cent, on goods imported by Persians; in consequence of which they pass their wares in the name of Russian subjects; and that since the session of Erivan to Russia, the Persian subjects born there, and who have removed to Persia Proper, pass themselves off, for the purpose of trade, as Russians, and thus evade the additional duty.

Batoom, is situated near the Georgian frontier, on the east coast of the Black Sea. Its harbour is deep close to the shore and protected by a point of land. Population about 2500. The surrounding country is described as fertile.

"In consequence of the revolt in the neighbouring province of Guriel, and the disturbed state of this part of the country, the trade of the district has been very limited during the year 1841, although the gross return of shipping exceeds that of the year 1840.

"The Russian government having confiscated a cargo of British manufactured goods,

which had been smuggled into Georgia, has for some time put a stop to the contraband trade carried on with that country.

"As Guriel was supplied with Turkish and European manufactures from this market and Chorooksoo, the trade of the latter has suffered in consequence of the revolt.

"The following is an approximate estimate of the value of importations for the year 1841: British manufacture, 2600*l.*; Russian iron, 520*l.*; wool, 600*l.*; Turkish and other manufactures, 3200*l.*; total, 6920*l.* This amount exceeds but little the total value of imports in the autumn alone of 1840.

"The crops of Indian corn, although not quite equal to those of 1840, are considered very fair, and the failure of those in the vicinity of Trebisond, will, it is thought, procure a good demand for the article here. The quantity of maize exported was estimated at 25,000 kiloes, or as many Winchester bushels; wax, 4000 okes; honey, 8000 okes; butter, 4200 okes. The fishery having failed last winter, the fish oil exported was trifling.

"Some cargoes of boxwood were shipped to Europe last year: the quality was inferior, and the loss on the speculation considerable."—*Batoum, December* 31, 1841. In 1841, 1 British vessel arrived at Batoum, bringing a few bales of goods, and left for Redout-Kale.

"In 1842 there only arrived at and departed from Batoum 7 vessels: of these 4 were Turkish, (2 of which in ballast and 2 with salt); 1 Austrian (a steamer), with goods from Trebisond; 1 Russian, for timber; and 1 Greek, for timber. The number of packages which passed through Batoum in 1842 for Georgia, were 128 packages of furs, 280 Turkish manufactures, value 2800*l.*; 2250 sugars, value 9000*l.*; 900 porter (British), value 1350*l.*; 200 indigo; 195 pepper; 400 coffee; 200 tin; 50 spelter; 200 steel; 350 champagne, French and Hungarian, value 3500*l.*; 400 Turkish tobacco. Total value, 41,697*l.* The manufactures called Turkish were chiefly British, cut into short lengths at Constantinople and dyed generally blue; in which form they are allowed to enter Georgia as Turkish fabrics. There is a trade carried on between Trebisond and Batoum in coasting boats, and nearly half of the manufactured goods imported by these consists of British fabrics."

COAST OF THE BLACK SEA FROM THE BOSPHORUS TO TREBISOND.

THERE are several small harbours along this coast, and the country is capable of yielding numerous products for exportation. Among these small ports are Ercoli or *Heraclae*, with 5000 to 6000 inhabitants; the anchorage is good, and the Turks build vessels in this place: the timber in the neighbourhood, and at Aastrah, being of excellent quality. Sinope, with 10,000 to 12,000 inhabitants, has a tolerably good port, but not much frequented, except by vessels which carry timber to Constantinople.

SAMSOON, with a population of only 2000, carries on an active coasting trade with Constantinople in vessels manned by Greeks. According to the vice-consul's report for 1841, no vessel had arrived at Samsoon under English colours.

"The entries of Austrian vessels being so great has been owing to the frequent visits of the steamers belonging to the Danube Steam Navigation Company, which ply between Constantinople and Trebisond, and which call here both in going to and in returning from the latter place.

"The largest of the Austrian steamers, of 160-horse power, engaged on this station was wrecked near Amastra, in April last, but afterwards got off and taken to Constantinople, where she still remains undergoing repairs. At present, besides one Austrian boat, of 140-horse power, constantly employed, and another, of 120-horse power, which makes occasional trips, there is one of 150-horse power, which was built in England, navigating under Turkish colours, and commanded by an Englishman, which plies regularly

With the annual increasing carrying trade of Trebisond, these vessels are not sufficiently large to perform the work offering to Samsoon. Independent of goods, they embarked during the past year, 18,870 deck passengers, of which 11,200 were troops. The rate for ordinary passengers is 24*s*., but for troops only 12*s*. The gain therefore by this branch of the service alone amounted to 15,924*l*.

"Of the 7650 packages of goods imported here, about 1550 packages were sold for consumption; leaving 6100 packages, which passed through Samsoon for the interior.

"With a view of ascertaining how far a direct trade from England could be carried on, I brought hither some English manufactures, iron and cotton twist. In the commencement the natives kept aloof, preferring to draw their supplies from Constantinople, for which the regular steam communication afforded every facility. So soon, however, as a quarantine was imposed on arrivals from this coast, owing to the plague at Erzeroom, they discovered that the delay and expenses were not compensated by the advantage they enjoyed in purchasing at Constantinople. They then came to my stores, but took what they wanted in such limited quantities at a time, that I am uncertain whether their original system of importing themselves will not be again resorted to when the quarantine is removed.

"The consumption of Samsoon itself can never be considerable, but a deposit of such goods as are required, might induce buyers from the surrounding country to come hither for their supplies. The quantity of English iron is not large, owing to the preference for the Russian article. The prejudice against English iron, however, is less here than in other parts of Turkey, and perhaps the cheapness of direct importations may gradually bring it into more general use. The Russian government, as at Trebisond, keeps a deposit of its iron at Samsoon, but the agent employed (an Armenian of Constantinople) is so restricted by high limits, that he has not sold any for a long time past. He cannot accept less than 110 piasters per quintal=18*l*. per ton; while others readily sell similar qualities at 80 piasters per quintal=13*l*. per ton. The appearance of corn among the importations into a district which ought to export that article may require explanation. Supplies from abroad were rendered necessary from the scarcity caused by the failure of the crops in 1839 and 1840. The last harvest was fortunately a good one, and the distress which preceded it has been partially removed.

"Regarding the exports, the quantity from *Kaissariah* ought to have been considerably more, but in 1840 heavy losses were sustained from merchandize being left out by the steamers, sometimes because it exceeded what they could carry, and often because they were obliged to refuse goods to accommodate troops. This year it was known that the militia which had been dispersed at Nezib were to be collected, and sent by Samsoon to Constantinople, and the merchants of *Kaissariah*, anticipating in consequence a repetition of the inconvenience of last year, preferred transporting their produce by the longer, but more certain route overland. The realization of the hopes entertained, that the entire trade of Kaissariah would pass through Samsoon, cannot be expected until the establishment on this line of steamers of greater capacity than those now employed.

"The overflowing of the rivers in this neighbourhood, from heavy rains in autumn, caused serious damage to the linseed and rice crops. The quality of the seed grown here is good, but being carelessly cultivated and collected, it is foul and mixed with extraneous seed, and would require cleaning before it could be sent to Europe.

"The hemp and timber of this province continue to be taken for the exclusive use of the Ottoman government. Hemp and timber, if their exportation were permitted, would eventually prove a great acquisition to English traders.

"The principal article of export grown in this province is tobacco.

"The steamers brought from Constantinople during the year 24,000*l*. in cash, the purchase of produce. The specie shipped from Samsoon amounted to 43,000*l*., of which 25,000*l*. was from merchants, and 18,000*l*. sent by the governor to the Porte.

"With regard to the commercial convention of August, 1838, it is tolerably observed; but the inclination to violate it is certainly not wanting in the local authorities. A European, who received a parcel of silk from *Amasia*, on account of an English house at Constantinople, says that the governor, Abdullah Bey, had demanded duties on it, which were abolished by that treaty, but had immediately abandoned the claim, when told that

the consul was about being applied to on the subject. The bey is too cautious to interfere in my own commercial business, and his fear of compromising himself is so great, that I have never yet been asked to exhibit a single *teskéré* (a custom-house certificate), for goods I have received, on which the duty had been paid at Constantinople. He is not, however, so scrupulous with others. Some Austrian subjects bought at Constantinople, for 900*l.* sterling, the privilege of taking leeches in the territory between Sinope and Trebisond. The attention of the parties was more particularly directed to this district, in which the leeches are most abundant, but Abdullah Bey gave them to understand that he would manage to prevent their getting any unless he also had a share of the business. The Austrians knew too well that the Bey possessed the means for doing what he threatened, and were obliged to accept his proposals—viz., the sale to him for 360*l.* of the privilege as far as it regarded Samsoon, they retaining the exclusive right of collecting the leeches, paying the bey at the rate of 68 piasters per oke=4*s.* 6*d* per lb. for whatever quantity they exported. On a moderate calculation, Abdullah Bey must have made a profit of 1500*l.* sterling. The absence of European establishments at Samsoon has hitherto prevented that benefit which the convention was intended to produce, but its effects must sooner or later be felt in a country so rich in exportable commodities as the province of *Djanik* and its neighbourhood. In common with all parts of the pachalic of Trebisond, Samsoon is not yet subjected to the fiscal regulations of the *Hatti Sheriff of Gulhanè*."—*Samsoon, December* 31, 1841.

FAIR OF ZILLEH.—"The almost total failure of the fair of 1840 was attributed to many circumstances against which it had not this year to contend. The war in Syria, an unprecedented early and severe winter, and the want of cash among the natives, in consequence of short crops for two successive years, were then all supposed to have caused the unfortunate result of the fair. This year, notwithstanding none of these impediments existed, it proved if any thing still worse: the number of visiters was unusually limited, the quantity of goods less than half of that brought last year, and very little was sold, although the people remained a fortnight after the ordinary time. The sales effected were by the Angora merchants, who being capitalists, and having larger stocks than others, could afford to give credits of four and five months, and in some instances to consent to payments being deferred till the fair of *Vaprakler* in August next. With all these disadvantages, however, the sellers did not get much better prices than they paid for their merchandize at Constantinople. The fair is attended from all parts of the country, but the mass of purchasers are traders from places not very distant, such as *Tokat, Livas, Amasia, Tchoroom, Vuzgat, Marsovan*, &c. Before the introduction of steam navigation into this quarter, a journey to Constantinople from the above places was considered a very great undertaking, independent of the risk of plunder on the road. The facility afforded by the steamers, and the consequent security for travellers have worked a complete change, and people now find it more advantageous to proceed with their cash to Constantinople, where they can adapt their purchases precisely to their wants. For example, a native of Amasia can come to Samsoon for 6*s.*, his passage to Constantinople would cost 24*s.*, in all 30*s.*; and as much more to return, and 20*s.* for expenses during a stay of ten days at Constantinople, and his expenditure would not exceed 4*l.* If we allow besides 20*s.* for embaling, freight and transport of two packages of manufactures, the whole outlay would be but 5*l.* The prices at Zilleh, to cover interest, charges, and a moderate profit, are not considered remunerating unless they yield 20 per cent over those at Constantinople.

"Now the Amasia shopkeeper who requires two ballots of manufactures valued at 50*l.* sterling, by making his purchase at Constantinople, and after paying his disbursements, 5*l.*, will save 5*l.* or 10 per cent, and he has moreover the advantage of making a particular selection, and the satisfaction of seeing the capital.

"The agent stationed at Zilleh, from the mint at Constantinople, collected old Turkish coins, in 1839, to the amount of 5000*l.*, in 1840 only 600*l.*, and in 1841, no more than 300*l.* This may be partly attributed to the coin being called in, and destroyed as soon as it is found, which necessarily diminished the amount in circulation."

AMASIA.—"The crop of silk in this district has been very abundant. The total quantity produced is calculated at 48,000 okes = 132,000 lbs., being an increase over 1839 of 28,000 okes = 77,000 lbs.; 1840, of 12,000 okes = 33,000 lbs.; and of 18,000

okes = 49,500 lbs. more than what has hitherto been considered a tolerable crop. Prices were higher than authorized by the value of silk elsewhere. The quality, which last year was sold at 25 piasters per *litra* = 6*s.* per lb., this year ruled at between 32 and 38 piasters per litra = 7*s.* 9*d.* to 9*s.* per lb. With so plentiful a crop there was no demand from abroad to which to attribute these higher prices, which were caused by two Europeans, agents for houses in Switzerland, who, in the commencement of the season, imprudently attempted to prevent each other from purchasing, by paying exorbitant rates. The Europeans this year exported between them about 14,000 lbs. of silk.

"Some natives wound off a small quantity on the short reel, but the principal Turkish buyers, prejudiced against changing old customs, declared they would not purchase any of the new dimensions, and even the *Mouhassil* interfered to oblige people to continue the original method of reeling the silk. The innovation, therefore, immediately fell to the ground, but the preference shown by Europeans for the short reel has rather encouraged those who introduced it. Another important advantage has already been secured; until this year, to render the silk very white, milk was mixed with the water employed in winding off the cocoons. It appears that this prevented the silk from easily taking a dye, and hence arose a great objection to the article in Europe. The circumstance seems to have been brought to the notice of the Turkish government, and before the time for reeling this year arrived, a *firman* was published interdicting the use of milk under pain of severe punishment. The difference in the whiteness is hardly perceptible, and if the people could be persuaded to pay more attention in the preparation of their silk, Amasia would soon be able to supply Europe with a very considerable quantity of this rich commodity. The trial in preparing it, made by an English house at Constantinople, completely succeeded, and the quality proved very little inferior to Brussa silk, and quite fine enough for the English market.

"The government has paid no attention to the petition of the Amasia merchants, praying for some reduction in the duty on their silk. This continues to be 12 per cent on a valuation of 200 piasters per oke, or 24 per cent on its real value, besides which a duty of 10 per cent is taken from the sellers by the local authorities, so that the article is taxed 34 per cent by the time it arrives at Constantinople.

"The Afshar tribes, lately plundered at Allostan, near Ghurun, a caravan of goods, valued at 1000*l.* sterling. Three quarters of the property were recovered by Aly Bey, the *Zabtiyèh* (executive authority) at Ghurun, who immediately raised about 100 volunteers, and went in pursuit of the robbers. No punishment was, however, inflicted, and their being allowed to retain a portion of the plunder is attributed to the great friendship existing between Aly Bey and the chief of the tribes referred to.

"The town of Amasia, by order of the government, is obliged to pay an annuity of 30*l.* to the family of the Italian doctor of the quarantine who was murdered there by the populace last year."

Tokat is a large town in the interior of Asia Minor; the population is estimated variously at from 40,000 to 80,000 inhabitants. The following is extracted from a consular report in the country round Tokat:

"The crop of yellow berries was much injured by hail-storms; the quantity produced was small, and the quality bad. The same occurring at *Kaissariah*, where yellow berries are principally grown, people expected that prices would rule high at Constantinople and Smyrna. Owing to the dull state of the European markets, the short crops produced no effect at the above places, and heavy losses were experienced by those who speculated at the places of growth. Trees, which in good years gave 13 okes = 35¾ lbs. of berries, this year only rendered 1 oke = 2¾ lbs.

"If the samples of the madder-roots of Tokat, sent to good judges, will suit the demand from England, the article may be shipped from Samsoon at a little more than half what it costs at Smyrna. The price at Tokat is 120 piasters per *quintal*, and the transport to the coast about 20 piasters, together 140 piasters per quintal = 26*s.* per cwt. At Smyrna the selling price is 250 piasters per quintal = 41*s.* 6*d.* per cwt.

"The extensive copper refinery, built at Tokat under the superintendence of Mr. Gustave de Pauliny, will not be completed until the month of May, 1842. The cost of it was not expected to exceed 10,000*l.*, but 15,000*l.* will be nearer the expenditure.

"The quantity of copper brought to Tokat for refining this year from *Arganah* was 130,000 batmans = 975 tons. The people in the interior seem better pleased with the *hatti-sheriff* of Gulhanè than they were last year. The government seems determined to prevent abuses on the part of its agents, and the Moulassils of Tokat and Amasia have been changed repeatedly during this year, for not conforming strictly to the regulations of that edict. The Moulassils, formerly appointed from Constantinople, are now nominated by a defterdar residing at Sivas."—*Samsoun, December* 31, 1841.

Copper Mines of Arganah.—Information given to the Vice-consul at Samsoun by Mr. Gustave de Pauliny, Director-general of Mines in Turkey:—"M. de Pauliny has just returned from Arganah, where he went to establish some Hungarian engineers in the Turkish service, now employed in working the mines in that district. He visits the capital to represent to government the absolute necessity of a change in the system now pursued—of supplying the mines with fuel by forced labour. The people are obliged to furnish it at about 6½*d.* sterling per horse-load and such as do not themselves own horses, hire them from others at about 1*s.* 9½*d.* per load, or 1*s.* 3*d.* more than they receive.

"The quantity of fuel which the forests within twelve hours' reach of the mines can supply, will not last for more than twenty years, and unless some means are devised, the mines, he says, will be lost to the country.

"The average quantity of copper which the Arganah mines yields, is 140,000 batmans, or 1050 tons per annum. This establishment is placed under the charge of a Turk appointed by the 'Consul des Mines' of Constantinople.

"He says there are copper-mines yet unexplored in many parts of Asia Minor; some of them in the immediate vicinity of Tokat. He visited the Livan Mountain near Harpoot, to report on the iron, which is found there in great quantities. The ore is exceedingly rich, and renders 75 per cent pure metal.

"There is no doubt whatever that veins and deposits of ore in this country are everywhere to be found, and it is not improbable that if the Turkish government permitted Europeans to work mines on paying a moderate seignorage, speculators would be found who would enter on such undertakings."

NAVIGATION of Samsoun for the Year 1841.

KAISSARIAH (*Cæsarea*), in the province of Karamania, nearly in the centre of Asia Minor, contains 32,255 inhabitants, 2500 of whom are Greeks, Armenians, and Jews. It is situated on the edge of a large fertile plain, and has some manufactures of cotton thread, cloth, and yellow morocco leather. The land is fertilized by inundations.

The population of the district of Kaïssariah living in the town, with its six sub-districts, and 102 villages, were estimated, in 1841, as follows:—Houses, 12,422 inhabited by Turks, 3716 by Armenians, 2854 by Greeks;—total number of houses, 24,992. If each house be estimated as lodging five inhabitants, the total population will amount to 124,960 inhabitants.

In consequence of the central position of Kaissariah, a British consul has been established there, and we shall conclude our statements relative to the productions and trade of Asia Minor, by the following abstracts from a report drawn up by him for the year 1841.

"*Kaissariah*, or, as it is pronounced by the natives, *Kaissaryyeh*, and more commonly *Kaissary*, was formerly the centre of the commerce of Anatolia, and the emporium to which the traders of Koordistan, Syria, and Mesopotamia, resorted to dispose of their produce, and to obtain supplies of European merchandize.

"The people have been always remarkable for great intelligence and activity, and for a spirit of commercial enterprise, which lead them to pursue their trading occupations in all parts of the empire.

"The trade of Kaissariah has been long gradually diminishing, but its decline has been more rapid during the last few years, which by many is attributed to the facilities of communication introduced by steam navigation. The more immediate causes however appear to have been the depressing influence of the war with Mehemet Ali; the insecurity of the country, owing to the constant incursions of the Kurds that inhabit the neighbourhood, and the failure, for two years, of the grain crops all over Asia Minor. Yet, although much reduced from its former importance, Kaissariah is still the seat of a considerable trade, carried on with the surrounding districts, with Erzeroom, Tarsous, Constantinople, and Smyrna. The intercourse with the two last-mentioned places is maintained partly through Tarsous and Samsoon, but not to a great extent through either; and since the disappointment and loss which attended the latter route two years ago, in consequence of the failure of engagements on the part of the Austrian steamers, that channel is now but seldom availed of, and the trade with Smyrna, particularly that in exports, has almost entirely resumed its previous direct course overland.

"IMPORTS.—The articles of colonial and British produce imported, are coffee, refined sugar, tin, sal-ammoniac, sheet iron, copperas, and indigo (consumed to a great extent); and cochineal, dyewoods, pepper, pimento, cloves, cassia lignea, and other spices, and tin plates,—of the latter the consumption is more restricted.

"Unbleached calicoes of all descriptions, muslins, shawls, plain and striped nankins, are very largely consumed; and bleached calicoes, all kinds of printed cotton piece goods, cotton velvet, and cotton twist, are used, but in smaller quantities. English sheet iron, required to a large extent, is employed in all this part of Anatolia, for the plates on which bread is baked. A good deal of indigo, cochineal, and dyewoods, is wanted for the manufacture of carpets. The remainder, with a portion of the unbleached calicoes imported, (which annually exceed 45,000 pieces,) and some of the muslins, are worked up in the numerous dyeing and printing establishments, and the produce is distributed throughout the country. Striped and plain-coloured nankins are worn by all classes, and very large quantities, especially of the former, are sold. Those from Switzerland being provided cheaper, have, in some degree, superseded the British manufacture. Some cotton twist is used in the native manufactures. The demand for it has lately fallen off: many places, which drew supplies from this market, now obtain from Aleppo and Erzeroom.

"Other imports of foreign European articles consist chiefly of Russian bar iron, German steel and glassware; Italian common writing paper, French and Belgian woollen cloths, foreign silks, and red caps or fezzes;—to which may be added, cotton and silk stuffs, brought from Diarbekir, Moussul, Aleppo, and Damascus; Persian shawls, tobacco, and khennah, brought from Erzeroom.

"The consumption of Russian iron is large, for horse-shoes, nails, cart furniture, and implements of husbandry. Common English iron has been tried and not approved, owing to the difficulty of working it; the quality, called No. 3, would not present that objection, and its cheapness may, in time, enable its being brought into successful competition with the Russian. There is a great sale for paper, as it is substituted for glass in the windows of almost all houses. Woollen cloths are sold in considerable quantities, but few of English make will answer: those usually sent to the Levant not being of sufficient substance to suit

the general wants in this direction; for this reason the foreign fabric enjoys a preference, but, by bringing the proper qualities to the notice of our manufacturers, English cloth may become a more important article for this market. The foregoing imports command the most extensive and constant demand. There are many others which are either of more certain or only limited sale, and, with few exceptions, all varieties of European articles used in Turkey can be found in small quantities in the spacious and well-stocked bazars.

"The district of *Kaissariah* is not fertile in corn; a plentiful harvest not sufficing for more than three months' consumption. The residue is supplied from Yuzgat and Sivas.

"A variety of exportable commodities, however, are obtained; viz., yellow berries, sheep's and goats' wool, raw cotton, madder roots, gum tragacanth, aniseed, linseed, scammony, furs, skins, hides, &c.

"*Yellow Berries.*—The principal production of the country is the yellow berry, to which the climate and soil of Kaissariah are peculiarly favourable, the quality here being acknowledged far superior to that grown elsewhere. The shrubs which spring spontaneously are the most hardy and productive, but are few compared with what are cultivated: of the latter, large plantations exist in the neighbourhood of the town, and of most of the villages; much attention and expense are bestowed upon the cultivation, but the return is very precarious, shrubs which yield abundantly for several years frequently become barren, and the plantations are then renewed. The blossom is often injured by fogs and heavy rains, and the berry is exposed to many accidents from unseasonable weather before it ripens. A tree in full bearing will give as much as 6 okes = 16½ lbs., but sometimes not more than 1 oke = 2¾ lbs. In fair seasons, the average for a fruitful tree is about 3 okes = 8¼ lbs. After gathering, the berries are very carefully dried in well ventilated rooms, completely sheltered from the sun, any exposure to the influence of which would affect their coloring matter. In the process of drying they lose half their weight.

"The whole produce of yellow berries, in a good season, is estimated at 350,000 okes = 8,750 cwt., and it has sometimes amounted to as much as 500,000 okes = 12,500 cwt. The last year gave a short crop, which in all did not exceed 200,000 okes = 5000 cwt. Of the total quantity of this article annually produced it is reckoned that two-thirds are grown in the district of Kaissariah.

"*Sheep's Wool* is purchased from the Kurds and Turkmans who, in spring, bring their flocks to the pastures in this neighbourhood. About 9000 quintals = 500 tons can be easily collected for export, and the article is well adapted for England, where it has been sold at from 9*d.* to 11*d.* per pound. All that does not go abroad is used on the spot in the manufacture of carpets and coarse cloth, and other articles worn by the peasantry.

"*Cotton Wool.*—Large supplies of raw cotton, the growth of Adana, is sent to Smyrna chiefly through Tarsous, but a great deal finds its way thither from this place.

"*Madder Roots* are obtained in the adjoining districts of Caraman, Elegri, and Ak-Serai. The quantity is calculated at about 6000 quintals = 6000 cwt.; a part is shipped for Europe at Tarsous, some is sent to Smyrna, and some is consumed by the native dyers.

"*Gum Tragacanth*, which abounds in this quarter, is brought to market by the Kurds, and the sorting, performed here, enables the selection of a very fine quality: nearly the whole is sent to Constantinople and Smyrna, for Europe.

"*Goats' Wool.*—Very little white goat's wool is found here, but it is procurable from the vicinity. Of the gray and black, or mixed qualities, about 40,000 okes = 110,000 lbs. are annually produced near Kaissariah.

"*Aniseed* and *Linseed* can be had in considerable quantities; the former, said to grow wild, is gathered by the Kurd tribes, and goes to Smyrna. Very little lin-seed was raised, but the demand in Europe has encouraged the cultivation. Last season 30,000 kilos, or about 4000 quarters, were exported, and a great increase is anticipated this year.

"*Scammony.*—The quantity of scammony is small; and of galls, which come from Diarbekir and Mousul, the supplies are limited.

Skins.—"A good many fox-skins are sent hence to Erzeroom, for the dealers from Georgia, and from 50,000 to 60,000 hare-skins, of good quality and cheap, are annually exported, principally to Trieste. A vast number of lamb, sheep, and goats' skins are used in making yellow and red morocco leather, the preparation of which forms a great branch of native industry, and many parts of Turkey are supplied with the article from

hence. Of cow and ox-hides, independent of those remaining for home use, about 50,000 are available for export, a great many cattle brought from Erzeroom and Sivas being annually slaughtered for making '*pastoormah*,' or beef preserved with garlic and pepper, and dried in the sun for winter food. Besides providing all Anatolia, Aleppo, and Damascus, 4000 to 5000 packages, or about 6000 cwt. yearly of it, is sent to Constantinople.

"*Leeches.*—The leech fisheries of Kaïssariah, like those in other parts of the empire, are annually disposed of by government to the highest bidder at Constantinople. For three successive years, they have been purchased by the same parties, who are Europeans, accustomed to the trade, and who send the leeches for sale to Marseilles. As the marshes in this direction had not been previously explored, the fisheries were the first year sold for the small sum of 250*l*. By competition the price was raised the following year to 800*l*., and last season it increased to 1200*l*. The purchasers realized a great profit at the commencement, but latterly most of their leeches perished before getting to market; and, besides the risk, the business is attended with so much expense, that they are not supposed on the whole to have realized very ample gains. The marshes have been much exhausted, yet it is said that 6000 okes = 16,500 lbs. of leeches were obtained last season. The monopoly has this year been ordered to be sold on the spot, instead of at Constantinople.

"*Nitre* is collected here for the government, by two persons sent from the superintendent of the powder mills at Constantinople. They are not seconded by the authorities in preventing a trade in the article, and have been unable to procure more than 28,000 okes per annum. Natives have offered, if employed, to provide 50,000 okes = 1250 cwt. annually, and about as much more is now extracted secretly and sold in the country.

"The town of Kaïssariah numbers 6451 houses, and is situated at the foot of the mountain of Ergyés, which has been estimated as rising to an elevation of upwards of 12,000 feet. According to a statement, obtained from accurate sources, the whole district comprises a population of nearly 125,000 souls, and the villages are said to be more numerous, larger, and to contain a greater majority of inhabitants in easy circumstances, than any other part of Anatolia. The rayahs are exclusively Armenians and Greeks. The climate is warm in summer, and not very severe in winter, although a great deal of snow falls. It is generally considered healthy; but fevers are very common in the warm season, and are then so prevalent in the town, that most of the people are obliged to quit it. The unhealthiness of the town is perhaps chiefly owing to its being built upon a perfect level, which, preventing proper drainage, occasions a great deposit everywhere of stagnant water, particularly from the numerous tanneries and dyeing-houses. There is, besides, an accumulation of filth allowed in the streets and other parts, which alone seems sufficient to cause sickness. A superintendent, and a doctor of the quarantine who are resident here, have endeavoured to introduce regulations for enforcing cleanliness. The authorities promised their co-operation, but it was never cordially afforded, and the attempts at improvement in this respect have therefore been attended with little or no effect. The country has sometimes suffered from plague, but has not been visited by the disease for several years, and on the last occasion it was neither violent nor of long duration. The houses are solidly built of hewn stone, and have terraced roofs: their internal distribution is bad, and adapted more to a very warm, than to a temperate climate. The villages contain some handsome dwellings, constructed on the style of those on the Bosphorus. Grain from Yusgat is cheap; fuel scarce and expensive. Provisions of most kinds are good and abundant, but dearer than in most other inland parts of Turkey. Many of the fruits of warm climates are grown, and wine is made, though of indifferent quality, and only in limited quantities.

"In proceeding to my post from Samsoon, instead of taking the direct road through Zilleh, I was induced to go by Sivas, as I had been told that Kaïssariah was a dependency of that pachalic. It proved, however, that I had been misinformed, this district being subject to the jurisdiction of the pacha and the Mouhassil of Yusgat. Both those officers resided at that place, and I found Kaïssariah governed by the 'Vékil' (lieutenant) of the Mouhassil, as the civil authority, and by a 'Zabtiyéh,' as officer for the executive. They are appointed by the pacha, and are assisted by a municipal council, of which they themselves are members, the others being the cadi, the mufti, two deputies from the Mus-

sulmans, and two from the Armenians and Greeks. The pacha has only once been at Kaissariah for a short period, and the Mouhassil, who occasionally visits it, is never present for any length of time. This has been a source of constant inconvenience to the public business, for all matters, excepting those of the most minor importance, are referred to Yusgat; while Osman Pacha, who is indolent and addicted to debauchery, pays little attention to what is submitted to him, or to the proper discharge of his duties. The persons here intrusted with the conduct of affairs cannot act with decision, and being natives, and influenced by local interests, are not active in maintaining their authority, and adduce their want of power as a frequent pretext for withholding justice. Great disorder has been the consequence; the roads have become more than ever insecure, and robberies and other crimes, which have not been uncommon even in the town, are committed with impunity in all parts of the country. This being productive of universal complaint, the Porte lately directed the Pacha and the Mouhassil to transfer their residence hither from Yusgat. With this order the latter immediately complied, but the Pacha has not done so. He is aware it were not possible for him to pursue here the dissolute life he leads at Yusgat, which is the motive for his preferring it as a residence, and is therefore employing every means to obtain permission to remain there. It is anticipated that this will occasion his dismissal from his post, the prospect of which is a subject of general satisfaction. It is a glaring inconsistency, that so important a place as Kaissariah, should so long have been without a resident Pacha, while one should have been stationed in a town comparatively of such insignificance as Yusgat. Those that inhabit this vicinity and frequent the pastures, are the Turkmans, the Kurds, and the Aoshars, a race said to be distinct from the other two, and peculiar to this part of the country. The Turkmans are generally peaceable, but the others are not so; and from the Aoshars in particular, whose principal occupation seems to be plunder, the inhabitants of this quarter suffer continual molestation. Whole villages are sometimes ruined by their depredations; which are not confined to any particular season, and in which it would appear they have been encouraged by the lax police of the authorities, and the abolition of the punishment of death, the only effectual restraint upon these wild and lawless people. On my journey through Sivas, Seid Pacha would not consent to my proceeding without an escort of armed horsemen, as a protection against these marauders, a party of whom had but a short time before pillaged a caravan near Ghurun. Travellers, unaccompanied by a guard, can rarely pass with any chance of safety. Since my arrival, many have been plundered at a short distance from this place, and I am informed that, in summer, passengers from the town are constantly waylaid and robbed. A firman has just been published, authorizing the punishment of death. There is also a report that an expedition against the Kurds is to be undertaken next summer, by the Pachas of Sivas, of Yusgat, and of Koniah.

"The people in this quarter, and in that portion of the Pachalic of Sivas through which I passed, acknowledge with respect to the late *Hatti-sheriff*, that though not always strictly observed, it has been productive of great good, in restraining abuses and extortion among local governors; and the rayahs, especially, speak of the greater freedom and tranquillity they now enjoy. All, however, agree, that abolishing the punishment of death has been prejudicial to good order, and has tended to the increase of crime; and many complain that the taxes claimed for government are heavier now than under the old system. The contributions required from the whole district of Kaissariah never exceeded 1600 purses = 8,000*l.*, till the year in which the death of Sultan Mahmoud occurred. At that period, the extraordinary demands in this country for the army employed in the preparation for war with Egypt, raised the amount to 2000 purses = 10,000*l.* 750 purses = 3750*l.* more, are besides exacted from the sub-districts: being nearly three-fourths over the former amount of taxation. The contributions were proportioned on the number of houses, but the Mussulmans last year protested against this rule, urging that, though they were the most numerous, the rayahs were more wealthy, and should bear a heavier share. The question was settled by the rayahs giving a sum in diminution of the quota due by the Mussulmans. I was not prepared to expect the establishment of a European Consul would be favourably viewed by any of the natives. I have been treated with politeness by all, however, and have had no cause to complain of my reception even by the authorities, having, on arrival, received visits from most of the persons

an office. The Mussulmans of Kaissariah are extremely bigoted and intolerant, and they prohibited the rayahs from wearing dresses of particular colours, from riding through any part of the town, and obliged them to dismount on being met anywhere on horseback by any respectable Turk. In the Christian churches (no bells being allowed) a rattle is sounded as a call to prayers. The custom gave great offence to a Mollah who has great influence, and a threat from him compelled its discontinuance. On learning that I was expected here, the Cadi recommended the Mussulmans to be aware of insulting or molesting any of my people, and to abstain from annoying the rayahs. The primates informed me, that this soon caused a cessation of the vexations noticed, which I understand have not been since renewed. There are many persons here, either natives or long established in the country, who have Russian or Greek passports, and are treated as rayahs. European merchants at Tarsous experience great inconvenience in trading with the interior, owing to ignorance of its resources leaving them entirely at the mercy of native information. The country between this place and Tarsous comprehends districts, rich in various productions, which have hitherto been but little explored by the European trader, and a more intimate knowledge of their commercial resources might tend materially to the extension of British trade in this quarter."

"*Exchange.*—About 115 piasters at present rate of exchange = 1*l.* sterling; a batman 6 okes; an oke = 2¾ lbs.

"Tin bars are sold with ¼ their weight of salammoniac, without which the article cannot be used for tinning copper vessels.

"The charges are, duty according to the tariff (on most articles about 12 per cent), and 5 or 6 per cent for brokerage, commission, &c., and carriage to or from Smyrna, about 90 piasters per quintal of 180 okes = 4*s.* per cwt. The carriage to Samsoon is about 2*s.* 3*d.*; that to Smyrna, camels employ thirty to thirty-five days, and horses, twenty-five to thirty days. To Samsoon, the caravans can go in about half the time."—*Kaissariah, February* 26, 1842.

CHAPTER XII.

SYRIA AND PALESTINE.

SYRIA and PALESTINE.—A great portion of this extensive country consists of a succession of hills and valleys. On the north and west it presents a rugged appearance, and mountainous character. The country east of the Orontes and Damascus is level and fertile; and in many parts of Palestine and Syria there are valleys and tracts of great natural fertility. This region, so celebrated in sacred and profane history, is at present in a state little removed from general anarchy. Under the military despotism of Mehemet Ali, order was certainly maintained. His lieutenant, Ibrahim Pacha, was far from being a mild ruler, and his conscriptions and exactions were excessive and severe; but there was some security against internal and external depredations, while, under the administration of the Porte, all security has disappeared; life and property are no longer safe, and the mountaineers of Lebanon seem prepared, on every occasion, to pour down upon the inhabitants of the lower countries. Considering the uncertain state of Syria and Palestine, we shall not enter upon any details, except such as bear upon the mere commercial statistics of the country.*

Population.—We have only estimates of the population of Syria, which has been stated at about 2,000,000 of inhabitants, thinly scattered over many parts of its surface. Col. Campbell, who was consul-general in Egypt, estimates the population of Syria at 1,864,000 in 1836, viz.—997,000 Mussulmans, 22,000 Bedouins, 17,000 Mutualis and Yezides, 260,000 Catholics and Maronites, 345,000 Greek Church, and 175,000 Jews. Consul Werry, computing the number from the collection of the firdah or capitation tax, concludes that the population does not much exceed 1,250,000. At present, considering the loss of life during the late war, and the retreat of Ibrahim Pacha, and in consequence of the ravages of the Druses and other tribes, it is doubtful whether the number of inhabitants exceeds 1,250,000 for a region nearly 50,000 square miles in extent.

Mr. Moore, consul of Beyrout, gives the following statement of some of the towns in Syria, but he considers the estimate as merely approximate:

"Damascus, from 100,000 to 110,000; Aleppo, 60,000 to 85,000; Hamah, 44,000; Tripoli, 15,000; Beyrout, 12,000; Jerusalem, 10,000; Latakia, 5000; Nazareth, 2000; Bethlehem, 1500."

* Our authorities are British and Foreign Consular Reports, Dr. Bowring's Report, *La Syrie sous Mehemet Ali*, Marmont's Travels, &c.

And he deems that part of Mount Lebanon which is under the jurisdiction of the Emir Bechir to consist of—

"Mahomedans, 4000; Mutualis, 6000; Druses, 37,000; Christians, 120,000;—in all, 167,000."

The *Mahomedans* are the most numerous inhabitants in the secondary towns and villages, and they occupy also a great part of the agricultural districts; but they are rarely associated with the progress of arts or industry. The trade of the country is chiefly managed by Christians or by Jews.

The *Jews* in Syria are poor, except at Damascus, Aleppo, and a few other places, where many of the race are rich, and live and dress in comparative splendour. They are bankers, or, more properly speaking, discounters of bills and money-lenders.

The *Armenians* of Syria are active, industrious, and follow several pursuits, from those of domestic servants and coffee-house keepers, to those of traders, money-lenders, and bankers. They are generally punctual, trustworthy, and cautious. They have seldom had sufficient confidence in the power, or justice, of the government, to induce them to bring their wives or families from Armenia to reside in Syria.

"The inhabitants of Mount Lebanon are an active and laborious race, who turn to good account such parts of their soil as are suited to agricultural production. Their personal bearing is far more proud and independent than that of the Syrians in general. In many parts of the mountain-range the land is laid out in terraces, much resembling the almost horticultural cultivation of Tuscany and Lucca. The agricultural instruments are rude; the plough is ordinarily drawn by a pair of oxen, the peasant being very dextrous in its guidance over the rugged surface. Large quantities of mulberry-trees grow at various elevations. There is also an abundance of olive-trees, some vineyard-grounds, much wheat and maize, and many gardens filled with vegetables. There is no part of Syria in which there is so obvious an activity—none in which the inhabitants appear so prosperous or so happy. There was formerly a considerable manufactory of gold and scarlet cloth at Deir el Kamr (the Druse capital), but it exists no longer.

"The Druses still wear a garment in which much gold is mixed with the woollen tissue, and it is, I understand, a domestic manufacture. Looms are sometimes seen in their cottages, and they thus mingle (but not generally) the manufacturing with the pastoral life.

"They have also a manufacture of the high silver ornaments (or horns) which the women wear on their heads, and which are the distinguishing badge of wifehood. With but few exceptions, almost every individual Druse, as indeed all the male population of Lebanon, are proprietors of land, and are engaged more or less in agriculture.

"The manner in which some of the water-courses are constructed, and are still kept in order, does great credit to the sagacity of the Druses. There are streams that flow many miles along the sides of the hills, that have been conducted through mountains perforated for their passage, carried over wide valleys by admirable aqueducts, and which irrigate large tracts of land in their progress.

"The Arab tribes dwell, for the most part, either in the Desert or on the exterior ridge of Eastern Syria. There is of late years rather a tendency among them to engage in agricultural pursuits; and if taxation were light, and they could obtain security for person and property, in a generation or two I think their predatory and wandering life would be exchanged for that of the peasant."

Polygamy is common, and it is stated that a much greater number of females are born than of males: the latter have also been greatly diminished by conscrip-

tions, war, and the hostilities of the mountain tribes. In the towns, bad drainage and dirty habits occasion frequent diseases, especially plague and small-pox, which rapidly thin the population.

The following are Extracts from Reports of British and Foreign Consuls.

Colonel Campbell's Report—Syria in 1836.—"Syria, properly so called, was divided into four pachalics, namely, the pachalics of Aleppo, Damascus, Saida or Acre, and Tripoli; and, to complete the division of the countries subsequently conquered by the Egyptians, the district of Aintab was governed by a mutsellim, yearly appointed at Constantinople—that of Adana, from Beylan to Koulek Bogas, by a pacha of two tails, whose appointment was equally dependent on the Porte; but the titular pachas of the four principal pachalics were far from being the real rulers of the whole countries which were thus nominally placed under their orders. Abdallah Pacha, of Acre, whose fanaticism and cruelty are now proverbial, had obtained in the latter part of his government the pachalic of Tripoli in addition to that of Acre, together with the districts of Nablous and Jerusalem: but the authority was purely nominal over the mountainous districts of Lebanon, and the Emir Bechir was in fact the sovereign prince of that country. Abdallah Pacha had certainly no means to subdue him; and the emir, rather from a peaceable inclination than from real dependence, continued to pay his annual tribute. On the other hand, the celebrated *Abou Ghosch* ruled, without any control, over the mountainous districts of Samaria and Palestine, and arbitrarily taxed the pilgrims of every nation who visited the Holy Land.

"The pachalic of Damascus was still in a more disorderly state. Selim Pacha had been struggling, without success, with the people of that populous town. He was ultimately murdered by that lawless and fanatic populace, when the government fell into the hands of a Sheikh Tafètmi, one of the elders of the town, who continued to be the nominal governor of Damascus until the city became the prey of the Egyptians. During the period of his government, the city may be considered to have been in a state of complete anarchy, there being no sort of check upon the will of the populace.

"The Christians and Jews, under the governments of Abdallah Pacha, and of Sheikh Tafètmi, were subjected to every sort of violence and injustice, and the trade of these countries was almost annihilated from the total want of confidence.

"Sheikh Tafètmi left Damascus on the approach of the invading army: he repaired to Constantinople in the hope of obtaining employ. Being tired of the deceitful promises of the Ottoman ministers, he soon came to Cairo, where he obtained permission to return to Damascus, but has not been suffered to interfere with public affairs.

"The pachalic of Aleppo was ruled by Mahomet Pacha. This man, generally known for his apathy, left the whole burden of his public duties in the hands of his favourites; the rich inhabitants of Aleppo obtained, therefore, by bribery, a large share of power, highly detrimental to all the inferior classes, and essentially destructive of the public welfare.

"The districts of Aintab and Adana were much in the same condition. All the eastern frontier of Syria was open to the depredations of the Bedouin Arabs, and, in fact, every community in Syria sought for defence in its own means; a resource which, however necessary, contributed to arm the entire of its population, and thus became the efficient cause of the bloody struggles which have so often rendered its territories the theatre of civil devastation, of open resistance to lawful authority, and of depredation upon the innocent stranger. Such was the unsettled and miserable condition of Syria, when Ibrahim Pacha landed with his army at Kaifa, in November, 1831. The details of the rapid movements of Ibrahim Pacha, of his victorious and unexpected progress and success over the discomfited Ottoman armies, are too well known to require any observation from me. It was immediately after the treaty of Kutaya, in the month of May, 1833, was concluded, that Ibrahim Pacha, on his return from Syria, published his intention of organizing the government of the country in the manner which I shall proceed to detail.

"*Political Divisions.*—Soon after a civil governor-general of Syria was appointed to reside at Damascus, Sherif Pacha, who had been a long time the viceroy's kaya-bey at Cairo, was selected for that high and responsible situation: his conciliatory and dignified

manner, mixed with a natural but reasonable severity, rendered him a very fit person to contend with the fanatic population of Damascus; and great credit is due to his measures for the security and tranquillity, as well as the entire and open religious toleration which are now enjoyed in that city. All the other governors in Syria were placed under his orders. Syria was then divided into the following provinces:—*Aleppo.*—General Ismael Bey Mudir (or governor-chief). *Tripoli* governed by a delegate of the governor-general. *Adana and Tarsous.*—General Menekly Ahmed Pacha Mudir. *Saida and Jerusalem, and Nablous.*—Hussein Abd-el-Kedr Mudir. *Gaza.*—Sheikh Saayd-el-Mustapha Mudir. *Jaffa.*—General Ibrahim Bey Mudir.

"The Egyptian government left to the Emir Bechir the whole of the countries (of *Mount Lebanon*) which were under his orders before the conquest. Those mountainous districts are bounded in their length by the territory of Tripoli and Kanzyr, between Saida and Sour (Tyre), and in their breadth by the Mediterranean, with the exception of the sea-coast towns of Tripoli, Beyrout, and Saida, and on the opposite side by the plains of Balbeck. This space of land is about 110 miles in length, and 36 in breadth: it is divided into ten districts, and contains about 500 villages.

"The Emir Bechir pays an annual tribute to the Egyptian government of 1300 purses, that is, 650,000 piasters. This has lately been reduced by Ibrahim Pacha to 800 purses, or 400,000 piasters, as a mark of his Highness's satisfaction at the emir's conduct in the last disarmament of the Druses. Still the emir receives from the inhabitants, and for his account, the same taxes as are paid by the rest of the population of Syria.

"The Karatch (or toleration tax) called Djouali, in Mount Lebanon, is paid in the following proportions by persons from 15 to 60 years of age—By 77,000 Maronites, 15,000 Druses, 8000 Greeks, 2000 Turks, Mutualis, &c.: 102,000 individuals.

"The sheikhs of villages, the priests and the monks, who are all exempted from this tax, are about 5000 in number.

"The Roman Catholic religion is in favour in these mountains; the Maronites have acknowledged the supremacy of the Pope since the fourteenth century. They have a patriarch elected by their bishops, and confirmed by the Court of Rome. The Maronite clergy is composed of twelve bishops, and a curate in every village, besides a great number of priests: they have also three orders of monks, divided in about forty convents, six of which are for women. The Greek Catholics have also a patriarch, who assumes the title of Patriarch of Antioch, but who generally resides at Damascus, or at Ain Tress, near Deir El Kamar: they have also various bishops, and five or six convents. The Syrian Catholics have a patriarch of their own, who resides in one of the convents in Castravan; in another, near Deir Mzummar, there is also a patriarch of the Armenian Catholics.

"The Greeks of the Oriental Church have also a dozen of convents in Mount Lebanon, dependant on their patriarch at Damascus. The Maronite nation, although by far the most numerous in those mountains, has not always been the most powerful, nor, indeed, so warlike as the Druses, who form a Mahomedan sect. The Mutualis also, who descend from the Persians that commanded in Syria, are remarkable for their warlike disposition." This explains that sort of necessity which has been felt in these mountains, to be ruled by a foreign family, as that of the Chaabs (the Emir Bechir), whose princes, up to this moment, born Christians, live as Mussulmans, and die as Druses, to be in harmony with the different nations over which they rule. The Emir of Lebanon has always been considered by the Porte as a delegate of the Pacha of Ain, who had the nominal power to remove him at his will and pleasure. Each district of Mount Lebanon is under the government of one of the princes of the Emir's family, and every village has a chief selected by him, found among the richest inhabitants, who is invested with the authority of a justice of the peace, and collects the taxes for the Emir. The Emir has no other troops but his household and his farmers, and those of the families of his sons and relations.

"*Revenues.*—I believe the annexed return may be considered as correct; it has been given by Bahry Bey, the minister of finance and commerce in Syria, who resides at Damascus: it will be perceived that the total revenue of Syria, during the year 1250, amounted to 87,758 purses, or 43,879,000 piasters = to about 440,000*l.* In the present year a diminution of 530 purses will occur, in consequence of an equal diminution of tribute granted to the Emir Bechir. But, on the other side, the

progressive amelioration of the administration, continually tending to a better and more regular perception of the taxes in every branch, will doubtless produce an increase. Great credit is due to Ibrahim Pacha on this head. His attention is constantly occupied in examining the proceedings and returns of every branch of the public revenue; and any dishonest act on the part of the *employés* is certain to meet with an adequate punishment. Great regularity has been already introduced, and daily improvements are experienced by his direct orders. Still it must be said that the system which is now in force, of farming almost every branch of the public revenue, is defective in principle, and tends to put into private hands the means of introducing abuses. The above revenue, with the exception of the ferdah, is formed by the same imposts which existed in Syria under the government of the Sultan. The ferdah seems to be a war tax, known of old in the Ottoman dominions but which was never enforced except when the state was involved in war: it has been permanently enacted some ten years ago in Egypt, and introduced into Syria in 1834: it is paid by the male part of the population from 15 to 500 piasters per head, according to the means of the payer. No one is exempted from this tax, and the rich pay a larger sum of 500 piasters to make up for the insolvent.

"The *miri*, or land-tax, has never been fixed in Syria by an invariable rule, or by any admeasurement of the land. A 'dissertine,' which is the word used by the Syrians for a determined surface, is nothing else but the extent of land which can be ploughed by a pair of oxen in eight hours. In the perception of this tax it is said, for instance, that the government of Aleppo has to pay 300,000 piasters of miri, or 300 kerats of 1000 piasters each. This sum is then apportioned among the different villages according to their greater or less amount of population, or more or less extent of land. It is in this way that one village is perhaps taxed at two kerats (shares), another at two and a half or three, and so on: that is to say, that one pays 2000 piasters, the other 2500 or 3000 piasters, and it is the peasants themselves who make the repartition of the whole sum amongst the different villages. Under the head of 'different taxes,' are included—a duty of from 5 to 15 per cent on the transfer of real property, a duty on houses and shops and on windmills, a duty of 300 piasters on every silk-loom, and some other local manufactures, and a duty on salt, tobacco, oil, soap, trees, camels, horses, mules, tents, &c. (the habitations of the pastoral Bedouins). But besides these taxes the peasants complain of the continual demand of the government for provisions of every description, which are required for the army, and for which the price is fixed by the government itself at about half the market price: this (after the conscription) is one of the most loud and reasonable sources of disaffection, and certainly aggravates the population of Syria to an immense degree, since the whole of the Egyptian forces are subsisted upon this principle. The same observations apply to the continual requisition for beasts of burden for the transport of government stores, as well as in assisting in the removal of the different corps, when stations are almost periodically changed, and also for the requisition of workmen of all sorts, who, for about half the sum they could obtain near their own residence, are driven from their families and relations to great distances to the public works. It is, however, just to remark, that, both in point of labour, as well as in value of provisions, &c., the Egyptian government pays more than was paid by the Sultan's government.

"The taxes levied are—ferdah (capitation-tax), karadj, or karatch (toleration-tax), house-tax, and Baltz. This last is a tax levied by the Emir Bechir.

"In the districts of Jaffa and Nablous, independently of the above imposts, the following taxes are levied:

"On every olive-tree, 1 piaster. A yoke of oxen for arable land, 150 piasters. A yoke of oxen for vineyards, 30 piasters. A yoke of oxen for gardens and common purposes, 50 piasters. Sheep, 1 piaster per head. Mules, 20 piasters per head. Camels, 30 piasters per head. Other animals, 10 piasters per head.

"Besides the ferdah, at Nablous and its neighbourhood there is a poll-tax of 20 piasters per head: the ferdah in the above district is fixed at 32 piasters for each peasant.

"The miri, or land-tax, paid by agriculturalists, has not been altered.

"The mode of levying imposts is as follows:

"This chief pays the amount received by him to the chief of the district, who in turn transfers it to the governors.

"The ferdah and house-tax are common to all classes; the rate is 13 to 500 piasters per head.

"The karadj, paid only by the Rayas: the rate is from 22 to 60 piasters.

"Baltz, peculiar to Mount Lebanon, and levied for and by the Emir Bechir.

"At Aleppo, Adana, Tarsous, and dependencies, there is an ancient local tax called Sullian, which had been rescinded by the former government, but is now enforced.

"The ferdah tax for all Syria produces annually 25,000½ purses. The only taxes under the former government were karadj and miri. Besides the new taxes imposed, the old imposts have been, as near as may be, doubled, the miri excepted."

The estimated expenses of the government of Syria for the Turkish year 1251 (A. D. 1835 6), were—

"Tribute to the Sultan, 15,000 purses. Civil government, 4800 purses. Judiciary expenses, 970 purses. Karatch transferred to the Sultan, 1726 purses. Expenses for collecting the revenues, &c., 1250 purses. Repairs of bridges and roads, 240 purses. Repairs of schools and public institutions, 360 purses. War department, 12,000 purses. Fortifications, barracks, arsenals, &c., 15,000 purses. Expenses attending the levying of conscripts, 1500 purses. Pay of the army, 24,000 purses. Total, 76,846 purses.

"The above 76,846 purses, at 500 piasters each, are equal to 38,422,000 piasters, or about 400,000*l.* sterling.

"*Judiciary System.*—The administration of Justice in Syria has undergone, in a very short period, all the ameliorations which Mahomet Ali had introduced into Egypt during a long course of years; the Mekemehs were the only tribunals which existed in these countries. In every province a chief justice, called mufti, was yearly appointed by the Porte; and he, in his turn, had the appointment of the inferior "cadis," or judges. The Mekemeh takes its decisions from the Koran, and Christians are only admitted as witnesses. The depravity and venality of all these tribunals is beyond conception; and even at Constantinople there is a coffee-house known as the rendezvous of false witnesses, who can be bought at so much for the day. The muftis generally make their fortunes in ten years, for the appointment of the cadis does not depend upon their fitness for this situation, but on the sum which they can pay for the same. This institution is still in force in Egypt as in Syria, but the real benefit introduced by Mahomet Ali consists in having very much curtailed the prerogatives, for it was certainly not within his province to destroy its existence. The mortal stroke given to the Mekemeh is, that they cannot proceed in a case without an authority, in writing, from the governor. All cases, therefore, whatever be their nature, are represented by memorial to the head of the government, who has the right to decide himself, but generally declines, except in criminal cases. All questions relative to family affairs, state religion (Mussulman), real property, as houses, land, &c., are referred by him to the decision of the Cadi, by means of a decree on the original memorial of the plaintiff. All affairs of taxes, or revenue, commercial differences, and civil debts, are referred in like manner to the Shorah. The Shorah is a tribunal instituted by Mahomet Ali, and composed of some of the principal elders of the town and some of the merchants. They are not generally paid, but in some of the principal towns the members of the shorah receive a remunerating salary. The shorahs are not composed of Mussulmans only, but there is a competent number of Christians, and even of Jew members. The sentences of the cadi are, or may be referred to the mufti. Those of the shorah to the same tribunal of the larger towns, to the governor-general, and, in some cases, appeals have been received by Ibrahim Pacha, and even by his father. In Egypt a commercial court has been established besides the shorah.

"Criminal cases are invariably decided by the executive power; still death cannot be inflicted in Egypt without the previous sanction of Mahomet Ali, who, it must be admitted, is scrupulously minutious before he confirms the awful punishment; and the same prerogative is vested in Ibrahim Pacha, and I believe in the governor-general of Syria. It must, therefore, be admitted that great progress has been made in the judiciary system, under the Egyptian government. Venality exists to the same extent with regard to the mekemeh, but nothing of that description can be said of the different shorahs; at least their reputation stands high, and the people at large appear to be satisfied of their justice and equity. All natives who are not Mussulmans have reaped a great degree of secu-

rity and liberty by the ameliorations referred to, and have freed themselves of the wanton injustice of the mekemeh, and of the evil consequences of their fanaticism and partiality."

Since the evacuation of Syria by Ibrahim Pacha, the judiciary system has not in itself been changed in any important degree, but its venality and insecurity are said to have become more general.

Agriculture in Syria is in a rude state, and the fertile grounds only cultivated to a very limited extent. Ibrahim Pacha, who is, in Egypt, a great agriculturalist, endeavoured by his example, while in Syria, to improve and extend its husbandry. He did not succeed, from the scarcity of labourers and other causes.

In 1836, Colonel Campbell reports, "There can be no doubt that since the conquest of Syria by Mahomet Ali the agriculture of that country has made considerable progress. Ibrahim Pacha has employed large capitals of his own in agricultural pursuits, and many villages which, under the sultan's government, had been deserted, are now again inhabited, and their lands cultivated with considerable advantage. The principal produce of Syria, which under a more enlightened system, would certainly double its resources, is the silk. It is cultivated more generally in the districts of Saida, Beyrout, Lebanon, Damascus, Tripoli, Latakia, and Antioch, where extensive plantations of the mulberry-tree exist, and which have been greatly increased since the conquest.

"The mulberry-trees are planted in (quincunx) rows at four paces distant from each other. During the first eight years they give a greater or less quantity of leaves. After that term their produce, if cultivated with care, remains stationary, but soon begins to decrease if the cultivation be neglected. The plantations of mulberries require great care, and the ground between the trees is ploughed or turned up eight times each year, and the greatest attention is necessary to extirpate all weeds. When a person buys a plantation he reckons that three trees will give 20 rottoli of leaves. Then 130 to 140 rottoli of leaves are considered to suffice for the nourishment of worms enough to give one rottolo of silk, of 720 drachms. After the worms are hatched they are left twenty days in a room in osier baskets. The worms are kept four times fasting in all their existence; after eight days they fast four or five days: they are then removed to a larger habitation made of reeds and matting, and in which they make their cocoons or balls. The Syrians are ignorant of the manner of making their worms produce twice in a year: they are ignorant of any other plant (as in Europe) to serve as a substitute for the mulberry leaves, with which the worms may be nourished during the first four days. The miri, or land tax, is fixed in proportion to the quantity of seed (eggs) of silkworms which the cultivators can produce. Experience has shown that one ounce of eggs produces three rottoli of silk. In the district of Beyrout, at half an hour from the city, the miri is 33 piasters; besides three piasters more per rottolo, in virtue of a tax called Bisreye, which makes 30 piasters tax, in all, per rottolo. In the Lebanon the tax is infinitely higher: it amounts to nearly 100 piasters; and, although in the middle region of the mountains, one ounce of eggs gives somewhere about 50 per cent more silk than on the plain or at the summit, still the whole produce is often absorbed by the enormity of the tax. In the neighbourhood of Beyrout the mulberry plantations are worked in the following manner:—The proprietor takes a farm-servant, who, with his family, lives in the plantation, and does all the labour required for the cultivation of the mulberry-trees in the course of the year; but, during the two months in which the silk is produced, they are obliged to hire people, and, between women and children, 15 are required for each 1000 mulberry-trees. Labour is rather dear in Syria, a man is paid 5 piasters per day, a woman 4 piasters, and a young person 3 piasters. In conformity with a convention generally adopted, the farm-servant receives for his share one-fourth of the produce: of the remaining six-eighths, three-eighths are absorbed by the expenses of cultivation, one-eighth serves to pay taxes; so that the clear gain of the proprietor is only one fourth of the whole. And as a plantation which would give 20 loads of leaves, costs, in the present day, 6000 piasters, a capital employed in this branch would not yield more than 5 per cent. In one 'division' it is generally calculated that there are 1350 trees which will give 450 loads of

leaves, and will produce 64 rottoli of silk, which, at 200 piasters per rottolo, give a total of piasters 12,800

Deducting one-fourth for the farm-servant	.	3200
" three-eighths for expenses of cultivation		4800
" one-eighth for payment of taxes	.	1600
		—— 9600
Proprietor's net profit	.	piasters 3200

"In the Lebanon the mode of working is different, inasmuch as the proprietor cultivates the ground himself, in-stead of letting it out to a farm-servant. By this means he economizes one-fourth of the produce; but as the taxes, as I have stated already, are much higher, the gain of the proprietors, in *good* years, is not more than one-fourth, and in *bad* years, it hardly suffices to pay the expense of cultivation and the amount of the taxes. The total amount of silk produced in Syria may, for 1836, be quoted at 1700 cantars, of which 100 from the district of Saida, 200 for Beyrout, 100 for Tripoli, 700 for Lebanon, 70 for Damascus, 30 for Latakia, and 500 for Antioch: total, 1700 cantars.

"With regard to the cultivation of other produce, the system of farm servants may be said to be in usage all over Syria, but the conditions vary from those relative to the cultivation of silk. The proprietor makes with the peasants the following arrangements:—He supplies them with the seeds, and a certain sum of money to buy oxen, cattle, and instruments of husbandry: from the produce of the harvest he receives 10, 15, or 20 per cent, according as (after ancient regulations) the ground is more or less taxed. The remainder is divided into two equal parts, one of which the proprietor takes, and the other is for the peasants. These last are obliged to repay the money advanced to them, but not the seeds. The miri, or land-tax, is, besides, entirely paid by the peasants. With the exception of the complaints which the peasantry of Syria prefer with the rest of the population against conscription, and statute labour (corvées), and the requisition of their beasts of burden, and provisions for the army, they appear to be satisfied with the present system of government. M. Molinari, the Sardinian consul at Aleppo, who has the best means of information, and of whose impartiality I have no reason to doubt, says that the peasants are well off under the Egyptian government; that they will all become rich, because they are not subject to the vexations which they formerly suffered. The village of Dano, for example (he said), on the road to Antioch, had, under the Sultan's government, 200,000 piasters of annual expense; whilst at present, including the loss which it sustains in furnishing provisions for the army, the sum does not exceed 35,000 piasters. Property in Syria is not acquired and retained under the same principle as in Europe. For a certain sum right is acquired over lands for life, for which the miri is annually paid. This right is not transferable by inheritance, but may be ceded to the children or to any person by means of the requisite formalities, and in paying the sum demanded for a fresh firman.

"Besides silk, Syria produces 3600 cantars of cotton, 10,700 cantars of tobacco, 300 cantars of madder-roots, some three or four cargoes of sesame-seed, some scammony, some wool, sponges, and some oil. The grain, wheat, pulse, &c., do not generally suffice for the wants of the country, and a quantity of these necessaries are annually imported from Egypt, Caramania, and the Archipelago. If the government were to take into serious contemplation the want of proper public roads, especially between Beyrout and Damascus, Damascus and Aleppo, by Hamah and Homs, and between Aleppo and Scanderoon, it is calculated that about 80,000 beasts of burden, and some 30,000 men, out of those who are now employed in the transport of merchandize and the stores and provision for the army, would be restored to agriculture, and thereby augment considerably the agricultural produce of the country, which is highly susceptible of amelioration, as well as to be rendered a very wealthy and populous province.

"The soil at the lowest estimation of its productive power would yield sufficient to maintain ten for one of its present number of inhabitants. Regions of the highest fertility, uncultivated, towns amidst lands capable of the most profitable cultivation, import corn for daily use. Such is the case with Antioch in the immediate neighbourhood of the Turkish lands on the banks of the Orontes.

"The old Roman plough, drawn by bullocks, is generally used. In Mount Lebanon, the scantiness of soil requires a succession of terraces for cultivation, and spade husbandry.

"To the more important articles of export, may be added wheat, barley, maize, millet, lentils, sesame-seed, and other produce, consumed principally by the inhabitants.

"At Suediah, in the vale of Antioch, Latakia, Tripoli, and many other places, the cultivation of tobacco is one of the first importance, and is on the increase; and there is scarcely any place in Syria where it is not now grown, but the qualities are very various.

"The fellah at present of Syria earns little more than a bare subsistence. If left to themselves, and if they were convinced of security, the peasants would thoroughly cultivate the country."

PRODUCTS WHICH ARE EXPORTED FROM SYRIA.

Cotton-wool, silk, sheep's wool, olive oil, sugar, indigo, the finer qualities of tobacco, and many other articles might be produced extensively for exportation under a government which established order, and maintained security. The import trade is limited from the want of exportable commodities for the European markets. Many articles can be imported into Mesopotamia and Persia from Smyrna and Constantinople, more cheaply than from Alexandretta and Beyrout, notwithstanding their greater adjacency, in consequence of the lower freights from Europe which are paid to ports which offer a return cargo. Some only of the vessels which bring manufactures from England can obtain return cargoes in Syria, and ships are consequently compelled to proceed in quest of freights to Smyrna. They sometimes load a cargo by proceeding to the different ports on the coast of Syria; but this is attended with uncertainty, delay, and expense.

"*Gums and Drugs*, formerly of great importance, are at present of little amount.

"*Gum Arabic* is received from Bagdad and Egypt; there are two sorts, red and white. The consumption in Aleppo is not more than 3 cantars, and it is a rare circumstance if a larger quantity is in the market. The pistaccio, apricot, and prune trees produce gums which are used in Syria; the two latter as a substitute for gum arabic

"*Tragacanth* is received from Anatolia, Marash, and from Mesopotamia: it formerly was obtained from Bagdad and shipped to Europe. At the present time that received from Karpout is mostly used at Aleppo, though some is received from Diarbekir; the first is worth 6 piaster per oke, and the second and third 5 piasters. Aleppo and its districts consume in the manufactories about 20 to 35 cantars annually, and about the same quantity is sent to Damascus.

"*Scammony* is a gum resin, the produce of a species of convolvulus or creeper plant, which grows in most parts of Anatolia and in Northern Syria: it is obtained by an incision made into the roots, which yield a milky juice, and is received in sea shells placed for that purpose: when kept it becomes hard. It is valued for its medicinal properties, and principally used by the medical faculty for its purgative and laxative effect. It is sold to the country and Jew dealers, who adulterate it, mixing four or five rottoli of starch to one rottolo of scammony, in which state it is sent to England; it is worth 250 to 300 piasters per rottolo. There is an inferior quality sold at 15 to 20 piasters per rottolo, which is also adulterated by the Jews. This drug is collected on the mountains of Karpout, Malatia, Diarbekir, Kaissariah, Marrash, Basna, Aintab, and Latakia. The amount does not exceed five or six cantars of pure scammony It is not consumed in Syria. The Aleppo scammony, commonly so called, and considered the best, is sent direct to England; a portion is also sent to Smyrna and other ports, from whence it is shipped to England. It being a drug collected in most parts of Anatolia, is shipped from many ports thence to Europe; but England takes the largest quantity.

"*Opium* is not cultivated in Syria.

"*Hare, Fox, and Jackal Skins*, are collected and received from Tokat, Kaïssariah, Karpout, Malatia, Diarbekir, Aintab, and Basna. There is no consumption for them in

Aleppo. They have been chiefly sent to the French and Italian ports, and are consumed by the hatters for making hats of fine quality.

"It is stated, upon official authority, that 300,000 skins of hare, fox, and jackal, are exported from Tarsous to different ports, but none to England.

"*Galls, or Gall-nuts*, called in Arabic, *Afis*, and in Turkish, *Mazi*, form one of the principal articles of export from Syria. They are abundant in Asia Minor, Mesopotamia, Syria, and Persia. There are three species—viz., the white, green, and blue. They are chiefly produced in the mountains in the vicinity of Moussul, on the banks of the Tigris. The real Moussul galls are the best of any, but all that are gathered in the surrounding country are sold under the name

"The greatest quantity of galls shipped from Syria comes from the mountains of Moussul, which are the most esteemed. The annual gathering is calculated to be 7000, 8000 to 10,000 cantars; but in this quantity are included some small parcels of galls from the Singar mountains, and Giaour Dagh of Killis, amounting to about 60 to 70 cantars. The annual consumption in Aleppo is limited to 50 or 60 cantars; the rest is exported to Europe.

"The prices in Moussul have been as high as 2000 piasters.

"*Saffron.*—The finest quality comes from Persia, Odamish in Anatolia, and Erzeroom. It is worth almost 400 piasters per oke; the second, 150 okes, worth 300 piasters per oke; the third, about 350 per oke.

"These fine qualities are consumed by the manufacturers of gold thread, to which it gives a bright colour, and diminishes the use of a large quantity of gold.

"*Safflower* is produced in the gardens and fields of Aleppo at Hamah, Homs, and Nebk. The cultivation is not sufficient to produce a quantity for exportation."

Foreign Trade of Syria.—"The progressive augmentation of foreign trade since the conquest is not to be denied. The English trade has made, comparatively, more progress than all the rest; and since the firman of Rhamaan, 1251, has been put in force in Syria, we can fairly say that our commerce rests upon the basis laid down in the capitulations. Great activity prevails in the ports of Syria, and the general navigation is much increased: it is certainly superior to what it was under the former government. I have not been able, however, to procure regular returns from the different ports, owing to the very irregular state of the records. In 1831 the first British vessel direct from England arrived in Syria; nine in 1833, and eleven in 1834, of the burden of 2934 tons; their cargoes consisting of 9430 bales of English manufactures, 1553 pieces of Brazil wood, and 875,000 lbs. of cotton twist;—all those goods for the Damascus and Aleppo markets. The port of Beyrout is the most frequented. Scanderoun is likewise a place of importance to us, the whole of our goods destined for Aleppo being landed at that port. I also remark that a somewhat active trade had been opened by our merchants at Tarsous, from which they provide all the district of Adana, and even the central parts of Anatolia. I have not, however, been able to acquire much information regarding Adana and Tarsous during my tour in Syria, which did not extend to those provinces. The trade with Tuscany seems also to have made considerable progress, as well as that with Greece. But the people of the latter country, it must be owned, are often guilty of dishonest acts, and even frequent barratries, which has produced a strong feeling of distrust in regard to the Greeks in the whole commercial community of Syria. The French and Sardinian trades have considerably diminished, and this is ascribed to the preference given by Syrians, indiscriminately, to all sorts of British manufactures. The exportations from, and the importations to, Syria, may be reduced to the following amounts:

Exportation.	Piasters.	Importation.	Piasters.
To Austria	957,700	From Austria	1,581,500
France	6,525,000	Egypt	14,684,000
Egypt	12,090,000	France	6,682,000
Great Britain	570,000	Great Britain	7,261,600
Greece	246,650	Greece	124,400
Sardinia		Sardinia	3,700
Tuscany	3,133,520	Tuscany	9,022,000
Turkey	4,677,500	Turkey	8,841,400
Total	28,150,200	Total	48,200,600

"The above statement for the year 1835, leaving a difference against Syria of about 20,000,000 of piasters, or 1,000,000 of dollars which she must pay in hard money, or in ingots of gold or silver, &c. Her majesty's steamer now carries monthly from Syria for Malta and Europe considerable sums in specie.

Internal Trade of Syria.—"The augmentation of the produce of the soil, as well as the progress of foreign trade, have naturally exercised a beneficial influence on the internal trade of the country.

"Damascus, a populous city of about 120,000 souls, has much gained, especially by the introduction of British manufactures. It is now the chief emporium of the trade with Bagdad, Bussora, Persia, and all the adjacent countries; and in May last, no less than 6000 camels arrived at Damascus to buy European manufactures, and there were hardly goods enough in the market to load one-fourth of the arrivals. All the necessaries of life have tripled in price at Damascus; but every person gains more, and there is evidently an amelioration and greater prosperity in the country. In return for the manufactures sent from Damascus to Bagdad, &c., they receive silk, drugs of Persia, saffron, gums, shawls, pearls, ingots of gold and silver, gall-nuts, and a great quantity of timber. To the sort of submission into which the Egyptian government has been able to bring the Bedouin tribes, is chiefly owing the flourishing state of the trade at Damascus; for, as Mr. Farren himself explicitly stated to me in Damascus in the month of April last, the possession of Deir, which adds considerably to the means of controlling the Bedouins, has proved most efficient in ensuring the safe passage of the caravans between Bagdad and Damascus. These caravans do not pass through Deir, but follow a line of cisterns between Palmyra and Aza, the whole of which line would be completely opened to the Bedouins if Deir were not occupied by the rulers of Syria, and the Arabs overawed by the efficiency of their means of repression.

"Deir, as far as I have been able to learn, originally formed part of the pachalic of Aleppo, and the convent there of Armenian Catholics was founded by, and subject to the spiritual direction of the chief of that religion in Aleppo. It forms, at any rate, a part of Syria, and cannot in any way be said to belong to the district of Orfa or to Mesopotamia. In the course of time the power and authority of the pachas of Aleppo became very weak, and they were unable to enforce obedience to their orders on the part of the Annassi and other tribes of Bedouins who inhabited the desert round Deir, and who completely ruled over all that tract of country. In consequence, the Porte, many years ago, separated Deir from the pachalic of Aleppo, and placed it under the orders of Daoud Pacha, then pacha of Bagdad, who, being a man of energy, would, it was supposed, be able to bring these turbulent tribes of Arabs under order and subjection. Daoud Pacha was unable to do so; and for five years before the possession of Syria by the Egyptians, Deir and its district had been completely abandoned by the Pachas of Bagdad, who neither received tribute from it, nor in any way interfered with it, and it had again fallen into the hands of the same Bedouin tribes, who acknowledged no other master. Ibrahim Pacha, considering Deir as a part of Syria, and probably considering it a good boundary, took possession of it, then brought the Arabs under subjection, rendering thus the roads secure from their depredations, to the great benefit of all the Syrian frontier, as well as to our own trade with Bagdad and Persia through Damascus, which would otherwise be very materially injured by the precarious security, or rather insecurity of caravans.

"I have not been able to learn, either in Aleppo or elsewhere, that the Porte or Reschid Pacha have in any manner complained of the occupation of Deir by Ibrahim Pacha, and which Reschid Pacha would certainly have done, either directly to Ibrahim Pacha or the Porte, had Deir belonged, as Mr. Farren says it does, to the district of Orfa. The occupation of Deir may also be beneficial to the Euphrates expedition, as it is certainly preferable that the Bedouins on the line of that river should be subject to a power that will keep them in order, and be responsible for their conduct, rather than to have to deal with them directly, without hopes or means of redress against any means on their part. The trade of Aleppo has also increased to a considerable extent, and it is the place from whence they now supply all the north of Syria, Mesopotamia, and part of Anatolia. Another cause of the rapid increase of the internal trade, is doubtless the confidence felt by that part of the population especially, which is not Mussulman, in the present government.

"Without arguing the cause of this change, I will mention the fact, that a large number of individuals, whose only study was to make others believe that they were poor, have now brought forward their riches, which they have embarked in speculations. The very bad state of the public roads is a subject of deep regret; they are almost all impracticable, and were they to be placed on a tolerable footing, it would greatly contribute to increase the rising spirit of speculation, by facilitating intercourse, and add much, as I before observed, to the agricultural produce of the country.

"*Native Manufacturing Industry of Syria.*—With regard to native industry, it is not very extensive: their silk stuffs form the main produce of their manufactures: about 1200 cantars of the silk produced in Syria are consumed in the following manufactories:

"Aleppo 300, Damascus 500, Tripoli 100, Hamah 20, Beyrout 100, Lebanon 130, Saida 50.—1200 cantars. The manufactory of sword-blades, &c. at Damascus no longer exists. The celebrated Phœnician sources are here, and they are sufficiently powerful to put in motion the largest machinery."—*Colonel Campbell's Report.*

TRADE OF ALEPPO.

(*Haleb-es-shabba*) in the north of Syria, about 75 miles east from *Alexandretta*, or *Iskanderoon*, which may be considered its seaport.

The population at present is estimated at about 60,000, of whom 16,000 are Christians: as late as the year 1795, it is said to have had 250,000 inhabitants.

The houses and other buildings are described as of Saracenic architecture, built of stone, with flat roofs, spacious apartments, large windows, and richly-ornamented walls and ceilings. A great part, including the ancient palace and many of the mosques and other buildings, are described as ruins. The earthquake of 1822 caused multitudes of the inhabitants to desert Aleppo; before that time its manufactures of shawls, cottons, silks, gold and silver, &c., were of very considerable value. It is still the cleanest town in Syria, and the commercial entrepot for the trade between the west and Persia, and Upper Arabia; and between the latter and Asia Minor. Aleppo had, in former times, a considerable trade with England by its port of Alexandretta. The position of Aleppo, its large warehouses, its bazaars and its communication with the Euphrates, render it a place conveniently adapted for an extensive trade. The obstacles are insecurity of life and property, an uncertain government, and a vast country in the midst of which it is situated being laid waste by depopulation and by war. Under Ibrahim Pachaits trade was extending, and there was then some protection for life and property, and security was extended to travellers and to the caravans.

The following statements are condensed from consular reports, (English, French, and Austrian,) and from the consular returns, reports, and statements, imbodied in Dr. Bowring's report on Syria.

"IMPORTS from Great Britain into Aleppo during 1836 and 1837.

"Sugar 358 sacks, 484 barrels, sacks weighing about 25 rottoli, barrels weighing each about 50 rottoli; prices 10 to 12 piasters per rottolo in barrels, and 10 to 10½ piasters per rottolo in sacks. The sugar in barrels was English refined, crushed, and in sacks East Indian. Two-thirds of the above quantity were consumed in the city of Aleppo. Coffee, 792 bags, weighing about 30 rottoli = 23,760 rottoli; prices 16¼ to 17¼ piasters per rottolo; one-third consumed in Aleppo. Indigo, 170 cases, weighing about 50 rottoli =

8500 rottoli; prices 180 to 220 piasters per rottolo; two-thirds are consumed at Aleppo. Cochineal, 84 barrels, weighing about 70 okes = 5880 okes; prices 130 to 150 piasters per rottolo; one-half used at Aleppo. Copperas, 121 cases, weighing about 60 rottoli = 7260 rottoli; prices 200 to 350 piasters; one-half used at Aleppo. Tin bars, 163 casks, each 45 rottoli = 7335 rottoli; prices 28 to 34 piasters; one-third used at Aleppo. Tinplates, 84 cases of 225 sheets, prices 250 to 280 piasters per case of 225; two-thirds used in Aleppo. Pepper, 701 bags of about 15 rottoli each = 10,515 rottoli; prices 11½ to 12 piasters per rottolo; one-half consumed in Aleppo. Pimento, 40 bags at 30 rottoli each = 1200 rottoli; prices from 12 to 12½ piasters per rottolo; the half used at Aleppo. Sal-ammoniac, 49 cases, 31 barrels, weighing each 50 rottoli = 2450 rottoli; prices at Aleppo from 24 to 26 piasters per rottolo; one-third consumed at Aleppo. Rice, 540 bags, each weighing 15 rottoli, prices from 5½ to 6¼ piasters, consumed at Aleppo. Cotton water-twist, 3877 bales, each bale is valued from 2000 to 2200 piasters; one-third is consumed at Aleppo, and two-thirds sent to Mesopotamia, Armenia, and as far as Trebisond. Mule yarn, 600 bales, each bale valued at 3200 to 3400 piasters; two-thirds were consumed at Aleppo. Manufactures, 5336 bales and 53 cases; these consisted of all sorts of British manufactures; each bale is valued at from 3000 to 5000 piasters, and a few at from 6000 to 8000. Aleppo consumes half the manufactures imported, and the remainder is forwarded into Mesopotamia, Armenia, and Bagdad, and even to Persia.

"Imports from Germany to Aleppo, during 1836 and 1837:—Cloth, 44 bales, from Trieste, each bale containing 12 pieces = 528 pieces; value of each bale estimated from 8000 to 10,000 piasters; half the quantity was consumed at Aleppo. Tarbouches or red caps, 163 cases of 120 dozen each = 19,560 dozen; prices from 35 to 40 piasters per dozen; one-third consumed in Aleppo. Divers manufactures, 94 bales; principally printed handkerchiefs from Germany; each bale valued at from 5000 to 8000 piasters; one-third consumed at Aleppo. Glassware, 50 cases, consumed at Aleppo, or sold in retail to people from the interior.

"Imports from Italy to Aleppo, during 1836 and 1837:—Sugar, 73 cases and 100 bags, average weight, 50 rottoli; prices at Aleppo 12½ to 13 piasters per rottolo; two-thirds consumed at Aleppo; total weight imported, 8650 rottoli. Coffee, 321 bags, at 35 rottoli each = 11,235 rottoli; prices 17 to 18½ piasters; one-third consumed at Aleppo. Tarbouches, or red caps, 255 cases, generally Tuscan manufacture; each case 70 dozen = 17,850 dozen; prices from 70 to 120 piasters per dozen; one-third used at Aleppo. Pepper, 237 bags at 15 rottoli each = 3555 rottoli; prices 11 to 12 piasters per rottolo; half the quantity consumed in Aleppo. Pimento, 29 bags at 30 rottoli each = 870 rottoli; prices 12 to 12½ piasters per rottolo; one-half consumed in Aelppo. Indigo, 11 cases, weighing 50 rottoli = 550 rottoli; prices 180 to 220 piasters per rottolo; two-thirds consumed in Aleppo. Coral, 25 cases, of various qualities, cases valued at 10,000 piasters to 50,000 piasters each: about 8 cases to 10 were sold in Aleppo to the Persians and Bedouins, the remainder were sent to Bagdad and Persia. Cochineal, 82 cases, weighing about 70 okes each = 5740 okes; prices at Aleppo 130 to 150 piasters per oke; half used in Aleppo. Paper, 166 bales, each bale of 20 reams = 3320 reams; prices 25 to 40 piasters per ream; half consumed in Aleppo. Manufactures, 293 bales, of all sorts, of which a considerable portion British, bought in the Italian depots; each bale was estimated at 3000 to 5000 piasters; about one-third of which in 97 bales were used in Aleppo.

"Imports from France to Aleppo, during 1836 and 1837:—Sugar, 114 barrels, 766 cases, average weight 50 rottoli each, weight 44,000 rottoli; prices at Aleppo during these two years were 12½ to 13 piasters per rottolo; two-thirds were consumed at Aleppo. Coffee, 330 barrels, 725 bags, average weight 35 rottoli each; weight 36,750 rottoli; prices 17 to 18 piasters per rottolo; one-third consumed in Aleppo. Cochineal, 35 barrels, 68 cases, weighing 70 okes each; total weight 7210 okes; prices from 130 to 150 piasters per oke; half consumed in Aleppo. Tarbouches, 64 cases, from France, manufactured at Tunis; each case contained 50 dozen; prices 200 to 400 piasters per dozen; half consumed at Aleppo. Pepper, 135 bags, each weighing 30 rottoli; = 4050 rottoli; prices from 11 to 12 piasters per rottolo; half consumed in Aleppo. Pimento, 129 bags, weighing 30 rottoli each, = 3870 rottoli; prices from 12 to 12½ piasters per rottolo; half consumed in Aleppo. Indigo, 4 cases, weighing 50 rottoli each; prices 180 to 200 piasters per rottolo; two-thirds con-

sumed in Aleppo. Manufactured silks (from Lyons only), ten cases were imported during the years 1836 and 1837; each case contained 10 pieces, each piece, 35 pikes; prices 10 to 60 piasters per pike: not used at Aleppo or Mesopotamia, but purchased generally by the Persians. Wrapping-paper, 280 bales; each bale 30 reams, sold at 10 to 12 piasters per ream; half consumed at Aleppo. Cloth, 398 bales, imported during the two last years; each bale contained 12 pieces; the cloth from France is of such different qualities, each bale was valued at from 4000 to 6000 and to 8000 piasters; half the quantity used in Aleppo. Divers manufactures, only 9 bales imported during the two years, principally prints of Swiss manufacture. Ordinary payments in Aleppo, for manufactured goods, is by bonds or promissory notes, due at a given period. It was not usual to discharge them in full when the time stipulated for payment arrived. A part was paid, and written on the back of the bond; many months often passed before the whole was paid. The custom has been and continues to be, for collectors to go round, according to circumstances, to gather in what they can on account of those bonds. They are used often by the holders to make other payments with, but they are not endorsed, and the risk is transferred to the party who consents to receive it.

"*Christian Merchants.*—There were about 30 Christian houses which have traded with Great Britain, France, Italy, and Germany. The whole amount of capital possessed by their establishments was calculated to be from 14,000,000 to 18,000,000 of piasters. There were 7 Christian houses whose capitals exceeded a million of piasters.

"*Mussulman Merchants.*—About 70 Mahometans have traded with Europe. The lowest estimated capital of one among them was 100,000 piasters, the highest from 1,300,000 to 1,400,000 piasters. The whole amount of Mussulman capital engaged in the European trade was calculated at from 6,500,000 to 7,500,000 piasters, 65,000 to 75,000*l.* sterling. There were 15 Turks who traded in European commodities, but not direct with Europe.

"*Jewish Merchants.*—There were 10 Jewish mercantile houses in Aleppo that traded with Europe, and estimated to employ in the trade from 2,000,000 to 2,500,000 of piasters. The wealthiest of these was supposed to have about 1,000,000 piasters engaged in business.

"*Bankers.*—There were, independently of the above, several rich bankers; the merchants from Bagdad, Mousoul, Diarbekir, Orfa, Constantinople, and Smyrna, who were settled in Aleppo, were not included among those enumerated in the foregoing lists.

"*Shopkeepers.*—There were more than 50 shopkeepers, who sold the manufactures of Aleppo. The whole amount of capital engaged in this trade was not believed to exceed from 1,200,000 to 1,600,000 piasters. Twenty-one shopkeepers sold silks. Nineteen shopkeepers were engaged in the sale of cloths from France and Belgium. The capital employed by this class is from 330,000 to 410,000 piasters. There were 70 shopkeepers who sold British manufactures; their capital was estimated from 750,000 to 880,000 piasters.

"*Druggists.*—There were 35 druggists. Estimated capital 325,000 to 420,000 piasters.

"A large proportion of the trade of Aleppo was and is carried on by the general system of credit established there. The merchants collect their receipts by a system of incessant dunning, employing chiefly native Christians, dragomans. There are four British mercantile houses established at Aleppo."

Extract from statement drawn up in ? 38, by Mr. Heugh of Aleppo.

"The language usually spoken is Arabic; every European merchant has his *magazinier*, who speaks generally one or more European languages, and who acts as dragoman, assists in making sales, and collects the money. Nearly all sales are made through brokers. The best brokers speak Italian, as well as the language of the country.

"The magaziniers are all Christians, the brokers are nearly all Jews.

"The brokerage is generally paid by the seller. The charge for brokerage here is one per cent; the charges of the British houses, on sales made, amounts to about 7½ per cent for commission, storage, and del-credere, exclusive of carriage, porterage, petty charges, and brokerage, which make the total charges on sales about 13½ per cent.

"Sales are generally made on a credit of four months; but this credit is extended, according to the times, from eight to twelve months, and, in some cases, even eighteen months or two years, where the buyer is quite sound, but cannot be forced to pay.

"Accounts are kept in piasters and parras, but the payments are made in Turkish and European coins; and from the immense variety of coins, and the want of any proper facilities for transferring money, there is an enormous consumption of time, in the collection and counting of money.

"There are scarcely any bills on Europe to be had, but the course of exchange made by remittance in specie averages 104 to 106 piasters per *l.* sterling.

"The following are the values of European coins, as published by the government, and as they pass current among the merchants:

	Published Rates, piasters.	Current Rates, piasters.
Sovereign	97½	103
German dollars	20	20¼
Spanish ditto	21	21¼
Dutch ducats	45 13/20	47
Venetian	46 18/20	47½

"The mode of selling twist is per bundle of 10 lbs. English. Gray cotton, per piece, or per English yard; white and printed cotton, per piece; handkerchiefs, per dozen; shawls, per piece; tinplates, per 2 boxes; tin, in bars, per rottolo; sugar, per oke; pepper, per oke; coffee, per rottolo; cochineal, per oke; Indigo, per rottolo; broad cloths, per pike; velvets and silks, per pike; dye roots, per cantar of 187½ okes.

"Produce is bought nearly all for cash, a little on credit, and a few barters are made.

"Galls are bought, per cantar of 187½ okes; cotton, ditto; wool, ditto; silk, ditto.

"There is an allowance on sugar of two per cent for tret on coffee, and 10 per cent on pepper, and five per cent tret on indigo and cochineal: all on the real tare.

"In purchasing galls the buyer pays the brokerage, &c., and has an allowance of five per cent tret in lieu of it. Cotton and wool are bought net, or, if in hair bags, the bags are weighed as wool or cotton, and no charge made. Silk is bought at net weight.

"*Weights.*—The cantar of Aleppo is 187½ okes; the rottolo of Aleppo is 100th part of 1 cantar; the oke of Constantinople, used for cochineal, is about 2¾ of a lb. avoirdupois: the Egyptian is 4 per cent lighter. The 1000 drachms of silk are 7 lbs., the pike is 27 inches.

Prices current in Aleppo, in 1838.

" *Wages of Labour, Food, &c.*—A mason per day 12 piasters, really 8 piasters; a carpenter, 12 piasters, really 8 piasters. Shoemakers, tailors, printers, and dyers.—These trades have no fixed rate of labour, but are associated each among themselves, and divide the profits. A weaver is paid per pike 5 to 10 piasters, and can make from 1 to 2 pikes per day. A porter may make 8 or 10 piasters per day. A servant has 60 to 200 piasters per month. A mason or carpenter, when employed by any inhabitant, must furnish to government a man to work as long as he works for his private employers. The private employer pays 12 piasters per day, the government 4 piasters. So each man receives in reality only 8 piasters per day, although it costs the inhabitant 12 piasters.

ARTICLES similar to those manufactured in Britain, but imported into Aleppo from other European States, at lower Prices than they can be supplied by Britain.

" *Paper.*—For writing and packing the stuffs of Aleppo. It is furnished from Italy about 15 per cent cheaper than it can be from Britain. The quality of British paper is better: but after allowing for the difference of quality, the Italian paper is cheaper.

" *Cloth.*—All kinds of cloths and cassimeres. The prices here show a loss on English cloths, whilst a large trade is done in them with France.

" *Steel* is supplied cheaper and better from Trieste than from England.

" *Velvets.*—Satins and silk from Genoa and Leghorn. Cotton crapes from Lyons.

" *Alum*, from the interior of Asia Minor.

" *Cambrics.*—Switzerland about 7½ per cent cheaper than British.

" *Pullicate Handkerchiefs.*—From France and Switzerland about 12 per cent cheaper than the same quality of Scotch.

" *Turkey red printed Garments.*—From Switzerland fully 20 per cent cheaper than the nearest quality of British. The quality of the Swiss is also better.

" *Striped and plain Nankins.*—Better from Switzerland than from Manchester, and fully 5 per cent cheaper.

" *Manufactures of Aleppo. Soap.*—There were in 1838 in Aleppo 30 soap manufactories, and in Edlip half that number, employing about 1000 men, at wages of from 5 to 10 piasters per day. The quantity produced varied from 500 to 1500 tons annually, according to the crop of oil

"*Stuffs.*—Aleppo was famous throughout the east for her woven goods. Those which are still manufactured, consist of silk stuffs, with gold and silver thread; silk and cotton, flowered and striped; and the striped cottons, called nankins. Few modern improvements have been introduced into the machinery; the fabrics are, many of them, beautiful, and costly when silver and gold are used. There are in all about 4000 looms employed, and about 4800 persons, men and children, earning from 3 to 12 piasters per day. Of the 4000 looms 300 are employed in producing stuffs of silk and gold and silver thread, yielding per annum about 6000 pieces; averaging, per piece, 150 piasters each, which gives a total value of 900,000 piasters.

	Piasters.
"1700 looms are employed in making the stuffs of silk and cotton, producing about 340,000 pieces per annum, of the average value of 40 piasters per piece, giving a total value of	13,600,000
"1000 looms are employed in making the cotton stuffs, of which they produce annually about 500,000 pieces, worth 12 piasters per piece, giving a total of	6,000,000
"Besides these there are about 1000 looms employed on low muslins, used for printing on; they occupy about 1200 persons, at rather lower wages than the others, and produce annually about 500,000 pieces, worth 10 piasters per piece, giving a total of .	5,000,000
Total piasters . .	25,500,000
Total sterling .	£250,000

"These stuffs are sent east, north and south, and form a large part of the trade of Aleppo. All the British twist imported consumed was in these looms.

"The rich stuffs are worn by brides and wealthy women; all other sorts are used for the every day outer garments of men and women.

"*Dyeing and Print Works.*—There were about 100 dyeing and print works in Aleppo, employing about 1500 persons, who earn from 5 to 14 piasters each per day. The dyeing is chiefly that of silk and cotton yarns used for stuffs, and, in fact, all fast colours. The printing is also on fast colours, but in a very rude state. Compared with the other manufactures here, the chief business is printing the handkerchiefs worn by women and lads, tied round the heads, and for veils for the women when they go out of their houses.

"*Gold and Silver Thread.*—There are 15 workshops of gold and silver thread, in each of which about four persons are employed.

"The ports of Aleppo are Alexandretta or Scanderoon and Latakia. The conveyance of goods to and from the coast is by mules and camels. The journey to and from the latter is done in winter, by camels, in 7 to 8 days; by mules, 5 to 6 ditto. In summer, by camels, 5 to 9 days; by mules, 4 to 5 days.

"The charge of carriage varies from 60 to 120 piasters per cantar of 1871 okes.

"The journey from Latakia occupies from two to three days more, and the charge of carriage is from 30 to 50 per cent higher.

"*Caravans.*—The caravans between these places vary from 10 to 100 mules or camels. There are muleteers who are continually employed on these roads, so that there is always abundance of opportunities for the transmission of goods, except when a seizing by government takes place. The communication with Mousul and Diarbekir, Bagdad, &c., is not so frequent, and the caravans are generally accompanied by the merchants who load them.

TABLE showing the per Centage which the expense of Carriage amounts to on the following Articles by the different Routes.

ARTICLES.	Between Aleppo and Scanderoon	Latakia	Tarsous and Adana.	Marash, Aintab, and Killis.	Orfa.	Diarbekir and Merdin.	Moussoul and Bagdad.
	per cent.	per cent.	per cent.	per cent.	per cent.	per cent	per cent.
Twist and heavy cotton goods	1 to 1½	1½ to 2½	2 to 3	½ to 2½	½ to 2½	2½ to 4	3½ to 5
Other British manufactures, cochineal, indigo, and spices	½ to ¾	¾ to 1	¾ to 1½	¾ to 1	¾ to 1	1 to 1½	1½ to 1½
Sugar, coffee, pepper, and metals	¾ to 1	6 to 10	7 to 12	7 to 10	6 to 10	10 to 16	20 to 30
Galls	¾ to 1	6 to 10	7 to 12	7 to 10	6 to 10	10 to 16	20 to 30

"*Quarantines.*—There was, and we believe there is still, a quarantine established at about two days' journey beyond Adana on the frontiers of Syria. The effect of this quarantine has been to shut out from the markets of Tarsous and Adana all the population of the interior of Asia Minor. The caravans which formerly came from Tarsous and Adana, from the country on the north side of the Taurus, have for some years gone to Smyrna and Constantinople, in order to avoid from 7 to 20 days in quarantine on a journey of 4 days.

"The same is true on the frontiers towards the Euphrates. These quarantines are absurd from the fact they can almost always be passed by paying money; a *bakshish*, or a bribe, usually procures an immediate pass.

"*Posts.*—The communication with Europe was during the possession by Ibrahim Pacha carried on by post sent to Beyrout, to meet the steamer from England, once a month, and by Tatars to Constantinople about once every six weeks, but there was no regularity in their time of starting. The post used to go to Constantinople in 7 days in winter, and 5 days in summer; the postage was about 4*d.* for a single letter. The Tatar went to Constantinople in 12 days in good weather, and in bad weather he was frequently 20 days on his journey; the postage, by him, for a single letter was about 9*d.* He carried money at the rate of one-half per cent for gold, and one-third for silver. There were also two opportunities per month by horse post, for the conveyance of money to Beyrout; one was in the hands of the British merchants, and its rates of carriage were three-eighths per cent for gold, and one-eighth for silver. Since the evacuation of Syria by Mehemet Ali, the same system was presumed to continue; but there is less security and regularity.

"Aleppo, as an entrepôt, supplies not only the surrounding country, but also parts of Armenia, south from Arabkir. To the north it supplies Marash and its neighbourhood; to the east and south-east, Orfa, Diarbekir, Merdin, and Moussul are supplied from Aleppo, and it sends a caravan, once a year, to Bagdad.

VALUE of the following Articles imported from England during the Years 1830 to 1837 inclusive.

"Formerly the import of British manufactures into Aleppo was done chiefly through Leghorn. The value of British manufactures imported in 1837, was 11,811,000 piasters, the value through Leghorn was only 191,000.

"The direct import trade from Great Britain to Aleppo was begun in 1828. In 1832 the late British Consul-general opened a house here, and in 1833 and 1835, three or four British houses were established, and if the security of the local business, and of the transit trade were insured, Aleppo might again become a great depot for commerce.

"There is no possibility of getting correct, or even approximate accounts of the exports. They are made on Aleppo account from Tarsous, Latakia, and Alexandretta. The trade between Aleppo and these places is carried on chiefly by natives, who purchase from importers, sell the goods to the producers in advance for the coming crops of silk, cotton, wool, &c., receiving payment in these articles, and resell them to the importers, for shipment at the nearest port.

"The products of Syria, and those brought into Asia Minor, and exported on Aleppo account, are cotton, grown on the plains of Tarsous, and Adana, in Caramania: silk, raised near Antioch; silk, brought from Tocat; Wool, grown around Aleppo, or brought from Tarsous and Adana; Galls, brought from Killis, Merdem, Diarbekir, and Moussoul; camels' hair, brought from various parts of the interior.

"The average price of cotton during the three years ending 1837, was 1000 piasters per cantar; average exports 2700 cantars, value 2,700,000 piasters, of which three-fourths was exported to Marseilles and Leghorn.

"Of silk—Antioch produced about 9,000,000 drachms.

"About three-fourths was exported to Marseilles and Leghorn; to Great Britain *none;* the remainder was retained for the consumption of the country. The average price for the three years 1835 to 1837, was 400 piasters per 1000 drams; the average exports 6,750,000 drams—equal to 2,700,000 piasters.

"Of Amasia silk, from Tocat, there came to Aleppo, in 1830, 180 bales; in 1831, 165; in 1832, 190; in 1833, 60; in 1834, 80; in 1835, 12; in 1836, 40; and in 1837, 60 bales, containing each 25,000 drams; giving an annual importation of 2,487,500 drams, worth, on an average, 450 piasters per 1000 drams = 1,119,150 piasters; of which was shipped one-third (373,050 piasters), and two-thirds are retained for use here. *Wool* from Tarsous and Adana 1500, and from Aleppo 850 cantars.—Total 2350 cantars.

"The average price during these three years was 600 piasters per cantar; the average exports 1750 cantars, value 1,050,000 piasters.

"*Galls* from Killis, 150 cantars; from Merdem and Diarbekir, 500 cantars; from Moussul and Bagdad, 700 cantars.—Total 1350.

"The average prices during these three years were 1700 piasters per cantar; and the average exports were 1050 cantars = 1,785,000 piasters.

"The cotton of Syria is very short in the staple, and very full of seed; the manufacturers of France, Italy, and Switzerland, consume a much greater quantity of such cotton than England does, it being chiefly used for lamp and candlewick. The silk is reeled so very long (about eight feet diameter) that it is impossible to find purchasers for it in Britain. The quality is estimated in England at 5 to 10 per cent better than Persian.

"Wool is adapted for the purposes of British manufacturers, but its price has generally been too high to permit shipments to be made to Britain.

"Galls are the only article sent to Britain in any considerable quantity.

"ALEXANDRETTA—(*Scanderoon*).—The bay of Scanderoon affords the only safe anchorage, at all times of the year, on the coast of Syria, and is defended from all winds. It is the natural port of Aleppo, and of all northern Syria. British imports and exports, and the greater part of the foreign, pass through it;—except what is carried by small vessels of very light draft of water during the summer; at which season, on account of its greater salubrity, they go to Latakia, a small port, about 40 miles to the south of the Gulf of Scanderoon, but capable of containing only three or four vessels, and very unsafe except during the fine summer months. Another great advantage that Alexandretta possesses is the much less cost of carriage and the greater facility of procuring animals than at Latakia.

"The drawbacks to Alexandretta are the marshes in its immediate vicinity, which produce intermittent fever during the summer months, and consequently deter vessels availing

themselves during that season of a safe and commodious port. One, and the most considerable marsh, was, eight years since, drained effectually at the instigation of Signor Martinelli, the then agent and factor, since which time the place has been much more healthy: such marshes as remain being all above the level of the sea might be very easily drained at a small expense, which would then render the place as healthy as most other parts of Syria, and open a safe retreat for vessels at all times of the year without danger of their crews suffering from sickness; this is particularly applicable to British vessels, which are all copp[illegible]ed, and also unable, from their draft of water, to avail themselves of the port of Lavakia during the unhealthy season from June to September.

"The Bay of Alexandretta possesses also an advantage from its proximity to Tarsous and other parts of Caramania, the whole coast of which is destitute of any port, and is the country where most of the cotton and wool of Syria is produced.

"The British imports at Alexandretta for the year ending 31st December, 1836, were, for the first six months in British vessels, comprising together a register tonnage 1086 of the approximate value, calculated at the prices of Great Britain 85,401*l.*, as detailed in the six months' return; and for the last six months, six British vessels comprising together 869 register tons, in value 65,827*l.*

"The exports to Great Britain in British vessels were for the first six months in three vessels, comprising together 392 register tons, in value 16,790*l.*; and for the last six months in two vessels 255 register tons, in value 8250*l.*, the decline of which may be attributed to the advices of the high prices of galls received from Great Britain at the latter end of the year 1835 causing a larger supply of that article to be sent during the spring of 1836 than the market could consume.

"The imports by foreign vessels for the first six months of 1836, were 1 French vessel of the register burden of 240 tons, value about 300*l.*; 1 Sardinian of 160 tons, value about 1200*l.*

"The foreign exports for the first six months were 2 French vessels, comprising together a register tonnage of 360, value about 20,000*l.*; 3 Sardinian vessels comprising 460 register tons, value about 18,000*l.*; for the last six months there were not any foreign imports, and the exports were 1 French 112 tons, value about 7500*l.*, and Tuscan loaded for Leghorn 1, of 188 tons, value 12,500*l.*

"It is to be observed that the British vessels coming to the coast of Syria are all entirely loaded, their cargoes being nearly equally divided between Beyrout and Alexandretta, the larger portion rather for the latter place, and that of the 14 vessels arrived during the year, 5 only were enabled to find return cargoes, the remainder having recourse to Smyrna or Alexandria, but 8 out of 10 go to the former place, whereas the foreign vessels come out with frequently not more than two-thirds of a cargo, and frequently much less, depending on the return, which they are almost invariably enabled to find between Beyrout, this place, Tripoli, and Cyprus; this is accounted for by galls, silk, and cotton being the staple articles of export, but which are not suited to the British market, the high price of the first preventing its more general use, which is caused almost entirely by the expensive land-carriage they are subject to from Moussul, where the greatest part are collected: a portion comes from the banks of the Tigris to Aleppo.

"The direct importations for the supply of Alexandretta and that of the surrounding country, consist principally of grain, rice, and salt; the former coming mostly from the plains about Tarsous. The rice and salt are imported from Damietta, on the coast of Egypt.

"The only staple article of export, the produce of the district of Alexandretta, is dips, or beshmet, made from grapes into a consistence resembling honey. The production of that article, which is all made in the mountains, is about 350 to 400 cantars per annum; of which about 200 to 250 are exported principally to Tarsous and Karamania. It forms a great article of food among the natives of the country. It is sold in the place at from 350 to 400 piasters per cantar; each cantar is equal to 500 lbs. English.

"The district of Alexandretta extends from Cape Kanzyr, the southern point of the gulf, as far as Byas, the N.E. extremity, and comprises the towns of Beilan, with a population of about 1500 persons; Arzous, about 250; and Alexandretta, 250, with 20 villages, containing a population of about 1500 to 1800. The inhabitants of Beilan are principally Turks, with a few Armenians; those of Alexandretta are about half Greeks and

half Turks, and Fellahs, who observe the feasts and outward ceremonies of the Turks, but are idolaters in their religion. The cultivation of the villages is very precarious, and frequently not sufficient for the consumption of the district. About 40,000 trees were felled in 1836 in the mountains for Mehemet Ali: the greater part were fit for ship-building purposes. They consisted generally of mountain pine, very tough and close grained, with a few oaks of rather inferior quality. For the transport of which 50 vessels, forming together about 20,000 tons, arrived from Alexandria during the course of that year. The sum allowed by the government for each man's daily pay was 3 piasters = 7½*d.* sterling (the common price for labourers being 5 piasters).

"*Duties.*—On every loaded beast coming to, going from, or passing through Alexandretta, there is a tax of 26 paras. Till this year only 6 paras.

"On every kilo of grain imported, 18 piasters: on every cantar of dips made, 6 piasters.

"The British imports, during the year 1837, were in 12 vessels, tonnage 1574, estimated value of 149,773*l.* sterling.

"The exports to Great Britain, during the year 1837, were only by one vessel, tonnage 109, estimated value of 1710*l.* sterling.

"The foreign imports at Alexandretta, for the year 1837, were in four French vessels, tonnage 659, estimated value 15,439*l.* sterling; and exports by four French vessels for Marseilles, tonnage 562, estimated value of 4140*l.* sterling. Two Austrian, and three Sardinian for Genoa and Leghorn, of the united tonnage of 676 register, and estimated value of 13,550*l.* sterling.

British and Foreign Trade at the Ports within the Consulate of Aleppo, during the Year 1837.

Of the 20 British arrivals, 9 vessels had manufactures, 2 manufactures and colonials, 3 colonials, and 6 twist. Of the 19 British vessels which departed, 9 had galls, 1 with yellow berries, 8 were in ballast, and 1 had tombak.

TRADE OF DAMASCUS.

Damascus, one of the oldest and most beautifully situated cities in the world, has a population estimated at from 120,000 to 150,000 inhabitants. About 12,000 of whom are Christians and about 13,000 are Jews. It is 180 miles south-east of Aleppo, and 70 from Beyrout. This city is surrounded by a country of great natural fertility at the foot of the *Anti-Lebanus*; and the rivers and clear streams of Damascus flow through and round the city, as in the days of Abraham and Ahab. The buildings are mean, but the houses of the rich are described as gorgeous in the decorations and furniture of their apartments. They have sparkling fountains and flower-gardens attached to them. An European costume is seldom seen in this most Oriental, in its manners, of Turkish cities.

There is a great Khan, or huge building, frequented daily by the various merchants, and in this edifice and in 30 inferior Khans, purchases and sales are conducted by the merchants, who have their countinghouses near them. Sales are made very generally for ready money, or to the regular caravan merchants on credit, often until they return the following year. Bazaars are numerous, and arranged for the respective tradesmen, such as goldsmiths, jewellers, druggists, hardware and cutlery dealers, ready-made clothiers, pipe-dealers, &c.; public cooks of whom there are more than 500, grocers, dyers of woollen stuffs, saddlers, shoemakers, leather-dealers, &c.

Caravans.—Traders and merchants arrive and depart with the caravans to and from Mecca once a year; to and from Bagdad, Mesopotamia, and Persia, two or three times a year; to and from Aleppo twice a month; to and from Beyrout weekly. *Damascus* is one of the holy cities, and here the pilgrims assemble on their journey to, and separate on their return from, Mecca.

"There is a tribunal of commerce for the settlement of business disputes. It consists of 9 Mussulmans, 2 Christians, and 1 Jew. It is said that the Mahomedan majority has seldom acted unfairly to the Christians.

IMPORTS arrived and received at the Custom-house of Damascus.*

* The Teskere is a custom-house piece, for goods passing from the seaport or frontier to the interior—certifying that the duty has been paid.

"*Mahomedan Merchants.*—There are in Damascus 66 Mahomedan commercial establishments which trade with Europe. The whole amount of their capital is estimated at from 20 to 25,000,000 of piasters—200,000*l.* to 250,000*l.* sterling. Of these houses, eight are believed to possess a capital exceeding 1,000,000 of piasters. There are two (Abderachman Ashim and Mahomed Said Aga Bagdadli) who trade with Bagdad, whose capital is estimated at from 1½ to 2,000,000 piasters; and one house (Hadji Hussein Chertifchi) which is supposed to have from 2 to 2,500,000 piasters in trade. The larger houses generally trade with Europe and Bagdad; those of smaller capitals with Constantinople and Smyrna. There are about a dozen engaged in the Egyptian trade with Cairo and Alexandria, one or two with the holy cities of Mecca and Medina, and a few with Jerusalem, Nablous, and other parts of Palestine. There is one of the principal houses whose commercial relations extend as far as the East Indies.

"*Christian Merchants.*—There are 29 Christian merchants at Damascus engaged in foreign trade, the whole of whose capital is estimated at 1½ to 5,500,000 of piasters. By far the wealthiest of these establishments is that of Hanah Hanouri, having a capital of from 1½ to 2,000,000 of piasters, and carrying on a trade with England, France, and Italy, besides being a considerable manufacturer of Damascus stuffs. Several others of the Hanouri family are engaged in foreign commerce, and are among the most opulent of the Christian merchants. A great proportion of the Christian commercial houses have connexions with great Britain. They are less opulent than the Mussulmans or the Jews.

"*Hebrew Merchants.*—As a class the Jewish foreign merchants of Damascus are the most wealthy. There are 24 Hebrew houses engaged in foreign trade, and their capital is estimated at from 16,000,000 to 18,000,000 piasters, making an average of from 600*l.* to 700*l.* sterling each. Among them there are no less than nine houses whose capitals vary from 1,000,000 to 1,500,000 of piasters. The two most opulent are believed to be Mourad Farhi and Nassim Farhi, whose wealth in trade exceeds 1,500,000 each. Most of the Jewish foreign houses trade with Great Britain.

"*Retailers of British goods.*—There are 107 shopkeepers who retail British goods in Damascus. The whole amount of their supposed capital is from 1,600,000 to 2,100,000

piasters, so that the average capital possessed by each is only from 150*l.* to 180*l.* sterling. Their bazaars are kept up to a great extent by of those who sell them goods on credit.

" *Woollen Shopkeepers.*—There are 15 sellers of woollen cloths by retail. They are the most affluent body of the shopkeepers, and are deemed to have from 650,000 to 800,000 piasters employed in all: making the average of their capital—from 400*l.* to 500*l.* sterling; the wealthiest of them having about double that amount, and the lowest among them being supposed to possess from 200*l.* to 300*l.*

" *Stuff Manufacturers.*—There are 14 Mahometans engaged in the stuff manufactures of Damascus; their capital varies from 200*l.* to 1200*l.* sterling, and the whole amount engaged is from 600,000 to 750,000 piasters, giving on an average from 400*l.* to 500*l.* sterling. The two most opulent of these manufacturers are dervishes.

" There are 45 Christian establishments for manufacturing Damascus stuffs. Their total capital is from 1,100,000 to 1,500,000 piasters, or an average from 220*l.* to 335*l.*

" The number of looms for silk and cotton stuffs in Damascus is about 4000; each of which produces weekly from 4 to 5 pieces, of 11 pikes in length by 1 in width, containing about 100 drachms of silk, and 100 drachms of cotton twist of Nos. 16 to 24. The price of the piece varies from 80 to 95 piasters. The price of labour is from 8 to 10 piasters per piece.

" The number of looms for cotton stuffs is about 400, which make each about 7 to 8 pieces per week, requiring about 200 drachms of cotton twist, Nos. 16 to 24; each piece is 11 pikes long and 1 broad. The price is 20 to 21 piasters; the labour, 6 piasters per piece.

" *Grocers and Druggists.*—Grocers and druggists are numerous, and are computed to be about 80, having one with another, on an average, a capital of about 10,000 piasters each.

" *Currency.*—Value of monies, according to the firman proclaimed in Damascus, April, 18, 1838:—

" At these rates coins are ordered to be received and paid as legal tenders.

" It is calculated that a miskal of gold of good quality of 24 kerats, is worth 13*s.* in England. The miskal weighs 1½ drachms of 24 kerats.

" 100 drachms of silver, pure, is worth in England 2*l.* 16*s.*; a quintal of England of 112 lbs. weighs here 44½ okes.

" 100 English yards are = 130 pikes, country measure.

" The exchange in London is calculated at so many piasters per pound sterling, the recent rates being about 100 piasters, so that the piaster is = 2*d.*

" On France the exchange is calculated at about 4 piasters per franc.

" The oke = 400 drachms = 2¾ lbs. English, or 40 okes = 1 cwt.
And 800 do. = 1 ton.
640 do. = 252 gal. liquid measure.
720 drachms = 1 rottolo = . . . 5 lbs. English.
100 Habbies of Jaffa = . . . 39 quarters.
1¾ pike = ... 1 yard.
The Syrian cantar is 180 okes of Constantinople = 504 lbs.

" *Quarantines and Boards of Health.*—The plague has rarely appeared at Damascus. Beyrout being the principal port of Syria is the principal quarantine station. The establishment was, until lately, under the control of a Board of European consuls, and after-

wards under the care of the governor, and is specially managed by an Italian. We are not acquainted with its management since Ibrahim Pacha's retreat.

"The Board of Health at Aleppo, which watched over the sanatory state of that district, and superintended the quarantines, which were fixed by its authority on the northern frontier, from Aintab to Bir, and extends the same superintendence by a quarantine into the defile of the Taurus. The Syrian quarantines exhibited the absurdities, the exactions, and the extortions of the lazzaret system in Europe."

BEYROUT is the seaport of Damascus, from which it is distant about 70 miles. It is little more than a deep roadstead, with good anchorage, the mole being neglected. Its population is estimated at about 15,000, and its bazaars are large, and generally well supplied with merchandize. The consul states in his report, written before the retreat of Ibrahim Pacha,—

"The internal trade of the country has increased within the same period, as native capitalists now venture to embark their fortunes in commercial speculations, which formerly they did not venture to do. It would, however, be an error to suppose that the *international consumption* of European goods in Syria has materially augmented. No direct commerce is carried on betwixt Tyre, Sidon, or Acre, with England or other British ports, as no British subject, with a capital adequate to important commercial operations, resides in those places; but an internal, and I have reason to believe an increasing trade exists between those places and Beyrout for articles of British produce.

"The importations in transit, forwarded to Damascus, not being for the consumption of that city only, go by the caravans to Bagdad, whence they are distributed in the adjacent countries. Those, again, destined for Aleppo find their way into Asia Minor, especially to the towns of Orfa, Diarbekir, Malatiah, Sivas, &c.

"Beyrout is certainly, at present, the most flourishing commercial city in Syria in proportion to its size; and, as my personal observations have hitherto been confined to this place, I may be inclined to overrate the general commercial prosperity of the country. A wealthy class of Christians reside here, whose habits, both as regards dress and the consumption of other luxuries of civilized society, exceed those of the generality of their countrymen. This body of Christians were, under the former government, refugees to Mount Lebanon, and have now returned to Beyrout since the Egyptian invasion. If any Christians feel a leaning to the present government, it is those who have found a security to their property under it, which they did not previously enjoy; even these feel that they possess, by a most precarious tenure, their advantage."

According to all the information which we have since received, misrule, corruption, and insecurity, have succeeded the security of the military despotism, and severity of Ibrahim Pacha's government: and this is confirmed by the consul, who states that the articles imported, have, in 1842, increased in quantity, but being of a coarse kind, not in value; that there is no safety or security in the interior, and that the system of selling on credit has been greatly limited: a proof of commercial insecurity.

"With respect to the moral state of Syria, Mr. Moore, the consul, states it must be considered as one of degradation—where man is no longer looked upon as a free agent, and treated accordingly, it cannot be otherwise; and we need not be surprised if we meet with little of either rectitude or principle, or dignity of conduct in the native Syrian; whilst the reverse of this is too frequently found—intrigue, pusillanimity, and falsehood, forming the component parts of his character. In a commercial point of view, the position of Syria is highly favourable: its coasts afford facilities for the external supply of its wants, whilst its topographical position, as respects part of Asia Minor, Mesopotamia, Bagdad, Persia, and Arabia, is equally advantageous for furnishing these countries with our produce.

"In a manufacturing point of view, Syria has lost, in proportion to her importation of

foreign goods, as well as on account of her diminished population, and the gradual impoverishment of the country. Agriculture has equally declined for the two latter causes."

Colonel Campbell observes—

"Since the government of Ibrahim Pacha was established in Syria, the police has become much more efficient, and the government has been more regularly obeyed;—that a far greater toleration of religious opinions has been introduced, and the punishment of offences has been more prompt and certain. The position of Syria, divided from Asia Minor by the Taurus, and by the desert from the Euphrates, having more intimate relations with Arabia and Egypt than with any other parts of the world—no Turkish spoken, but Arabic, the universal language, would have all tended to cement the union with Egypt. In the former agents of the Turkish government, and those interested in its abuses—in the roider hordes who hover about the frontiers—in those who dread, and naturally dread the conscription—and in the intolerant Mahomedans—there are, of course, elements of great discontent, and desire for change. There is evidence of great improvement both in agriculture and commerce. Thirty-seven thousand mulberry-trees have been planted in the district of Beyrout, Sayda, and Tripoli—a large part of the plains of Esdredon and Bekan planted with olive-trees. The imports of cotton-twist increased from 200,000 lbs. in 1832, to 875,000 lbs. in 1835. Religious prejudices are weakened on the part of the Mahomedans towards Christians in general. Religious hatred and strife among Christian sects *not* lessened. There is a great change in the Mussulman feeling as to their invincibleness. The loss of the Morea—the success of the Russians—the battle of Navarino—stoppage of Ibrahim Pacha at Kutaiah, by the influence of the Great Powers—the greater contact with Europeans, both on part of governments and people—the comparison of the intelligence, wealth, activity, intercourse of Christians with Mussulman authorities—have all tended to lower Mussulman pride and confidence.

"Mr. Moore, consul at Beyrout, gives the following rates of wages in the Beyrout districts: Field laborer 5 to 6½ piasters = 12*d.* to 15*d.*; artisans, masons, and carpenters, 14 to 15 piasters = 2*s.* 10*d.* to 3*s.* 10*d.*

"The annual cost of clothing for one of the labouring classes is 3*l.* to 4*l.*; food, 7*l.* to 8*l.*; lodging, in town, 2*l.* to 4*l.*; lodging, in country, 1*l.* to 2*l.*—The habitation generally consists of two rooms.

"*Ports of Syria.*—Exclusive of Alexandretta and Beyrout.

"*Mersin*, the port of Tarsous, is safe for a limited number of small vessels.

"The port of *Latakia* (anciently *Laodicea*) is small, the entrance to it very dangerous and intricate, with ruins falling into it; not more than two or three vessels can now anchor in it, and, except in the summer months, it is always considered unsafe.

"The port of *Tripoli* is very small, and cannot be considered an harbour, except for vessels of a moderate tonnage. The anchorage in the road-stead can only be made use of in summer.

"The bay of *Akka* or St. Jean d'Acre is large, but much exposed. It is frequented chiefly by French, Italian, and Austrian vessels. British vessels seldom touch there. The anchorage at Hypka, under the southernmost point, affords some little shelter.

"The ancient ports of *Jaffa*, *Tour* (Tyre), and *Sayda* (Sidon), are now all choked up, and offer no security to shipping.

"The harbours on the coast of Syria are many of them susceptible of being sufficiently improved for the safety of trading vessels; but no undertaking requiring permanent security for capital and enterprise can be entered upon, while the condition of the country in regard to its administration remains under the Turkish pachas.

"In a recent report of the consul at Beyrout, he states that internal disorder, and insecurity in respect to person and property, still prevail in Syria."

STATEMENT by Mr. Consul Moore of Arrivals of Merchant Vessels under British Colours, during the Years 1824 to 1837 inclusive.

YEARS.	Number of Vessels.	Tonnage.	Crews.	REMARKS.
1824	15	Three only of these vessels have the tonnage registered, making ..... 401 Tons.	Only one vessel has the number of crew registered, making 10 men.	The registration of vessels began in the year 1824, but not with every particular. It is impossible to give an accurate statement of the tonnage, crews, and places from which the vessels arrive, as they were not regularly registered previous to the arrival of Mr. Consul Moore. The departures are the same as the arrivals, and the ports of destination are not regularly registered.
1825	19	One only of these vessels have been registered, making 602 ,,	Not registered.	
1826	17	One only registered, 111 ,,	Only four vessels have the crew registered, making 33 men.	
1827	11	Not registered.	Not registered.	
1828	15			
1829	17	One only of these vessels has the tonnage registered, making ..... 111 ,,	Only three of these vessels have the number of crew registered, making 23 men.	
1830	22	One only of these vessels has the tonnage registered, making ..... 11 ,,	Not registered	N.B.—Great difficulty exists in obtaining lists of the foreign navigation.
1831	26	Two only of these vessels have the tonnage registered, making ..... 203 ,,	Ditto.	
1832	19	One only of these vessels has the tonnage registered, making ..... 106 ,,	Ditto.	
1833	28	Tonnage.....1186 ,,	Only six vessels have the number of crew registered, making 50 men.	
1834	22	Ditto.....1765 ,,	Only four vessels have the number of crew registered making 36 men.	
Total....	209

"During the three first years 13 British vessels arrived and departed.

"Of the 35 British arrivals in 1841, 31 vessels had general cargoes, 1 wheat, 1 provisions, and 2 had Syrian produce. Of the 35 British departures, 23 were in ballast, 8 had in part and in whole general cargoes, 3 had Syrian produce, and 1 had galls.

"*Sales and Payments.*—Sales are generally effected at a credit of three or four months, but the term is only nominal, as none of the buyers pay when it is expired. For the most part buyers only *begin* to pay in about a month after the stipulated credit is past, and six, eight, and even twelve months not unfrequently pass over before the final liquidation of the debt can be obtained, and in very few instances can interest be obtained for the excess of credit. With buyers, who prove more than ordinarily dilatory in their payments, we are often obliged to apply to our consul to exert his official influence in forcing them to pay; and when the debtor is a 'Rayah' (subject of government) this method generally is pretty successful, but there are very few of the buyers indeed who, from some ground or influence equally unintelligible, have not claimed and obtained the protection of some foreign power, and the difficulties which the consuls, who find it to their advantage to afford this protection, throw in the way of obtaining this liquidation of a long protracted account, are of the most serious and vexing description. When the party owing and failing to pay is a 'Rayah,' the consul has only to address himself to the governor, who, on hearing the circumstances of the case, gives an order that the amount due be instantly paid; and if this order be not attended to within a reasonable time, he proceeds to punish the delinquent. The case is far different with a debtor who has succeeded in obtaining the protection of a foreign power, as in this case all complaints must be made to the party protecting; and in every instance we have found their conduct such as to impress us with the idea that they find it their interest, as they make it their practice, to screen the delinquent as much as in their power. And this protection system is by no means limited in its extent; for of the whole Christian commercial community of Beyrout we only know of one who is not protected by some consul or another.

"The constant tendency of the current coins to rise in amount is a source of the most perplexing uncertainty as also of considerable loss to us. It appears to us there is a continual traffic in moneys going on. Certain coins frequently disappear, and are only again brought into circulation when their increased value offers a fair remuneration to the speculator or holder. This tendency of the currency to increase in value affects us in two ways. First, it offers a premium to the debtor to protract his payments as much as possible, as the coin, which if he pays to-day will bring only a certain number of piasters, will in all probability be worth 3 to 5 per cent more, if he can manage to withhold his payment for a month or two longer. Secondly, in the loss we sustain by the increased value of moneys: for instance, we sell to-day at a price based upon the Spanish dollar being worth 21 piasters, but we are unable to obtain payment before five to eight months, when the dollar has advanced perhaps to 21½ or 22 piasters; and thus we lose 2½ to 5 per cent, besides receiving no compensation in the way of interest, and our calculations rendered doubly precarious—on the one hand by the uncertainty as to the time we shall be paid in full, and on the other, by the uncertainty of the value the coins may have when we are paid. The different seraffs are in the constant practice of buying up all the coins which are in demand for exportation, and by curtailing their circulation in the first instance, they contrive to increase their value: and in the second, by becoming the principal holders, we are forced to pay them an advance on the current value. Many of the coins are also 'clipped,' and of short weight: it is true they make a reduction of so much per grain for every grain of short weight, but that reduction in general is below the current value of the coin, and thus they gain by paying coins of short weight. For instance, the Dutch ducat, before the proclamation, was in circulation at 46½ piasters: the full weight of the coin is 53 grains, and the reduction allowed for short weight is $\frac{10}{40}$ per grain, leaving a very considerable gain to the payer, as the following statement will show:

53 grains value at full weight	46	20
53 grains at $\frac{10}{40}$ (the rate allowed for short weight) .	39	30
Difference . .	6	30

Or nearly 14 per cent profit by paying coins of short weight: this could be easily obviated

by fixing the value of every grain of short weight considerably above its proportion compared with the value of the coin.

"The British trade with Syria is by no means a reciprocal one, as all, or the greatest portion of the returns, must necessarily be made in specie; and a continual drain of this nature helps, in a degree, to increase the value of specie adapted for remittances, and likewise influences the fluctuations to which it is subject. The country produces ample means for paying for its importations in cotton, silk, and other exports, but owing to the very inferior quality of the former, and the unsuitable manner in which the latter is prepared, they are not adapted for the English market. The export trade is principally carried on with France and Italy, and to those markets is sent by far the largest portion of the cottons, galls, silks, gums, madder-roots, wools, &c. exported from this coast. The best information which we have been able to procure states the annual production as follows:

"*Cotton:* Acre and Nablous, about 2204 tons.
Tarsous and Adana . 2500

1700

"*Silk*, in all about 600,000 okes, or equal to 1,650,000 lbs. English. Since 1831 we do not think any silk, except some few bales of *waste*, has been exported to England.

Exportation of Silk from Beyrout in 1833, 1834, 1835, and 1836.

"The commerce of Beyrout and Damascus is greatly dependent upon that of Bagdad."—*Extract from a statement drawn up for Dr. Bowring by a mercantile house at Beyrout.*

Exclusive of spices, sugars, drugs, and dyestuffs imported into Syria for the use or consumption of the country, or to be forwarded to *Bagdad*, the trade in such articles as are manufactured in the United Kingdom, requires some notice. British commercial houses were established in 1833. Before that time the manufactures of the United Kingdom were imported into Syria through some of the Italian ports. The markets promised a constantly increasing demand, as the countries to the east became more and more in connexion with Aleppo and Damascus. The disturbed state of Syria has no doubt been injurious to the sales of British manufactures; but there are many foreign articles, especially French woollens, which compete profitably, and even undersell those of England, in Syria as well as in the Levant.

Goods were formerly shipped by the manufacturers to agents at Beyrout or Aleppo, and sold on credit. This system was followed by that of Syrian houses giving their orders for goods to the British agents at Beyrout; payments are made partly in advance, and partly on the delivery of the articles ordered.

The trade in cotton *domestics* had increased considerably during the more secure state of the country under Ibrahim Pacha. In 1836, there were about 20,000 pieces of different measures imported from England into Aleppo, and nearly double the quantity was imported the following year.

Damascus requires for its use and sales 600,000 pieces, or about 800 bales. In 1836 and 1837, 5336 bales, and 53 cases of British manufactures were imported from the United Kingdom; 2 bales only from France, consisting of Swiss prints; 293 bales of all kinds from Italy, of which a considerable part were British fabrics. The remainder was sent by the caravans to Bagdad or Mesopotamia; 94 bales were imported from Germany principally. The red caps, or *tarbouches*, worn, are chiefly from Italy, and the *Consuls* report that no *woollen cloths* are imported from England; that a trial was made, but did not succeed, and France supplies Syria with Languedoc woollen cloths; Belgian woollen manufactures are also finding a market there.

"In 1836 and 1837 Aleppo received from France 398 bales, imported during the two last years, each bale containing 12 pieces; but the cloth from France is of such various qualities that it is difficult to name a price; each bale is valued at from 4000 to 6000 piasters, and as high as 80,000 piasters: half the quantity for the consumption of Aleppo, and the remainder is exported to the East: only a bale or two are imported from Italy. Germany sent 14 bales through Trieste, each bale containing 12 pieces = 528 pieces; the value of each bale is estimated at from 8000 to 10,000 piasters, according to quality. Half of the above quantity is consumed at Aleppo, and the remainder goes into the interior.

Damascus imported in 1836 . . . . . 6401 pieces.
and in 1837 2819

"No manufactured silks are received from Great Britain. Aleppo imported, in 1836 and 1837, from Lyons, only 10 cases during the two years, each case containing 10 pieces, each piece of 35 pikes; ruling prices 10 to 60 pi. per pike. French silks are not consumed at Aleppo or in Mesopotamia, but they are generally purchased by the Persians."

The low prices and the *dyes* of the light cloths of Carcasson adapt them for all the Eastern markets.

Paper for *writing*, and for windows instead of glass, is imported from Italy and France; glassware from Bohemia by way of Trieste.

"Of some of the staple articles of Great Britain, such as earthenware, iron, iron-plates, tin-plates, tin, loaf-sugar, lead, lead-shot, sheet-lead, the consumption generally is increasing; and should a regular and uniform system of government analogous to European countries, on a liberal basis and principles, be eventually acted on, it may reasonably be expected to increase still further.

"*Loaf-sugar* is not imported from Great Britain into Syria in the quantities it is susceptible of being consumed; the French loaf-sugar interferes, and competes successfully in its consumption. No obvious reason prevents the competition of Great Britain with other countries in this article.

"The trade in colonial articles imported is subject to more open competition from America, and from the ports of France and Italy; which latter has hitherto, during the peace since 1814, nearly destroyed the trade between Turkey and Great Britain in coffees and raw sugars; little of these articles is now imported from Great Britain into the sultan's ports, and none whatever into Syria. Cochineal and dyewoods are also imported from the same quarter; and of all the colonial articles, East India indigo is the only one which remains as an article imported in a tolerable quantity direct from Great Britain. The Americans also import this article, and it finds its way from India, *viâ* the Persian Gulf and

Bagdad, into Syria; some may go to Mesopotamia, to Diarbekir, but not further into the sultan's dominions through either that channel or by the sea from Syria.

"The articles of British manufacture forming the bulk of trade are longcloths or gray domestics, cotton yarn, muslins, and some nankins. The two first are of large importation for consumption; the former interferes with the manufacture of similar goods formerly made in Syria, and has entirely superseded the importations *viâ* the Persian Gulf of a similar quality from the East Indies.

"Cotton yarn in its application for the manufactures of the country is, like a two-edged sword, cutting both ways; it being of great consequence as an article of production by the British manufactories, at the same time furnishing the manufacturers of cotton alone, and of cotton and silk goods of this country, with an article in general consumption, used for long under-garments, which checks the increased consumption of British prints. The manufacture of the finer cotton and silk goods of this description has sensibly declined, but still a large quantity of ordinary goods, both of cotton, and cotton and silk, is consumed."—*Consul's Report.*

CHAPTER XIII.

DIARBEKIR AND TURKISH KURDISTAN.

Diarbekir is the capital of the pachalic of the same name, situated on the Tigris. It formerly, as well as *Orfa*, possessed a considerable share of trade, and goods are still forwarded to both from Aleppo. Diarbekir has greatly suffered, and its condition has been deteriorated by the depredations of its neighbours the Kurds. The population is estimated at about 30,000, and the neighbouring country is naturally very fertile. It formerly had several manufactories, and its bazaars have been usually well filled with merchandize.

Turkish and Persian Kurdistan.—Kurdistan lies chiefly in the upper basin of the Tigris, and extends for some distance over the adjoining mountains. The number of inhabitants is uncertain, and variously estimated at from 800,000 to 1,200,000. They are Mahomedans of the sect of Omar, and acknowledge little or no allegiance either to Persia or to the Porte. The Turkish Kurds live chiefly in fixed habitations, and attend near the towns and villages to some agriculture, and to certain trades. The Persian Kurds are a nomadic people, and often plunder their neighbours for the means of living: sheep and goats afford them, as well as the Turkish Kurds, the means also of sustenance. Agriculture is in the most rude state, and there is but little trade carried on with the country.

The inland trade of Syria with *Orfa*, *Diarbekir*, *Merdin*, *Moussoul*, *Bagdad*, and other places by caravans, have long been of great and important value. As many as 5000 camels have been employed by these caravans, each camel carrying about 500 lbs.

There are several Turkish and Christian merchants at *Orfa*, *Diarbekir*, and *Moussul*, who exclusively carry on the trade from Aleppo to those places.

Three-fifths of the capital employed, about 50,000 dollars, and of the credit accounts in the trade between *Aleppo* and *Orfa*, is stated by the consul to be for British manufactures, chiefly cotton twist, calicoes, prints, muslins, and nankins; the colonial goods, &c., employ the remaining capital and credit. The returns from *Orfa* to *Aleppo* are in specie. The duty paid at *Orfa* by the *Rayas* is 3 per cent on the invoice cost of goods. The cost expense of transporting goods from *Aleppo* to *Orfa* is from 80 to 100 piasters per Aleppo cantar. *Orfa* supplies *Aleppo* and the north of *Syria* with wheat and barley, and there is an active intercourse between *Syria* and *Orfa* by *Bir* over the Euphrates.

The commerce from *Aleppo* to *Diarbekir*, and *Merdin*, is in the hands of the Turkish and Christian merchants of the latter country, and conducted on the same plan as in the trade with *Orfa*, and the capital employed is about 100,000 dollars, but a credit business is also carried on. *Diarbekir* is said not to take, however, more than 35,000 dollars from *Aleppo*, 25,000 of which are for British manufactures, and about 10,000 for colonials. The returns are partially made in galls, but the payments are chiefly in money. These merchants also frequently obtain, through the European Aleppo agents, goods direct on their own account from Great Britain. The expense of carriage from *Aleppo* to *Diarbekir* is from 200 to 250 piasters per cantar. The custom paid at *Diarbekir* is the same as at *Orfa*, 3 per cent on the value of goods.

CHAPTER XIV.

PACHALIC OF BAGDAD.

The extensive Turkish province now comprehended in the Pachalic of Bagdad embraces those once populous regions of antiquity, including Babylonia, Chaldea, a great portion of Assyria and the whole of Mesopotamia. Its most fertile parts lie between the Euphrates and Tigris, and the whole extends over a surface of more than 100,000 square miles. Yet it is doubtful if the population of the whole Pachalic exceeds 1,200,000 inhabitants. Here once stood the cities of Nineveh, Babylon, and many others which do not now contain a single inhabitant. The Euphrates and the Tigris afford abundant water for inland navigation, as well as for irrigating the lands; and wherever cultivation appears, the crops are said to be generally abundant. These consist of wheat and most

other kinds of grain; tobacco, hemp, flax, &c. The administration is generally weak, extortionate, and corrupt, and property is said to be insecure. The Kurds and Arabs acknowledge scarcely any authority. Under the *Porte*, no security and no improvement can be hoped for, in this beautiful and naturally fertile country.

Trade of Bagdad.—This city is conveniently situated on the banks of the Tigris, about 190 miles above its junction with the Euphrates. The population is said to be yearly decreasing, and not at present, as estimated, above 65,000. Bagdad has for many ages been the great entrepôt for the trade of the nations east, west, north, and south of this once famous emporium. The following abstracts, condensed from consular reports, embrace nearly all the information we possess relative to its present state.

"The trade of Aleppo and Damascus with Bagdad, the former through the desert, across the Euphrates at Anna or Hit, and the latter across the desert, by way of Tadmor, also traversing the Euphrates at Hit, is chiefly carried on by Mussulmans and Christians; some few Europeans are engaged in it; but hitherto British merchants have seldom adventured on it. There is not often more than one caravan of from 700 to 1000 camels annually between Aleppo and Bagdad, and one of from 1000 to 1200 or 1500 yearly between Damascus and Bagdad.

"It is difficult, or rather impracticable, to state the quantities of the different articles forming this commerce. Those sent to Bagdad are chiefly cotton twist, calicoes, shirtings, prints, imitation shawls, woollen cloths, some dyes, and an assortment of the different articles noted in the list, all of which vary extremely as to quantity and prices according to the state of the respective markets: these articles are received from Europe generally.

"The chief articles received in return, independently of remittances in specie, which generally form the principal return are Persian and Hussineeh Tombak, galls, buffalo hides, East India indigo, pearls, Cashmere shawls, some Mocha coffee, and an assortment of the other articles.

"The cost of carriage varies from 350 to 450 piasters per cantar, between Aleppo and Bagdad, and from 350 to 400 piasters per cantar between Damascus and Bagdad. The chief cause which enhances the price of carriage across the desert is the insecurity of the route from the menaced incursions of the Arab tribes, which frequently obliges the body of merchants of Bagdad to compromise and give considerable sums and presents to the chiefs of the Shammahk and Anazee tribes at Bagdad, who become responsible for their respective hordes not plundering the caravan on its passage through their districts. These presents vary according to the value of the caravan. The Aghali Arabs, who act as guards, and accompany the caravan, receive presents, and are paid as a kind of military and protecting escort.

"The customs duty paid at Aleppo and Damascus is paid indiscriminately both by Mussulmans, Christians, and Europeans.

"It is stated, on the authority of information obtained from the chief merchants interested in the trade between Damascus and Bagdad, that the trade of the former has considerably suffered from the declining state of the Bagdad market, arising from Persia no longer supplying herself to the extent it formerly did from Bagdad; Persia now receiving her chief supplies, in the northern provinces, *viâ* Trebisond, from Great Britain and Constantinople, and in the southern, direct from India and the Persian Gulf."

Mousul is situated in the pachalic of Bagdad on the banks of the *Tigris*. Population about 30,000, of whom one-third are said to be Christians. It has been long in a declining state, and the streets are narrow, dirty, and gloomy.

"In the trade between Aleppo and Mousul there are about 25 Turk and Christian merchants engaged, whose capital is stated to be from 170,000 to 200,000 dollars. Mousul takes annually from Aleppo to the value of about 150,000 dollars, of which the

greater part is for British manufactures, and the rest in colonials; but since the occupation of that town and district by the Sultan's pacha, from the fines and severity imposed on the population, the trade has declined. The returns are principally made in galls, and some specie; the article of galls being one of considerable importance in which many merchants engage. The trade is considerably greater than of old, and offers to those engaged in it the means to carry it on, on a credit system, as the Moussul merchants are considered the wealthiest in Mesopotamia. The carriage is from 350 to 550 piasters per cantar on all goods, whether by camels or mules. The inland duty to this place is heavy, but it gives a free passage to other places—that is to say, all goods except copper, as iron, lead, soap, pepper, and pimento, pay to the Sultan's customs, on passing through Bir, a 'badgi' of 100 piasters per camel or mule load, and on their arrival at Moussul pay 'badgi' 200 piasters per load, with 2½ per cent on invoice cost. Other goods pay 'badgi' 50 piasters per load at Bir, and 100 piasters per load at Moussul, with 2½ per cent on invoice amount.

"There is a trade between Moussul, Merdin, Diarbekir, and Orfa, with Erzeroom, Karpout, and Trebisond, which cannot be specified or calculated; but it consists in most of the articles received from Europe, and in articles of the country. It appertains to the jurisdiction of the Erzeroom consulate, and the trade is susceptible of extension, both in regard to the produce of those countries in galls, sheep's wool, Persian yellow berries, from Kaissariah, goats' wool, buf-calve and other hides, and for the consumption on that line of country, of cotton-twist, calicoes, manufactures generally, and colonials, which trade is carried on in the same way as the trade between Mesopotamia and Aleppo."

CHAPTER XV.

TURKISH ISLANDS.

THE Islands which appertain to Turkey in Europe and Asia, are adapted by climate, soil, position, and harbours, to maintain a population in agricultural, manufacturing, and commercial pursuits, which might render them, probably, as independent and powerful as the whole Ottoman empire in Europe is at present. The principal islands are Cyprus, Rhodes, Candia, Samos, Khio or Scio, and Mytilene.

CYPRUS.—This island is 61 miles from the coast of Syria, and 15 from Asia Minor. Its length is 131 miles. Breadth varying from 6 miles near Cape St. Andreo, to 20, 25, and 36 miles in the wider parts. The ancient Olympus, now Mount St. Croce, rises in the centre, and two principal ridges extend along a great part of the island. The country has been greatly neglected and oppressed. Malaria prevails during hot weather, from the absence of drainage. In winter cold winds blow from the mountains of Asia Minor and Syria. The soil is naturally fertile, and at one time maintained a population of nearly 1,000,000. Cotton, grapes, and all kinds of grain and fruits grow; but agriculture is in a most rude state. The corn crops are said to be nearly monopolized by the pacha and bishop. Sheep and cattle thrive. Copper abounds, but the mines are closed. Various minerals, and asbestus, are said to be abundant. Salt is made

on the sea-shore. Game and fish are plentiful. *Nicosia*, in the centre of the island, is the capital, population uncertain; but estimated at 48,000, more than half of which are Greeks.

Baffa, the ancient Paphos, is a sheltered port. *Famagousta* is also a well-sheltered, but neglected port, and the town nearly in ruins. *Larnica* has good anchorage in a bay, from whence wheat and other grain is exported.

Statement of the population of Cyprus in the year 1841, calculated from the number of contributors to the *Cefaliatico*, or personal tax, allowing five individuals to each family: Greeks, 70,000; Turks, 30,000; Catholics, 400; Maronites, 450; Armenians, 100. Total population, 100,950.

STATEMENT of the produce of the Island of Cyprus, taken upon an average of five Years.

		Austria	172	Leather and hides	700	France	180
Gunpowder	1,040	Tuscany	1,000	Tissues of cotton	1,111	Constantinople	240
Grain—wheat, barley, and meal	*210	Caramania	210	Specie—gold and silver	810	Genoa and Leghorn	110
		Constantinople	1,000			France	300
Specie—gold and silver	3,000	Smyrna	170				
		Syria	160				

* The imports of grain in 1838 amounted in value to 11,210*l.*, of which 8,000*l.* was from Constantinople, and 12,200*l.* from Syria and Caramania.

† In 1838, the export of this article amounted in value to 7,000*l.*, of which 5,000*l.* was to Constantinople, and 2,000*l.* to Smyrna.

The direct trade between the Island of Cyprus and France in the Years 1838 and 1839 was as follows:

Imported from France.	1838		1839		Exported to France.	1838	1839.
	£	£	£	£		£	£
Tissues of Wool	1,000	1,120	2,000	2,416	Cotton wool	11,720	10,111
" Cotton	100		111		Silk	11,500	11,000
Coffee		721		650	Madder	1,000	1,700
Sugar		500		540	Sponge	2,000	2,000
Pottery, delft & glasswares		500		500	Wool	1,000	710
Metals (iron, steel, and tin		172		172	Wines	100	100
Leather and hides, tanned		210		100	Hides, raw, and leather	200	100
Cochineal and Indigo		210		200	Specie, gold and silver	800	300
Fish, cod		150		208	Other articles	200	110
Other articles		100		500			

The following is a summary of the trade of 1839 as compared with 1838:

Navigation (tonnage).	Increase.	Decrease.	Trade (value).	Increase.	Decrease.
General trade, entered		33 per cent.	General trade, imports		61½ per cent.
" cleared		40 "	" exports		23 "
Trade with France, entered	12½ per cent.		Trade with France, imports	21 per cent.	
" cleared	19½ "		" exports		10½ "

In the general import trade some manufactured articles have experienced a decrease.

Corn exhibits a remarkable falling off. In 1838, corn was imported to the value of 44,240*l.*, to supply the bad harvest; and in 1839, only to that of 240*l.*

In the export trade, the decrease has been chiefly in native cotton stuffs, cotton wool, grain, madder, wool and wines.

The variations in the trade with France are too insignificant to be mentioned.

Generally speaking, the export trade of the island of Cyprus is more important than the import trade. This is owing to the surplus of agricultural produce in the island, as well as to the few wants of the inhabitants, and the state of comfort in which they are placed. A contrary result occurred in 1838 it is true, but that was owing to the bad harvest of corn, when the island was obliged to draw upon Turkey, Egypt, and Syria, to the amount of more than 44,000*l.*

The political events which have for some years agitated most of the countries of the Levant, have doubtless tended to restrain the commercial transactions of the island of Cyprus with foreign countries; but the quarantine to which its produce is exposed at Beyrout has an equal effect. In consequence of the quarantine arrangements, vessels coming from Europe, instead of proceeding straight to their destination, make for Beyrout, and there discharge their cargoes, which are then conveyed to Cyprus in coasting vessels, as the produce of Syria, whereas they are generally the products of the various states of Europe, and especially of France.

STATEMENT of the Value of the principal Articles exported from the Island of Cyprus, distinguishing the Trade with each Country in the Year 1841.

RHODES, so famous and rich in ancient times, and afterwards so highly important, under the knights of St. John of Jerusalem,—and with a climate mild and healthy, and a soil capable of yielding in abundance the richest products of grain, vegetables, and fruits, is now a wretched and thinly inhabited island.

It is 41½ miles long, and varies from 11 to 18 miles in breadth. Dr. Clark, and all other recent travellers, extol its natural beauties and advantages, and the fragrance of its orange and citron groves. The island of Cos, and several other smaller Turkish islands, are described as of equal beauty and fertility.

SAMOS is about 30 miles long, and 7 to 9 broad. It is fertile, and produces, even with bad culture, wheat and other grain, cotton, silk, wine, olives, oranges, figs, &c., and exports corn, grapes, and raisins. Population about 50,000, chiefly Greeks, are described as miserable, who voluntarily surrendered to the Turks.

SCIO is somewhat larger than *Samos*. Population, variously estimated at from 75,000 to 150,000. It is mountainous, with fertile valleys. Dr. Clark calls it the paradise of modern Greece. It however grows a little corn, silk, mastic, lemons, oranges, wine, olives, cotton, almonds, &c. *Khio*, the capital, is described as the cleanest town in the Levant. With the exception of the period which immediately succeeded the Greek revolution, the island has, generally, been subjected less to Turkish rapacity than any other of the Greek islands. It has numerous Greek and Roman Catholic churches. Previous to 1822, there were several silk and damask manufactories. The part which some of the inhabitants took in the Greek revolution, and who put a small Turkish garrison to the sword, led to a large Turkish force being landed, who massacred, it is said, 20,000 of the population, pillaged and laid waste the whole island, and carried off nearly 20,000, chiefly women and children, as slaves. Its commerce and industry forsook the island in consequence, and the principal inhabitants who escaped the massacre fled to Greece.

MYTILENE (Lesbos) is 32½ miles long by 17 to 18 broad. It is fertile, and yields corn, olives, grapes, figs, cotton, silk, building-wood, oil, fruits, and pine timber, and pitch are among the exports. The population is estimated vaguely at 40,000, nearly half of whom are Greeks. Under a mild and just government this once rich and populous island would soon become of great commercial value in the amount of its exportable produce. This observation applies to *Marmara, Imbro, Scarpanto*, and numerous *smaller islands* belonging to Turkey.

CRETE, usually named Candia by Europeans, and *Kriti* by the Turks, is about 161 miles in length, and varies in breadth from 7 miles in one narrow place at Istrona, to 9½ in the next, and to 49 from Cape Matala to the town of Candia. The average breadth may be computed at 21 miles. It is divided into the three provinces of Candia, Canea, and Retimo; each of which are divided into districts; in all 20 districts. Under Mehemet Ali the country was justly governed, comparatively to its administration under the rule of the Turks; and, in 1837, when he visited the island, he abolished many absurd restrictions on

trade, and especially that which prevented foreigners having any trading intercourse with the interior. Under Turkey, despotism and extortion were the characteristics of the pachas and their dependant agas; and since the resumption of the government by the Porte, we fear that neither the security of the people, nor the prosperity of the island, is likely to advance.

Crete is capable of maintaining more than 2,000,000 of inhabitants: the population at present does not probably exceed 150,000.

TRADE OF CRETE. The following are condensed statements, taken from various consular reports; and from Dr. Bowring's Report on Candia, and also from statements published at Trieste in the Austrian Lloyd's Journal.

"In fourteen months of the two years 1817 and 1818, the following vessels were loaded with olive oil: 54 French with 76,540 barrels; 22 Austrians, 22,155 barrels; 8 Sardinians, 11,200 barrels; 2 Ionians, 1153 barrels; 2 Greeks, 8781 barrels. Total, 119,779 barrels of Venice; worth at that time about 131,800*l.* sterling.

"A considerable commerce in raisins, carobs, and wine was carried on. 45 manufactories of soap existed, which supplied Constantinople, Smyrna, and other parts of Turkey.

"The Turks and Greeks who carried on this trade brought back in return manufactures, &c., for the consumption of the island.

"France furnished direct some cloth, &c., and Austria supplied nails and glassware.

"As soon as the Revolution broke out in Greece the Spakiotes and the rest of the mountaineers flew to arms, and soon succeeded in driving the Turks into the fortresses, where immense numbers fell victims to the plague, which committed great ravages for nearly five years. The Turks having been subsequently reinforced by several thousand Albanians took the field, and with some little success.

"Many of the peasants left the island, others retired to the summits of the mountains with their wives and children, but others, less fortunate, fell victims to the Turks, their houses were burnt, and their lands laid waste, and thousands of olive trees were felled to supply the troops with fuel. Whenever the possessions of the Turks fell into the hands of the Greeks they were treated in the same manner; and, although seven years have elapsed since the restoration of tranquillity, the ruined farms and villages in every direction show to what an extent this destructive system was carried.

"From 1821 to 1830 little trade existed, but this little was very lucrative.

"The Greeks had in general the command of the sea, and prevented the arrival of supplies; the few cargoes therefore which reached their destined port left large profits. As long as the Greeks were masters of the country they established a council at the village of Margarites in the province of Retimo, and any merchant wishing to load a cargo of oil, sent thither an agent to treat with the council for the price; after which a place was fixed for the delivery, to which the vessel went, and the quantity was then delivered by the peasantry in presence of the troops of the council.

"The allied powers having decided that Crete should be given to the viceroy of Egypt, the Cretans, in 1830, laid down their arms, the government of the island was confided by the viceroy to Mustapha Pacha, an Albanian, who had commanded a body of men here during the whole of the Revolution. To assist him in the discharge of his duties three councils were established, one in each province, composed of the cadi, treasurer, douannier, and other functionaries of the province, also a Turkish and Greek representative for each of its districts, chosen, not by the persons they represent, but by the pacha, from whom also they receive a salary. A president with a high salary, and who was either an European or Asiatic Turk, was also appointed by the viceroy to each council: this person was considered the governor of the province when the pacha was absent.

"When the viceroy took possession of the island he declared to the council and to the inhabitants, that he would impose no new taxes, but content himself with those established by ancient usage: he had so far departed from this declaration in 1833, that a variety of new taxes, amounting to nearly 1000*l.* per annum, were levied.

"The Greeks and Turks collected in great numbers in the neighbourhood of Canea, and made representations to the consuls of England, France, and Russia. As soon as the viceroy heard this, he sent a number of troops, and the assembly separated; about 32 were taken and hung in several parts of the island.

"The population previous to 1821 was about 260,000, nearly one-half Mussulmans, the rest Christians. In 1830 the above number was reduced by emigration, plague, and civil war, to less than one-half. In 1832, according to a census taken by the metropolitan, the Greek rayahs amounted to about 60,000, and the whole island contained, in 1838, at least 153,000 souls, exclusive of 1501 Albanian and Arab troops.

"The proportions may be considered as follow:

Greek rural population				100,000
Turkish				27,000
	Cities of Candia.	Retimo.	Canea.	
Turks	9,000	3,000	5,000	
Greeks	2,580	700	1,800	
Jews	20	20	200	
	11,520	3,720	7,000	
Foreigners, principally Hellenes and Ionians	480	280	1,000	
	12,000	4,000	8,000	
				24,000
Black male and female slaves				2,000
				153,000

"The number of Greeks, both in town and country, has greatly increased: this is to be attributed to the return of many of the emigrants, to the absence of plague, or any other unusual malady, and to the number of marriages which took place immediately on the return of tranquillity, and which still continue, because the peasant finds it advantageous to have a wife who will prepare his meals and aid him in the management of his farm. Children, as soon as they attain the age of seven or eight, are also an advantage, being useful in watching the flocks, collecting olives, and many other trifling occupations. Children are much more numerous in proportion than adults; there is scarcely a family in which there are not three or four under the age of eight.

"Owing to the loss of life amongst the males during the revolution, and the departure of those who have entered the service of the viceroy, the females greatly exceed in numbers the males; about 600 Greek marriages take place in a year, and the proportion of births to deaths may be taken at three to two.

"A chain of mountains runs from one extremity of the island to the other, having on each side many fertile valleys and plains. Those which have rivulets running through them are, from June to the end of September, very unhealthy, fevers being prevalent in them; so that although very productive, and offering facilities for the conveyance of produce to market, most of the peasants prefer residing in the hills, where the land is less fertile, but where they are sure of enjoying uninterrupted health.

"The productions of the soil are—

"*Oil.*—Although great numbers of olive-trees were cut down during the revolution, the population is still insufficient to attend to them all; the only culture they receive is the having the ground in which they stand ploughed. The fruit is allowed to drop of itself, it is then collected by the women and children employed for that purpose, who receive for their trouble one-third of what they collect. If the crop be good, one-fourth is generally lost for want of hands to gather it up.

"In the district of Apokorona the fruit is beaten from the trees, but this is considered to injure them, and certainly they are smaller here than in any other part of the island. The fruit as it is collected is put into heaps, and, as soon as the quantity is sufficient, it is taken to a mill of the rudest and most simple description, where it is bruised; after which it is put into a wooden press, worked by two or four men. The oil from this first pressure

belongs to the owner of the olives, out of which the government receives a seventh. The mass is then again put into the press, and an oil of an inferior quality extracted, in quantity about one-third of that produced by the first pressure; this oil is divided into sevenths, one of which is taken by the government, two divided among the workmen, and the remaining four belong to the owner of the mill. The first sometimes undergoes a third pressure, and the oil then produced, after deducting the seventh, is divided equally among the workmen and the owner of the mill. Those persons who have not mills of their own are obliged to take their olives to those of the government; and no person is allowed to erect a new one except in a village which may not have been worked since the revolution. From want of care, the olive is much neglected in Europe, except for making soap. The villagers bring it in skins and sell it to people who keep magazines; it is then put into large wooden reservoirs: the purchasers have in general advanced money to the peasants months before the *recolte*, for which they receive the counter value in oil. Two millions of gallons of oil is considered an average crop, and an abundant one will produce more than 3,000,000.

"Silk is produced in small quantities, a good crop will not amount to more than 8000 okes; it is considered equal to that of Adrianople.

"*Wine and Raisins.*—The vines were almost totally destroyed during the revolution; great numbers, however, have since been planted; the produce of wine is sufficient for the consumption, and the quality is as good as that of any wine of the Archipelago. The raisins exported from Candia are of inferior quality, and used for distillation.

"*Carobs.*—About 2000 tons are produced annually in Candia and Retimo.

"*Tobacco.*—This article has not till very lately been attended to.

"*Oranges and Lemons.*—Of these there are great quantities, and they form a considerable article of export.

"*Cotton, flax, wax, honey, boxwood, almonds, and chesnuts* are also produced. All, except the two first, are exported in small quantities.

"*Corn.*—Sufficient *corn, barley, oats, beans*, &c., for eight or nine months' consumption is grown. The wheat and barley are of very fine quality.

"*Sheep and Goats.*—About 600,000 sheep and goats are fed on the mountains, each of which gives on an average half an oke (1¼ lbs. English) of coarse wool. Their milk is made into cheese: each female gives about one oke (2½ lbs. English) in a year: the milk of cows is never used, there being a prejudice against it.

"*Horned Cattle.*—Of horned cattle there may be 50,000, used principally for ploughing. These pay no tax whatever, neither do horses, mules, or asses; of these the number is at least 20,000; no improvements have been made in agriculture for centuries.

"*Returns of Produce.*—Arable land, if sown with wheat, produces six to twelve fold. Barley and oats in proportion. The cultivation increases with the population.

"*Manufactories.*—There are now at Candia nine, at Retimo six, and at Canea eight soap manufactories at work, and they can produce 6000 tons of soap annually; hitherto not much more than one half of that quantity has been produced. Each manufactory has in general one caldron, which will contain 90 cwt. of oil, and produces on an average 140 cwt. of soap; it is usual to let out the premises to any person who is desirous of making that quantity, an operation which takes about fifteen days. The average cost of the manufacture, exclusive of oil, amounts to about 7*s.* 9*d.* per cwt.

"The quality is highly esteemed all through the Levant, especially that made at Candia; at Trieste it always obtains the highest price of the market. Owing to the employment at Marseilles of an alkali called *soude factice*, oil is taken thither from the island at an expense of 50 per cent, there converted into soap, which is sold in the market of Trieste at a lower price than it can be furnished at direct from the island.

"A small quantity of leather for the use of the island is made at Retimo.

"*British Goods.*—The average consumption of British manufactures and metals amounts to 21,850*l.* They reach us principally from Syria and Trieste. This latter place also furnishes some of Austrian manufacture. Some colonials also reach us from England by these routes, but the quantity is uncertain.

"The few European establishments here attend to the trade in oil and other exports, but only on commission, as they prefer putting out their own funds at interest on good security at 2 per cent per month, and sometimes at even more.

"*Corn* is imported partly from Russia, by way of Constantinople, and partly from the shores and islands of the Archipelago.

"*Oil* is purchased for cash, soap at a credit of two and three months; to obtain the other articles of export it is necessary to advance money to the grower several months before the delivery of the goods.

"A frequent intercourse is kept up between the different parts of the island by means of small Turkish boats, and the provinces of Retimo and Candia receive in this manner, from Canea, frequent supplies of manufactures, &c.

"*Freight.*—The freight is always excessively low, about 5 piasters per bale.

"*Charges.*—The charges on purchases and sales are, 2 per cent commission; 1 per cent warehouse rent; 1 per cent brokerage.

"*Custom-house Certificates.*—The only custom-house regulations are, that a vessel previous to sailing must procure from the custom-house a certificate that the duties on her cargo have been paid. For this certificate European vessels pay 20 paras, and Ottoman one piaster; the port dues vary from 12 piasters to 1 piaster for each vessel.

"*Teskeres* only.—In our calculations, goods which have once paid duty in any port of the Ottoman empire may be sent by the importer to any other port without any further duty being demanded of him, for which purpose they are generally accompanied by a *teskere* (custom-house certificate).

"*Smuggling.*—Although the duties on silk and wax did not exceed 6 per cent, the greater part of these articles were smuggled, as the only penalty for so doing was double duty, which, of course, was not a sufficient punishment to put a stop to a practice, detrimental not only to the government, but to the regular trader.

"*Money.*—The money of the country is the same as that of Constantinople. Remittances to and from the island are made in specie; and as the exports usually exceed in value the imports, there is a number of foreign coin, principally English sovereigns, and Spanish and Imperial dollars. There is also a good deal of old Turkish coin.

"Bills are rarely offered for sale. Now that the Austrian steamers have rendered our communications with Constantinople quick and certain, the price of coins here must follow the courses of exchange in that city.

"*Weights.*—These are the oke and 1 quintal of Constantinople; the former equal to 2 lbs. 13 oz. 5 drms.; the latter is 44 okes, equal to 126 lbs. English.

"*Measure.*—The archeen, equal to 27 inches, for woollen cloths; the endaze, equal to 25 inches for other goods.

"*Land Measure.*—The archeen of 33 inches English; the dekanin, 44 square archeens. Vineyards only are sold by this measure; the misuri, or measure, which implies the quantity of land that will contain a measure of seed, when sown.

"*Corn Measure.*—The kilo of Canea equal to that of Constantinople; the misuri of Retimo equal to the Winchester bushel; the misuri of Candia, of which 140 are equal to 100 kilos of Canea.

"*Oil Measure.*—The mistach of 8½ to 9 okes, according to the purity of the oil.

"*Wine Measure.*—The mistach of Canea weighs 14 okes; Retimo, 12 okes; Candia, 8 okes.

"SEAPORTS.—*Canea.*—This is the one most frequented, as it is larger than the other two, and has not been so much filled up with sand; it is formed by a mole 1160 French feet in length. It has undergone repairs, and a lighthouse has been erected at its extremity. The entrance, which is very narrow, is about 24 feet deep. At the anchorage there is only 18 feet water at the deepest part. A vessel drawing more than 12 feet ought not to enter without a pilot. The entrance faces the north, and if the wind blows strong from that quarter, vessels cannot go out; it would scarcely be safe even for a steamer to attempt it if there were any considerable swell.

"*Suda.*—This port is by land, three miles distant from Canea, and is about seven miles long, and perfectly safe in all weathers; it has several small islands at its mouth, on one of which is a small fortress, which commands the entrance.

"*Candia.*—This is formed by a mole, but it is so filled with sand that only smallcraft, drawing eight feet of water, can enter. Vessels loading from Candia anchor in one of the three ports of the small island of Standia, opposite the town, at a distance of seven miles.

The middle port of this island is best adapted for merchantmen, whilst the one at the east end is most fitted for vessels of war.

"*Retimo.*—The port of Retimo is formed by a mole, and is still smaller than that of Candia. Any vessel receiving oil from this port usually anchors at the fortress of Suda, about two miles distant. Both of the ports have been cleared out a little, and attempts are making to render them still deeper.

"*Spinalonga.*—The port of Spinalonga, at the east end of the island, is good; but the entrance is subject to sudden squalls. The small port of *Agio-Nicola*, a few miles south of Spinalonga, is, next to Suda, the best harbour in the island: but the nearest village to it is at five miles distance. There is also a small port on the southern part of the island, called Lauro.

"*Roads.*—These are, except in the immediate neighbourhood of the three towns, little more than paths, not better than those in the island of Sicily. They are, as in the latter, traversed by mules and asses. The bridges are impassable.

"*Goods* are carried from one part of the country to another on the backs of horses and mules; there are no public carriers, and every person wishing to send any thing to a place, must hire a beast, for which he must pay from five to nine piasters per day until he returns it to its owner. A horse or mule will carry from 2 to 2½ cwt., an ass 1 to 1½ cwt.

"*Landed Property.*—Almost every peasant has (or at least had under Mehemet Ali) his own farm, and the few who have not, cultivate those of the *agas*, who furnish the farm-house, the seed, and all the necessaries of husbandry. The produce, after deducting the seventh paid to government and the seed furnished by the aga, is divided in equal proportions between him and the cultivator. Olive trees are not included.

"The Greeks have been continually purchasing the lands of the Turks, and to make up the purchase money for any particular piece of land, they have borrowed it at an interest of from 20 to 30 per cent per annum.

"The expenses of repairing or rebuilding their houses has exhausted the pockets of the peasants. They enjoy but few comforts; their houses are invariably built of stone and covered with a sort of clay, beaten down so as to prevent the rain from making its way through it. Their clothing on working days is generally of coarse white cotton or linen cloth, manufactured from the raw material by their wives and children, who also manufacture wool into cloaks, coverlids, and sacks; the latter are required in great numbers to contain the soap exported from the island. Foreign cotton or linen manufactures are of too weak a texture to stand the wear and tear on the mountains; they are, therefore, not much worn, except on holidays.

"*Food.*—Barley bread, cheese, and olives, also beans, pulse, and vegetables cooked with abundance of oil, are their usual food. The poorest family consumes 12 mistaches (about 40 gallons) of oil in a year. The average consumption of bread may be taken at 1½ lbs. a day for each individual; frequently a grown-up person will consume nearly 3 lbs. per day. This will occur principally in Lent and the other numerous Greek fasts, which are rigidly observed. The consumption of animal food is small. Wine and spirits are drunk as long as the vineyard of each family may happen to supply it.

"*Wages of Labour.*—2½ to 3 piasters (6*d.* to 7½*d.*) per day is paid, with food, or 4 to 6 piasters (9½*d.* to 1*s.* 6*d.*) per day without it. The price of food varies so much from a variety of causes, such—whether the article be grown on the spot or brought from a distance—whether the roads be very bad or not—that one can scarcely quote any others than oil, which is 45 piasters per mistache, and cheese 3 piasters per oke. It is also equally difficult to quote prices of clothing. Each peasant spends from 24 to 40 piasters per annum in boots, without which they never stir out, and some do not take them off once a week; these cost 8*s.* to 14*s.* per pair. They take the produce themselves to the markets of the capitals, and, owing to the bad roads, this takes them two or three days in the provinces of Retimo and Canea. They are frugal and hospitable, and are extremely fond of their children; their principal vices are lying and stealing.

"Their *Amusements* are, attending the fêtes of the different villages and monasteries, where they dance and play upon a small instrument resembling a guitar, which they accompany with their voice.

"The number of *Holidays*, including Sundays, is about 100. They have not the same

intelligence and activity of body, which the Greeks of the other islands generally have. They are, however, fine strong men.

"The price of labour and food in the cities is as follows:—Common labourers, carpenters, &c., 5 piasters, equal to 1*s.* per day; head carpenters and masons, 8 to 10 piasters, equal to 1½*s.* to 2*s.* per day; household servants, 300 to 500 piasters, equal to 3*l.* to 5*l.* per annum; women 100 to 300 piasters, equal to 1*l.* to 3*l.* per annum, and one or two suits of clothes a year, and as many shoes as they may require. One suit of clothes will cost 80 to 100 piasters.

"*Prices of Food at Canea.*—Beef, per oke, 2 piasters; mutton, 2½ piasters; goats' flesh, 2 piasters; bread, 1 piaster; olives, 2½ piasters; rice, 2½ piasters; butter, 9 piasters; ceci and beans, per oke, 1 piaster; wine, 2 piasters; spirits, 6 piasters; cheese, 3½ piasters; oil, 5 piasters; barley, per kilo, 10 piasters; wheat, 18 piasters. The prices at Candia and Retimo are lower.

"*Clergy.*—Previous to 1830 there were 12 bishoprics. The expense of supporting such a number of clergy was too great for the island; the bishoprics reduced to 8, including the metropolitan, who resides at Candia. The patriarch of Constantinople received annually from Crete 250,000 piasters. There are as many as 30 monasteries in the island, possessing large estates; their edifices shared the fate of all others during the Revolution. The monks or *caloyers* are now few in number, but they have been gradually restoring their monasteries. The clergy are very ignorant; most of the priests were, in 1838, unable to write, and the peasantry were in the lowest state of ignorance. The Musulman population were on a par with the Greek as to education.

"No provision exists for the poor, and they are few in number. *Lands* here, as in other parts of Turkey, are of two sorts, *mulk* and *rakouf*; the latter are those which have been given to mosques and have been sold by the *mutevelli* (executor), on condition that they revert back to the mosques in case the proprietor die without issue. These are frequently transferred from one person to another by paying to the mosque a small sum at each transfer. *Mulk*, on the contrary, descends freely to whomsoever may be the heir.

"QUARANTINES.—In May, 1831, quarantines were established. A committee was formed at Canea, consisting of the consuls, and Dr. Caporal, a French medical man, who was appointed by the government as president.

"By 1835 the consuls, unable to agree amongst themselves, one by one withdrew, and the direction since that period has been solely in the hands of the doctor. Although the plague has at various times been in the lazaretto at Suda, and although the Egyptian fleet, with this disease on board, was for a long time anchored in that bay, the malady has not obtained a footing in the island. A vessel, with a foul bill of health, having susceptible goods on board, must proceed to the bay of Suda, where she must discharge them into the lazaretto, to be aired for 31 days. If she has no susceptible cargo on board, and be destined for Candia, she may proceed direct to the island of Standia. At one of these two places the vessel must perform 11 days' quarantine, and is then allowed to proceed to the destined port, where she finishes her quarantine, which is usually 21 days. Vessels with clean bills of health may proceed direct to their destined port.

"The quarantine dues for vessels are, two paras for every ton not exceeding 100; one para for every ton beyond 100; half para for every ton beyond 200; thus a vessel of 300 tons would pay 350 paras.

"If the vessel intends taking a pratique, a guardian is put on board her, who receives 3½ piasters per day with provisions, 4½ piasters without, for goods. Susceptible goods pay one per cent *ad valorem*, and pay of guardian as above. The lazaretto for passengers at Canea is a small but excellent establishment; the expenses are extremely moderate. The employés of the sanità are mostly *Cerigots*. The receipts exceed the annual expenses; but the expenses of the lazaretto at Suda, &c., amounting to 1800*l.* sterling, have not yet been made up.

"*Revenue of Crete.*—When the island was taken from the Greeks by the Turks, the lands were divided into compartments, each of which was to pay the one-seventh of its produce to government. The revenues of some of these departments were appropriated to certain officers of the pachalics, others were applied to the maintenance of mosques and to facilitate the collection of the rest. Government farmed to contractors its right to receive

the tithes, upon condition of their paying, besides the original purchase-money, a fixed annual amount either of money or of produce.

"Each department was called a *mukatta*, and the receiver of the tithes was the *mukatta' aga*. He enjoyed his privilege for life, and at his death the *mukatta* was again sold to the highest bidder, the annual amount to be paid remaining always the same. The children of the deceased, who were generally bidders, always had the preference. These mukattas were frequently transferred by the aga to his children during his lifetime, or sold by him to another, and the Porte received, at each transfer or sale, a sum of money on making out the necessary documents.

"The receipts at the custom-house were dealt with in the same manner.

"The aga, of course, possessed great influence in his own particular district.

"There is also in each village a *soubache*; generally one of the Albanian irregulars, and whose duty it is to overlook the *grammatico*, of which there is also one in almost every village.

"We have already seen how the seventh of oil is taken; when government finds it to its advantage to receive the tithe in kind, the proprietor is obliged to convey it at his own expense to a place designated. Frequently the amount is taken in money, and then almost invariably at a price exceeding the value of the article at the place of production. The *seventh of corn* was taken after it had been thrashed out, but government, believing that this exposed it to being cheated, takes every seventh sheaf; and the proprietor is obliged to thrash it out immediately, and convey both corn and straw to the magazines of the government before he can attend to his own. *Fruits*, instead of paying the seventh, formerly paid 2 to 3 paras per tree.

"*Silk* in some districts paid nothing; instead of it mulberry-trees paid a slight tax. In lieu of the seventh of wine and spirits, a small sum was exacted from each village.

"Mehemet Ali levied a seventh on all these articles, except oranges and lemons; he has also raised the tax on sheep and goats.

"The tax gatherers, who receive but a small remuneration for their trouble, make up the difference by helping themselves out of what belongs to the government.

"*Capitation Tax.*—This tax was formerly levied at the rate of 4, 8, and 12 piasters, according to the pecuniary means of the individual; the rate has increased to 16, 30, and 60 piasters, payable by all rayah males above the age of 13; the average amounts to a little more than 30 piasters per head.

"*Octroi.*—This is the third head of revenue, and produced, under Mehemet Ali, rather more than one million."

Octroi on Animals entering the Three Cities.

DESCRIPTION.	Candia.	Retimo	Canea
	piasters.	piasters	piasters
Oxen and cows, each	1 to 4	2 to 3½	1½ to 3
Sheep and goats, each	½ to 2½	1	1½
Lambs and kids, each	1 to 1½	½	¾ to 1
Pigs	1½ to 1½	1	1½
Farmed at	115,000	19,450	45,000

Various other Articles were subjected to the octroi.

GOVERNMENT OF CRETE.

BEFORE the Greek revolutions there were three pachas in Crete: viz.—1 pacha of three tails in Candia; 1 pacha of two tails in Canea; and 1 ditto in Retimo. These were often removed at the caprice of the sultan, or the demands of the janizaries, who had great power in the island; and as the country was always heavily taxed by the new pacha, the change was never profitable to the island.

The European Christian merchants had to send their remonstrances to Constantinople, and when they even prevailed so far as to have the pacha removed, his successor was found to be equally unjust. The Turks in Crete were haughty and insolent towards the Greeks and other Christians: the janizaries turbulent and unmanageable. The Greeks were kept in a state of degradation, and when the revolution broke out in continental Greece, the spirit of revolt extended to Crete, and would have succeeded, notwithstanding the fury of the janizaries, if Mehemet Ali had not garrisoned the principal cities with the Arnaut troops and two regiments of regulars, which he sent under the command of Mustapha Pacha and Osmer Bey. A great number of Greeks fled from the island in consequence. Mustapha Pacha was named seraskeir, or governor of Crete, and although we cannot defend the taxes imposed in many cases by Mehemet Ali, or his seraskeir, yet the government of the island was more justly and equally administered under him, than at any previous period of Turkish rule. He created mixed councils of Greeks and Turks. He advanced money and cattle to the peasants whom the war had ruined: he pacified both Turks and Greeks; and many of the latter who had fled to the Morea and Greek islands returned. He extended positive liberty to the Christian church; he established printing and lithographic presses; he directed free access to the customs' books, to ascertain the state of duties paid on the trade of the island; he directed the gratuitous vaccination of children; and he abolished a most obnoxious grievance, the tax on cattle. During the rule of his government order and security were certainly maintained in Crete.

Soon after the government of Crete was transferred from Mehemet Ali to the Porte, an attempt was made by the inhabitants to achieve their independence. The country has, in consequence, been subjected to severe military rule, and industry and trade seriously injured. There is but little hope of improvement under the present government, and being inhabited chiefly by Greeks, near the continent and islands of the kingdom of Greece, dissatisfaction will continue to prevail among the Christian population, to whose appeals in 1840 and 1841, their fellow Christians in Europe did not respond. The unsatisfactory state of continental Greece, has certainly contributed to prevent that sympathy for the inhabitants of Crete, which might naturally, if not reasonably, be expected.

By a report for 1842, on Crete, it appears that since the withdrawal of this island from the government of Mehemet Ali, the cleaning out of the ports have been abandoned, and that *Candia* and *Retimo* are filling up; that Mustapha Pacha is fully alive to this, but says he has no funds left at his disposal to employ in public works; and that the export duties have, to the great injury of the island, been raised to 12 per cent.

AVERAGE Annual Revenue and Expenditure of the Island of Crete under Mehemet Ali.

REVENUE	Average Amount.	EXPENDITURE.	Average Amount.
	piasters.		piasters.
Taxes on agricultural produce	5,675,800	Salary of Mustapha Pasha, the Governor	2,500,000
From this is to be deducted the proportion belonging to the Mukatta Agas, which may be estimated at a fourth, but they do not receive this exemption on the new taxes, it may, therefore, be estimated at a fourth of 5,200,000	1,300,000	Pay, rations, &c., of one regiment of Arab regular troops	1,000,000
		Ditto, 1200 Albanians	1,000,000
		Expenses of the three councils, including Salaries	600,000
		Expenses of Treasury	120,000
	4,375,800	Expenses of Mehkeme, printing office, and custom-house	100,000
Amount of payments of corn, &c., made annually by the Mukattas	500,000	Expenses of collecting tithes	140,000
Capitation tax	600,000	Repairing fortresses and other public works	1,000,000
Duty on oil exported	1,611,750		
Ditto, soap	417,500		
Duties on other exports	98,333		
Ditto, on imports, 3 per cent on 10,000,000	300,000		
Ditto, of octroi	1,000,725		
Receipts at Mehkeme, supposed at	75,000		
Total	9,179,000	Total	18,100,000
Sterling	£717,250	Sterling	£81,000

AVERAGE Annual Quantities of Agricultural Produce taxed in the Island of Crete, with the Average Price, Rate of Tax, and Amount paid by the Farmer thereof.

ARTICLES	Quantities.	Average Prices.	TAX

"The imports consist of barilla from Malta; the Ionian islands and Sicily; barilla and rice from Egypt; manufactures from Syra and Trieste; corn and tobacco from Turkey.

"The exports to France consist wholly of oil; about 50,000 cwt. of soap have been exported principally to Turkey, of which the value is about 75,000*l*.

"It is expected that the trade of 1841 will greatly exceed previous years owing to the large crop of olives; the value of the oil of which, for exportation in 1841, is supposed will be about 180,000*l*.

"By the new convention between Great Britain and the Porte, the duties on all pro-

duce, except oil and wine, will be greatly increased: most articles of agricultural produce pay also to the government a tax of the '*Seventh*,' which is conveyed in kind, at great expense, to the government stores. In other parts of Turkey only the *tenth* is paid.

"The duties of 9 per cent to be levied by the new tariff, in addition to the tax of the '*seventh*,' will seriously affect the agricultural interest here.

"The duties having been taken off soap (except those paid here) will give a great increase in the trade in this article, and prevent its being smuggled as heretofore.

"On the other hand, the high duties on silk, wax, articles of small bulk, but of great value, will offer great temptation to smuggling, and but little of them will leave the island in a legal manner. The Ionian vessels are principally employed in the exportation of soap.

"The oil produced in this island does not rank high in the British market, owing to inattention on the part of the shippers: attempts are, however, now making to establish a trade in this article with England, which will probably succeed.

"Valonia, also, will now no longer be purchased for the Egyptian government and will form an article of export to England.

"One great advantage which may accrue to this island from the new treaty, is that it may become an entrepôt for the product of the neighbouring islands as well as the coasts of Asia and Barbary, from which places goods may be imported and reshipped to Europe, without *any* payment of duty, which has not hitherto been the case."—*Extracted from Commercial Report which accompanied the Consular Returns.*

Trade and Navigation of Crete during the Year 1841.

In 1842 it does not appear that any improvement has taken place in British trade. Of 666 vessels which arrived in the port of Canea 2 only were British (in ballast, they departed with oil, &c.), 115 were Ionian, 170 Turkish, 330 Greek, 14 Austrian, 3 Sardinian, 14 French, 17 Russian, 1 Syrian. The invoice value of all these imported cargoes is stated by the consul at 137,376*l.*; of exported cargoes, 129,850*l.*

Of 117 vessels which arrived at Retimo, none were British, 3 were Ionian,

2 French, 37 Turkish, 69 Greeks, and 6 Russian. Invoice value of cargoes imported 24,201*l.*; of cargoes exported, 21,234*l.*

Of 220 arrivals of vessels at the port of Candia none were British, 1 was Ionian, 91 Turkish, 112 Greek, 9 Russian, 3 French, 2 Austrian, and 2 Sardinian. Value of imports, 30,972*l.*; of exports, 43,835*l.*

CHAPTER XVI.

FINANCES OF TURKEY.

If principles, which have been promulgated since the time of the founder of Islamism, had been justly practised in the Ottoman Empire, perhaps no country would have enjoyed a more independent treasury, or a people more equally taxed. Mr. Urquhart who bestows the highest praise on the Turkish municipal system, in his work on Turkey and her Resources, says,

"Since the reign of Mahommed the second, the collection of the revenue has been by farm (iltizam), which are put up at auction, and sold to the highest bidder. The system has undergone multifarious modifications and changes, the farms have been increased, diminished and subdivided, new branches of revenue have been introduced, and old ones newly appropriated; and all these modifications have applied to the subdivisions of the revenue, both generally and territorially. In some districts, certain of the *iltizam* are farmed, as a matter of course, yearly by the pacha—in others there are farmers for life; in some districts there are distinct farmers for the different branches, in others the whole taxes are at once compounded for; but all these distinctions vanish in practice, which resolves itself, as I have already said, into a sum of so much demanded from each district or village, which the peasants are allowed to collect as they please: the mode may, therefore, vary in each village, but the object in all is to adjust taxation to property.

"Taxation may be reduced to these five heads: 1st. Poll-tax, divided into three classes, ala, evsat, edna, under Solyman the Second, (or first, according to the Turkish historians,) and fixed at ten, six, and three lesmines, or piasters, on adult males not professing the Mahomedan religion.

"The number of papers yearly issued is 1,600,000; but many districts compound for a certain number, and then the amount is added to the general property assessment.

"2d. Land-tax, one-tenth of the produce, or by assessment; the tenth is either paid to government or affected to military fiefs; a portion of these applied to the support of the governors, the remainder to the body of spahis; 450,000 men are thus calculated to be supported. The tributary lands are farmed at from one-third to one-half of the net produce.

"3d. Nouzoli and avarisi, assessed-taxes in towns where the population is not agricultural.

"4th. Customs; 3 per cent on foreign commerce, export and import; internal transport duties at gates of towns and bridges.

"5th. Excise upon gunpowder, snuff, wine, and duties on various articles of late introduction, chiefly established to meet the expenses of the new organization under Selem the Third. I omit those branches of revenue which are not of universal application.

"The local and municipal expenses, independent of arbitrary exactions, amount at the very lowest to three times the sum received by the government; and I have no doubt the people would be benefited if the government were to quadruple its demands, allowing the municipal authorities the entire management of the finances.

"But the Turkish government has deviated from the Arab type which Mahomet

adopted, and which as the fundamental principle of the financial system of Islamism, deserves particular notice, no less than for its beautiful simplicity and comprehensiveness."

The fiscal evils of Turkey,—the extortions (*avanias*) of the pachas,—and the small proportion of the taxes collected, which finally reached the Sultan's treasury, caused the Hatti-Sheriff, so often referred to in our statements relative to Asia Minor, &c., to be promulgated on the 3d of November, 1839. The following is a translation of this law, which has been very generally promulgated:

"Every one knows that in the beginning of the Ottoman empire, the glorious precepts of the Koran and the laws of the empire were held as rules always revered, in consequence of which the empire increased in strength and greatness: and all its subjects, without exception, attained the highest degree of welfare and prosperity. Within the last 150 years a series of events and variety of causes have, from not abiding by the holy code of laws, and the regulations that arose from it, changed the welfare and strength into weakness and poverty. Thus it is that a nation loses all its stability by ceasing to observe its laws. These considerations have constantly presented themselves to our notice, and since the day of our accession to the throne, the public weal, the amelioration of the state of the provinces and the relief of the people, have never ceased to occupy our thoughts. Bearing in mind the geographical position of the Ottoman empire, the fertility of its soil, the aptitude and intelligence of its population, it is evident that by bringing into operation efficacious means, we may obtain by the assistance of God! the object we hope to ensure, perhaps, in the space of a few years. Thus, full of confidence in the Almighty, and relying on the intercession of our prophet, we deem it necessary to seek by new institutions, to procure to the states which compose the Ottoman empire the happiness of a good administration.

"These institutions should have three objects in view—first, to guarantee to our subjects perfect security of life, honour, and property: secondly, the regular levying and assessing of taxes; and, thirdly, a regular system for the raising of troops, and fixing the time of their service.

"For, in truth, are not life and honour the most precious of all blessings? What man, however averse his disposition to violent means, can withhold having recourse to them, and thereby injure both the government and his country, when both his life and honour are in jeopardy? If, on the contrary, he enjoys in this respect full security, he will not stray from the paths of loyalty, and all his actions will tend to increase the prosperity of the government and his countrymen. If there be absence of security of property, every one remains callous to the voice of his prince and country. No one cares about the progress of the public good, absorbed as one remains with the insecurity of his own position. If, on the other hand, the citizen looks upon his property as secure, of whatever nature it be, then, full of ardour for his interests, of which, for his own contentment, he endeavours to enlarge the sphere, thereby to extend that of his enjoyments, he feels every day in his heart the attachment for his prince and for his country grow stronger, as well as his devotedness to their cause. These sentiments in him become the source of the most praiseworthy actions.

"The assessment of regular and fixed taxes is a consideration of vital importance, since the state, having to provide for the defence of its territory, can only raise the means necessary for the maintenance of the army by contributions on the people. Although, thanks be to God! the inhabitants of this country have lately been freed from the curse of monopolies, formerly improperly looked upon as a source of revenue, a fatal practice still remains in force, although it cannot fail to give rise to the most disastrous consequences—it is that of venal corruption, known under the name of Iltizam. According to this system of civil and financial practice, a district is abandoned to the arbitrary rule of one individual, but too often notorious for his rapacity, and the most cruel and most insatiable disposition; for, should this farmer of the revenue not be a virtuous man, he will have no other care but that tending to his own advantage.

"It becomes, then, necessary for every member of the Ottoman society to be taxed according to a fixed rate, in proportion to his means and circumstances, and that nothing

further should be exacted from him, and that special laws should also fix and limit the expenses of our army and navy.

"Although we have already observed the defence of the country is a most important consideration, it becomes the duty of the inhabitants to supply soldiers to that object; it becomes essential to establish laws to regulate contingents which each district is to supply, according to the urgency of the moment, and to reduce the time of the military service to four or five years; for it is, at the same time doing an injustice, and inflicting a mortal blow on agriculture and industry, to take, without regard to the respective populations of each district from one more, from other fewer men, than they can afford to provide, and it is also reducing the soldiers to despair, and contributing to the depopulation of the country, to retain them all their lives in the service. In short, without the different laws of which the necessity has been shown, there is neither strength, riches, happiness, nor tranquillity for the empire, and it has to expect those blessings as soon as these laws come into operation.

"It is therefore that in future the cause of every individual shall be tried publicly according to our divine laws, after mature inquiry and examination; and till a regular sentence has been pronounced, no one shall have it in his power, either secretly or publicly, to put an individual to death, either by poison or by any other means.

"It is not permitted to attack the honour of any individual unless before a court of justice.

"Every individual shall be allowed to be master of his own property, of whatsoever kind, and shall be allowed to dispose of it with full liberty, without any obstacle being offered by any one. For instance, the innocent heirs of a criminal shall not forfeit their right to his property, nor shall the property of a criminal be any longer confiscated.

"These Imperial concessions extend to all our subjects of whatever religion or sect they may be, and these advantages they shall, without exception, enjoy.

"Thus we grant full security to the inhabitants of our empire, of life, honour, and property, as we are bound to do, according to the text of our holy law.

"As to the other subjects, they are subsequently to be regulated after the decision of the enlightened members of our council of justice, the members of which will be increased according to necessity, which is to meet on certain days, which we shall appoint. Our ministers and dignitaries of the empire will assemble to establish laws for the security of life and property and the assessment of taxes, and every member of these assemblies shall be free to express his opinion and to give his advice.

"Laws concerning the regulation of the military service will be debated at the military council, which will hold its meetings at the palace of the Seraskier.

"As soon as one law is settled, in order that it may be for ever valid, it shall be presented to us, and we shall honour it with our sanction, and to the head thereof we shall affix our imperial seal."

On the publication of the foregoing *hatti scheriff*, the following official announcement appeared in the Turkish Gazette:

"The sultan, ever since his accession, has most ardently desired to signalize his reign by the re-establishment of the Ottoman power on the basis of the common well-being of his subjects. His efforts have, on various occasions, been crowned with the most signal success: but one fundamental reformation was requisite to crown his labours, and to assure to his people the benefits which he sought to confer upon them.

"The collection of the revenue has remained up to the present time laden with abuse, oppressive to the subjects and detrimental to the state. Numerous firmans have been issued—inquiries have taken place: but the sultan, during his late journey through the provinces, having employed himself in examining into the state of the administration, has been convinced that no sensible improvement has been effected, and that more decisive measures are required.

"In order to proceed methodically in this reformation, his highness has ordered an extensive inquiry to be instituted, so as on the one hand to ascertain the amount of the contributions actually paid by each district, and on the other to ascertain the actual disbursements for the army, the marine, the arsenals, and the other military establishments.

"The council of the Porte has therefore been assembled in presence of the high functionaries of the state to deliberate on the best means for carrying the intention of his highness into execution, and after a long debate it has been resolved as follows:

"That a table shall be constructed exhibiting the sums received. 1. For the Treasury. 2. For the valis and voivodes. 3. For the expenses of travelling functionaries. 4. The amount of contributions in kind to different departments, paid in saltpetre, corn, timber, &c. 5. The value of labour to which certain towns and districts were liable under the denomination of Angaria (Corvée). 6. The sums paid for local police, judges, &c.

"That an exact statement or balance sheet be prepared of the whole revenue, fixed and casual, of the state.

"Henceforward every tax unauthorized by the ancient canon shall be abolished.

"The properties of the high functionaries of the state, whether military or civil, and the persons attached to the services shall be equally assessed with those of the nation.

"Every exemption from taxation, and every privilege through which the common burdens were avoided shall cease.

"The imposts shall be imposed with complete impartiality, at a rate of so much per thousand, which shall yearly be settled in the month of March, according to the new ordinance.

"Each individual shall receive a ticket bearing the seal of the community, stating the amount of his contributions, and these sums shall be entered in the public register of each municipality.

"Men of recognised probity and intelligence shall be commissioned, at the public expense, to prosecute the necessary inquiries throughout the empire.

"The above regulations shall immediately be carried into execution in the provinces nearest to the capital, Broussa and Gallipoli, so that the effects and advantages of the change may be observed, and with the least possible delay extended to the remainder of the empire.

"From the date of the execution of this order, the two provinces designated shall be exempt from the payment of the impost termed 'Iehtisab' (internal customs).

"The confiscation of private property shall in no instance be allowed. The government shall in no case appropriate to itself the property of individuals, except on the death of persons who have no heirs.

"The government will reserve to itself the right of previous liquidation in the case of a holder of government money dying without sufficient effects to cover his debts.

"These regulations, fixed by the council of the Porte, have been confirmed by the high council, and sanctioned by the imperial firman.

"As these present institutions have for their object to cause the religion, government, nation, and empire to reflourish, we solemnly bind ourselves to do nothing in contravention to them: as a pledge of our promise, it is our determination, after having them deposited in the hall which contains the glorious mantle of the Prophet, in presence of all the ulemas and dignitaries of the empire, to abide by these institutions in the name of God!!! and then order the ulemas and grandees of the empire to take the same solemn oath. After that, he who shall violate these institutions shall be liable, without any regard being paid to his rank, consideration, or credit, to corresponding punishment to his faults after once it has been made clear.

"A penal code shall be drawn out to this effect:

"As every functionary receives at present a suitable salary, and as the pay of those who are not yet sufficiently rewarded is to be subsequently increased, rigorous laws will be promulgated against the sale of patronage and places under government, which the divine law reprobates, and which is one of the principal causes of the downfall of the empire.

"The above resolutions being a complete renovation of ancient customs, this imperial decree shall be published at Constantinople and in all the provinces of our empire, and shall be communicated officially to all the ambassadors of friendly powers residing at Constantinople, in order that they may be witnesses to the granting of these institutions, which, if it may please God!!! are to endure for ever.

"May the Almighty God!!! extend his protection to us all. Let those who may

presume to violate the present institutions be the object of divine malediction, and be deprived of happiness now and for ever. Amen."

The foregoing hatti-scheriff and official announcement appear beautiful and just; but the administrations remain unchanged—*pachas, agas, beglerbeys, beys, mohassils,* remain the same; and however desirous the Porte may be to tax the people equally and justly—the power, and the corrupt administration, of its functionaries, are sufficient to defeat the purposes of the central government.

We have not been able to ascertain either the amount of the miri, or general public revenue, nor of the *hazné,* or revenue derived by the sultan from his domains,—from tributes, paid by Mehemet Ali, and by the Danubian principalities, &c.; and from the presents sent by pachas and functionaries. The people are highly taxed, whether they be Mussulmans or Rayas: they have not only to pay the public taxes, but the *avanias,* or extortions of the pachas, and also the communal expenses of the municipality in which they live. (See also commercial and fiscal regulations of Turkey, page 13.) All male Rayas, from 7 to 70 years old, pay the *haratch,* or capitation-tax; and all Turks and Rayas are liable to corvées, or forced labour.

Exclusive of the evils of taxation, and its dangerous tendency in regard to the stability of Turkish power, the debasement of the currency is attended with the greatest insecurity, and uncertainty. To establish a sound currency may be difficult, but certainly very possible; and a scheme was presented to Redchid Pacha, in London, by an experienced and highly respectable British capitalist, which had for its foundation the establishment of a national bank at Constantinople; and which, it appeared to us, might have placed the currency as well as the financial credit of Turkey upon a certain and secure foundation.

In connexion with this plan, it would have soon been found necessary to have taken the fiscal affairs of the several provinces of the empire entirely from the hands of the pachas, and other governors.

CHAPTER XVII.

TURKISH TREATIES WITH RUSSIA.

RUSSIA.—Exclusive of the treaties between England and the Porte, which we have transcribed, pages 17 to 36, the latter has ratified treaties with most other powers in Europe, and with the United States, upon much the same principles. The treaties between Turkey and Russia contain very different and important stipulations, which either do, or may, affect the commercial intercourse between Turkey and foreign states.

By the treaty of Adrianople, September, 1829 (which renews the convention

of Ackerman), between Russia and Turkey, the following commercial stipulations were concluded:

ART. VII. Russian subjects shall enjoy throughout the whole extent of the Ottoman Empire, as well by land as by sea, the full and entire liberty of commerce, secured to them by the treaties antecedently concluded between the two high contracting parties. No restraint whatever shall be placed on this liberty of commerce, nor shall it be limited in any case, or under any pretext, by prohibition or restriction, nor in consequence of any regulation or measure, either of the government, or of provincial legislation. Russian subjects, vessels, and merchandize shall be protected from all violence and fraud. The first shall remain under the exclusive jurisdiction and police of the minister and consuls of Russia; Russian vessels shall never be subjected to visit, by Ottoman authorities, either at sea, or in any of the ports or harbours under the dominion of the Sublime Porte; and all merchandize or productions belonging to a Russian subject, after having paid the customs duties according to the tariffs, may be freely sold, deposited in the storehouses of the owner or consignee, or transhipped to another vessel, of any nation whatever, without the Russian subject being under the necessity of giving notice thereof to the local authorities, or still less of asking permission from them. It is expressly stipulated that grain proceeding from Russia, shall enjoy these privileges, and that its free transit shall not, under any pretext, suffer the least difficulty or hindrance.

The Sublime Porte engages, moreover, to take especial care that the commerce and navigation of the Black Sea, in particular, shall be exposed to no impediment of any nature whatever. To this effect it recognises and declares the passage of the canal of Constantinople, and of the strait of the Dardanelles, to be entirely free and open to Russian merchant-vessels, loaded or in ballast, whether going from the Black Sea to the Mediterranean, or from the Mediterranean to the Black Sea; these vessels, provided they are merchant vessels, of whatever size or draught they may be, shall not be subjected to any sort of vexation or obstacle, as is before regulated.

The two courts will agree upon the means proper to obviate all delay in the delivery of the necessary documents. In virtue of the same principle, the passage of the canal of Constantinople, and of the strait of the Dardanelles, is declared free and open to all the merchant-vessels of powers at peace with the Sublime Porte, whether proceeding to Russian ports of the Black Sea, or returning therefrom, loaded or in ballast, on the same conditions as those stipulated for vessels under the Russian flag.

In fine, the Sublime Porte, acknowledging the right of the Imperial Court of Russia, to secure to itself guarantees of this full liberty of commerce and navigation in the Black Sea, declares solemnly, that it will never, under any pretext whatever, throw any obstruction in the way. It promises, above all, never, from henceforward, to allow itself to stop or detain vessels, loaded, or in ballast, whether Russian, or belonging to nations with which the Ottoman empire is not at open war, passing through the canal of Constantinople and the strait of the Dardanelles, from the Black Sea to the Mediterranean, or from the Mediterranean to the ports of Russia in the Black Sea.

If any of the stipulations of this article be infringed, and full and prompt satisfaction be not given on the reclamation of the Russian minister, such infraction is recognised as an act of hostility, and justifies reprisals on the part of Russia against the Ottoman empire.

By the third article of this treaty, the right to the navigation of the Danube is secured to the merchant-vessels of the two parties. Russian vessels of war are not allowed to go higher up the river, than to its place of junction with the Pruth. It is provided that Servia, Moldavia, and Walachia, may regulate their commerce and revenue, reserving to the port the annual tribute.

The old treaty arrangements, regulating the duties on imports and exports on the trade of Russian subjects in Turkey having expired, a new arrangement was concluded in September, 1842. The rates which were agreed upon, are about the same on imports from Russia, as on imports from Austria, England, or France; but, instead of 12 per cent being levied on Turkish produce exported by Russian

subjects from Turkey, rates corresponding with 3 per cent are to be levied, under the presumption that Russian subjects will pay the internal duties: in lieu of which the English, Austrian, and French pay 9 per cent in addition on exports. Russian subjects have hitherto generally, it would appear, evaded paying those duties: whether they may in future, we have no information on the subject, further than the subjoined extracts:

"The present Russian tariff expires, I believe, early in the present year. I learn that the terms of the new one have been agreed on at Constantinople, but I do not know what they are. Should the subjects of that nation still be favoured by it as they have hitherto been, it is evident that the whole of the export trade must inevitably fall into their hands, as their advantages are too great to be resisted by the subjects of any other foreign power, being fully from 9 to 15 per cent in their favour on the different articles of our produce."—*Adrianople, December*, 1841.

"The British merchants here (Beyrout) laboured, and are still labouring under great disadvantages compared with Russian subjects, and indeed as respects those foreigners who have not scrupled to avail themselves of Russian protection in commercial transactions.

"The subjects and *protégés* of Russia have, not only as respects the past, enjoyed the benefits accruing from an adherence to the old tariff rates of duty, but will in future possess that secured to them by the new commercial treaty, recently concluded by Russia with the Porte, the highest stipulation of which, whether for exports or imports, does not exceed a duty of 3 per cent, whilst British merchants are bound, by the treaty of 1838, to pay 5 and 12 per cent export and import duties respectively."—*Beyrout, April*, 1843.

COAL-FIELDS NEAR HERACLEA, OR PENDERACLIA, IN ASIA MINOR.

In the early part of the year 1841, a Turkish peasant from Asia Minor brought to the imperial arsenal at Constantinople a piece of a substance which he had accidentally discovered, and which he supposed might be coal. It was examined by an Englishman, Capt. John Ford (designated there Ford Bey), who is in the employ of the Turkish government as superintendent of the sultan's steam-vessels. He found it to be bituminous coal of a very good quality, and suggested to the Capudan Pacha (Tahir) the importance of the locality where it was found being examined, in order to the coal-field being worked for the benefit of the arsenal and other government establishments. Nothing, however, was done except the digging up of a small quantity to the extent of about 50 or 60 tons, which was tried in the steam-vessels and found to answer.

About this time Mr. Anderson, a director of the Oriental Steam Navigation Company, visited Constantinople for the purpose of obtaining information, and making arrangements relative to the establishment of a line of steam communication between England and the Levant and Black Sea, and his attention was drawn to the discovery of this coal-field.

Under the advice of Lord Ponsonby, the British Ambassador at the Porte, Mr. Anderson was induced to submit a proposal to that government for working the mines under a firman or grant from the sultan. After considerable negotiation, it was at last intimated to Mr. Anderson by Sarim Effendi, the minister for foreign affairs, that the sultan's government had decided to entertain his proposal; and upon Mr. Anderson's signifying a wish to have a personal examination of the coal-fields, assisted by some friends then in Constantinople, who had a practical and scientific knowledge of the subject, he received letters to the local authorities to facilitate his object: a guard of Cavasses was also sent with him.

Thus authorized, Mr. Anderson proceeded to the spot, accompanied by Dr. Davy, inspector-general of hospitals, brother of the late celebrated Sir Humphry Davy, and Mr. Granville Withers, of Liege, a gentleman of much practical experience in mining, being a part proprietor of some extensive coal-mines in Belgium, the working of which he had for a number of years personally superintended. Besides these gentlemen, Lord Ponsonby sent his 2d Dragoman, Mr. E. Pisani, to assist Mr. Anderson.

The subjoined reports of Dr. Davy and Mr. Granville Withers afford a view of the extent and value of these coal-fields. After Mr Anderson had, on the assurance of the

Turkish minister, incurred the trouble and expense of visiting and examining the mines, owing to some intrigue or other unexplained cause, the promised grant of the mines was refused, and the negotiation broken off. Pending Mr. Anderson's negotiation an attempt, by order and on account of some pachas, members of the government, was made to work them for their private benefit, but so unskilfully, that a number of labourers were killed by the superincumbent stratum falling upon them, and the cost of the coals procured was found to greatly exceed the price at which Newcastle coals could be purchased for at Constantinople. The quality of the coal is also debased, from the carelessness of digging them mixed with other substances.

"*Dr. Davy's Report on the Coal Mines in the neighbourhood of Penderaclia.*—In this report I shall notice chiefly what came under my own observation when inspecting these mines on the 3d and 4th instant in company with Mr. Anderson and Mr. Withers.

"The mines we visited were the four following:

"1. Kiossi Agsi, at the distance of three hours, or about nine miles from Penderaclia, situated in the sea-cliff, a few yards only from the water's edge.

"2. Aladja Agsi, about an hour, or three miles more distant, and about half a mile from the sea-shore, in the side of a steep hill at an elevation of from 300 to 350 feet.

"3. Kiveslick, three miles beyond, in the side of a low hill, 50 yards from the shore.

"4. Tchous Agsi, about three miles farther, or six hours from Penderaclia, distant from the shore about half a mile, or three-quarters of a mile, and situated in the side of a hill about 100 feet above the level of the sea.

"In all these instances, the mines have been worked to a small extent only, and in the manner of quarries in a very rude and primitive manner, but well fitted to expose for inspection and examination the coal strata and the rocks in which they exist.

"The coal strata vary in thickness from one foot to seven feet, and variously inclined, and in some places disturbed and broken, and interposed between layers and strata of bituminous shale, indurated clay and limestone, and calcareous and silicious sandstone.

"In the first-mentioned mine the principal coal stratum is from three feet nine inches to four feet thick. In the second, where the coal has been explored in several places, and where, within a few feet of the surface, there appears to be two distinct coal strata, the greatest thickness of solid coal is about six feet. At Kareslick, where one stratum only has been superficially opened, its thickness is about one foot, and there the coal is mixed with clay. Lastly, at Tchons Agsi, where the workings are more extensive than at any of the preceding localities, and where we found about 200 men employed on two distinct coal strata: the greatest thickness of the coal was seven feet.

"The coal generally in all these different situations was very similar in quality, and of a good description both for working and use. It is the common coal of mineralogists, and remarkably pure, even within a few inches of the surface. It may be procured in masses of large size, and in the working there is little loss, the coal being little disposed to crumble.

"Of two specimens which I tried, one I found of specific gravity 1.32; the other of the specific gravity of 1.38: both burnt with a bright flame and caked slightly. The furnace yielded 72.5 per cent of good coke; the latter 58 per cent. The coke of the first afforded about 3 per cent of reddish ash; that of the second about 6 per cent. Owing to the property of softening when heated and caking, good coke may be obtained from the dust of either. The first-mentioned specimen was from a mine we did not visit, about three miles beyond Tchons Agsi; where, according to report, the coal stratum is abo ut nine feet thick. The other specimen was coal of Kiossi Agsi.

"The specimens of coal generally which we saw were very similar to these, and not inferior in quality, as well as I could judge from appearance.

"My opinion of these mines is that they are very valuable, and likely to be very extensive. According to the statement of the Turkish authority, who has the superintendence of them, coal strata of a like quality, and not inferior in magnitude, occur to the *westward* of Penderaclia; those noticed being to the *eastward;* but they have not yet been worked, the shore in their neighbourhood, it is said, being without good landing-places.

"It is probable that ironstone fit for smelting will be found sufficiently near the coal to become another source of profit.—*Constantinople, July* 15, 1843."

Mr. Granville Withers's Report.—"The result of our short, but very agreeable tour, on the coast of Asia Minor in the Black Sea, I have now the pleasure to lay before you in

the form of a brief report on the nature and qualities of the coals, as well as the situation and probable extent of the immense coal-fields which we examined together with as much care, and in as great detail as our time and means would permit. To the report I have also added an estimate of the expense of a mining establishment, with balance of profits and loss which you may rely upon as not being exaggerated.

"The finding of coals on that coast is of recent date; it was quite an unlooked-for circumstance and purely accidental. The ground has been travelled over by scientific men who are really judges of such things, but their description of the geological formations of Asia Minor encouraged the belief that no fossil coal existed in that part of the Turkish dominions. This arose, no doubt, from a too hasty survey; because the strongest indications of the presence of coal present themselves, so as not to be mistaken, for more than forty miles along the coast from Penderaclia, eastward. It happened fortunately for the truth that a rich vein of this precious mineral, thick, black, and inviting, was accidentally exposed in a situation where it could not escape observation, by a rupture which separated and threw down a large mass of strata composed of very coarse sandstone, shale, clay, coal, &c.

"The existence of several of these veins of hard black coal having been ascertained, and its superior quality satisfactorily proved, by comparing its heating qualities in the production of steam, with those of the best Newcastle coals, the government agents made some loose arrangements for getting supplies of it for the use of their own steamboats, the royal arsenal and founderies at Constantinople.

"Up to this time, however, a few hundred tons only have been obtained, whilst it is found that the cost of getting alone is 100 per cent higher than the ordinary price of English coals delivered in the Bosphorus.

"The reason of this enormous cost price it is very easy to explain, and is entirely owing to the utter ignorance of those who direct the mining operations. Besides the total want of practical knowledge of the art of mining, there are neither tools nor funds for commencing and carrying on the work systematically. These causes combined have kept, and I am afraid will keep, for a considerable time to come, this important treasure in a state of unproductiveness—an incalculable loss to the commerce of the country.

"The situation of this coal-field is on the south coast of the Black Sea, in the environs, and chiefly to the east of Penderaclia. The direction of the seams is east and west nearly, following the large undulations of the ground which is remarkably accidental, without bearing marks of having suffered violent dislocation. We had no positive means of knowing the exact limits of this vast formation, but from the extent of the veins already laid bare, that is from *Kiossi Agsi* to *Alasen Iskelessi*, a distance of five hours, and the general appearances of the sectional strata of the rocks above and below Penderaclia, it will be below the truth to state that good coking coals in seams of two feet to eight feet thick, exist in great abundance for twenty miles in a direction east and west, and not less than eight miles in a direction north and south, or in other words 160 square miles.

"We examined veins of coal at four different places, where some rude attempts at mining were going on. One of these veins, and that nearest the surface, measured one foot only in thickness, the others were three, four, six, and seven feet thick, increasing in thickness and quality with the depth from the surface. There are other veins of still better quality measuring nine feet thick, at *Alasen Iskelessi*, which I regret we had not time to examine: this is the most easterly point to which the veins have been traced, but I am disposed to consider this as the centre, and not the limit of the coal basin.

"The general section of the strata of that district, so far known as it has been cut through in search of coal, is alternations of coarse sandstone, or puddingstone-clay, shale, and coal: the coal strata, with the exception of a thin seam near the surface is remarkably regular, whilst the dip or inclination of the seams varies as usual. In one place we saw a fine vein, bent abruptly upwards so as to form nearly a right angle. No seams have been opened below the level of the sea, nor indeed would it be possible to work them, with the stone-quarry system of mining at present adopted. Of the existence of still finer seams, below that level, there cannot be a practical doubt. Enough, however, is already known to justify the commencement of a mining establishment on the largest scale, without the least risk of loss, even if another seam of coal should not be found.

"As I have already observed, the coals are scratched from these seams without regard to plan or system. There are upwards of three hundred workmen employed at the work,

and the way they proceed is by removing the super strata, and laying the seams bare, or by getting at them horizontally through the sloping sides of the mountains. In this way the coal is got to a certain extent, and the place afterwards abandoned when the water has accumulated; or, as it has happened more than once, after some of the poor creatures get buried alive beneath the masses, which ignorance of the art had left without sufficient prop to support the superincumbent pressure.

"No such thing as a pit or shaft has been sunk or even thought of, indeed they have no conception of mining except in the way I have just explained, and they seem to have quite as little idea of the utility of good roads for the conveyance of the coals from the place where they are got, to where they are embarked.

"So far, I hope, I have succeeded in making myself understood, and that I have properly defined the important part of the question, in establishing beyond doubt or dispute the existence of some very rich seams of fossil coal, fit for steam navigation and manufacturing purposes. It remains to show that the localities where this treasure lies, are such as to offer no obstacles to the economical working of any mines that may be established there. I shall be able to do this in a few words.

"The Black Sea is a dangerous navigation during the four winter months, on account of the violence of the winds which prevail from the N.W. This might be an obstacle to the transport of coal during a part of that period at least. With this single exception, which after all is of no great moment, I consider the coal-field as most fortunately situated for being worked with extraordinary economy. The size of the coal seams, the trifling depth of them below the surface, the ease and little expense of draining, drifting, and ventilating, the abundance and low price of timber, which is an article of great consumption and consequent expense in all mining operations, the rapidity and economy with which, by a little skilful engineering, the coals may be brought from the pits and put on board small vessels; all these are great advantages which very few mining establishments possess in the aggregate, and they are of such importance as to ensure the complete success of any enterprise connected therewith, if entered upon with adequate means, and persevered in with spirit and judgment. The country in which these coals lie, is accidented with hills and mountains, very much resembling the general features of the mining district of Wales, those in the neighbourhood of Liege in Belgium, and Aix-la-Chapelle in Prussia. Some of the mountains rise as much as 500 feet above the level of the sea. The coal strata is distinctly seen on the section of the sea cliff for more than 40 miles along the coast. The working of the mines would necessarily be carried on as close to the shore as possible for the sake of economy of draining, carting, &c.

"I am co-proprietor of some extensive mines in Belgium, where I have been for several years a good deal employed in them in my capacity of engineer, and by which I am enabled to form a correct estimate of the expense of such operations, and the profits that may be derived from them. As before stated I have examined the coal-field I am now reporting upon with scrupulous attention to the quality of the coals, the thickness of the veins and the localities in which they are found, with a view to calculate the cost of getting and bringing to market.

"In this Report, and until something more is known as to the intentions of the Turkish government, I do not think it is necessary to go into a minute detail of expenses. I will, however, state in round numbers, what I calculate the working expenses for getting one ton of coal.

	s.	*d.*
"Expense in the pit, paid in wages	3	0
Ditto, wood for roofing, carpenters' and smiths' work	0	4
Ditto, bringing to surface, engineers, coals, grease, ropes, &c.	0	2
Ditto, wear and tear of ropes, &c.	0	0½
Ditto, carriage to the shore, loading, &c.	0	6
Cost of coal placed in craft for transport	4	0½ per ton.

"This is a simple statement of facts and observations made upon the spot, with some reflections drawn from my experience as a mining engineer of some years' practice on the continent.—*Constantinople, July* 22, 1841."

SECTION X.

GREECE.

CHAPTER I.

EXTENT AND RESOURCES.

The modern kingdom of Greece comprises the whole of the Morea,—the island of Egrito, or Negropont, the ancient Eubœa,—and continental Negropont, or the ancient Attica; Lepanto, and Kaulali, including the countries lying south of Epirus, now Turkish Joannina, and of Thessaly, now Turkish Trikala; and the Greek islands—viz., the Cyclades and Sporades. Total area about 16,000 square miles. Possessing numerous inlets and excellent harbours; fertile valleys, and table-lands; many, but not large, rivers; and a salubrious climate, yet sufficiently mild to produce, in great perfection, the indigo plant, cotton, coffee, sugar-cane, opium, maize, rice, and olive; the mulberry and vine; the same kinds of grains, vegetables, and timber trees as those of France, Italy, and Turkey; useful minerals; and plenty of fish along the coast and in the rivers,—Greece, for a country limited to an extent of 400 miles in length by about 100 in average breadth, commands *all the natural elements* of wealth and power.

There is no country, however, in central, or southern Europe, whose natural resources have been so long neglected: scarcely any mines, except lead, have been worked; little grain is comparatively raised; the despotism of the Turkish governmen, the internal dissensions, and the consequent insecurity of property, have for centuries retarded the progress of agriculture, and have driven the inhabitants of the interior chiefly to the rearing and herding of cattle, and those of the sea-coasts to a *maritime, semi-marauding, semi-trading* life.

The general aspect of Greece is much diversified with inlets, islands, rocks, and high mountains: with the Parnassus, Olympus, Helicon, Pindus, and Cythaeron, in the south; the snowclad Rhodope and Arbelus to the north; and with numerous rich valleys, rugged districts, woods, pastures, and streams.

All accounts of the population of Greece are uncertain. The country north of the Morea having been long in a insubordinate state, and under the control only of those feudal chiefs, the *capitani*—it is impossible to form even a tolerably just estimate of the number of the inhabitants—a great part of whom live among the fastnesses of the country.

According to Balbi (who must, in this estimate be greatly in error) the population of Greece is	600,000
The *Annuaire du Commerce* seems also much in error, in allowing only to Greece proper, the Morea, and the islands . . .	960,000
M. Beaujour allows to Grecian Macedonia, 700,000; Thessaly, 300,000; Epirus, 400,000; Boëtia, Ætolia, and Phocis, 200,000; Morea, 300,000; Attica, 20,000; being for continental Greece, 1,920,000; to which, if we add 200,000 for the islands, will give	2,120,000

M. Pouqueville allows 420,000 to the Morea; and other writers, particularly Mr. Humphreys, 600,000. In comparing various statements relative to the population of Greece, we conclude that more than half the inhabitants of the islands, and less than half those of the continent, are of ancient Greek race.

M. Frederic Thiersch, in his work published at Leipsic, gives the following statement:

	Towns.	Villages.	Inhabitants.
Eastern Greece	11	585	130,000
Western Greece	19	226	76,000
Peloponnesa	86	1,335	429,250
Islands	33	...	176,185
Total	...	...	811,435

Capo d'Istrias instituted a statistical commission, and the population, according to that inquiry, appears to have been in 1836, for Eastern Greece, 175,800 Greeks, 15,000 Turks; Western Greece, 116,700 Greeks, 4500 Turks; Morea, 450,000 Greeks, 40,000 Turks. Total, 742,500 Greeks, and 59,500 Turks.

Or a total population for continental Greece of 802.000, and about 210,000 for the Greek islands, being a total population of 1,012,000 inhabitants for the kingdom of Greece. We, however, consider this statement overrated. Balbi states the population, in 1830, at not more than 600,000 inhabitants; and a statement in the statistical journal of Paris enumerates the population of Greece and the Greek islands, in 1835, at only 688,426 inhabitants. Both the latter statements are probably underrated. Oranges, figs, olives, and other fruits; wild fowls, wild bees, and fish, are abundant. The resources of Greece are, under its new government, but very imperfectly developed. M. Thiersch considers that the gold,

silver, lead, and copper mines are far from having been exhausted. Sulphur, asphaltum, manganese, are said to abound. The wheat and maize, of the Morea and other parts, are of excellent quality; currants, oranges, lemons, pomegranates, and olives, thrive in abundance. But industry, instead of being encouraged, has, as we will hereafter show, been subjected to restriction.

Manufacturing industry has hitherto been confined to articles for domestic use, and consist chiefly of a few coarse cottons, silk and woollen stuffs, carpets in the islands,—some soap, common pottery, cutlery, and leather,—the necessary works of handicraftsmen; and nearly sufficient salt for home use is made at Missolonghi and elsewhere. Ship-building is, however, the most important branch of industry, unless it be agriculture.

With the advantage of rich soil, in many parts, with extensive mountain pastures, with sufficient building timber for all useful purposes, with plentiful fisheries, and numerous seaports, Greece is still a country that is very far in the arrear of improvement and civilization; and we can only attribute this backward state to maladministration.

CHAPTER II.

GOVERNMENT.—COMMERCIAL AND FISCAL LEGISLATION OF GREECE.

The Greeks revolted against Turkish domination in 1821, asserted independence, and proclaimed a Republican government. A destructive war ensued; the governments of Russia, France, and Great Britain interfered, and the Sultan was induced to consent to the independence of Greece. In 1827 *Count Capo d'Istrias* was elected president of Greece, for the term of seven years; in January, 1828, he entered upon the duties of his office, and he succeeded in establishing nearly an efficient administration.

Greece was then divided, provisionally, into thirteen administrative sections—viz., *Eastern and Western Greece; Argolida; Arcadia; Laconia; Lower and Upper Messenia; Elida; Achaia; Eubœa; the North and South Cyclades; and the Sporades.*

The government was reorganized by the fourth national congress, which met at Argos, in the summer of 1829, Capo d'Istrias still remaining at its head. The *Panhellenium,* a council of 27 members, was replaced by another body, consisting also of 27 members, called the *Gerousia,* senate or congress. This body gave its opinion on matters of legislation, but had not the power of a negative upon the decisions of the *Regency.* Besides the senate, there was a ministry, consisting of four departments, each having a secretary—viz., the home

department; foreign affairs, including commerce; the judiciary; public instruction and ecclesiastical affairs; war; and marine and finances. Three supreme tribunals were also instituted.

In February, 1830, the plenipotentiaries of Great Britain, France, and Russia, named *Prince Leopold* of Saxe-Coburg, as the hereditary sovereign of Greece, with the title of "Sovereign Prince." He accepted the appointment; but afterwards resigned it.

Prince Otho of Bavaria was, in virtue of the authority transmitted by the Greek nation to the convention held at London, and the treaty concluded there in May, 1832, appointed king, and ascended the throne in February, 1833, with a regency of *four persons*, until he attained twenty years of age, which was on the 1st of June, 1835.

The government was in 1833 divided into ten nomarchies—viz., the Morea into five, Eastern and Western Greece into three, and the islands into two nomarchies. These were subdivided into eparchies, and the whole into 468 municipalities, or communes (Dimoi). Since the retirement of Capo d'Istrias, the affairs of Greece have been involved in financial difficulties, heavy taxations, and commercial restrictions.

COMMERCIAL AND FINANCIAL LEGISLATION OF GREECE.

The provisional government of Greece adopted liberal and sound principles of commerce and navigation; and if that under King Otho had continued to act upon those principles, we might expect that the shipping and trade of this country, so conveniently situated for commerce, although its productions are not very abundant, would, before now, have enriched the population, as well as the treasury. Austria has for some time past placed the trade between Trieste, Venice, Greece, and Albania, upon a basis of great liberality; and we had the opportunity, while at Trieste, in October, 1838, after the commercial crisis which caused so many stoppages in that city, of ascertaining that of several Greek houses who had failed, there was not one who did not pay every florin of its obligations.

The President of Greece, Capo d'Istrias, soon after its independence, imposed duties on commodities, solely for the purpose of raising a revenue, leaving the internal trade altogether unrestricted.

A duty of six per cent *ad valorem* was imposed generally on *exports*.

A duty of ten per cent was to be levied generally on imports.

A tariff of *lower*, or *nominal export duties*, was imposed on animals, increasing in amount from 30 liptas (3*d*.) to 6 drachmas (4*s*. 6*d*.) on horses, and the highest, 12 dachmas (9*s*.) on buffaloes.

A tariff of lower duties was also promulgated on certain imports, chiefly articles of food; and on coffee, sugar, wine, porter, beer, canvass, cordage,

leather, fish-hooks, tobacco, oils, raw materials, iron, steel, nails, files, brass, tin-plates, shot, copper, agricultural tools, &c.

No tariff or scale of duties could have been more equitable than that of Greece; and it was also decreed, that when the collector of the revenue and the merchant disagreed as to valuation, the matter should be submitted to an umpire. The tonnage duties on vessels, and other charges, were at the same time rated at very moderate scales, and to be extended in reciprocity to the vessels of all countries.

These were the fiscal and commercial regulations and duties established by Capo d'Istrias; under the government of King Otho, not only have many vexatious regulations and restrictions been introduced, but the state officers, and other *employés*, interfere, in a manner in which no country but Spain and her colonies, and to some extent Portugal and Naples, has offered so unworthy an example to the world: among other vexatious practices are those of *absolutely rating the prices* at which currants and other articles of export are to be purchased, and in affixing capricious values to augment the duties upon commodities. Greece, under these circumstances, does not certainly afford the prospect of attaining financial, political, or commercial prosperity.

The export and import duties have been in practice augmented, so that the contrabandist, and not the treasury, profits by the unwise and impracticable policy; and so stringent are the following articles of the last customs law, that the authorities in the outports are ashamed to attempt carrying them into effect.

The export duties are severely oppressive on the growers of currants and other fruits. The new customs law is based upon the principle that "FRAUD is the *basis* of all TRADE;" and that this fraud can only be prevented by a formidable system of penalties and punishments.

ABSTRACT OF THE LAW OF ORGANIZATION OF CUSTOMS, 5—17 APRIL, 1843, FROM THE GOVERNMENT GAZETTE.

ART. I. The officers of customs to consist of inspectors, collectors, sub-collectors, waiting officers, and guards.

II. All merchandize is declared to be liable to duty, whatever the articles may consist of, either new or old, which may be bought or sold; the only exceptions being, worn apparel, uniforms, articles of the toilet, &c., for the immediate personal use of the wearer, passenger, or member of the crew, or the carrier by land.

III. The import and export duties, and transit duties, shall continue to be the same as those in force now, and the present customs tariff shall continue in vigour until the compilation of a new tariff.

IV. All merchandize, either foreign or native, shall be considered as foreign, and be subjected to the fixed duties; when, after having been exported, it shall be reimported into the kingdom.

V. *Exceptions to Art. IV.*—1st. All merchandize which can be distinguished from those for the first time imported into the kingdom, by the production of additional proof, and those also which are of a nature not produced in foreign parts. These exceptions to be decreed by royal ordinance.

2d. All merchandize carried from any part of the kingdom to those parts within the Ambracian gulf, and *vice versâ*, which are not destined for foreign parts.

3d. All merchandize carried from any part of the kingdom to within the Corinthian Gulf, or western shores of the kingdom, and *vice versâ* by vessels, which from stress of weather may have put into the Ionian ports.

In reference to the above paragraphs, Nos. 2 and 3, there must not be on the part of vessels any shipping or landing of any article, excepting necessary provisions; and certificates of the Greek consulate must be taken, or in default of these, of the custom-house authorities.

VI. All foreign merchandize of which similar goods are produced in the kingdom, imported once for local consumption, and import duty paid thereon, enjoys the same privilege as far as exportation from the state and payment of the duties fixed on the exportation of Greek produce. This to be further decreed by royal ordinance.

VII. The merchandize which has paid the duty on transit may be exported without export duty.

VIII. The landing, shipping, or transhipping of merchandize from ship to ship, is prohibited in ports where there are no custom-house authorities.

IX. The native produce, and the foreign merchandize on paying duty, may be shipped or landed at any custom-house, sub-custom-house, or station, but not a guard-post. At the stations, however, this can only be done after obtaining permission from the head custom-house.

X. The native produce once having paid export duty at the place of export, may be freely transported to any custom-house, sub-custom-house, station, or guard-house.

XI. The wrought produce of Greece of the native workshops, &c., when landed or shipped, are free from duty, as are also articles of husbandry, and subsistence of cattle, corn, &c., and their passage through all custom-houses, &c., permitted. At the guard-houses, however, permission from the head officer is first required.

XII. The import of foreign merchandize, and payment of the duty, is only permitted at the chief custom-houses.

Exceptions for the facility of commerce are made to the sub-custom-houses of Egina, Vostizza, Amourgion, Andros, Antikerro, &c.

At the other sub-custom-houses, stations, and guard-houses, it is only permitted to land these articles of foreign merchandize which have already paid the duty.

1. IMPORTATION.

XIII. The masters of all vessels, on anchoring in the ports of the kingdom, either for the landing of the whole cargo, or a part thereof, or merely for the purpose of continuing their voyage without landing any part of their cargo, are required to present themselves at the health office, with their sailing clearances and their manifest, within twelve hours after their arrival. This last document is to be immediately sent by the health office to the custom-house. This manifest is to be the one, the contents of which are certified by the signature of the proper authority of the port where the cargo was loaded, if such manifest has been given; otherwise the captain himself draws one up, and must be filled up either in Greek or Italian.

In the case where official manifests of cargo are not given, the captain is bound to declare this on oath, at the foot of the manifest he draws up.

XIV. If it happens that the manifest does not specify the kind of goods, quality or quantity, weight or measure of the articles forming the cargo, the captain may, within three days after his arrival, draw up and present to the health office a supplementary manifest, in which are to be inserted all the things omitted in the original manifest. The harbour-master shall visit each vessel, within twelve hours at most, after arrival, to make known to the captain the above, and to give him a printed form of the supplementary manifest, in which to insert the articles and particulars omitted in his original. The captain having signed this, it is to be delivered to the health office.

XV. Before the delivery to the health office of the manifest and supplementary manifest at the time required, *the vessel cannot be admitted to free pratique.* The health officer,

who shall give free pratique before he shall have received the papers, shall be subjected to a fine of 50 to 100 drachmas. If the captain, having received in time the invitation, should neglect to deliver, within the time referred to, the custom-house papers required in Articles XIV. and XV., The head officer of customs, in case that neither the manifest nor supplementary manifest contain all the other information required, who neglects to demand from the captain the fulfilment of the omission, is liable to a fine of 50 to 100 drachmas.

XVI. In the manifest must be inserted all the merchandize contained in the vessel, not excepting what the sailors may have, or the passengers for their own account. Of the provisions and stores of the vessel, the captain must give a separate note at the same moment as the manifest.

It is understood that such merchandize as is contained in bales, boxes, or other packages, shall at least be noted with the marks, numbers of same, and other particulars in the manifest.

XVII. All importation of provisions and stores noted as such, shall be prohibited, even when duty is offered to be paid. For the omission of this and other irregularities the manifest regulation, all custom-house officers overlooking the same shall be fined to the extent. Exception is made for such stores or provisions as may be damaged and unfit for service, which the captain may have permission to import, after the health and custom-house officers shall have drawn up a protocol stating the fact of damage.

XVIII. If other or more merchandize than that inserted in the manifest and supplement be found in the vessel, or in the separate note of stores, they shall be subjected to a fine of *fourfold* duty. Also, in case there shall be found in the vessel, when anchored at her second or third port, where there is a custom-house, any merchandize which shall not have been manifested at her first port of arrival, such merchandize shall be subjected to *fourfold* duty, unless proved that the merchandize in question has been laden afterwards, and said fine not imposed.

If the merchandize in question shall be found less than that in the manifest and supplement, a fine equal to the single duty due, or a fine from 100 to 600 drachmas, shall be levied for each package wanting on the merchandize so found less.

If the merchandize shall be found of a different sort or quality than stated in the manifest, a fine equal to from 25 to 100 drachmas shall be imposed.

If, however, the merchandize should be of inferior quality to that manifested, a fine equal to the difference of price shall be imposed, if such deterioration do not arise from any damage suffered. The fines named in this article are imposed *on the captain only;* well understood that these fines do not render the merchandize exempt from payment, besides, of the legal duty. And when the entire cargo is not landed at the port where these irregularities are committed, note is made of any differences between the manifest of the vessel and the cargo, on granting her new manifest of clearance.

XIX. These fines of fourfold duty are imposed when articles of merchandize, instead of being noted in the manifest and supplement, are noted in the bill stores.

XX. The captain is not bound to manifest such articles as may be in the possession of passengers from quarantine places. The inspector of lazaretto, under fine of 50 to 200 drachmas, is bound to make known these to the health officer.

XXI. Captains importing for their own account, or, in case the receivers do not present themselves, bulky merchandize, and those of small value, such as charcoal, firewood, fruit, &c., of which it is difficult to specify exactly the quantity, weight, &c., must note this in their manifest and supplement, and ask for a guard to be present at the landing and weighing of the same.

XXII. The said merchandize of which the captain cannot declare exactly the quantity, if not exempted by the 14th Article from the obligation to manifest, must be declared by the captain in his manifest as *about so much.* In such case the difference between the declared and verified quantity is not subjected to fine, when the difference does not exceed, on articles not subjected to diminution, as metal, timber, &c., 5 per cent; and on articles subject to diminution, as corn, liquids, &c , 10 per cent.

When less than the declared quantity is found, duty is paid on all deficiency above 2 and 10 per cent. All excess over the above 2 and 10 per cent is fined fourfold duty.

XXIII. If during the voyage the merchandize has suffered damage or loss in quantity, the captain is to declare it immediately on his arrival at the port; then the custom-house with the port authorities visit the vessel, verify the fact, and draw up a protocol signed by them, the health officer, and the captain.

XXIV. The health officer is to affix his *visa* to all manifests and supplements made agreeably to the Articles of this law, and put to each a running number, registering them in a book kept by him, and then he shall send these to the custom-house authorities.

XXV. Receiver of merchandize before landing must give an exact and detailed invoice on paper. Invoice not written on such paper and in words full length, shall not be received and shall be considered null. Custom-house officer who accepts such invoice, fined 100 to 500 drachmas, and on repetition of offence dismissed.

If receiver of goods does not know the contents, &c. of packages, the same may remain in the warehouse until he gets an invoice, or be entered at 1 per cent additional duty.

XXVI. When invoice is thus presented it is *visa*'d by the custom-house officers and is to be attached to the wall of the place where the merchandize is opened, so that any one may easily read it. It remains attached to the wall until, agreeably to Article 35 it shall be practicable to write thereon the valuation.

The packages are opened publicly, the merchandize weighed and measured, &c., to compare them with the invoice. If the merchandize is found less than the quantity noted in the invoice, single duty is exacted on the declared quantity. If more, the surplus is subject to *sixfold duty*. If of better quality than the invoice declares, they are liable to *eightfold* duty on the excess of value, unless, as in Article 18 it is provided they are deteriorated from damage suffered, certified by protocol.

XXVII. If, agreeably to Articles 22 and 23 the merchant does not know the quantity of merchandize, he shall conform to what is provided for the captain in similar cases.

XXVIII. The valuation of merchandize to be by custom-house officer, collector, and health officer as umpire.

XXIX. *Samples* of every description of goods to be sent numbered and sealed to the finance department by the above-named officers.

XXX. Difference of opinion in the valuers to be noted in a protocol.

XXXI. Merchants complaining of valuation may name a valuer, and custom-house another. Governor or mayor to name a third as umpire.

XXXII. Allowance made for damage; form to be adopted to prove same.

XXXIII. The valuations are to be made publicly in the office of custom-house and when made to be noted in the invoice, dated, and signed. Invoice and valuation again stuck on the wall, where it is to remain three days. Fines for neglect of these formalities.50 to 300 drachmas, and dismissed if needs be.

XXXIV. The health officer has a right at least once a week, or as often as he has great suspicions, to visit the merchandize as long as they remain at the custom-house.

XXXV. Whenever any one wishes to export merchandize, either out of the kingdom or from one part of it to another, he must, before putting the same on board, give a *detailed invoice* of the articles to be shipped, the weight, quality, quantity, and measure to the custom-house, which grants permit agreeably to the invoice.

The custom-house, after verification of the cargo, draws up the schedule of the cargo and sends it to the port authorities, who, on visiting the vessel and finding that all and no more than the manifested articles have been shipped, give it to the captain.

For that the port authority has a right and is bound, when he has heavy suspicions that the goods shipped are not agreeable to manifest, to order that the bales, cases, and packages be opened to ascertain the truth, without, however, having the right to unload the cargo. And only when he finds irregularities between the custom-house books and the goods verified on board, he draws up a protocol accordingly.

Any vessel leaving a port of the kingdom for any destination whatever, must have a manifest of her cargo. If, however, the vessel arrives from another port with part of a cargo and pursues her voyage, the custom-house shall note at the foot of the old manifest, or on the back thereof, the quantity, weight, &c. of merchandize laden, and give it to the captain.

The manifests furnished to vessels to be registered in the custom-house books.

XXXVI. The masters of fishing-vessels, &c., who are to appear at the health offices

every third day to renew heir papers, are also bound to present themselves at the custom-house, &c. Custom-house fined 30 to 100 drachmas for neglect.

XXXVII. Where there is no captain of the port, the health officer supplies his place in the present law, and *vice versâ*.

XL. Invoice of imports to be given at quarantine ports.

XLII. Invoice of exports to be given before export allowed.

L. Captains of vessels anchoring under stress of weather, &c., are bound to make known immediately the motive of their anchoring to the port authorities. They are only bound to comply with the Articles 13 and 14 about manifests, when they decide on landing cargo or part cargo in the ports of the kingdom.

LI. If on landing a cargo it be not found according to manifest, Article 18 is to be applied to the goods.

LII. If the vessels need repairs and demand to land the cargo or part thereof, captains are to comply first with Articles 14 and 15, and on violation are liable to Article 28, the goods to be deposited in the custom-house.

LIII. The goods may remain one month in the custom-house on paying ½ per cent. If they remain longer, they are to be subjected to the duties on goods in transitu.

LIV. If the goods are not reshipped by the same vessel, but on board another, they are to pay the duty fixed on transit from ship to ship.

LV. All vessels arriving and sailing are subjected to visit or search from the custom-house authorities, which takes place on delivery of the manifest and supplement.

LVI. Greek ships of war are also subject to visit, on notice being given by the custom-house authorities to the officer in command, and the port officer is to be present.

LVII. The custom-house officer is bound to visit all vessels before they leave. He may also visit all vessels whenever he thinks fit. On his last visit at the departure, he is to be accompanied by the port-master.

LVIII. The captain of any native ship who opposes the visit, is to be fined by the port-master 25 to 100 drachmas, to be paid to custom-house. If the resisting captain be foreign, the fine is to be claimed through the consulate; if no consulate exists, the captain of the port is to enforce it.

LIX. In the visits of vessels, the captains are bound to open the hatches, and to show to the custom-house officers the packages, and to grant every facility for the execution of their duty. The result of the visit to be set forth in writing, and to be signed by custom-house officers, port-master, and captain, if needful to set forth any irregularity. In the contrary case, no statement is required.

LXI. For the facility of commerce, goods may be deposited by merchants in the entrepôts at Patras, Sydra, Hydra, and Nauplia and Piræus.

LXII. Goods in depot are free of import duty and export duty. They will pay 1 per cent every four months; light and bulky articles 2 per cent.

LXIII. No articles subject to combustion or damage are received in the export stores.

LXIV. Articles of bulk and little value to be put in private stores, under bond.

LXV. Keys of private stores to be kept by officer of entrepôt.

LXVI. When any one wishes to avail himself of the privilege of entrepôt, he is to give notice to the custom-house, furnish invoice, have goods inspected, &c.

LXVIII. The transit duty to be paid at once.

LXIX. Goods in entrepôt can be moved from one entrepôt to another; imported, on paying duty; or re-exported on payment of transit duty.

LXX. Goods in entrepôt may be sold to other parties on the owner giving written notice to the officers, and making transfer.

LXXI. Goods can remain in entrepôt three years.

LXXII. No allowance of duty to be made, if goods are taken out before the expiration of four months.

LXXIII. When goods are required to be transported by land from one entrepôt to another, bond is to be given to produce certificate of delivery in the second entrepôt. Goods to be sealed, and accompanied with permits and detailed invoice, signed by the customs.

LXXIV. Seals to be examined at every station, &c.

LXXV. If on arrival at second entrepôt with goods, the owner prefers paying im-

port duty, and entering them for consumption, he may do so, and produce receipt of duty in discharge of bond.

LXXVI. If within three months after removal of goods, certificate of delivery in second entrepôt, or of payment of duty, be not produced, the owner and security are jointly bound to pay import duty.

LXXVII. If within three or four months the owner produces the said certificates, and shows that the delay is from *force majeur*, the duty is returned to him.

LXXVIII. The merchant has the advantage of the time between the removal and arrival of the goods at second entrepôt. But duty for the second four months commences on expiration of the first.

LXXIX. Whoever exports goods from entrepôt, must conform to the provisions of the law for exportation. He must give a bill of lading to the custom-house, signed by the captain, who receives the goods, which when *visa*'d, is given to officer of entrepôt.

LXXX. When a merchant wishes to take out all or part of the goods in entrepôt, he must make a written demand with detailed invoice, &c. to the custom-house.

LXXXI. Transit of goods is permitted at the custom-houses and sub-custom-houses of the kingdom where importation is permitted.

LXXXII. Whoever wishes to avail himself of this privilege must give to the custom-house an invoice agreeably to Article 67, and the provision of Articles 4 and 3.

LXXXIII. When goods are imported in transitu, the merchant must furnish himself with permit agreeably to Article 73, giving bond for the export of the goods, or certificate of delivery in some other entrepôt.

LXXXIV. Customs to send the documents to harbour-master and health officers to see the goods exported, &c.

LXXXV. Goods may be taken in transitu from one port to another where entrepôt exists.

LXXXVI. On visiting the goods in transitu, any difference found in the invoice subjects them to the rules of Article 74.

LXXXVII. Rules for nonproduction of certificates same as in Articles 74, 76, and 77.

XCV. In the entrepôts, and where these do not exist, goods for which no owner appears within two days after landing, are kept in depot for six months, during which time any one with proper titles may claim them, paying the entrepôt duty agreeably to Article 62, and the expenses incurred.

XCVI. So soon as these goods are deposited in entrepôt, they are advertised on the walls and door of the stores, and in the government gazette, with particulars, name of vessel and captain, &c., for the purpose of finding owner.

XCVII. On the expiration of six months and one day, if no one with proper titles appears, the goods are put up by auction, and the proceeds, deducting expenses, deposited in the treasury. The owner has a right of claiming the amount within six other months.

XCVIII. If goods are liable to damage, they are to be sold before six months. The owner, however, has always a right of claiming the proceeds, less charges, within twelve months from landing in entrepôt.

XCIX. The auction takes place eight days after the custom-house, through the governor, has published it in all the communes of his jurisdiction.

C. All merchandize shipped or landed, where there are no custom-house establishments, or at places not appointed for shipping or landing merchandize, or at places where this is not allowed except by written permit, and such permit not having been obtained, or at prohibited hours, or with forged papers; or any effects liable to duty whatever, concealed in baggage shipped or landed, are seized as contraband.

CI. Any guard or officer of customs, or any other authority or private individual, who may observe any one employed in importing or exporting clandestinely goods subject to duty, is bound to denounce the same, and to call on the armed force and private persons present, to aid at the seizure of the contraband goods.

CII. Immediately the contraband goods are brought to the custom-house, the chief officer draws up a protocol of the facts signed by the party seizing, the witnesses, &c.

CIII. If the person who was committing the contraband is present, he is to be called in to state his defence.

CIV. The chief officer of customs having taken into consideration the protocol and

facts, shall decide on the fine to be paid. Against this decision an appeal is permitted to the finance minister, which is final.

CV. The seized goods to remain in the custom-house until the payment of the fine fixed by the officers or finance minister.

CVI. When the person liable to the fine is not known, or refuses the payment, the goods are to be sold, as set forth in Articles 97 and 98. If not sufficient to pay fine and expenses, the surplus is claimable within a year.

CVII. The custom-house officers are to act in the cases provided for in the present law, and are liable to fine for neglect.

CVIII. In every case wherein the port, health, communal, or other authorities shall have knowledge or suspicion of contraband, or violation of custom-house laws, or any other irregularity, they are bound to denounce it to the custom-house authorities.

CIX. If there is no doubt that delay may cause proof not to be obtainable, they are immediately to draw up a protocol, and send it to the custom-house authorities.

CX. If an individual has such suspicions, he is to communicate them to the nearest custom-house authority, to carry into effect this law. If there be danger of want of proof from delay, he is to go to the nearest authority, who is to act, &c.

CXI. Any authority or individual who may discover abuse in any custom-house officer or servant, must denounce him to the inspector.

CXII. The inspector may suspend officer, and report to finance minister.

CXIII. Finance minister to summon officer before tribunals.

CXIV. When the contraband shall have been proved, and the fine exacted, the individual, or custom-house officer, who denounces the contraband shall receive one-third of the fine.

CXV. The obligation to pay duty is general, and merchandize imported for the use of public authorities is subject thereto. Exceptions are permitted by royal ordinance.

CXVI. Before payment of duty, merchandize cannot be removed.

CXVII. If payment is not made, the goods are kept as security for the duty and expenses, as well as any that may afterwards arrive; and if this detention does not enforce payment, sufficient goods may be sold by auction to meet the same.

CXVIII. All payment of duties to be certified by double receipts (coupons).

CXIX. Whenever the fines fixed in this law do not reach the highest limit fixed by the 12th and 13th article of the penal code, these last will be considered as the fine.

CXX. All the laws of customs hitherto in force are by this law annulled.

CXXI. The finance minister is charged with its execution and publication, and the other ministers in so far as it relates to them.—*Athens*, 19 (31) *March* 6, 1843.

(Signed) OTHON.

MONIES, WEIGHTS, AND MEASURES OF GREECE.

Weights.—The quintal contains 44 okes or 132 lbs. Each oke is equal to 3 lbs. 36 oz., or 400 drachms. The lb. contains 6168 English grains. Thus 100 of these lbs. equal 88 lbs. avoirdupois, or 39.95 kilogrammes.

The lb. weight used for weighing silk is heavier than the above by $\frac{1}{4}$, and contains 15 ounces, or 166$\frac{2}{3}$ drachms.

A sack of currants weighs 140 lbs. (ordinary), or about 123 lbs. avoirdupois.

Measures.—The measure used for grain is the "staro," which is composed of 3 bachels, and equals 2.33 English bushels, or 0.821 hectolitres.

There are 2 kinds of pic or aune, one being 8 per cent longer than the other.

The large pic, for measuring woollens, = 27 English inches, or 0 6855 metres.

The little pic, for measuring silk goods, = 25 English inches, or 0.6347 metres.

Monies.—Since the Revolution the Greeks have established a system of coinage in imitation of that of France.

The phœnix is a silver coin that should contain 9-10ths of pure metal, and 1-10th of alloy, or 4.029 grammes of the former, and 0.448 ditto of the latter, being worth about 8$\frac{1}{4}$*d.* sterling,

The lipta is a copper coin, being 1-100th part of the phœnix.

The silver coins are much debased, so much so that they have been even refused by the officers of government.

Manufactures of wool, cotton, and all articles not enumerated in the above tariff of import duties, shall pay 10 per cent *ad valorem*.

All articles not contained in the list of export duties, shall pay a duty of 6 per cent *ad valorem*.

The practice of arbitrary valuations and fines, adopted under the new customs law, may be considered as levying (except when goods are smuggled) average duties of 20 per cent on imports, and 12 per cent on exports.

Tonnage Duties.—Royal Decree of 8th (20th) February, 1834.

Art. I. The duties to be paid by Greek and foreign vessels in the ports and harbours of the kingdom of Greece, after the 1st of April next, shall be according to the tariff annexed hereto.

II. The merchant-vessels of foreign nations shall be subjected to no higher duties than Greek vessels, so long as the latter are received in the ports of such foreign nations on a footing of complete reciprocity But if in the ports of another nation there shall be levied on the merchant-vessels of Greece, duties higher than those levied on them in the ports of Greece, then an increase of duty equal to such excess shall be levied on the vessels of such nation.

The additional tariff for this increase of duties shall be published in the government journal.*

III. Every master of a vessel must, before his departure, pay at the custom-house of the port the duties set forth in the tariff. The certificate of payment is signed by the Minister of Finance.

IV. The custom-house, after receiving the duties, will furnish a receipt, which must be presented to the officer of the port, who will deliver the permit for departure. The master of a vessel who attempts to depart without a permit is subjected to a penalty of *twenty times* the amount of the *duties owing by him;* and a vessel which has no port-duties to pay, that attempts to depart without a permit, is subjected to a fine of from one to ten drachmas.

TARIFF OF PORT CHARGES IN THE KINGDOM OF GREECE.

Tonnage.—In the ports of Syra, Nauplia, Piræus Marathonensis, Pylos, Calamata, Navarino, and Patras, the charges are—On vessels under 5 tons, free; on vessels of 20 tons, 9 liptas; on vessels above 20 tons, 12 liptas.

In the other ports—On vessels under 5 tons, free; on vessels of 20 tons, 6 liptas; on vessels above 20 tons, 9 liptas.

Clearances, or Permits of Departure.—On vessels under 5 tons, free; on vessels of from 5 to 20 tons, 50 liptas; on vessels of from 21 to 50 tons, 1 drachma; on vessels of from 51 to 100 tons, 2 drachmas; on vessels of from 101 to 200 tons, 3 drachmas; on vessels of from 201 to 300 tons, 4 drachmas; on vessels of 301 tons and above, 5 drachmas.

Lighthouse Dues (only where there is one).—On vessels under 5 tons, free; on vessels of from 5 to 20 tons, 50 liptas; on vessels of from 21 to 50 tons, 1 drachma: on vessels of from 51 to 100 tons, 2 drachmas 50 liptas; on vessels of from 101 to 200 tons, 5 drachmas; on vessels of from 201 to 300 tons, 8 drachmas; on vessels of 301 tons and above, 10 drachmas.

When gunpowder remains on board, for every 2¼ pounds per month of 30 days, 2 liptas.

When it is placed in the public magazine, for the same time, 3 liptas.

OBSERVATIONS ON THE TONNAGE DUTY.

1 Vessels arriving from abroad loaded, and which discharge their cargoes and depart loaded pay the whole duty.

2. Vessels arriving from abroad loaded, and which depart in ballast pay *two-thirds* of the duty which is also exacted if they arrive in ballast and depart loaded.

3. Vessels arriving from abroad in ballast departing without lading, or arriving and departing with cargo, and not discharging any of it, pay *one-third* of the duty.

4. Vessels arriving from and going to another port of the kingdom, pay but *one-half* of the duty.

5. A vessel is considered as loaded, whether she be so fully or partially.

EXCEPTIONS.

1. Every vessel forced to enter a port, either by a storm or in consequence of damage, is exempted from all charges during eight days.

2. Every vessel entering a port, from whatever cause, and destined to another port, and the master of which shall immediately make a declaration to the captain of the port that he

* See this additional tariff, post.

has no intention either of loading or discharging his goods, may remain five days without paying any duty except the lighthouse duty. He is permitted also to receive or to deliver letters or money, unless otherwise provided for by special ordinances.

Convention of Commerce and Navigation, between her Britannic Majesty and the King of Greece. Signed at London, October 4, 1837.

Art. I. From and after the exchange of the ratifications of the present convention, Greek vessels entering into or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering into or departing from the ports of the kingdom of Greece, shall not be subject to any other or higher duties or charges whatever, than are, or shall be levied on national vessels entering into or departing from such ports, respectively.

II. All articles the growth, produce, or manufacture of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom of Great Britain and Ireland, and of the kingdom of Greece, respectively, in vessels of the one country, shall, in like manner, be permitted to be imported into and exported from those ports, in vessels of the other country.

III. All articles not the growth, produce, or manufacture of the dominions of her Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland into the ports of the kingdom of Greece in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Greek vessels. And, reciprocally, a similar rule shall be observed in the ports of the United Kingdom, in respect of all articles not the growth, produce, or manufacture of the dominions of his Majesty the King of Greece, which can legally be imported into the ports of the United Kingdom in Greek vessels.

IV. All goods, wares, and merchandize, which can legally be imported into the ports of either country, shall be admitted at the same rate of duty, whether imported in national vessels or in vessels of the other country; and all goods, wares, and merchandize, which can legally be exported from the ports of either country, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the one country, or in those of the other.

V. Neither of the two governments, and no company, corporation, or agent, acting on behalf of, or under the authority of either government, shall, in the purchase of any article which is the growth, produce, or manufacture of one country, and is imported into the other, give, either directly or indirectly, any priority or preference on account of, or in reference to the national character of the vessel in which such article may be imported; it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

VI. In order to avoid any misunderstanding with regard to the regulations which may determine the conditions which constitute a British or Greek vessel, it is hereby agreed, that all vessels built in the dominions of her Britannic Majesty; and all vessels which, having been captured from an enemy by her Majesty's ships of war, or by the subjects of her said Majesty, furnished with letters of marque by the lords commissioners of the Admiralty, shall have been regularly condemned in one of her said Majesty's prize courts as a lawful prize; and all vessels which shall have been condemned in any competent court, for a breach of the laws made for the prevention of the slave trade; and which shall be owned, navigated, and registered according to the laws of Great Britain; shall be considered as British vessels: and that all vessels built in the territories of Greece, or which shall have been captured from an enemy by the ships of war of the Greek government, or by Greek subjects furnished with letters of marque, and shall have been regularly condemned in one of the prize courts of the kingdom of Greece as a lawful prize, and which shall be wholly owned by any subject or subjects of Greece, and whereof the master and three-fourths of the crew are subjects of Greece, shall be considered as Greek vessels.

VII. If any ships of war or merchantmen of the one nation, should be wrecked on the coasts of the other, all such parts of the said ships of war or merchantmen, or of the fur-

niture or appurtenances thereof; as also all goods and merchandize which shall be saved, or the produce thereof; and likewise the papers found on board the vessel; shall be carefully preserved until they are claimed by the proprietors, or their agents duly authorized, or by the respective consuls in whose districts such wreck may have taken place, if such claim be preferred within the period fixed by the laws in force in the states of the high contracting parties; and such consul, proprietor, or agent, shall pay only the expenses incurred in the preservation of the property, and the rate of salvage which would have been payable, in the like case, upon a national vessel; and the said goods and merchandize saved from the wreck shall not be liable to pay duties, unless cleared for local consumption.

VIII. Her Britannic Majesty and his Majesty the King of Greece have agreed, that each of the high contracting parties shall have the right to nominate and appoint consuls-general, consuls, and vice-consuls, in all the ports of the dominions of the other contracting party, wherein such consular officers are or may be necessary for the advancement of commerce, and for the protection of the trade of the subjects of either crown; and it is expressly stipulated that such consuls, of whatever class, shall, in the country in which they are stationed, be placed upon the footing of the consuls of the most favoured nation.

IX. Her Britannic Majesty consents to grant to the subjects of his Majesty the King of Greece, the same facilities and privileges with respect to the commerce to be carried on in Greek vessels with the British dominions in the East Indies, as are or may be enjoyed, under any treaty or act of Parliament, by the subjects or citizens of the most favoured nation; it being always understood, that the laws, rules, regulations, and restrictions, which are or may be applicable to the ships and subjects of any other foreign country, enjoying the like facilities and privileges of trading with the said dominions, shall be equally applicable to the subjects of the King of Greece.

X. All subjects of her Britannic Majesty shall, within the dominions of the King of Greece, be as free as native Greeks to manage their own affairs themselves, or to commit the management of those affairs to any other person whom they may please to appoint as broker, factor, agent, or interpreter; nor shall British subjects be restrained in their choice of persons to act in such capacities, nor be called upon to pay any salary or remuneration to any person whom they shall not choose to employ. Absolute freedom shall also be allowed, in all cases, to the buyer and seller to bargain together, and to fix as to them may seem meet, the price of any goods, wares, or merchandize, imported into, or to be exported from, the dominions of the King of Greece, observing the laws and established customs of the country. The same privileges shall be enjoyed, in the dominions of her Britannic Majesty, by the subjects of his Majesty the King of Greece, under the same conditions.

XI. In all that relates to the police of ports, to the lading and unlading of vessels, and to the safety of merchandize, goods, and effects, the local laws and police regulations of each country shall be applied to the subjects of both, without discrimination or distinction; and, throughout the whole extent of the territories of each contracting party, the subjects of both shall enjoy full and entire protection for their persons and property. They shall have free and easy access to the courts of justice in the prosecution and defence of their rights, and shall be at liberty to employ the lawyers, attorneys, or agents, of whatever denomination, whom they may deem the best qualified to maintain and defend their interests: it being understood that they shall conform, in this respect, to the obligations imposed upon native subjects by the laws of the country. In all that concerns the administration of justice, they shall enjoy the same privileges, rights, and franchises that belong to natives; and in none of these respects shall they be subject to any other duty or tax than is imposed upon natives. They shall be exempted from all compulsory military service, either by sea or by land: no forced loan shall be imposed upon them; and their property shall be subject to no other charge, requisition, or tax, than those to which the property of natives shall be liable.

XII. Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Majesty the King of Greece, agree that the subjects of the respective countries shall enjoy, within the dominions of the other, the full benefit of the complete toleration and protection for the professors of all religious opinions, which at present exists in both countries by law.

XIII. It shall be free for the subjects of her Britannic Majesty residing in the domi-

nions of the King of Greece, and for the subjects of his Majesty the King of Greece residing in the dominions of her Britannic Majesty, to dispose of their property, of every description, by will or testament, as they may judge fit; and if any British subject shall die in the territories of the King of Greece, or any Greek subject shall die in the territories of the Queen of Great Britain, without will or testament, the respective consuls or vice-consuls shall exercise the right of administering to the property of subjects of their nation so dying intestate, for the benefit of the legitimate heirs to such property, and of the creditors upon the estate, so far as the laws of the respective countries shall admit.

XIV. The high contracting parties agree, that the stipulations of the present convention shall be applicable to Gibraltar and to the island of Malta.

XV. The present convention shall be in force for ten years from the date of the exchange of the ratifications thereof; and further, until the end of twelve months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other at the end of the ten years above-mentioned, or at any other period after that time; and it is hereby agreed between them, that at the expiration of twelve months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

XVI. The present convention shall be ratified, and the ratifications shall be exchanged at London, within three months from the date hereof.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 4th day of October, in the year of our Lord 1837.

(L.S.) PALMERSTON.
(L.S.) TRICOUPI.

This treaty has been carried into effect by British orders in council, dated July 5, 1838, and December 9, 1839.

PRINCIPAL SEAPORTS OF GREECE.

MODERN *Athens* occupies part of the site of the ancient city. Previously to the Greek Revolution it had about 1200 inhabited houses; these were all levelled during the conflict. In 1834 the seat of the new government was transferred to it, and a new town built. It has, at present, three or four well-built streets, a royal palace and stables, an university, gymnasium, hospital, barracks, and some other public buildings. The population, consisting of Greeks, Germans, French, Italians, Russians, Armenians, and Americans, amounting to nearly 20,000 in number.

The *Piræus* is the port of Athens. It has a population of nearly 2000, a quay, custom-house, lazaretto, &c. The trade of this port depends greatly on the capital and the materials and money annually expended on public works. We have no returns of its trade before the revolution. The following statements are condensed from consular and other official returns:

Navigation and Trade of the Piræus for 1840.

* These 9 vessels sailed for England laden with valonia.

Patras has a bay in front, but the port farther up affords good anchorage and shelter. It has one good shore only. The population has greatly diminished, being only about 5000.

Trade of Patras in 1830.

Syra.—This port is convenient, safe, and deep,—population, in 1825, nearly 5000; in 1842, nearly 25,000. The island is well cultivated, but naturally not very fertile. The recent stringent regulations of the Greek customs have greatly injured its trade.

POPULATION, Annual Produce, Revenue, and Expenses of the Islands comprised within the Nomos, or Department of the Cyclades, in 1835.

ISLANDS.	Population.	ANNUAL PRODUCE.					ANNUAL REVENUE TO THE GOVERNMENT.*			ANNUAL EXPENSES OF THE NOMOS.

Of the 58 arrivals, 30 had sundry merchandizes; 2, sugars; 1, wheat; 8, iron; 11, coals, &c.; 1, fish, &c.; 5 were wind bound.

Of the 58 departures, 32 had part of original cargoes (merchandize); 15 were empty, and 11 wind bound.

"About 3000 tons of coals were imported into Syra from England, in British vessels, of this quantity 1600 tons were for the coal depot for the French steamers, and 1400 for the Austrian depot. On the foregoing value of goods imported and exported 12 per cent must be added, as the custom-house valuation is always 10 per cent below the real value.

"The amount of imports from England and other countries for the year 1841 has been greater than in any preceding year, but this excess of speculation could not meet with an adequate demand, and at the end of the year a large proportion of the imported goods remained unsold in the bonded stores. This overtrading naturally brought on low prices, and although the market is now recovering, still it does so very slowly.

"The principal merchandize imported from England consists in Manchester cotton manufactured goods. Iron from London and from Liverpool, and likewise direct from Cardiff and Newport, crusted sugars, tin in bars, tinplates, indigo, coffee, raw and tanned hides, chain cables, and anchors, &c.

"All the iron imported into Syra, and I may add, into every other part of Greece, comes from England. At Syra the annual importation may be calculated at about 3500 tons; independent of the vessels which come direct with iron cargoes from Cardiff and Newport, every vessel from London and Liverpool is ballasted with iron.

"The qualities imported consist in flat bars, in imitation of Russian iron, in bolts, in nail rods, and in sheet and hoop iron.

"British cotton manufactured goods are also imported into Syra from Trieste, Malta, and Leghorn, in Greek and Austrian vessels."

"*General Trade of Greece.*—The direct foreign trade carried on in Greek vessels, during the year 1841, was as follows:

	ARRIVED.		DEPARTED.	
	Vessels.	Tons.	Vessels.	Tons.
From Turkey	209	7,774	99	7472

„ Holland	1	190		
„ England	2	442		
	247	13,887	104	7623

"The trade of Greece depends greatly on her relations with Turkey. During the quarter ending Sept. 30th, 1841.

"There entered at Hydra from Turkey 47 Greek vessels, and from other countries 15. Total 62.

"Departed for Turkey 37, and for other countries 7. Total 44.

"Spetzia entered from Turkey 20 Greek vessels, and other countries 28. Total 48.

"Departed for Turkey 42, and other countries 10. Total 52.

"Trade generally throughout Greece during the year 1841 has been in a most depressed state. There have been more failures at Athens and other towns of Greece in this one year than during the ten previous ones.

"These failures have been partly caused by the scarcity of money and want of confidence existing at Trieste, and in Germany, which has prevented the Greek merchants and shopkeepers from getting the facilities they have been accustomed to in carrying on their operations; but I should be inclined to attribute the greater portion of the misfortunes that have occurred, to an accumulation of stocks, of which the value has been continually on the decrease, and to a system of purchasing produce at high prices."—*Piræus, Jan.* 6, 1842.

"The commerce of this kingdom has fallen off very considerably during the year 1842, in comparison with previous years, since the establishment by the royal government, and the pecuniary distress of the landed proprietors has, at the same time, made rapid progress. The establishment of the national bank is now pronounced, even by its originators, a complete failure.

"The population of the capital may be taken in round numbers at 25,000. A plan has been laid out by the government for a town calculated to contain with ease 100,000 souls, and though I should think that few Greeks can anticipate that the ninth part of the entire population of the kingdom will determine on residing in the capital, the cost of land in Athens is higher than in the best situations of London and Paris.

"There is some talk of establishing a free port at the Piræus, but the spot is not yet selected."—*Piræus, Jan.* 10, 1843.

"During the past year the commerce of Greece has suffered generally from various causes. The crops of currants and oil, which are the staple commodities of the Morea, have fallen short of the quantity produced the preceding year, while at the same time the prices of both have materially declined. Silk also has been much lower in price; and from the above three articles, the loss to the country has been very great, and consequently money has been, and still is, exceedingly scarce.

"When it is considered also that Trieste has suffered a severe money crisis, and that the principal trade of the Greek merchants is with that place, it may easily be supposed that the trade both in imports and exports has been greatly depressed thereby.

"The short quantity of produce, and the low prices realized from it, have put it out of the power of the landed proprietors to purchase so largely of manufactured goods, or even to pay their debts to the dealers in them, and several failures have taken place both in the capital and also in this place.

"It is true, that considerable assistance has been given to trade by the establishment of the Commercial Bank of the 'Piræus and Patras,' which obtained with great difficulty the royal sanction in February last, and has been in active operation under English management and with British capital.

"A national bank is about to be established with a nominal capital of 3,000,000 of drachmas, and an issue of paper money, but this latter measure is extremely unpopular with the Greeks, who remember the losses the holders of the Greek bank-notes suffered from the suspension of the former national bank.

"Generally, prices of all manufactured goods have been from 10 to 15 per cent lower than during the preceding year, and the quantity imported is fully 25 per cent less.

"The crop of currants of 1840 was nearly eleven millions of pounds, and produced *net* to the growers 738,000 dollars. That of 1841 is only estimated to yield nine and a half million of pounds notwithstanding the increased cultivation; and prices paid have ruled from 37 dollars to 43½ dollars per 1000 pounds net to the grower, or 38,000 dollars, being little more than half the sum realized in 1840, and about one-third of the crop still remains unsold in the growers' hands.

"The crop of oil in the south of the Morea and at Salona is only reckoned at 80,000 barrels, whilst that of 1840 was about 140,000 barrels; prices too are likely to be much lower, so that the sum realized for the crop will only be 64,000 dollars, whilst that realized in 1840 was nearly 1,200,000 dollars.

"From this it will be seen that the loss to the country from defective crops and low prices is nearly a million of dollars, or 210,000*l.* sterling.

"No progress has been made towards drawing up statistical returns from the documents existing in the public offices, from which alone a correct opinion could be formed of the present state of commerce and agriculture as compared with preceding years. It is, however, evident that the present condition of both is far less flourishing than in 1839 and 1840, and that agriculture does not make those advances which it would if government would grant facilities for the acquisition of property by a more liberal and general distribution of the national lands, and if the means of communication between the seaports and the interior were improved by the formation of roads. From the want of these, the peasantry in the interior sell their crops of grain at 30, and in some places at 50 per cent less than those who are near the seaports.

"Wheat at Tripolizza and the villages around, can be purchased at 18 liptas per oke, or 1*l.* 2*s.* 7*d.* per Winchester quarter, whilst the same wheat, if delivered in Patras, would be worth 28 liptas, or 1*l.* 15*s.* 2*d.* per quarter. The consequence is, that none is brought, for even this great difference would not pay the expense of transport, which on account of the absolute want of roads, is always tedious and difficult, and often dangerous and impracticable."—*Patras, January*, 1842.

"Commerce has greatly decreased during the past year at Syra, principally since the new law of customs has come into operation, and although the collector has received instructions not to insist rigorously on the fines and penalties, and to grant every indulgence, without, however, totally losing sight of the spirit of the law, yet so deplorable have been the consequences of first impressions and apprehensions, that a great proportion of the coasting trade from and to Asia Minor and European Turkey has been lost, and having found other channels will not return to Syra.

"The merchandize imported into Syra from England during the year 1842, consisted principally of Manchester manufactured cotton goods, Glasgow cotton goods, iron in bars, about 4000 tons, bolts, plates, and hoops, chain cables, anchors, tin, indigo, tin plates, crushed sugar, coffee, hides, pepper, &c.

"The French and Austrian steamboats continue to run as formerly, and both the depots receive their coals from England."—*Syra, Jan.* 1843.

REVENUE AND TAXATION OF GREECE.

The taxation of Greece is certainly grievously borne by the people; and the whole fiscal system is badly arranged and worse managed. For so small a population, the government is upon too great and too expensive a scale; and the outlay on palaces and public edifices, not easily justifiable; while at the same time there is ample cause to suspect that neither economy nor honesty have been strictly observed in the expenditure. The Greek loan, and the excess of payments over income, has increased the debt to probably near seven millions sterling. If Candia had been annexed to Greece on the revolution,—and if a strong, intelligent, and strictly just administration had been established,—the natural capabilities of Greece and Candia, and the energy of the people would have, during the last ten years, rendered both countries rich and independent. Agriculture, commerce, and revenue would have naturally flourished.

STATEMENT of the Revenue of Greece, according to the Budget for 1843.

RECEIPTS FOR 1843.		EXPENDITURE FOR 1843.		
	drachmas.			drachmas.
I. Direct taxes: viz.—		I. Public debt.		
Tithes and usufructs	6,250,000	*English loan.*		
Tithes of, upon endowments	25,000	Interest ....dr.	2,980,520	
Tax upon cattle	1,880,000	Sinking fund	933,000	
„ patents	150,000			3,872,520
„ rents	50,000	*Bavarian loan.*		
II. Indirect taxes: viz.—		Interest	119,086 61	
Customs	2,600,000	Sinking fund	279,000	
Stamps	950,000			398,086
Miscellaneous	240,000	*National debt.*		
III. Public establishments: viz.—		Interest		2,010
Mint	150,000	Pensions		430,616
Post-office	180,000	II. Dotations: viz.—		
Printing establishment	40,000	Civil list		1,000,000
IV. National domains: viz.—		Council of state		209,004
Mines and minerals	127,000	III. General service: viz.—		
Mineral waters	2,795	Ministry for Foreign Affairs		394,712
Salt	470,000	—— of Justice		904,992
Fisheries	110,000	—— of the Interior		1,073,182
Forests	180,000	—— of Worship		185,234
Olive plantations	180,000	—— of Public Instruction		466,424
Vineyards and currant grounds	60,000	—— of the Marine		1,404,468
Gardens	70,000	—— of War		5,255,804
Public buildings	35,000	—— of Finance		486,600
V. Sale of public estates	240,000	IV. Collection of revenue		1,504,222
Sundries	218,000	Sundries		60,000
Ecclesiastical revenue	200,000	V. Various Expenditure: viz.—		
Arrears previous to 1842	1,100,000	Investment in National Bank		250,000
Balance of English loan	162,000	Payments due to Russia and England		216,438
Total receipts	15,669,795	Indemnity for Turkish lands		492,200
Deficit	2,996,687	Total....Drs.		18,666,482
	18,666,482		or £	661,104 sterling
	equal to £661,104			

It will appear from the above statement that the deficiency is estimated at 2,996,687 drachmas, or 106,132*l.* sterling: which deficiency actually exceeds the interest of the loan, which England, France, and Russia have guaranteed the payment of, and which interest Greece has now failed to discharge. There is little prospect of improvement, in the revenue, under the present financial and commercial legislation, and the incompetent fiscal administration, of that country. At the same time, the resources of continental Greece and the Greek islands are ample, under proper management, to yield a sufficient revenue, without oppressive taxation, not only to meet the annual exigencies of the state, but to the interest, and gradually diminish the amount of the national debt.

SECTION XI.

AFRICAN STATES.

1. EGYPT.

CHAPTER I.

GEOGRAPHICAL POSITION, RESOURCES, AND STATISTICS.

THE superficial extent of Egypt and the limits of the country have never been accurately determined. On the Mediterranean, Egypt extends from Palestine, near Al Arish, to the frontiers of Tripoli. Its breadth, including the district of Suez, extends west from the Red Sea, and south to the frontiers of Abyssinia, beyond the valley of the Nile, as far as the authority of Mehemet Ali can command respect over the wandering tribes of Tibbous, or the desert. There is, however, no definite western boundary, unless we lay down as such, the mountain ridge which separates the valley of the Nile from the African desert. The southern boundary of Egypt is equally undefined. Philæ, on some point above the first cataract of the Nile near the tropic of Cancer, has been laid down by some geographers as the southern limits of Egypt: but this boundary, or any other, depends altogether on the power of the viceroy; and whether he may extend it over Nubia and Kordofan, seems a point which will depend upon himself and upon those who may either join or oppose him in those regions.

The winding valley and Delta of the Nile comprises the fertility, life, and riches of Egypt. This valley is divided into several: one of the richest is that of Faioum about 1200 square miles in extent. The cultivable surface of Egypt has been variously estimated at from 12,000 to 16,000 square miles: from different reports made to the pacha it would appear that even the latter underrates the lands capable of profitable culture, and that 18,000 square miles in extent may be estimated as included within the viceroy's territories: exclusive of Lower and Upper Nubia, Kordofan, Soodan, and its approaches towards Abyssinia. In upper Egypt *sienite* marble, and granite are the prevailing rocks. Limestone prevails east of Cairo towards Suez. We need scarcely observe that

the DELTA of the Nile consists of rich alluvian formations. This fertile region is in many places 30 feet deep, with canals for preserving the overflowings of the Nile for irrigating the lands, and for the means of communication afterwards. The superfices of the Delta, according to recent surveys, may be estimated at nearly 4000 square miles, and the whole is under cultivation. The resources of Egypt consist chiefly in its cattle; its agricultural products, wheat, cotton, rice, the papyrus, date-tree, &c.

Population of Egypt.—We have no *data* except vague estimates as to the number of inhabitants in Egypt. This remark may be said to apply to all Africa, and to nearly every state in Asia, whatever may be asserted to the contrary. The plague, conscription, and the wars of the pacha have all diminished the population which Marshal Marmont describes as less in number than in 1800. Mr. Lane, in his work on the modern Egyptian, estimates the Arab Egyptians at 1,750,000, the Copts at 150,000, Turks at 10,000; Syrians, Greeks, Armenians, and Jews at 17,000; wandering Arabians, white slaves, negro slaves, Nubians, and Franks at 70,000. Total 1,997,000.

In a country like Egypt, where the *harems* and houses are inaccessible, and where there exists a religious opposition to numbering the people, the only estimate of the population has been founded upon computing the number of houses and allowing four, five, or more, as the average inmates of each house. According to such a computation the present population of Egypt does not certainly exceed 2,000,000 of inhabitants.

The climate of Egypt is hot, dry, and not generally speaking unhealthy. Ophthalmia is one of the most afflicting and prevailing diseases.

RACES OF PEOPLE.—The *Osmanlis* or Turks constitute the dominant race in Egypt; not in numbers but in authority and power. The whole number of Osmans does not probably exceed 18,000. They are found in all parts of the kingdom. They constitute the aristocracy, or Beys, of the country.

The *Copts* rank next to the Osmans; they are employed in public offices and in trades, but not generally in agriculture. They have a patriarch and twelve bishops. As Christians they are not liable to the conscription. They have their harems like other orientals. They are as secluded in their domestic life as the Osmans.

Mamelukes.—The ancient race of Mamelukes are considered as having been destroyed, or extinct, but there are nearly 2000 acting as guards or servants in Turkish families.

Bedouins, or Arabs of the Desert.—In costume and in habits they have undergone no change for many ages. They keep aloof from all other races, rarely, if ever, intermarrying with the fellahs, or agricultural Egyptians, or with the negroes of the upper country; though a few of the latter are sometimes seen among them as domestic slaves. Few of them are stationary except on the

borders of the wilderness, where they annually pasture, for some months, their flocks. They are the principal owners of the camels, which are the chief beasts of burden in Egypt. The Arabs are a nobler looking race than the Fellahs; they walk with a proud and bold step, are simply clad, and seemingly regardless of the world's luxuries. But they have generally ceased to lead their usual predatory life. In the Faioum, the Arabs appear gradually to be adopting a more stationary pastoral life. Where the desert is contiguous to cultivable land, many have devoted themselves to agricultural pursuits. The Bedouins have for some time been in a state of complete subjection to Mehemet Ali, and seem to have abandoned all idea of resistance to his power.

Armenians.—The Armenians are influential, but not numerous, and occupy many of the most elevated posts of government. Boghos Bey, the prime minister of the pacha, is an Armenian Christian. Artin Bey, who ranks next to Boghos Bey, is also an Armenian. They are generally learned and accomplished. Many of them are workers in gold and silver, others exercise various handicraft trades. They are divided into the Orthodox Armenians, the largest number, under the authority of their own patriarchs; and the Catholic Armenians, who recognise the spiritual sovereignty of the Pope of Rome.

Negroes.—It is estimated that 6000 houses in Cairo have black women and Abyssinians for domestic service; the average being two, which makes 12,000 female slaves. There are probably besides 4000 male black slaves.

There is a great influx from Nubia of free blacks; they are faithful domestic servants, employed for the most part as porters, doorkeepers, watchmen, &c. They guarantee the good conduct of one another. They are estimated at 5000 in Cairo. They rarely marry Egyptian women, but return home with their earnings, to be succeeded by perpetual swarms of new emigrants.

Foreigners.—Greeks, Maltese, Franks, &c., are found in the principal cities of Egypt, particularly Alexandria and Cairo. The number of such foreigners in Alexandria is estimated at from 9000 to 11,000.

The Fellahs. — The agricultural labourers, the soldiers, the artisans and labourers of Egypt are fellahs. They are unarmed and submissive; and, under every government, their degraded condition has been unchanged; they are seldom rich; they live in mud huts, without windows, and with few utensils.

"Yet the fellah is of all beings the most gay and joyous; careless of the future, if left in peace to cultivate his land and pour the waters of the Nile upon the rich soil on its banks, he would neither desire nor dream of a happier condition; he is contented, though a perpetual labourer, to gather little of the fruits of his labour. Of the fellahs it may be said as was said by Amrou of the ancient Egyptians, 'They are bees, always toiling, always toiling for others, not themselves.' The love of the fellah for his country and his Nile is an all-absorbing love. Remove him and he perishes. He cannot live a year away from his village; his grave must be where his cradle was. But he is of all men the most submissive. He will rather die than revolt. Resignation is his primary virtue; impatience under the yoke is unknown to him; his life, his faith, his law, is submission. Allah kerim! is his hourly consolation, his perpetual benediction. He was made for peace, not for war; and though

his patriotism is intense, there is no mingling in it of the love of glory, or the passion for conquest. His nationality is in his local affections, and they are most intense.

"The meanest man who speaks Turkish is, *ipso facto*, considered as belonging to a caste high above the indigenous inhabitant. And so universal is the sentiment of inferiority and of subjection among the natives, that they seem to recognise the right with the might of the few Turks who rule over the many Egyptians, ejaculating frequently, 'We are but *fellaheen*.' So the country has been subdued by one set of invaders after another, almost without any resistance from the inhabitants; not certainly for want of attachment to their country, which they love with extreme passion—abhorring a military life, though it provides them with a far greater number of comforts than they would otherwise enjoy, but then it alienates them from the place of their birth. The *habit* of submission is universal among the fellahs; it is part of their education; it has existed from immemorial time; and though, perhaps, the progress of instruction among some of them has created a certain vague sense of nationalty, it will be long before the sentiment can be operative or extensively influential. Notwithstanding these habits of submission which have come down from the remotest times, a change has been gradually introduced in favour of the Egyptian people. Egyptian functionaries, formerly wholly excluded, are now found in the establishments both civil and military. Both Copts and Arabs are sometimes invested with official power. The judicial and religious authority has been long in their hands, and the increasing power of the indigenous population may be seen not only in the diminished numbers of the Turks, but in the diffusion of that tolerating spirit which characterizes the Egyptians more than any other of the Mussulman races. Mahomedans, Christians, and Jews live together in Egypt in far greater harmony than do the various Christian sects in Christendom. There is against idolatry a common hatred, but the spirit of intolerance goes no further than this."—*Dr. Bowring's Report.*

CHAPTER II.

GOVERNMENT OF EGYPT.

THE government which succeeded the Roman rule in Egypt was that of the caliphs, under Omar; whose general, Amrou, conquered Egypt, A. D. 640. The Turkomans drove out the caliphs, A. D. 1171; and the Mamelukes, in their turn, rebelled, and destroyed the government of the Turkomans.

The Mamelukes were originally brought as young slaves from the country now called *Mongrelia*, or rather *Circassia*, including the countries situated near the *Euxine* and *Caspian* seas: a region famous in all ages for brave men and beautiful women. When brought into Egypt, by one of the successors of Saladin, they were called Mamelukes, and reared with great care and instructed in all military discipline, and exercises. They proved, as they grew up in numbers, the bravest troops. The commander of these Mameluke guards was invested with absolute power over them. They were intended to support the government of the Turkoman princes, and enslave the Egyptians; but finally, one of the Mameluke commanders, knowing his own power, and taking advantage of the general contempt into which the then sovereign had fallen, on account of his effeminate and sensual life, the former deposed and afterwards strangled the latter. The commander of the Mamelukes then assumed the government of Egypt under the style and title of sultan, and reigned by the

force and bravery of his Mameluke troops, which were constantly increased in numbers by the importation of young Circassian slaves.

The Mameluke power was exercised absolutely in Egypt for upwards of 200 years, during which time their sultans were always elected, upon the death or deposition of the old, by the Mamelukes, out of their own body.

The sons of the deceased sultans were permitted to enjoy the estates and riches left by their fathers, but, by the order and constitution of the government, no sultan's son was ever to succeed, or be elected sultan; so that to have been born the son of a sovereign, constituted the certain exclusion from the kingdom, and no Mameluke was ever chosen sultan, who was not *a Circassian and a Christian by birth, and who had not been actually sold for a slave, and trained up from a private soldier in the Mameluke troops.* Yet from these men were formed many who made their names celebrated in the age in which they lived; and no nation made so brave a resistance against the growing empire of the Turks as the Mamelukes did under their sultans, until they were conquered by *Selim* after a most bloody war.

The Mameluke sovereigns were all slaves *ab origine.* The first king of that denomination raised himself from a state of slavery to the royal dignity by his address and capacity, and the power and influence he had over his people.

Upon his demise, the kingdom devolved upon a slave, who was either nominated and recommended by the incumbent before his death, or elected by the Mamelukes afterwards.

And so it continued until the extirpation of that race.

In conformity with the same custom, the beys were generally selected from among such persons as had been slaves to preceding beys. When a bey died, his chief, or favourite slave, generally married his widow, and succeeded him in his beylic; and often in all his posts of honour, profit, and trust.

This manner of succession among the beys was continued afterwards under the Porte. It was more in accordance with the interests of the latter than hereditary succession; for the successor of a bey was obliged to give up, to the sultan, a great part of his estate to secure his place and title.

These beys were all princes, and *sangiac*, meaning a standard; each sangiac bey was a prince of the standard or ensign of the province he governed. Though generally disliking the power and authority of the Turkish Pacha, and unanimous in their opposition to him, yet they were as constantly at war with each other; and these wars usually ended by the more powerful domineering over the weaker tribes.

Sultan Selim conquered the *Mamelukes* in 1517, and put a final close to the reign of that race, by causing King *Thomam-Bey*, after exposing him to great indignities and tortures, to be strangled and afterwards hung, as a spectacle, on one of the city-gates. He also cut off all the other Mamelukes of note.

The sultan afterwards appointed his Viceroy or Pacha to govern Egypt. But the beys were at that time obstinate and intractable, and compelled him to be as obsequious to them as they ought to have been to him. The pachas had very little power. The sangiac beys (twenty in number) generally thwarted and despised the pacha's authority when contrary to their own views.

The pachalic of Egypt, or, as it was commonly called, of Cairo, would have been the first in the Ottoman empire were it not for the power of the beys, janizaries, and other military troops.

In Mr. Perry's curious work on the Levant and Egypt, written in 1750, we have the following account of the pachas and people of the latter country:

"It is said that the bashaw is the secret spring and author of those dissensions and massacres, which often take place among them, in order to weaken each other and strengthen his own power.

"So limited is his authority that he cannot hold a divan at his seraglio, except an officer called the Chiauslarbgast, who is sent on the part of the Odgiack of the janisaries, be present. His business is that of a spy to report to the Odgiack on his return all that has passed at the divan, and no business can be transacted without he is present.

"The duties of the bashaw, as at present laid down, are to summon the divans of the beys, in which he presides by his Kyayah (who is a bey *pro tempore* by virtue of his office), while he himself sits in a room behind a lattice, as the grand signior does at the divan of Constantinople. To these he has to communicate all matters relative to the state, with such orders as he may have received from the Porte, and to see them executed. To sell or farm out lands, towns, and villages, and to appoint the governors of provinces; to collect the revenue, &c. Besides, he has many other duties to perform; he ought to keep on good terms with the leading men of the militia, and to have his spies every where, and if he finds that any of the beys are hatching mischief, he generally lops their heads off, though without the sanction of the leading men of the janizary Odgiack: these measures often lead to his deposition, which he generally likes, for he is sure to be removed to another government, as the porte naturally concludes that his measures were for the purpose of keeping up its authority. When the bashaw meditates any such exploit, he generally takes care to form a strong party, dispenses money liberally, procures resolute persons who perform their parts secretly and firmly. A bashaw attempts these things safely, for his person is held sacred by those under him, and should he fail in his purpose, there is no great danger of their hurting him, though there is one instance on record of a bashaw of Cairo being massacred by the mob.

"When sultan Selim conquered this country it is probable he left the same form of government it had before; though, as it is said, he destroyed the Mameluke race. But then it may be supposed, that the beys he first constituted were devoted to his interests, though afterwards their successors were not so much attached to his successors.

"The slaves of military officers when set at liberty become janizaries, and are advanced gradually.

"But these slaves, whether of the military officers or the beys, are a fine people, for they are the most promising children of Georgia, and taken for tribute due by the county to the grand signior.

"They are only in truth nominally slaves, for each is well clothed, mounted, fed, and taught, and when he rides out has a servant to attend him. They do no drudgery, but stand in a respectful posture round their master.

"They have to wear their vests within their long breeches, and to shave their beards; these are the marks to distinguish them from others. A slave is held so sacred that no servant dares strike him under pain of death.

"They are taught to comport themselves as persons that may become governors of towns or provinces; and, as to externals, there is little difference between a slave and his lord. However, the chief slave has a right to correct them if they offend.

"The power and riches of the beys and other great men consist chiefly in their slaves, of which they have from 100 to 200 each; and in these consist the barrier of the present constitution against the grand signior.

"The slaves, as they advance in age, accomplishments, and in the favour of their masters, are first made free, and then sent out as cashifs, or caimacams, into the provinces or villages. They are always deeply attached to their masters.

"It is astonishing to behold the grandeur and magnificence in which the beys and great men of Egypt live. Their household often consists of from 200 to 300 men, as slaves, servants, and others. The expense of maintaining these is much less, however, than that for clothing, horses, furniture, &c. The harnesses, even of their slaves' horses, cost about 200 dollars each.

"Their great pride is to have their retinue splendidly equipped. Their revenues are quite equal to this expense, for, besides their subsidies from the grand signior, they have farms, villages, and are often governors of provinces, which they turn to good account; they also extort money from those under them.

"We shall now give the character of the bashaw of Cairo, or Egypt, and what he is, and what he should be. He is, *de facto*, a tyrant, or lion in chains, with his teeth filed down, and his claws clipped, so that he can neither bite nor scratch. He would be a tyrant, without restraint, at full liberty, with all his instruments and weapons of oppression, death, and destruction, in full force, which he would exercise according to his appetite, pleasure, and caprice, and at the expense of distressing and oppressing every body under his jurisdiction. He *ought* to be a magistrate invested with full power and authority, and endowed with consummate wisdom, policy, justice, equity, resolution, courage, and lenity."

The administration of Egypt, under the Pachas, continued much as above described until the invasion by the French, and until one of the most extraordinary, and most magnanimous men, of modern times, appeared as its ruler.

Mehemet Ali was born A.D. 1769, or in the year 1182, in the little town of Kavallo, on the gulf of the same name, near the southern extremity of Roumelia. His father was no more than chief of the district police. Mehemet received no education. He was not even taught to read or to write; and he had to struggle in his early career, not only against the evils of poverty, but with many difficulties, which would have utterly discouraged ordinary minds. At the age of 31 he rose to be second in command of the troops, 300 in number, which were raised in the district of Kavallo, to join the Turkish expedition in 1800 against the French in Egypt. By his sagacity, promptitude, and courage amidst the intrigues and anarchy which prevailed at that time in Egypt, he acquired great influence in the country. In 1805, when a rebellion broke forth in Cairo, the Mameluke sheikhs refused to receive the Turkish Pacha, Khourchid, and they elected Mehemet Ali to the chief command. This election was from necessity confirmed by the Porte. The Mamelukes afterwards plotted against Mehemet Ali, as they had at all times against all former pachas. He baffled their intrigues for six years, resolving to deal with them, as the sultan dealt afterwards at Constantinople with the janizaries. In 1811 he formed an army to repel the incursions of the Wahabees, and gave the command to his son, Toussoun Pacha. On the 11th of March, during the ceremony of investing Toussoun with the supreme authority over the troops, the Mameluke chiefs assembled in the citadel of Cairo. While those unmanageable tyrants existed in the country, it was hopeless to establish either a permanent government, or to hope for improvement or civilization. The Pacha had long resolved on a bold, though merciless act,—the citadel of

Cairo was invested by his soldiery, and the Mameluke chiefs were all massacred by Mehemet Ali. From that day he has held absolutely the government of Egypt in his own person. The Porte found it again necessary or prudent to confirm his newly-acquired power. His successes in the Morea—his acquiring from the Porte the government of Crete—his conquests and authority over Syria, Arabia, and the holy cities—his power over Nubia and Kordofan, and his final evacuation of Syria and Candia, will be recorded among the striking facts of history. He is, *de facto*, absolute sovereign in Egypt, though he is nominally placed, chiefly by unwise British policy, under the suzerainety of the sultan, to whom he pays tribute. Mehemet Ali, notwithstanding the disasters to which European coalition has subjected him in Syria, is still the most powerful of Oriental Princes. Considering the state in which he found Egypt, a prey to the anarchy, the extortions and the tyranny of the Mameluke Beys, the wonder of this age is, that an uneducated conqueror should have done so much, and not that he has not done more, towards civilizing and advancing the condition of his subjects. He is certainly an ambitious man; that is, he is ambitious to live in history by the record of great deeds, and, in the memory of succeeding generations, by the works which he will have accomplished. He has, at an advanced period of life, acquired the knowledge of reading, writing, and other elements of education, and much acquaintance with European statistics. He has had many of our most instructive English works—among others, those for the diffusion of useful knowledge—translated for his own use; and he has interpreters of other languages always near him. His thirst for practical information has surprised all Europeans who have conversed with him. To the mechanical arts he gives extraordinary attention. He is causing the rapid disappearance of oriental prejudices, and, instead of squatting on a carpet and eating with his fingers, he sits on a chair before a mahogany table, covered with European damask or diaper, plate, porcelain, and crystal; eats with knife, fork, or spoon, and drinks his claret, of the quality of which he is proud, and of which an abundance is provided for each guest. The same custom has been adopted by many of the chief persons of Cairo and Alexandria. He found it necessary to organize armies, as well as a navy; first for defence, and afterwards for attack. He, in the progress of creating both, acquired an acquaintance with European tactics and science, and employed Europeans of great acquirements in mechanics, and especially as ship-builders and engineers. His powers of perception enabled him at once to discover the men whom he could the most efficiently employ; and he never allowed either intolerance or bigotry to interfere with his better judgment in bringing the most able men he could into his service and into his confidence. Among these are Boghos Bey, an Armenian Christian; Artin Bey, his confidential secretary; Mohammed Bey, chief superintendent of naval construction, Basilius Bey, a Copt, and numerous engineers and officers, chiefly Frenchmen of great scientific ability, many of whom, especially Colonel Seve, now Solyman Bey, had served under Napoleon.

One of the great characteristics of the mind and heart of Mehemet Ali is magnanimity. During the late unjustifiable and merciless war against Syria in which England bore the chief part, in money, ships, and men; and while we endeavoured to ruin the fortunes of this great man (whom we did not even refrain from insulting in his own capital), Mehemet Ali had it in his power to extend irreparable calamity to the British empire. This happened when the Anglo-Indian army was massacred in Affghanistan. Had Mehemet Ali done what we fear statesmen, who say they are Christians, would have done, if they were placed in his situation,—had Mehemet Ali but given the least secret intimation to the Bedouins of the desert, that it would not be disagreeable to him, if they intercepted British mails, and British travellers, after arriving by the Red Sea at Suez, or after departing from Cairo for the east, who could measure the fatal consequences to British power, or the calamities which would have overspread our Indian empire, and which would have reacted on our commerce, on our revenue, on our national credit, and on the reputation of the British name? If the communication with India, through Egypt, had been intercepted, the intelligence of the disasters in Affghanistan would not have reached England until four months later than the period when it arrived, unmolested in its course, through the territories of the man, whom we endeavoured to the utmost to degrade and to ruin. Instructions, as to the policy to be followed in consequence of those disasters, would not have reached India until three to four months later than by the route through Egypt. The calamities, which would attend, and follow, such a delay of communication, were averted by the magnanimous conduct of the Pacha of Egypt. If we, as Christians professed, Mehemet Ali practised on that trying occasion, the beautiful doctrine, "DO UNTO OTHERS WHAT THOU WOULDST HAVE OTHERS DO UNTO THEE."

The attempt to restore Turkish power in Egypt, was an attempt to re-establish what had been from the days of Selim II., to the beginning of the reign of Mehemet Ali, a far more grievous plague than all the plagues of the Pharaohs, and all the other pests that have afflicted the Egyptians. When we consider how deeply the prosperity of the country, and the civilization of its inhabitants, depends upon the life of an old, though still energetic man, to have bound him, and his heirs, under the suzerainety of the feeble power of the sultan, was, especially on the part of England, an act of the most blundering and unwise policy. Instead of strengthening the power of the sultan, he is greatly enfeebled in his authority, by being harassed with insubordination in Syria, and by having no power whatever in Arabia. Considering all the circumstances which bear upon the condition of our Indian empire,—and considering that the progress of civilization has received an impetus from the rapid intercourse between the nations of the earth, by means of steam power—an impetus to the progress of civilization and freedom, which it will be in vain for all the rulers of the world to attempt to arrest; and considering also the commercial and

financial condition of England, our wise course would have been, not to have sent an expensive armament to carry havoc into, and drive Mehemet Ali out of, Syria, but to have, by conciliatory negotiation, obtained for him (what we know could have been effected, without expense and without bloodshed) a perfect independence of the Porte, as sovereign of Egypt, Syria, and the holy cities. We might at the same time have secured what may be disputed, while he is nominally, by treaty, considered a subject of the sultan. We might, had he been freed from that nominal suzerainety, have negotiated with him, as with other sovereign princes, not only commercially, but politically; and secured, for our mails, merchandize, travellers, and troops, if necessary, a perpetual safe and speedy transit through Egypt to and from our Indian possessions.

CHAPTER III.

ADMINISTRATIVE DIVISIONS OF EGYPT.

Egypt, which formerly was divided into sixteen provinces, is now composed of 24 departments, which, according to the French system of geographical arrangement, are subdivided into arrondissements and cantons.

Lower Egypt.—*Provinces.* I. Kelyoub, divided into the Arrondissements of Kelyoub, Beriah, and Takah, and subdivided into 9 cantons.

II. Sharkieh, divided into the departments of Balbeis and Shabah, and subdivided into the arrondissements of Balbeis, Abouskebir, Kousouv el Negaum, El Hozazieh, Shabeh and Jeh, and subdivided into 20 cantons.

III. Mansourah, divided into the departments of Mitkamr, and Mansourah, and subdivided into the arrondissements of Mitakamr, Sembehouben, Mansourah, and Mehaleh Damaneh, and subdivided into 17 cantons.

IV. Damietta, divided into the arrondissements of Damietta, Fanascour, and Menzaleh, and subdivided into 9 cantons.

V. Garbieh, divided into the departments of Tantah, Meshallah, and Fouah, and subdivided into the arrondissements of Tantah, Jafaryeh, Lefteh, Meshallah el Kebir, Nabarraen, Kafr el Sheikh and Fouah, and subdivided into 28 cantons.

VI. Menouf, divided into the departments of Melig and Menouf, and subdivided into the arrondissements of Subkieh, Menouf, Melig, and Biar, and subdivided into 16 cantons.

VII. Bahireh divided into the departments of Neghileh and Damanhour, and subdivided into the arrondissements of Negileh, Shebrikhis, Damanhour and Ramanieh, and subdivided into 16 cantons.

VIII. Ghizeh, divided into the arrondissements of Ghizeh and Badreshin, and subdivided into 7 cantons.

Upper Egypt.—*Provinces.* I. Atfieh.

II. Benisouef, divided into the departments of Bush and Benisouef.

III. Faioum.

IV. Minieh, divided into the departments of Minieh, and Manfalout, and subdivided into the arrondissements of Eshmouneyn, Minieh, Mellari, and Manfalout.

V. Es Siout. VI. Girgeh. VII. Keneh. VIII. Esneh.

"The highest authority, under the viceroy, is that of his eldest son Ibrahim Pacha, who is commander-in-chief of the army, and next that of Abbas Pacha (Mehemet Ali's grandson—the son of the deceased Toussoun Pacha), president of the council of ministers.

"The following are the departments of administration in Egypt, and the functionaries who are at their head, but modifications are not unfrequent:—Foreign Affairs and Commerce, Boghos Bey; Public Instruction, Public Works, &c., Edhem Bey; Ministry of

Marine, Hassan Bey; Ministry of War, Achmet Pacha; Ministry of Finance, Mahomet Effendi; President of the Council, and Minister for the Interior, Abbas Pacha, Governor of Cairo.

"*Privy Councillors.*—The pacha has privy councillors whom he is in the habit of consulting on state affairs; and there is a yearly assemblage of all the governors of the provinces at Cairo when the principal arrangements are discussed under the presidency of Abbas Pacha—the results of their deliberations being submitted to the approval of the viceroy.

"*Local Administration.*—The superintendent governors have the title of Mudir, and are charged with the dominant authority over the Mamours, who are the rulers of districts, under whom are Cachefs charged with a subordinate rule—they having under them officers with the title of Akem el Khot. The local village chief, who is almost always an Arab, is called the *sheikh-el-belled.* Above him almost all the authorities are of the Osmanli races. In every district a *kholy* is charged with the measurement of the land, and a seraf (Copt), assisted by the civil authority, and *sheikh-el-belled,* receives the contributions; and the *shaked* is a delegate of the cadi for the administration of justice.

"*Government of Cairo.*—The governor of Cairo is Abbas Pacha. The city is divided into eight localities (tumns), each having a Sheikh-tumn—over two Sheikh-tumns is a Sheikh-rubh; over the whole is a Nazir-eshgali-makhrusa (a Turk). Boulaq and Old Cairo have also a sheikh-tumn. They are charged with the collection of the *Ferdeh*—with the furnishing children for the schools, and workpeople for the fabrics. They are all public functionaries, paid by the government. In every quarter of the city there is a Sheikh-khara, who is the subordinate authority, but not paid by the state.

"*Sheikh-el-Belled.*—In the villages the sheikh-el-belled is generally a sort of hereditary authority. Individuals are, however, frequently displaced and replaced by the government.

"*Police.*—The *Kiaya* has charge of the police of Cairo. He is too the criminal judge, and the head of the police. He makes a daily report to the viceroy of all that is passing. A colonel under his authority has immediate charge of the public order of the city; he arrests delinquents and inspects all the public places. He examines weights and measures, and inflicts summary justice on offenders.

"*Government of Alexandria.*—The governor of Alexandria is Moharem Bey, the son-in-law of Mehemet Ali. He is assisted by a deputy-governor, upon whom indeed devolve all the active official functions. The post is one of great importance, from the presence of the fleet—the extent of the arsenal—the warehouses of the government, and the large population, both native and foreign; and from Alexandria being frequently the seat of government, and always the residence of some of the ministers.

"*Administration of Justice.*—The administration of justice in Egypt is more prompt and less capricious than in most Mahomedan countries. Publicity generally accompanies the proceedings of all the courts, and though no doubt there are many cases of corrupt and arbitrary decision, I generally found the tribunals giving just, if often rude and precipitate awards.

"*Mekemeh Court.*—The *Mekemeh* is the highest court, it exercises a sort of religious jurisdiction; it is the tribunal of final appeal, and its code of laws is the Koran; but a code so vague, so little suited to modern society, necessarily leaves a wide latitude to judicial decisions. It has, no doubt, some broad principles of general justice; but for nine-tenths of the cases which come before the Mekemeh, there is no specific provision.

"The *Mekemeh* is also the court for registration of landed, or other real property, and no legal transfer can take place without its authority. In this particular it exercises functions of the very highest extent and importance; and its records are considered unimpeachable evidence.

"*The Koran* is universally referred to as the paramount law in all Mahomedan countries; the law of laws cannot, according to Mahomedan prejudices, be propagated by printing; thus it is unattainable by the greater portion of the community, as a manuscript Koran is always of considerable value. The Koran is not indeed a code offering instructions for the daily business of life; but such as it is, it is almost as inaccessible to the great body of the community as were the Christian scriptures when they existed only in the dead languages. A few more enlightened Mussulmans have made attempts to introduce printed copies of the Koran; but they have failed; the printing is deemed a desecration; a humi-

liation to which the book ought not to be exposed. The reverence for the Koran is so devoted, that any sentence which can find a justification or sanction in the phraseology of the book, is submitted to with the greatest reverence by Mahomedan suitors. Indeed, so blind is the respect for all its teachings, that it would be scarcely possible to introduce a system of philosophical jurisprudence in the East, unless it could be in some manner or other connected with the teachings of the prophet.

"*Salaries to Foreigners.*—The salaries allowed in the pacha's service to Europeans are generally on a liberal scale, considering the cost of the necessaries of life in Egypt. Some in the higher grades receive 21 purses per month, or 1365*l.* per annum; and others from 6 to 12 purses per month, or from 390*l.* to 780*l.*. per annum, independently of rations, which are allowed to all in proportion to their rank. There is a reserved fund of the salary of one day per month, which is deducted for pensions.

"*Despatch of Public Business.*—The public business in Egypt, as generally in the East, is despatched in a divan, presided over by a principal functionary. The correspondence is opened and read, and answers dictated to the surrounding scribes, who are almost invariably Copts. Sometimes there is a discussion, and the opinions of the different members of the divan are consulted; but a predominant weight is invariably given to that of the president. A sort of publicity pervades all these proceedings. There is a perpetual succession of auditors and spectators, many of whom have no interest in the matters under discussion. Even in the great assemblies, where the governors of provinces and the highest authorities meet together for the most important purposes, the place of assemblage is generally a large tent in the open air, and there is nothing to prevent a bystander from entering.

"*Punishments.*—On ordinary occasions, the application of punishment to offenders is immediate; and, though often capricious and uncertain, it may be doubted if it be not in many instances more salutary than the remedial measures employed by more civilized nations in a bad system of prison discipline, transportation and capital punishments. An offender detected in the commission of crime is usually subjected, without delay, to a bastinading more or less severe, according to the award of his judge; whose authority he instantly recognises, and to whose inflictions he unmurmuringly submits. In fact, wherever there is power there is obedience, and obedience to even the injustice which power commits."—*Dr. Bowring's Report.—French Consul's Account, &c.*

CHAPTER IV.

REVENUES OF EGYPT.

In the middle of the 18th century, Mr. Perry in his travels in Egypt, speaking of the revenue, says—

"The revenue of Egypt consists of divers branches. As for example, the tax on lands, (miri,) and on villages; the poll-tax on Christians and Jews; the customs, the cassam, and the canals.

"Every town and village in Egypt pays a yearly tax to the sultan (except the Nile should fail of its usual bounty, in which case they are exempt); and hence chiefly arises the flazné, or annual treasure that is sent to the grand signior. This tax, and all others, amounts to about 6000 purses, each valued at 84*l.* sterling. Two-thirds of this sum is expended in paying at least 12,000 soldiers, the standing militia of Egypt, and for the purchase of oil, corn, and flour annually sent to Mecca; and for clearing canals, &c. 200 purses; besides which, under one pretence or another, they manage to transmit to Constantinople no more than 1200 purses for the grand signior. Besides the said military force, Egypt sends 3000 soldiers (if demanded) every third year, to aid the sultan in his wars."

Under Mehemet Ali the chief source of revenue continues to be the miri, or land-tax, which from the lands belonging chiefly to the pacha is considered more as *rent* than as a tax. It is levied at so much per feddan = about an acre; the maximum not being above 65 piasters per feddan, or a little more than 13*s.*, and the very lowest about half

that amount. The fellahs have been severely flogged when they are in arrears of rent; and when they are greatly in arrears they often abandon their lands. Another source of revenue consists of the *apaltos*, or exclusive rights to sell articles; chiefly hides and skins, salt, wine, spirits, fish, mustard, boots; various apaltos paid by the customs at Cairo, Alexandria, and Damietta, and the *farms* called *Hordes*.

The fiscal system of Egypt is pernicious to the country and to the treasury; and the fraud in collection, and the pillage before the revenue is paid to the government, are the consequences of an unsound system.

A translation of the income and expenditure of Egypt for 1833, is given as follows in Dr. Bowring's Report.

Revenues of Egypt in the year 1249 of the Hegira, A. D. 1833.

	Purses.
Miri, or land-tax	225,000
Ferdeh, or capitation-tax	70,000
Profit on cotton, indigo, flax, opium, sugar, rice, honey, wax, senna, rose-water, linseed, lettuces, and saffron	90,000
Profit on cotton goods	12,000
„ stuffs and silk goods	9,500
Customs at Alexandria and municipal duties	6,000
„ Damietta and Boulaq	7,353
„ Fostat	1,601
Fisheries at Menzaleh	2,750
Corn-tax at Cairo	36,000
Salt, roots, and fish	3,500
Appalte of liquors	2,771
Profit on hides	7,000
Land customs from Syria	200
Lime, plaster, bay-salt, and stones	4,400
Customs at Suez and Cosseir	6,000
Municipal duties of Upper and Lower Egypt	3,300
Taxes on dancing women, musicians, and public singers	900
Municipal duty on cattle	2,000
Appalto on senna	290
Mint	3,000
Duty on date palm trees	4,000
Profit on sale of mats	800
„ natron	600
„ soda at Alexandria	300
Customs at Darouay	270
Sal ammoniac	400
Silver-melting and jewellery	490
Sugar manufactures	1,200
Okels and bazaars of Upper Egypt	400
Karatch duty	640
Octroi of the Faioum and fishery of Lake Mœris	580
Boats on the Nile	2,400
Purses	505,145
£ sterling	2,525,725

Expenses in the year 1249 of the Hegira, A. D. 1833.

	Purses.
Army expenses	120,000
Principal functionaries	39,800
Coptic scribes and other employés	20,000
Pensions to the old Moutzelims	3,500
Expenses of the caravan of pilgrims	2,200
Cost of the manufactures and wages of the workmen, &c.	21,600
Expenses for the construction of manufactories, dikes, bridges, &c.	18,000
Remittance to Constantinople	12,000
Budget of the navy	60,000
Expenses of the viceroy's court	10,000
Rations to public functionaries	5,000
Pay of the irregular Turkish cavalry	6,500
„ Bedouin Arabs	5,000
Pensions to harems	6,000
Articles brought from Europe*	15,000
Boat building at Boulaq	3,500
Military school	1,500
Printing establishments	350
Ship building	15,505
Household expenses of the viceroy	4,000
Material of war	14,000
Forage for camels and beasts of burden	4,000
Secret expenses, missions, presents at Constantinople, &c	16,000
Purchases of horses, camels, &c.	3,000
„ cashmeres, cloths, silk, jewels, &c.	14,000
Purses	420,505
£ sterling	2,102,525

The revenue in 1821* amounted to only 240,000 purses, and the expenditure to about 190,000 purses. The present net revenue of Egypt may be estimated at least at 800,000 purses, or about 4,000,000*l.* sterling, and the expenditure is less than during the occupation of Syria. The pacha's expenditure is, however, enormous in consequence of the public works he has been carrying on, and the various improvements he has been introducing into Egypt. He has no state debt.

* In 1821, 12 piasters were of the same value as 20 in 1833.

The church revenues are independent of the state revenue, the mosques having generally lands belonging to them.

MONIES, WEIGHTS, AND MEASURES.

"*Monies.*—By the late regulations of his highness, the currency of the country is established as follows. The piaster is the standard money. It is in weight and value the 20th part of the dollar of Maria Theresa. The piaster is divided into 40 paras. In silver money there are pieces of 10 paras, 20 paras, 1 piaster, 5 piasters, 10 piasters, and 20 piasters. In copper money-pieces, of 1 para and 5 paras. In gold, there are pieces of 5 piasters, 10 piasters, 20 piasters, and 100 piasters. The value of gold money is equal to that of the Spanish doubloon. This system has been substituted for one which had caused the gradual depreciation of the currency. It permits the circulation of foreign money to be established, and by securing a legal circulation to the Egyptian currency, will extend its use, and facilitate commercial transactions.

"*Weights and Measures.*—The drachm is the standard of weight: 144 drachms make a rottolo, or pound; 400 drachms, an oke; 100 rottoli, a kantar or quintal. The roub is the standard of measure; it is a truncated cone, $5\frac{9}{10}$ inches in height, and its mean diameter $5\frac{3}{4}$ inches. The roub is divided into 4 kaddehs; the kaddehs into 4 roubaas, and the roubaa into 2 karoubias; 24 roubs make 1 ardeb. The confusion which existed in measures of length has induced his highness to adopt the decimal system, of which the French 'metre' is the standard."

CHAPTER V.

AGRICULTURE OF EGYPT.

THE agriculture of the valley of the Nile and the Delta of Egypt has been greatly arrested in its progress by the religion of the Koran, which has been prepared more for warriors and a pastoral people than for the cultivating of the soil. Mehemet Ali, and his son Ibrahim, though both have been brought up as warriors, are ardent farmers. Ibrahim Pacha has directed his special attention to agriculture and the rearing of cattle.

The following statements, relative to the agriculture of Egypt, are condensed from Dr. Bowring's report, Col. Campbell's report, translations from the first volume of Rüppel's Travels to Abyssinia, and various accounts in French, Italian, and German.

"The productive powers of the soil of Egypt are incalculable. Wherever water is scattered, there springs up a rapid and beautiful vegetation; the seed is sown and watered, and scarcely any other care is required for the ordinary fruits of earth. Even in spots adjacent to the desert, and which seem to be taken possession of by the sands, irrigation brings rapidly forth a variety of green herbs and plants. In two years an agreeable garden may be created in the neighbourhood of Alexandria, which is the least promising part of Egypt. Many a spot there is where the tall weeds grow coarsely but splendidly, which would nourish the fairest fruits and richest produce. It is true that much has been done of late years by the means of irrigation. The pacha has introduced more than 40,000 *sakias* or machines for raising water, and wherever there is water there is fertility.

"A perpetual struggle is carried on between the desert and cultivation. In many

parts of the Delta the desert has invaded and mastered the soil. In the neighbourhood of Abouzabel, in the district of Essiout, and some other parts of Egypt, the desert has been vanquished by cultivation. In fact, were there hands to plough, and water to irrigate, it is not easy to calculate what an immense tract of territory might be rescued from waste. Still, to counterbalance, as it were, the productive powers of the soil, other difficulties peculiar to Eastern regions present themselves in Egypt. The hot winds of the desert often destroy the hopes of the husbandman; their intensity and duration become objects to him of the greatest anxiety, for there are seasons in which the *khamsine* (which takes its name from its ordinary duration of 50 days) dries up whole districts, even after irrigation. Added to this, the prospect of large and productive harvests is sometimes cut off by the visitations of locusts, which appear in clouds of myriads, destroying every thing before them.

"In Egypt one necessity absorbs all others; the sunshine to ripen, the fair weather for gathering the fruits of the earth, may always be reckoned on, but, unless the inundations of the Nile irrigate the lands, in vain through immense districts is the seed sown, in vain the husbandman goes forth to harvest. The inundations are very various in their character and consequences: when favourable to the upper regions, they are excessive in the lower; and when they suit the lower districts, they sometimes leave the higher country almost dry.

"When the Nile rises from 23 to 24 coudees, 2,000,000 feddans (of about an English acre each) are cultivated. The miri (land-tax) was, in 1833, established on this basis. But often the Nile does not rise above 19 coudees, and the inundation is not permanent enough to produce the effect desired. Egypt is calculated to have 3,500,000 feddans of cultivable land, if cultivation were pushed to its greatest extent.

"M. Linant, an able French engineer, calculated there are in Lower Egypt 50,000 *sakiahs* for *asnaf*, (cultivation by irrigation,) not to reckon *shadoofs*. Each *sakiah* may be estimated as having three oxen (say 150,000 oxen) and two men (being 100,000 men in all). They work, on an average, 180 days in the year, the oxen costing 1½ piaster each, making 40,500,000 piasters, or 405,000*l.*; the men at 1 piaster, making 18,000,000 piasters. A sakiah costs for erection an average of 1,200 piasters; so that 50,000 represent a capital of 60,000,000 piasters. An ox is worth 900 piasters, which represents a capital of 105,000,000 piasters; thus the interest of 165,000,000 piasters, which must be calculated at 12 per cent per annum, M. Linant estimates in all at 65,520,000 piasters, or 650,000*l.* sterling per year—an enormous outlay for the charges of irrigation alone. This heavy expense, it is imagined, would be got rid of by the *barrage* of the Nile, at a short distance from the fork of the Delta. The outlay on *canals* and *sakiahs* is immensely great; 20,000 purses, or 100,000*l.* sterling, have been spent in the small canal of Serdawi, which only waters, even with the assistance of sakiahs, 8000 feddans of land.

"*Canals.*—Independently of the Great Mahmoudieeh canal from Alexandria to the Nile, and which serves the purposes of navigation and irrigation, many canals have been constructed under the government of Mehemet Ali. In the Delta, the canal of Tanta, whose mouth is at Shebyn, to the south, and near Safargah, joins a canal at Karr el Sheikh, west of Defyveh; it is 13,500 kassabehs = 54,000 yards long and 4 wide; has four sluices at Vamas, and preserves its waters through the year. There are also the canal of Bouhyeh, 15,500 kassabehs = 62,000 yards long, and 4 wide, on the Damietta branch; that of Bahyreh, 26,000 kassabehs = 104,000 yards long and 5 wide, on the Rosetta branch of the Nile.

"*Wells.*—Beyond the valley of the Nile wells have been completed for the supply of water. Two English engineers repaired or excavated, in 1831 and 1832, a considerable number of wells. There are eight wells between Keneh and Kosseir, four of which have been put into a good condition.

"*Distribution of Produce.*—In the distribution of agricultural productions the government generally takes the initiative, by determining what quantity of a particular article shall be cultivated in a given district, and at a price fixed upon before the time of delivery. By this arrangement most of the produce of the land comes into the hands of the government on terms determined by itself; and, in fact, the government, considering itself possessed of the fee simple of the lands, looks upon the fellahs as labourers under its direction, who may abandon, as indeed they frequently do, the lands whenever the conditions of cultivation are not satisfactory to them. When the fellah is poor, the prices paid by the government scarcely allow him to exist; but when the holder of the lands has capital for

seed, and can afford to wait for the returns, the prices allowed by the government will probably give from 15 to 20 per cent on the outlay of capital. In bad and steril years the government furnishes to the fellah his seed. Certain quantities are placed for this purpose in the hands of the authorities, who distribute them among the poorer peasants, according to the quantity of land they hold. They repay the advances with interest after the harvest. When the produce is large, the fellah usually lays aside a sufficient provision of seed.

"*Forced Cultivation.*—The excuse alleged for forcing a particular cultivation in Egypt is, that the lazy habits of the fellahs would induce them to abandon cultivation altogether, or at all events only to produce the articles necessary for their own consumption, and such as required the smallest application of labour, were not the despotic stimulant applied.

"*Indolence of the Fellahs.*—The indolence of the fellahs may be, to a certain extent, a justification of that direction which the government gives to cultivation, by requiring the production of certain articles in particular localities, not allowing to the peasant or proprietor to decide as to what produce would be most profitable to him.

"*Responsibility of Districts for Taxes.*—Under the present system, a district is responsible *en masse* for the amount of its taxes; so that, if there be any defaulter, the sum of the defalcation must be made up by those who have already paid their own quotas. The justification of the present arrangement is found in the circumstance, that the Sheikhs el Beled, and more powerful landholders, often contrive to ruin the petty cultivator by the unfair distribution of the imposts; and that the only check upon their rapacity is to make the whole of the tax-payers responsible for the whole amount levied on the district.

"*Agricultural Monopolies.*—The monopolies and interferences of the Egyptian government with agriculture have to a great extent grown up under the sanction, and with the encouragement of several of the consuls of Alexandria, who have been often the agents of the pacha; and, while they have represented the different courts, have been carrying on a large and lucrative trade on their own account. Except the consuls-general of England, France, Austria, Russia, and Spain, all the others are said to be merchants who deal largely in the commodities of the country, and whose intercourse with the authorities is more frequently for private than for public objects. The fellah who has sold his produce at the price the government chooses to give, which is always low, is often compelled to buy it again at the price the government chooses to fix, which is invariably high, nor can he always obtain it, offer what he may. By this impoverishment of the fellah, the government is itself a sufferer. The payment of his taxes falls into arrear, his land is neglected, and then abandoned, and the diminished receipts of the treasury are the immediate consequence of the diminished culture of the soil.

"It is impossible to present any thing like a general view of the state of agriculture in Egypt, every district having characteristics of its own. I will mention a few facts, collected in various localities, which may serve to throw some light upon the several topics, by reference to particular cases.

"*The Faioum.*—In the *Faioum*, which was formerly the most richly-cultivated part of Egypt, the desert has made many inroads. The irrigation of this part of the country is provided for, not by wells or *shadoofs*, but by a variety of streams and watercourses, which supply, but insufficiently, the land with humidity. Compared with very remote times, there is little doubt that this portion of the country, so well known as the garden of Egypt, has lost much of its fertility.

"It is estimated that in the Es Siout district the quantity of cultivated land has increased one-fifth since 1830; that the average produce of wheat is from six ardebs (30 bushels) per feddan, to eight ardebs, or 40 bushels. The value of dourah was to wheat in the proportion of 6 to 10, and it frequently gave 12 ardebs (60 bushels) per feddan. In this district it has been found more satisfactory instead of daily wages, to give the fellah a certain proportion of the produce of the soil. The cultivation of indigo has, in some cases, been eminently successful, and has given a return equal to four or five purses (20*l.* to 25*l.* sterling) per feddan. Opium and sugar give also profitable results.

"In the district of *Esneh*, 25,000 feddans of land are in cultivation for the summer crops of dourah and maize, and about 20,000 for the winter crops of wheat and barley. Of these 3000 are irrigated by the inundations of the Nile, and nearly 20,000 by the sakiah or shadoof. A feddan requires the labour of one fellah to irrigate it in summer, and two fellahs

in winter, from the lowness of the water in the Nile. There is a very great difference in the production of the fields which are artificially watered, compared with those irrigated by the Nile. The feddan watered by the shadoof will give from 10 to 12 ardebs, while the produce of those watered by the overflow of the Nile does not exceed 4 or 5 ardebs. The most productive spots are the islands of the Nile, which usually render the maximum of from 10 to 12 ardebs of wheat; but in the mainland the average does not exceed 7 to 8 ardebs. Of barley the produce is from 20 to 24 ardebs the feddan.

"M. Mengin calculates that 1,856,000 feddans were cultivated in 1833.

"In 1835, 2,000,000 of feddans were said to be under culture, paying miri, or land-tax, at the rate of from 24 to 30 rials per feddan; as for Upper Egypt, some lands only pay 16 to 17 rials; 25 rials were calculated as the average, and the receipt, vaguely estimated, will be 90,000,000 rials, = 112,500,000 piasters, or 225,000 purses, = 1,125,000*l.* sterling."

"*Produce of Egypt.*—The produce of Egypt, in 1834, was stated to Dr. Bowring to be as follows:

	Ardebs.		
Wheat	950,000	Sugar	cwt. 32,000
Beans	800,000	Cotton (Egyptian quality)	do. 6,000
Lentils	70,000	Ditto (foreign quality)	do. 200,000
Barley	560,000	Flax	do. 55,000
Maize	160,000	Indigo	okes 77,300
Dourah	850,000	Saffron	cwt. 3,500
Chick peas	50,000	Tobacco	do. 100,000
Lupins	35,000	Hennah	do. 30,000
Helbeh*	110,000	Silk	okes 65,000
		Opium	do. 15,000
Total	3,585,000	Linseed	ardebs 60,000
		Rice	do. 136,000

"Ardebs of Cairo, each = 14 Paris bushels; or, 1,821 hectolitres each. The Damietta ardeb is 225 okes; the oke 400 drachms. The Rosetta ardeb is 155 okes; the oke 2¾ lbs. avoirdupois.

"The quantity of wheat produced in Egypt may be estimated at from 1,000,000 (or 630,000 imperial quarters in an ordinary year) to 2,000,000 of ardebs in a good season.

"In abundant years, wheat has been sold at 25 piasters per ardeb; this is the minimum price; it has been as high as 190 piasters, as was the case in 1838; but notwithstanding the heavy expenses of sowing, labour, and harvesting, it is calculated that the returns for wheat production on capital, are not less on an average than 10 to 20 per cent per annum; and this is considerably increased when the cultivator has camels and oxen of his own.

"*Produce of a Feddan or Acre.*—The following is a pro formâ account of the produce and expenses on a feddan of land sown with wheat:

	Piasters.	Piasters.
"It will give an average of 4 ardebs sold at 50 piasters		= 200
Miri, say maximum 28 rials = piasters	63	
Sowing and cost of labour	20	
Labour for harvest 2 days for 10 labourers = 20 sheaves and straw per 3 ueheba ½ ardeb	12.20	
These labourers also have the right of gleaning after the harvest.		
Transport from the field to the village, 4 days' camel hire at 2½ piasters	10	
Two pair oxen for thrashing, 4 days at 5 piasters	40	
Labourers 4 days at 2 kele, each being 1 ueheba = 4 ueheba or ⅜ of an ardeb	16	
Four days for the keeper at 1 kele	8	
Small charges	4	
		173.20
Profit		26.20

"*Dourah* is produced in considerable quantities in Upper Egypt; its ordinary

* A seed with a somewhat bitter taste, whose flour is mixed with dourah by the fellahs.

price is about 30 or 40 per cent lower than that of wheat. It is more commonly the food of the fellah than any other grain, and is cultivated with much success.

"*Rice* is also an important article; it is principally grown in the lower lands of the Delta. The district around Rosetta produced, formerly, above 110,000 ardebs; but the cultivation had diminished, according to a late return, to about one-tenth part of this amount. It is now understood to be somewhat on the increase.

"*Tobacco* is grown to a considerable extent in Middle Egypt, but the quality is inferior and is used only for the consumption of the country. Syria supplies the greater quantity of the tobacco used by the opulent classes.

"*Cotton* is incomparably the most important product of Egypt. Its introduction is wholly due to the enterprise of Mehemet Ali. The average growth of this article, as regards her relations with foreign countries, may be said to fluctuate from 100,000 to 150,000 bales per year, the bale being about 2 cwt., the price varying from 8 dollars to 20 dollars per quintal.

"Cotton is not willingly cultivated by the fellah, and would probably be scarcely produced at all but through the interference of the pacha. When the grower is rich and influential enough to protect himself against the exaction and the dishonesty of the collectors and other agents of the government, cotton production at the price paid by the pacha is profitable; but when the poor fellah is at the mercy of the officers of the state, his situation is frequently most deplorable, and he is pillaged without mercy; often when the cotton he produces is of superior quality he gets only the ordinary price; he is cheated in weight, and cheated by being kept out of his money; indeed the functionary too often dreams of nothing but to extort from the suffering fellah whatever he can get hold of. Another cause for the unwillingness with which cotton is cultivated is, that it produces only one crop per year, while many other fruits of the soil give two or three harvests.

"The average produce of cotton does not exceed two cantars per feddan, and in many parts not more than one cantar; with proper attention to irrigation, to cultivation, and to gathering the wool, seven or even eight cantars per feddan may frequently be obtained; and five cantars would be a fair average production at a price of 200 piasters per cantar. In Lower Egypt the water-wheel is usually employed in irrigating cotton lands, the fellah having generally oxen for the work; but in Middle and Upper Egypt the water is for the most part raised by hand, employing the simplest of all machines—a pole, at one end of which is suspended a leather bag, which descends to the water, and at the other end a large stone, or a quantity of clay, to balance the weight of water, the pole being suspended on an upright post. Sometimes there are two or three such machines to raise the water from the river to the higher grounds, by a succession of reservoirs. During many months of the year the whole Arab population appears to be engaged in bringing water from the Nile to the adjacent fields.

"Generally speaking, the soil of Egypt is favourable to the cultivation of cotton: a strong soil, retaining its humidity, where the tree can become most robust, and in the neighbourhood of the Nile, is preferred, not subject to the inundations, however. The fellahs place dikes around the plantations to preserve them from the flooding. In winter they are watered every fifteen days. In spring (on account of the heavy dews) generally once only in twelve days. In Lower Egypt the soil is once ploughed; in the Said twice, if the land is light. Furrows are traced at a distance of 1 metr. 25 cent. (50 inches); the depth ploughed is 36 centimetres. The plough is generally, but the hoe is sometimes used. The ox, buffalo, and ass are the auxiliaries. The earth, after being ploughed, is broken and levelled by the hoe; holes are made three to four inches in diameter, in which the seed is placed, two to four grains in every hole, at a depth of two to three inches, the grains having been previously steeped 24 hours in water; they always sow in March and April. The distance of the cotton-trees one from another is about a metre. In the neighbourhood of the towns, the spaces are planted with vegetables, &c. The intention of the fellah is always to sow in straight lines, but he seldom succeeds. Sometimes two or three plants grow up together without any disadvantage. The weeds which spring between the trees, after the inundation, are removed by hand, and at the commencement of winter the plough is employed for the operation in the large plantations, and the hoe in the small ones; this clearing begins when the plant is three metres high. The clearing is beneficial to the soil. On the second year the weeding is accomplished by the plough and hoe. The cotton-tree is

pruned with a sort of hook, so closely, that all the branches are lopped and used as firewood. The fellahs, who have no instrument in Upper Egypt, break off the branches, which does no injury to the tree. The cotton-tree is less closely pruned the first year than the second and third; the tree is much strengthened by pruning. Formerly there were trees half a century old, but it is ascertained that after three years the produce diminishes. Generally speaking, the produce of a tree is from 1 to 1¼ lb. for the first year, 1¼ to 1½ the second and third year; after which the quantity lessens. The cotton harvest begins in July, and finishes in January; when the weather is wet, the harvest ends in December. A labourer can collect from 15 to 18 lbs. of cotton per day; a labourer can cultivate four feddans, each feddan containing 1000 cotton-trees; but for the removing the cotton from the capsules the assistance of children is called in. The cotton is separated by a simple machine, moved by the foot, consisting of two cylinders; a workman can separate from 12 to 15 lbs. per day. When the fellah is a small cultivator, he himself separates the cotton; when a large one, he employs labourers, who are paid five francs for separating a quintal of 120 lbs. Nothing is done for cleansing the cotton after its separation from the husks. It is put into bales in a dirty and peppery state; sometimes a fellah pays attention to the cleanness of his cotton, but rarely. For packing, only the pressure of the foot was employed formerly; of late the American press has been introduced. There are six such presses in Boulaq, each worked by three labourers, who pack 18 to 20 bales per day. The bales are of 100 kilogrammes, 1½ metre high, 1 metre wide; but by the new system, the same weight, 1 metre in height, and 1½ metre of diameter.

"No advances are ordinarily made to the fellah by the pacha; he requires the payment of the miri after the harvest; the fellah is obliged to deliver all his produce to the pacha, who pays the cultivator from 112 to 150 piasters the quintal of 120 lbs., according to the quality, the fellah being required to deliver it in the principal town of the district. He receives a document for the value of the cotton; if he have not paid his contributions, the amount is deducted from them; if he have, he gets his money little by little at the convenience of the director of the district. The price of labour in the Saïd is from 20 to 30 paras a day for field-labour. In Lower Egypt it is 30 to 40. The expense of living is about half the price of labour. There are abundance of fellahs whose expenditure is scarcely ½*d.* per day. The cotton-grounds should be removed from the inundations of the Nile, either by dikes or their elevated position. On the contrary, wheat, pulse, &c., succeed best in the inundated lands. For these the sowing takes place in the month of November, after the retreat of the waters; but of cotton in March or April. There the introduction of cotton has interfered little with the means of producing wheat, &c., but has principally driven maize out of cultivation. The arrangement for cultivation is, that the commanders of the provinces, according to the orders of the pacha, directs the quantity of feddans to be sown with cotton in each village, after an examination of the localities. The head of the villages sub-directs to each fellah the quantity of feddans he is to sow. When produced, the cotton is delivered as above described. There was at first some resistance on the part of the fellahs to cotton cultivation; but as it really interfered little with other produce, they have willingly adopted it, as the pacha has assisted them with wells and water-wheels, which have greatly tempted them. The first price paid by the pacha was 175 piasters; but the reduction of that price has led to a diminished zeal and an increased neglect.

"*Raw Silk* is an object to which some attention has been paid in Egypt, and is likely to become of great importance hereafter. The mulberry-trees sprout in January, and are in full leaf the 10th or 18th of February. There are mulberry plantations at Ouady Somulat, in the provinces of Sharkyeh, Mansourah, Menouf, Garbyeïh, Kaloubeyeh, Damietta, Rosetta, and Ghizeh. There are 3000 feddans of mulberry-trees in Ouady Somulat, and 7000 in the other districts. Three hundred mulberry-trees occupy a feddan, so that there are three millions of trees in all. The produce of silk was, in 1832, 6748 okes.

"Many hundred feddans have been planted with mulberry-trees by Ibrahim Pacha, and its cultivation is still extending; but the Egyptian production is not equal to the Egyptian demand for raw silk, of which considerable quantities are imported from Syria.

"The *Sugar-cane* has of late assumed considerable importance among the agricultural products of Egypt, and its cultivation will no doubt rapidly spread.

"The quantity of land occupied by the cane is 272 feddans, and the number of

labourers employed in harvesting was 750. Their pay was 30 paras = 1⅛*d.* per day. Gathering the cane and making the sugar employs two months. Almost without exception, the labourers mutilated themselves by cutting off the first finger of the right-hand, destroying the right eye, or pulling out the front teeth, in order to avoid the conscription.

"The produce of sugar is about 27½ cantars (each about 100 lbs. avoirdupois) per feddan. The sugar is thrice boiled; the crushing-wheels are moved by oxen, and fill 14 to 16 vessels containing about four cantars altogether in the 24 hours. The works proceed night and day, and when the labourers are weary, and take their rest, they are replaced by others. Most of the pans employed are of coarse earthenware, manufactured on the spot. The canes grow to a great height, and are large in diameter; 15 persons are necessary to supply a mill, and when they have completed their work, they leave off without any reference to the time they have been occupied. Independently of the men, a considerable number of boys and girls are employed, and their wages are from 10 to 25 paras per day, ⅜*d.* to 1½*d.* The government provides bread for them at a price generally somewhat under the price of the market; they were charged, for example, 12 paras = ¾*d.* per oke, instead of 20 = 1¼*d.*, which was the cost from the baker; and at these prices were allowed to purchase an oke per day, the amount of which is deducted from their wages. They would willingly obtain more bread, but the quantity supplied is limited. The sugar is made of different qualities; the finest lump sugar sells for 302 piasters per cantar = 7½*d.* per lb. The sugar-cane is found to exhaust even the rich soil of Egypt; and it was necessary frequently to shift the place of production. The character of the soil, however, and the facilities for irrigation, the very low cost of labour, would seem to point out Egypt as particularly well calculated for sugar production. In these districts, 2*d.* a day may be estimated as the average value of man's daily labour. The adjacency of the plantations to a cheap river communication adds greatly to their profitable character. For sugar, cotton, rum, and indigo, the facilities which Egypt affords are boundless.

"Another return of the produce of sugar-cane cultivation gave, from 152 feddans of land, 4010 cantars of sugar, and 4493 cantars of molasses, being about 26 cantars of sugar, and 29 of molasses per feddan. There is a sugar refinery at Reyremoun; it was established in 1818 by an Englishman, who was succeeded by two Italians. The whole is tolerably well organized. In 1826 the demand was interfered with by large European importations; but the quality has greatly improved. In 1831 the refiners produced 11,000 quintals. The establishment received 3000 quintals of molasses from neighbouring provinces, independently of the molasses produced from the 11,000 quintals manufactured. They buy first quality raw sugar at 60 piasters per quintal, 58 piasters second quality, and 34 to 40 piasters third quality. The first quality refined is called moukarar, and sold at 300 piasters per quintal (of 100 rottoli, the rottolo = 144 drachms); second quality is called kasr, the price 150 piasters.

APPROXIMATE Estimate of the Expenses upon a Feddan of Land devoted to Sugar-cane Cultivation in the Year 1837, furnished by the Nazir of Ibrahim Pacha's Sugar Works.

	Piasters.
Land-tax	106.10
Food for cattle, 360 days	450.00
Pigeon's dung, 15 ardebs, for manure	105.00
Cost of the sugar-cane seed	324.00
50 labourers for clearing the ground	27.20
Rewards to labourers, 7 for 3 days	21.00
Labourers for levelling the ground	3.00
Workmen for raising the water, days 360	270.00
Porters for carrying the seeds	12.20
Eight persons for cleaning the seed	6.00
Twelve persons for spreading the pigeon manure	9.00
Head sower	7.30
Ropes for water-wells	25.00
48 persons for cleaning the cane	36.00
64 persons for attending to the cane	48.00
Boilers and sugar makers	33.30
Carried forward	1484.30

	Piasters.
Brought forward	1484.30
16 porters	12.00
Water-carriers	4.00
Firemen	12.00
Porters for carrying the liquid	80.00
Director of the fire	4.00
Cost of firewood	192.00
Cost of oil for lighting	12.00
Cost of tallow and soap	4.00
Cost for hay for animals employed about the fires	48.00
Payment of janisaries, clerks, &c.	183.00
	2035.30
Expenses of working the sugar	80.00
,, the second process	86.30
Total	2202.00

RESULTS of the Produce of a Feddan in Raw Sugar.

	Piasters.
Value of cantars 12, rotols 40, best sugar	3,120.00
Value of cantars 14, rotols 4, second quality sugar	842.16
Value of cantars 29, rotols 33, ordinary sugar	1,466.26
	5,429.02
Deduct expenses as above	2,202.20
Net proceeds of a Feddan of Land	3,226.22

= 32*l.* sterling.

"*Rum.*—Some progress has been made in the manufacture of rum in the sugar districts possessed by Ibrahim Pacha. The quality is fair, and the pacha has sent to the West Indies, Omer Effendi, an intelligent Mahomedan, to examine into the manufacture of rum, in order to introduce the best methods for its production in Egypt. He has made arrangements with persons thoroughly masters of the subject to quit the British colonies and establish themselves in Egypt. In 1831, 14,000 quintals of molasses were distilled. 1 quintal gives 10 okes of rum of 28 degrees. The cost is 11 piasters for manufacturing: 15 piasters is the first cost of molasses. The rum sold at 182 piasters per quintal of 36 okes; the expenses of management were 20 per cent.

"Many Armenians have been invited from the East Indies to teach the fellahs the best mode of preparing indigo; and, in consequence, indigo-works have been established at Shoubra, Shabyah, in the province of Kaliub, Azazyeh, in the Sharkieh, at Menouf, Ahmoun, Mehalir el Kebir, and Birket el Kosseir. In the Faioum and in Benisouef there are also indigo establishments; they all belong to the government and are each directed by a nazir, who is charged with the payment of the workmen, and with sending the indigo to a general depot in Cairo, where it is sold for the Turkish and European markets: the quantity produced fluctuates much, the estimates varying from 15,000 to 80,000 okes.

"*Opium.*—Armenians were invited from Smyrna some years ago to cultivate opium in Egypt. At the end of October, after the withdrawal of the waters of the Nile, the seed, mixed with a portion of pulverized earth, is sown in a strong soil, in furrows; after 15 days the plant springs up, and in two months has the thickness of a Turkish pipe, and a height of four feet; the stalk is covered with long oval leaves, and the fruit which is greenish, resembles a small orange. Some plants bear four fruits at equal distances; when there is but one, it is invariably at the top. Every morning before sunrise, in its progress to maturity, small incisions are made in the sides of the fruit, from which a white liquor distils almost immediately, which is collected in a vessel; it soon becomes black and thickish, and is rolled into balls, which are covered with the washed leaves of the plant; in this state it is sold. When the seed is sown in non-inundated ground, the sakia or water-wheel is employed, but the produce is less and of inferior quality. The opium-seeds are crushed for lamp oil, and the plant is used for fuel. In 1831, 14,500 okes were produced and sold at 110 piasters per oke.

"*Olives.*—There is not a large extraction of vegetable oils in Egypt; olive plantations are extending, however, considerably; the fruit is large, but not sufficiently unctuous to be very productive. In the Faioum district, however, the olive answers well, and the peasantry willingly engage in its cultivation. In both Upper and Lower Egypt the olive has been extensively introduced. Ibrahim Pacha has planted multitudes of olive-trees, and they have succeeded tolerably well. The quality of the fruit in his plantations is good. The consumption of oil for burning is very great, not only on extraordinary occasions, when illuminations take place on the most extensive scale, but for the ordinary purposes of light.

"*Natron.*—The natron lakes have been of late years worked under the superintendence of M. Baffi, the capital having been furnished by Mr. George Gibarra. M. Baffi had obtained reputation by the introduction of the process for obtaining saltpetre without any other heat than that of the temperature of Egypt. The lakes which furnish the natrum or mineral alkali are at about 12 hours' distance from any inhabited spot, and a succession of experiments have led to a production of a very pure material, which is said to have many advantages over the best potashes. The article known to chemists as carbonate of soda has been purified in the proportion of 90 to 17 of the old natron of commerce.

"*Rosewater.—Faioum* is the land of rose-trees. In May the soil is twice turned up, divided into squares, and slips are then planted in holes at a distance of 2½ feet. The slips are covered with earth, which is kept constantly humid, till the trees appear above ground, when the irrigation is lessened and the trees reach their natural height of about 2½ feet. At the end of December the shoots are cut at the surface of the ground, irrigation being recommenced for 30 to 40 days, being the time necessary for the budding and blowing of the flower. The roses are gathered every morning before sunrise, while covered with dew; they are placed in an alembic ere they dry or heat, and the distillation lasts six hours. The water is white when drawn from the alembic; that offered for sale is generally *yellowed* by a mixture of water from roses which have been infused. A feddan gives from six to seven quintals of roses. In 1832, 800 quintals were collected. By a reduction of 50 per cent from distillation, these 800 quintals give 400, which produced 40,000 rottoli of rose-water. A feddan planted with rose-trees costs 60 piasters for culture and taxes, and gives 3 quintals, which give 300 rottoli, which, at three piasters, produce 900 piasters net. But no person is allowed to distil roses for his own account, and those who cultivate them are obliged to sell them to the government.

"*Otto of Roses* is not manufactured in the Faioum. The consequence of the monopoly is the gradual diminution of rose-trees throughout the district, every person being interested in producing as few as possible.

"*Dates.*—One of the most productive and most extensively cultivated objects of the vegetable kingdom is the date-tree. It is spread over all Egypt, is a source of considerable revenue to the government (1 piaster per tree being generally levied), and administers, both by its fruit, trunk, branches, leaves, and fibres, to the comforts of the natives far more than any other product of the soil. Revenue is collected on about 2,000,000 of date-trees.

"*Madder* is produced in Middle Egypt to some extent for the consumption of the country, principally for dyeing the tarbouche, or skullcaps, which are universally worn. Madder cultivation was introduced in 1825. In 1833 there were 300 feddans in Upper Egypt, and 500 in the Delta and the Kelyoub, devoted to madder roots.

"*Wine.*—Egypt was never celebrated for its wines. A few attempts have been made, principally by Ibrahim Pacha, to introduce the cultivation of the vine; and some tolerably good wine has been made. The white wine resembles Marsala, though it is not equal to it in quality; the red is somewhat similar to the common wine of Spain.

"*Trees.*—The indigenous trees of Egypt are few. The *acacia* (lebbek) has a fine foliage in the time of the inundation. The heart of the trunk, which is black, is employed in wheel-making and sakias: the white part of the trunk easily decays.

"The *sycamore* (gimmis) is knotty and not easily split; it is used much in the construction of sakias. Its fruits grow from the trunk, but do not ripen unless cut.

"The *acacia nilotria* (saat) is used for hedges and enclosures; it is also employed for boat-building on the Nile, for sakias, and for charcoal. In Upper Egypt gum is extracted from this tree. Boats are constructed in Senaar of the saat, which comes down the Nile for sale. Its fruit, called karat, is used for tanning, and it completely impregnates the leather in 40 days; so tanned, the leather resists heat admirably, but not humidity.

"The *etl* is a tree of light wood, which flourishes with so small a quantity of water as to grow on the skirts of the desert. Its appearance resembles the cypress.

"The *nebk* is a tree bearing fruit resembling olives, whose wood is employed for various purposes.

"The *doum* (hyphæne coriacea) is a dichotomous palm; the wood is used for the making of sakias. It is of a fibrous texture, not easily split.

"The *date palm* (phœnix dactilifera, Lin.) It is easily propagated by the off-shoots from the roots: of its leaves, brooms and brushes are made; of the *lif*, by which the branches are bound together, all sorts of cordage; the trunk is employed for house-building and many other purposes; and the fruit, of universal consumption.

"*Orange-trees* are very numerous in the province of Galium, and lemon-trees are common. There are many plum-trees, and some apple and peach trees; large quantities of figs and cacti.

"There are but *few medicinal trees*: the khiar shember is a fruit used for purging.

"*Onions.*—There is a very large production of onions in Egypt, far larger than that of potatoes, which indeed do not succeed well in the rich alluvial soil. The ordinary price of onions is from 4 to 6 piasters per cantar, or about 1*s.* the cwt.

"*Horticulture.*—Much has been done in Egypt for horticultural improvements; many of the gardens are beautiful in appearance, and rich in their productions; the most striking are in the care of Europeans; that of Ibrahim Pacha, in the island of Rhoda, is one of the most attractive. The extent of this garden is about 40 acres. The teak-tree grows in a most flourishing state. In a period of seven years it had reached the height of 25 feet, and was most luxuriant in appearance. As forest trees are almost unknown in Egypt, the timber consumed for ship-building, for domestic and general purposes, being principally imported from Syria, the introduction of the teak is of the highest interest and importance to the country. The bamboo, the yam, the caoutchouc, the ginger, and the arrow-root have also completely succeeded. The custard apple has also been introduced and prospers.

"Ibrahim Pacha has gratuitously distributed seeds and plants and trees from his own garden; but the cases are rare in which any attention has been paid to them by the receivers.

"To the pacha the horticulture of Egypt owes much; not only are his own extensive gardens watched over by intelligent and skilful botanists, but he has sent travelling gardeners to the East Indies and other parts in order to collect specimens of such vegetable productions as are likely to suit the Egyptian soil. Nor is there any unwillingness on his part to incur any expenses for the furtherance of botanical science and for making it instrumental to the general agricultural interests of the country.

"The experiments that have been made in the cultivation of the coffee and tea plants have not been fortunate, and it is to be feared that the soil of Egypt is not friendly to their production. But that the introduction of many important agricultural articles, which have hitherto not been attended to, would add greatly to the resources of Egypt there can be no doubt. The inertness of the fellahs—the unwillingness to try any new produce, however much the cultivation may promise—have been the cause of the scanty number of articles which the Egyptian soil, so rich and exciting, has hitherto nurtured. Nothing but the strong will of the pacha would have led to the growth of such vast supplies of cotton, to the cultivation of opium and indigo, and other objects of European consumption.

"The chief complaint of the fellah is, that the government holds his life, land, and liberty at its pleasure; if the poor fellah does not secrete some of his produce, it sometimes happens that nothing is left him at the conclusion of autumn to maintain himself and family through the winter.

"In the present day the fellah takes land at a certain price, for instance 10 feddans; he is then ordered by the government to sow two of them with indigo, hemp, or cotton, and it takes the produce of the two at its own price: the fellah has to pay a tax in addition, which is about one tenth of his yearly income. A workman in one of the pacha's manufactories has the pay of 33 working days deducted from his annual allowance. The government exacts also the straw, and two pounds of butter per feddan.

"A fellah would rather lose a limb than be taken for a soldier.

"In regard to the extraordinary augmentations in the price of the generality of the produce, it must be understood that all the ground, which was cultivated in the time of the Mamelukes, was, in great part, employed for the production of objects of nourishment—viz., wheat, barley, beans, Indian corn, garden stuffs, &c., the produce of which was immense; and the people were also enabled to rear fowls, sheep, goats, &c., and consequently the prices in comparison with those of the present time were but one-sixth to one-eighth.

"Another part of the land was employed in the cultivation of saffron, which gave from 10,000 to 12,000 quintals per year. From 30,000 to 35,000 quintals of flax, at 30 dollars, were also produced. A sufficient quantity of indigo was also produced for the use of the dyers, as also the cotton necessary for the consumption of the country, likewise a sufficient quantity of tobacco for the fellahs.

"This method of cultivation was in force until the end of the year 1805, when Mehemet Ali became viceroy of Egypt. From that period until the time when the governor established monopolies, the price of every article has gradually increased—but the great

increase of price of all articles has chiefly taken place since the year 1824, at the period when Mehemet Ali established his regular troops, and had to provide for their maintenance, as well as for that of his navy, and of the employés in his different manufactories."

Extracts from a journey into Abyssinia, by E. Rüppel, translated from the German.—"It will, perhaps, be proper to mention a curious fact, which, as concerns the disposition of the Egyptian regency is instructive. In the year 1833 the overflowing of the Nile did not take place, in consequence of which a portion only of the usual harvest was expected. The price of agricultural produce rose considerably; yet, notwithstanding this increase, Mehemet Ali thought fit to sell for exportation 60,000 ardebs of corn, because this speculation offered him a better price (owing to the famine on the coast of the Black Sea), than he could have got in his own country.

"It is not allowed any countryman to leave his native village, or to give up the culture of his land, and to seek his livelihood in towns or elsewhere.

"The agricultural class of the people were by the laws and new regulations of Mehemet Ali reduced to a state of slavery, which is scarcely credible; and I will also add that the present state of artisans and tradespeople in this respect is very pitiful. I must also before all things describe the general industry of the country, which lately received a kind of development, by the manufacturing regulations of Mehemet Ali, and which did not a little help to lead astray the opinion that the Europeans entertained of this man.

"Until the year 1815, Mehemet Ali had only taken a part in the commerce of Egypt by the sale of licences to export several of the products of the country. Thus industry was wholly free from all restriction, particularly as regarded certain branches of some consequence; such as the preparation of wool, linen and woollen stuffs, the fabrication of sugar, dyeing in indigo, the working up of old copper, the preparation of leather and some other manufactures."

The account given by Dr. Rüppel of the agricultural industry of Egypt corresponds nearly with the foregoing statements. But he does not seem to comprehend either the position or the policy of Mehemet Ali.

CHAPTER VI.

MANUFACTURES OF EGYPT.

Egypt is a country scantily supplied with fuel, and, in this, as well as in other respects, it is ill adapted for manufactures. Agriculture is the more natural occupation of the people, yet the pacha, by the illusory counsels of European adventurers, has, for many years, not only persevered in establishing, but in monopolizing numerous fabrics. Of these the manufacture of saltpetre and gunpowder have succeeded the best. The latter, situated at the isle of Rhoda, was placed under the direction of a Frenchman from the gunpowder manufactory of St. Chamond in France. Common pottery is also made in various parts; and smiths' work, and a few other rude handicrafts, are followed by the people. The pacha was fascinated by the flattering theory still cherished by Austria, France,

Russia, and even England, of being independent of every other country, in the case of eventful necessity. He was told, chiefly by those who had served under Napoleon, that England owed her respect and her glory to her manufactures, and to her restrictive system of navigation laws, and high protective and prohibitive duties. He therefore determined on establishing all kinds of fabrics in Egypt. The following account of the manufactures of Egypt is condensed from Colonel Campbell's Report, Dr. Bowring's Report, Rüppel's Travels, and various French consular Reports.

"As soon as Mehemet Ali had obtained possession of Egypt, he made changes in all the branches of the administration, according to new ideas which suggested themselves to him, in consequence of his daily intercourse with Europeans. Channels hitherto unknown to him, were pointed out. The Swedish consul and the French in his service, recommended projects which would tend to free Egypt from being dependent upon foreign industry. Cotton fabrics were consequently established in Cairo, at Boulaq, and in the provinces. The first of these establishments was introduced at Cairo, in the district of Kerum-fitch. Workmen from the manufactories of Florence began to spin silk for the manufacture of velvet, light silks, and other fabrics used by the inhabitants. Soon after the materials for this kind of work were transported into another establishment, and in their place were substituted thread, and other materials for weaving cotton stuffs.

"The machinery for spinning, called in Europe mule-jennies, to the number of 100 were introduced for coarse and fine spinning; in the proportion of *one* for coarse to *nine* for fine spinning, as is the custom in all such manufactories; the first having 200 spindles on a line, and the second 216. To the machines are annexed 370 cards, provided with the corresponding machinery for preparing the cotton before it is spun. The workmen spin upon the mule-jennies about 70 rottoli per diem in the winter, and as much as 100 daily in the summer season. They spin upon the mules during the winter 8 rottoli of Nos. 20 to 40; 5 of Nos. 40 to 60 and 70; in summer the work is increased a third part. The cards give from 15 to 18 rottoli in winter, and 25 in summer. The workman is paid a settled rate of wages; he receives 7 paras a rottolo carded; 4 paras a rottolo of coarse thread spun upon the mules, and 10 paras for a rottolo of fine spun upon the mules for No. 20; 15 paras for No. 30, 20 paras for No. 40; and so on in the same proportion. Besides the spinning-jennies, there are at the manufactory of Kerum-fitch 300 looms for weaving cotton cloth, muslins, and cambric. A workman generally weaves $3\frac{1}{2}$ pikes beladi (lineary measure) to 4 pikes aday in the winter, and 5 pikes in summer. He is usually paid at the rate of 10 paras a pike for cotton cloth, 15 paras for cloth and cambric, and from 20 to 26 for muslins, according to their texture. As soon as these are taken from the looms they are sent to Boulaq, or an establishment called Malta, to be bleached, and afterwards to warehouses, at which they are sold by the director, who has under him a writer, whose office it is to keep the accounts, and a money-changer. The cottons 2 pikes wide, and 32 pikes long, are sold at 60 piasters the piece of the best quality, and 50 piasters when the texture is coarse. The warp of the cotton cloth sold at 60 piasters is No 26, and the woof No. 30. The warp of that sold at 50 piasters is No. 20, and the woof No. 25. A piece of cotton cloth called batiste (cambric muslin) $17\frac{1}{2}$ pikes long, and $1\frac{3}{4}$ pikes broad, is sold at 35 piasters; the warp is No. 35, and the woof is No. 40. Double batistes $32\frac{1}{2}$ pikes long and $1\frac{1}{4}$ pike wide, are sold at 55 piasters wholesale, and 60 retail; the warp being No. 40, and the woof No. 50. The muslins are $1\frac{3}{4}$ pikes wide and 32 pikes long; they are used in making handkerchiefs for Constantinople, where the women wear them on their heads: the warp of these muslins is No. 40, and the woof No. 50.

"Besides spinning-jennies and looms, there are at Kerum-fitch blacksmiths, whitesmiths, turners in iron and wood, joiners who mend machines, and makers of articles relating to machinery. This work was scarcely completed, when there was laid, at Boulaq, the foundations of another much more spacious. Its direction was confided to M. Jumel, who

introduced the cultivation of the cotton-tree. This large establishment afterwards took the name of *Malta* from the number of *Maltese* workmen employed, and now has in use 28 spinning-jennies and 24 carding machines. These machines are like those in the spinning factory at Kerum-fitch. By means of 14 tambours, which receive their motion from a machine furnished with eight oxen, each spinning jenny employs 2 men and 3 children. There are also at *Malta* 200 looms. Cotton thread is made as in the factories; cotton cloth, cambric, and muslin of the same length and breadth. Malta being the only place where there is a bleaching establishment, all kinds of cloth are sent there to undergo the operation of bleaching, which is performed in the following manner. Cottons are bleached by 2 lyes, and then spread on the bleaching-ground. Cambrics are bleached in two different ways; some by oxygenated muriatic acid, and some by lye, exposure, and sulphuric acid. Others again by chloride of lime; the cloth which is to be printed receives a preparation, after having been passed through the muriatic acid to take away the oxygen. The cloths destined for sale are calendered, and passed over a roller, together with cambrics. They print at Malta 800 pieces of calico a month, both from the blocks and the roller. More might be printed if the extent of the bleaching establishment were great enough to admit it. Four others have been established at Chalan, at Chebyn, at Mahal-el-Kebir, and at Mansoura. In general the impressions on the printed calicoes are imperfect, the colours are poor, and do not stand washing sufficiently well. The colours are impressed by a machine and finished by hand.

"Another manufacture, carried on at Malta, consists of printed handkerchiefs, which are much used by the women as a head-tire. For this purpose are employed 400 pieces of muslin a month; each piece 32 pikes long, gives 26 handkerchiefs, which are stamped with various colours. These handkerchiefs, printed from blocks of Brazil wood, are sold for 5 or 6 piasters, according to the delicacy of the design; and those traced by hand, and printed in cochineal, are sold for 16 piasters. Workmen who print handkerchiefs from the block are paid $4\frac{1}{2}$ piasters for half a piece of muslin 13 pikes long, and 5 piasters for the handkerchiefs on which the pattern has been traced by hand.

"The quantity of cotton wasted in spinning a cwt. at Cairo is about a fifth. Besides these manufactories, there are workmen of every profession to repair and put together the machines, &c. destined for the manufactures of Upper and Lower Egypt. In the principal parts Europeans direct the work. There is also a cabinet-maker's shop directed by a Maltese. Franks and some Greeks are occupied in making models there, and articles of upholstery. There are also at Malta two large turners' shops, one having the machinery for turning the cylinders of the spinning-jennies; two wheels for piercing; two saws, one for wood, the other for copper; the other, moved by eight oxen, contains a large grindstone, machines for piercing holes, for cutting screws for large presses, &c.; a martinet, worked by four oxen, which puts in motion eight bellows for forging the larger articles. Besides these, there are about 28 other forges, each worked by three men.

"There are also at Malta shops for engravers on wood, engravers on engraving wheels on rollers for printing calico. These workmen are negroes and Arabs, superintended by Europeans. There are two cylindrical machines, with four large presses for finishing cloth.

"In another part there are tinplate workers and plumbers. The first are charged with making boxes, the others with making pipes to conduct water.

"The furnaces of the foundry are badly placed, and consume too much fuel; the sand is not sufficiently worked, and the meltings are often spoiled by the carelessness of the workmen, who do not dry the moulds sufficiently. There are eight furnaces in constant use. Two Syrians superintend these works, and they have a number of Arabs under them. Here are constructed spinning-jennies, cards, and other articles, for the manufactures of Upper Egypt. Here they also bleach cloth. It is at *Malta* that foreign labour is employed in all branches: there are a director-in-chief and sub-directors: the latter having under their orders the head-workmen and foremen charged with distributing the work.

"A number of Coptic scribes are employed in keeping the accounts; a money-changer receives the funds from the treasury, and pays those who are employed.—

"In a large place, near Malta, cotton is dyed red, a difficult operation, which was first taught the Arabs by a Frenchman, to make up for a debt of a thousand dollars, which he was unable to pay to the government; at present it is not nearly so well done—the colour has

no brilliancy. Cotton dyed in this manner is made into square handkerchiefs, the stuff is coarse, and the colours not fast. There are 40 looms employed in weaving them.

"In the neighbourhood of Malta are two establishments for spinning cotton, called Ibrahim Agha's and Seftych's.

"Near the citadel, in the quarter called Kalieh-el-Kessah, there is a large establishment, which contains many of the same kinds of workshops as in Malta. There are a number of joiners, forgers, file-makers, and turners. The spinning-jennies and the fine carding machines from these workshops are sent to the spinning factories established in the provinces. Not far from Kalieh-el-Kessah is a spinning factory called Zitti Zenab: being situated in the quarter of that name. The cloth from these looms is of the same quality and of the same price as that woven at Malta, where they are sent to be cleaned; the price of hand-work is the same; a workman weaves 3½ pikes a day in winter, and 5 in summer.

"At Kelioub, the chief town in the province of Zelioubeh, are manufactured in a large establishment, spinning-jennies and carding machines for the new factories; for this there are plenty of materials, and a number of workmen, among whom are several Europeans.

"At the village of Chebyn, in the province of Menouf, 70 spinning-jennies and 30 carding machines are collected in a large building. Three machines, of 14 cylinders each, harnessed with eight oxen, put them in motion.

"A building erected at Mahaleh-el-Kebir, contains spinning-jennies and carding machines, which are put in motion by four machines. There are also 200 looms; the quality of the cloth when woven, and the length and breadth of each piece, is the same as in other factories; there are also forges, file-makers, and ironmongers; and spinning machines are made for those factories where the number is not complete.

"At Kephtah, in the province of Gharbyeh, there is a spinning factory, containing spinning-jennies and carding machines. The director receives the necessary materials from the depot of Mahaleh-el-Kebir.

"The spinning factory of Mit Ghamr contains a number of carding machines and spinning-jennies. The number is continually being augmented.

"There is also a spinning factory and depot at Mansoura; four machines put in motion 120 spinning jennies and eighty carding machines; there are 200 looms which weave the cotton spun; there is a foundry, a turner's shop, forges, and workers in iron.

"Damietta has, in a new establishment, several carding and spinning machines.

"The factory of Damanhour contains 100 mules and eighty carding machines.

"At Foua there are seventy-five spinning-jennies and 40 carding machines. On this spot, so favourably situated for communication, the pacha has thought fit to establish a manufactory of caps, separate from the cotton-spinning; these caps are in imitation of those of Tunis, and are as well made, except the colour, which is nearly scarlet, a colour which the orientals do not like so well as deep crimson. The caps are woven of Spanish wool, prepared by Mogrebin workmen, whom the pacha has induced to come from Tunis. These workmen teach the Arabs weaving, fulling, and dyeing.

"At Rousti there is a factory furnished with 150 mules and 80 carding machines, with four machines to put them in motion. Upper Egypt has numerous spinning factories at Benisouef, Es Siout, Samenhour, Minieh, Farshiout, Tanta, Girgeh, Kenneh, Esneh, &c.

"The pacha originally had, from Constantinople, some Armenians capable of making silk and gold and silk stuffs, such as are manufactured in that country and in India. The first trial was successful, the masters instructed pupils; and there were 160 looms for weaving cloths of Beyrout, and thread of gold, and cotton threads. The work is well done, the stuffs are carefully woven, and the patterns are tasteful; the colours are generally brilliant, but not so fast as those of India.

"In 1818 Mehemet Ali Pacha erected at Boulaq an immense building which he destined for the manufacture of woollen cloth. The project was abandoned, and taken up again two years after; workmen from the manufactories of France and Belgium began to make fresh attempts; the death of some and the unwillingness of others put an end to the work and the instruction of pupils; but the pacha, who had just created a standing army, wished the soldiers to wear cloth woven in the country. He again turned his views to the manufacture of cloth; fresh workmen arrived from Languedoc; the work was begun;

wools from the provinces of Minieh, of Fayoum, and of Bahyreh, which are the best in Egypt, were in turn used for making cloth fit for the clothing of the troops. In each department there is a foreman who directs the workmen; who are paid by the job.

"The wool of Egypt is not fit for fine cloth, the nitrous dust with which it is impregnated making it hard and dry. Two-thirds of the wool is wasted before it is fit to weave up, yet it appears that cloth woven from this wool is very suitable to clothe the soldiers, as the fabric is strong, closely woven, and well made.

"There were, according to Col. Campbell, in all the cotton factories 1459 spinning-jennies in use, 1440 for coarse and 1019 for fine spinning; the first gave 14,500 rottoli a day in summer, and 10,150 in winter; the last 13,140 aday in summer, and 8540 in winter. The looms, to the number of 1215, gave in winter 3645 pikes (beladi), and 6075 pikes in summer. This product might be increased at least a fifth if the workmen were better watched and regularly paid; but these workmen, to the number of 31,000, are naturally without pride and of an indolent temper; they do not pay sufficient attention to their work, and if they have subsistence for the day, they are careless about the morrow. This remark applies to other manufactures, silk-making, &c. The cotton cloth is used in the country; the merchants, however, send some into Asia Minor, the Archipelago, and Syria. If it is considered that the government buys cotton wool at a moderate price from the Fellahs; that manual labour is nowhere so cheap as in Egypt; that the making of cotton and cotton cloths are advantageous notwithstanding the keep of 1200 oxen, (there are relays of oxen every two hours; the provender of an ox costs two piasters a-day, including the salary of the men who tend them,) employed in putting the machines in motion; notwithstanding the frequent repairs which the machines require, in consequence of the inequality of motion, and sudden shakes they sometimes receive, for the ox slackens his pace when fatigued, or hastens it when he feels the goad of his conductor; notwithstanding the expenses incurred in an onerous administration, but one which is in fact useless, which complicates the accounts and gives rise to many abuses, yet the profits are absorbed, and even exceeded, by the purchase of all sorts of machines which are brought from Europe at great expense, many parts of which are scattered about in magazines; by an unlimited use of wood, iron, copper, zinc, tin, and coal, and ingredients for dyeing; by the employing so many materials and so large a number of labourers, as are engaged in making new factories—all these accounts show that the manufacturing experiments are not successful."

Instead of forcing manufactures at an enormous expense to the country, the true course for the pacha would have been to have given all possible encouragement to the cultivation of the soil of Lower and Upper Egypt, and of Nubia; and, by a liberal system, created a demand in his own country for the more perfect and useful manufactures of other countries, in exchange for corn, cotton, silk, indigo, olive-oil, and other products, which his fertile territories are capable of yielding in ample quantities for all the purposes of commerce and of revenue.

"The *Egyptian cotton-cloth* is the only article which has injured importation; for it appears that England sends these articles far less in quantity; especially cloths of low quality; and Indian muslins, formerly so much used, are now scarcely at all sent to Egypt since muslins have been woven in the new factories.

"*Council of Public Instruction.*—The council of public instruction superintends all the manufactures of Egypt. To it all questions are referred for decision, and the decision is always tardy, and the absence of practical knowledge frequently injurious. One work is often interrupted by the demand for another, and the want of a proper organization, by which the regular provision of articles should be suited to the demands of the public revenue, is the cause of much confusion and loss.

"The cotton fabrics of the pacha were placed under the control of two Turkish effendis; one had under his charge all the fabrics situated in Lower Egypt,

beginning at Cairo and reaching to Rosetta and Damietta; the other effendi had charge of all fabrics from Cairo upwards; they are paid according to the produce of the fabrics at the rate of $3\frac{3}{4}$ giddets the rottolo upon all numbers of yarn, with an addition of $3\frac{3}{4}$ giddets upon every piece of cotton cloth woven. The consumption of cotton in all these fabrics is on a fair average, 30,000 cantars per annum, and is principally spun into low numbers, from No. 10 to 25. The cotton machines in all, with the exception of some situated in Cairo that are under the direction of Englishmen, were in a most wretched condition. The machinery was originally made by Frenchmen: it is not only on an old and bad principle, but the work has been badly finished; and the little care bestowed upon the machines by the Arab workmen to keep them in repair, and the great want of cleanliness in every department, has rendered them quite unable to produce the finer qualities of yarn, for which the Egyptian cotton is so well adapted. The Arabs, if brought young to the fabrics, are generally found to be of a quick intellect, and easily learn any branch of the trade they are put to.

"*Average Wages.*—34 paras $8\frac{1}{2}$ giddets (= about 2*d.*) is the full amount of all wages and expenses incurred for working one rottolo of twist in the fabrics of his highness.

"About $\frac{2}{3}$ of the twist made in Egypt is woven into cloth in the country, the remaining $\frac{1}{3}$ is exported, and sold to the merchants by the divan, at 15 piasters per oke. Boulaq was for some time directed by five or six Frenchmen from the manufactories of Languedoc. They trained a number of apprentices during four years, so that natives now exercise with considerable dexterity the functions of spinners, weavers, fullers, shearers, and pressers. Some Arabs have also been sent to Elbœuf and Rheims.

"*Tarbouches.*—The manufactory of tarbouches or red caps at Fouah, produces on an average from 10 to 12 dozen per day; but there are the means of making 60 dozen. They are not sold to the public, but only employed for the army. The quality is excellent; equal to those of Tunis, which fetch in the market about 30 piasters each = 6*s.*

"The wool is brought principally from Alicante. The wool is not washed; eight ounces of oil are used per rottolo. The tarbouches are fulled for three days and nights in hot water, and at the end soft soap is introduced; they are dyed with kerms, gall-nuts, and alum, and cost 17 piasters each.

"*Carpets* have been manufactured in Egypt for account of the pacha. The patterns have been received from England, and the directors of the manufactory are young men who have been educated in this country. The cost is considerably above English prices.

"The iron-foundry at Boulaq was placed under the superintendence of an Englishman, who receives 2000 piasters (20*l.* sterling) per month. But there, as in most of the establishments of the pacha, there is a native nazir, who exercises a sort of co-ordinate, or even superior authority, and is charged with the payment of the wages, the keeping the accounts, &c. The system of wages is not regulated by the work done by the workmen, but the different labourers are put on the establishment at certain rates fixed by the nazir or by his subordinates. Emulation is little excited, because superiority is little recompensed. Corporal punishment, and even imprisonment is employed as part of the discipline of the establishment. The wages vary from one to eight piasters per day ($2\frac{1}{2}$*d.* to 1*s.* 8*d.*), but they are by no means apportioned according to the aptitude of the labourers. The place is strewed with work spoiled by bad casting. The waste must be very great where the control is so imperfect. The English workmen generally complain of a want of power to prevent mischief. The building cost 1,500,000 francs = 6000*l.* sterling, for its erection. Besides the English superintendent there were employed five other Englishmen, three Maltese, and 40 Arabs. Attached to the nazir are two Coptic Christians, who have charge of the accounts. They are able to cast 50 cwt. of iron melted per day, employing 50 cwt. of coal. The annual cost is from 10,000 to 11,000 piasters, not reckoning original outlay or interest thereon.

"In the manufacture of arms in the citadel, the daily production averages 24 to 25 muskets, with bayonets, making 625 per month. Cannons, 3 to 4 per month; sabres, 20 per day; knapsacks, 200 to 280 per day.

"There were 420 to 440 workmen employed in the manufacture of muskets; 22 to 23 ditto, cannon; 24 to 25 ditto sabres; 200 ditto, knapsacks and other articles.

"Independently of the manufactures of arms in the citadel of Cairo, there are the

establishments of Houd-el-Marsout in the town of Cairo, and of Boulaq. They can produce without difficulty 1000 muskets per month, which cost on an average 125 piasters (*1l. 5s.*) each.

"The troops are supplied from the arsenal of Cairo with gun-carriages and artillery waggons (about nine of each are made there per month), boxes for ammunition, horse-shoes, lances, sabres, axes, stirrups, buckles, implements for sappers and miners, &c. The number of workmen was 800 when in activity.

"There is also a department for nails, locks, cards, carts, horse-shoes, currycombs, tinplate works, medicine-chests, &c., in which 600 persons are employed. There is a separate nail-making establishment, employing nearly 200 persons, working at 60 forges. There is a department for saddlery, water-sacks, harness, cartouch-boxes, &c., in which 1000 workmen are engaged. About 50 pair of army-boots are made per day by about 40 workmen.

"Every branch has a superintendent, sub-intendent, and other officers, with comptrollers and revisers, who all take military rank.

"The general mode of payment is per piece. I am informed the average of the workmen's daily gain is three piasters,—the minimum one, the maximum six piasters.

"There is also an establishment on the Mokattam mountains, consisting of 200 military and 40 civil artificers, who prepare all sorts of fireworks, cartridges, rockets, projectiles, &c., for government account."

Dr. Rüppel observes, "A very curious, although partial law, intending to test the worth of the result of the manufactures introduced a few years back by Mehemet Ali may be here alluded to. The Egyptian hemp is of excellent quality, but the manner of working it into linen is and always will remain bad. A quantity of this linen so manufactured in the pacha's fabrics, was sent to Leghorn and other European ports for sale, where it was found of so little use that, in the beginning of the year 1834, the raw material from Egypt sold in the first-mentioned place for nearly the same price as the manufactured cloth! The young Egyptians who are bound as apprentices in the pacha's manufactories, and who having acquired under the tuition of European workers great skill, often surpass their masters in cleverness, are compelled to work on account of and for the benefit of the government. One of the regulations concerning them is so tyrannical in its nature, as to authorize these apprentices being sent in companies to the military colonies in distant countries, and there to be employed in such of the government fabrics as happen to be at hand, as for example was the case in Sennaar and Nubia."

TRADE AND NAVIGATION OF EGYPT.

THE author of the *Lex Mercatoria* gives the following account of the trade of Egypt during the beginning and middle of the 18th century.

"The *interior* commerce of Egypt was once very considerable, of which its numerous fairs, that during the whole year were often held, several at a time, in the different provinces of the kingdom, will give the highest idea.

"Egypt being a fertile country, and well perfected in the arts and sciences, a great concourse from all parts flocked to these assemblies.

"The *exterior* commerce of the kingdom did not flourish all at once; it owed its birth to the wants of strangers rather than to those of the Egyptians themselves, and it only became great by degrees. Egypt was, for a long time, shut up within itself. Encompassed by long and toilsome deserts on the East and West, on the South by almost impassable mountains, and, while navigation was so little known, barred by the Mediterranean on the North.

"Egypt then was scarcely known, until the Greeks crossing over to Africa, beheld a nation already polished and a friend to trade, that in time engaged deeply in it, and became famous for its proficiency in the arts and sciences. After Egypt fell under the dominion of the *Mahomedans* all went to decay; the fertility of the country as well as the number of inhabitants diminished, and the people were reduced to extreme misery under their pitiless masters, and from being a nation once so industrious, are now one of the most unpolished and barbarous.

"*Cairo*, the capital of Egypt is seated on the Nile above the seven mouths by which this river discharges itself into the Mediterranean.

"*Alexandria* and *Rosetta*, distant from each other 10 or 12 leagues, and situated at two of the mouths of the Nile, serve for ports to this city, from which they are about 90 leagues distant.

"Although the size of *Grand Cairo* has, perhaps, been exaggerated, yet there is no doubt but it is a place of great trade.

"The famous city of Alexandria is now reduced in point of inhabitants to 3000 or 4000 refugees from the different provinces of Turkey. Rosetta is all newly built, its foundation was not laid much above 100 years ago.

"The trade of Rosetta has been greatly augmented, and this city has now become one of the most important in Egypt, and carries on an extensive trade with the Greek vessels from the Archipelago; but the greatest traffic takes place at Cairo, of which these two cities are but the storehouses, the purchases and sales being for Cairo.

"The goods exported from Egypt are—benzoin, bdellium, gum arabic, gum adraganth, turbith, myrrha, Abissinica, incense in tears, storax, aloes—succotrina and hepatica—sugar, in powder and loaves, sugarcandy, sherbet, in casks, cinnamons from Ceylon, Malabar, &c.; cassia, cocoa, coriander, nutmegs, coffee, myrabolans, chebula, bellerica, citrina, nux vomica, cardamoms, ben, tamarinds, coloquintida, pepper, mace, flax, of all sorts, senna, spikenard, bastard-saffron, cotton, in wool and thread, yellow wax, ginger, rhubarb, elephants' teeth, wool, washed and unwashed, ostrich and heron's feathers, mummy, sal ammoniac, nitre, roche alum, sea-lizards, botargue, mother-of-pearl, blue linens, of several kinds, from several places, mogrebines, muslins, and cambresines. Egypt also produces stuffs, and other commodities of various materials, as of wool, wool and silk mixed, &c., ribbons, handkerchiefs, carpets, and musk.

"There are likewise exported from Cairo and Alexandria a quantity of buffalo, ox, and cow hides in the hair; red and yellow cordovans, shagreen skins, &c.

"They still make in Egypt a large quantity of linens, and stuffs with silk and cotton, silk and gold, and even velvets, though but very few of them are perfectly good.

"The merchandize which Europe sends to Egypt are—agaric, white and yellow arsenic, blacklead, orpiment, antimony, sublimate, quicksilver, vitriol, vermilion, cinnabar, brass wire, tin, Venetian steel, lead, paper, satins, from Florence; cloths of all sorts, cochineal, coral, from Messina; red tartar, rock alum, dyewoods, hardware. A vast quantity of glass beads from Venice are sold at Cairo, and afterwards sent to India and all parts of Africa.

"There is also a considerable trade carried on at Rosetta in white slaves, brought from *Constantinople* and *Satalia*; and in black ones sent to those cities in return. All the eunuchs in the Grand Seignior's palace come from Egypt.

"The trade with the Red Sea is carried on through Suez, a town about 45 leagues from Cairo, and separated by a plain of firm sand, very commodious for carriages. It is from this small town that the European goods carried there by caravans, are at first transported to *Gedda*, a league distant from *Mecca*, and afterwards to Mocha, a city in Arabia, at the entrance of the Straits of *Babelmandel*, where the Red Sea communicates with the Indian Ocean; and at Suez all the returns from India to the Turkish merchants arrive, the staple of which for Egypt is at Mocha, where these merchants have their factors. There is also a very large quantity of rice, flax, sugar, and other commodities of Egyptian growth, sent to Constantinople, which employs upwards of a hundred *Saicks*.

"The trade from Asia is also very great, caravans are continually arriving at Cairo. It is from Arabia that the white balm comes to Cairo, so much valued for preserving the complexion.

The different countries of Africa also contribute greatly to enrich the trade of Egypt. Caravans arrive from Tunis, Algiers, Tripoli, and even the remotest provinces of that quarter of the globe. There are two sorts of merchants who come to Cairo, who must be spoken of; the first are called Croys, living near the isle of *Pheasants*, on the ocean, who come to *Fez* and *Morocco*, and from thence to Cairo, traversing the immense deserts that lie in their way. Their Caravan is from 7 or 8 months on its journey, and touches at Tripoli; it brings gold dust to Cairo, though they take care not to sell it as such, for in doing so they imagine they commit a sin, and therefore sell it for silver, with which they buy

copper and cutlery ware, which they carry back with a certain kind of shells, current in their country for money.

"The second sort are black like the other, and full as singular; they have a curious method of carrying on their traffic, for it is in vain to try to deal with them, even by offering double the value, without using the elephant's pizzle; or, in other words, giving them a good drubbing is the only way of inducing them to bargain, and therefore the brokers of the country, knowing the manners and customs of these gentry, do not fail to serve them according to their own fashion, and always begin by dealing them blows very liberally; after which these negroes are quite *contented*, and settle matters very agreeably and in great good-humour. The Nile conveys to Egypt all that Ethiopia contains which is valuable or serviceable; but the commerce is not carried on by Ethiopians themselves as they seldom trade to any distance from their own country. They sell their merchandize to the natives of Nubia, who traversing the frightful mountains which separate them from Egypt, bring their precious effects there.

"A commerce so great must naturally bring great wealth to Egypt. There is not a year that half a million of dollars are not brought from France and Italy. From Africa about one thousand quintals of gold-dust, and from Constantinople and Asia there comes more than one million of dollars to purchase rice, coffee, linens, &c. It must, however, be observed, that a good deal finds its way back, either as tribute to the sultan, or what may be carried off when the bashaw and his dependants leave the government. The natives, and even the Turks, are so apprehensive of being stripped, that they generally bury their money, by which it is useless to trade and often lost.

"The inland trade of Egypt lies within a small compass. Upper Egypt supplies the lower with corn and dates, as the Delta does the upper with linen, rice, &c., and Cairo supplies it with all sorts of goods imported from without, as Upper Egypt has now no communication with the Red Sea, or any other part, but through it. Before people found their way to India by sea, Cairo was the grand emporium for all Persian and Indian goods.

"They disembarked their goods at Cossur, on the Red Sea, and from thence carried them, in four days, by land to *Kenne* upon the Nile."

The statements and returns which follow, present the best accounts we can obtain of the present trade and navigation of Egypt.

"In 1823, the amount of imports from Europe was 2,888,552 Spanish dollars, of which only 131,222 were from England, 300,157 from the Adriatic, 504,690 from Turkey in Europe, but the largest amount was from Leghorn—namely, 769,801 dollars. The exports to Europe of the same year amounted to Spanish dollars 5,518,870, of which 186,439 to Great Britain, 593,286 to Marseille, 736,721 to Syria, 949,520 to Leghorn, but the highest amount was 1,252,676 to Constantinople. The total amount of exports to the whole world was 7,276,000 dollars, and of imports 3,282,450 dollars.

IMPORTS and Exports of Egypt in 1824.

Mr. Consul Thurburn's Report on Egyptian Trade in 1838.—"The trade of Egypt, since my acquaintance with this country, has experienced very great fluctuations, which have proceeded partly from political causes and partly from the internal regulations of the local government. These changes, however, cannot be said to have produced any sensible effect on the numbers of the population.

"During the war which succeeded the French revolution, a few articles of the produce of India were imported through Egypt for the supply of the Levant; and the gums and drugs of the countries bordering on the Red Sea, as well as the coffee of Mocha, were brought in considerable quantities by the same channel and transmitted for Smyrna and the Mediterranean ports, where they were prepared for the northern markets, an operation which, in latter times, has also been performed in Egypt. But with the exception of gum arabic from Semaar, which is brought into Egypt on account of government, the exportation of the produce of the interior of Africa has, for some years past, greatly diminished, owing chiefly to the heavy duties to which it is subjected on importation into the dominions of the viceroy, or the low price offered for such articles as are monopolized by the government, and the greater facilities afforded for their conveyance by the Cape of Good Hope.

"From the same causes, the trade in coffee from Mocha has been almost entirely lost to Egypt, as well as that in drugs, ivory, gold-dust, &c., from the interior of Africa, which was formerly one of the most important branches of Egyptian commerce, as much on account of the valuable commodities brought by those caravans, as of the articles of European produce and manufacture taken by them in exchange. The impediments which the commercial intercourse with the interior of Africa experienced in Egypt, have forced it into other channels, and the African traders now find it for their interest to carry their goods to the Barbary States, and even to the distant port of Zanzebar and other possessions of the south-west coast of Africa, subject to the Imaum of Muscat, who has of late held out great encouragement to commerce in that quarter.

"These fluctuations, by decreasing the transit trade, have tended very materially to diminish the importations from Europe in general; and the removal of the existing restrictions would have the most beneficial effect in improving both the internal trade of Egypt and its foreign relations. The importation of foreign coffee, which had hitherto been excluded with a view to favour the consumption of Mocha coffee, has within the last twelve months, been permitted by a firman from the sultan; a circumstance which may be favourable to the importation of West India coffee, should the high duties on the produce of Mocha be still kept up in the Red Sea.

"The profits arising from the sale of these new productions on the part of government not being for the benefit of the grower, who receives for them what the public functionaries consider an equitable price, but which is not always a remunerating one, from the defective mode of payment adopted, the advantages resulting from this extended cultivation are not apparent among the agricultural population in an increased demand for foreign articles of comfort or luxury. A considerable portion of the exports of Egypt has hitherto been repaid from Europe in warlike stores, timber, and other commodities consumed by the government, whose wants are, however, of a temporary nature, and unconnected with the causes affecting the internal consumption of the country.

"The great reductions, since the general peace, in the prices of European manufactures, but more especially in those of cotton, during the last fifteen years, has done more than any internal commercial amelioration to extend their consumption among the natives of all classes; and there is reason to believe that this increase would be progressive, were the cultivators admitted to a less restricted participation in the profits on the produce of the country, when exported.

"From my own experience of the Arab character, such as it exists at present, I must confess that there is some truth in the opinion that the Egyptian peasant, if left to the free exercise of his own will, would confine himself to the wants of the moment, and long continue to direct his attention to the cultivation of those articles only which are produced with the least labour and outlay of capital; very few of them having sufficient pecuniary means to engage in agricultural undertakings, however profitable, that are attended with a considerable disbursement of money and tardy returns; nor could Europeans embark in such operations without being protected by stipulations, which are not at present contemplated in their treaties with the Porte.

"If means could be devised for affording security to foreign capital, whether employed in agriculture or in advances to the cultivators on expected crops (as is practised in Sicily and other countries), the pacha would, no doubt, find it ultimately to his own advantage to relinquish his system of monopoly, and substitute for it a permanent per-centage duty in lieu of all other contributions, which might be levied at the port of shipment, without the intervention of those complicated and expensive administrations which are required to support the present system.

"For some years subsequent to the peace of 1815, Egypt supplied Trieste, Leghorn, Genoa, Malta, and the ports of Spain and the Mediterranean, with large quantities of wheat, barley, and pulse. During the last fourteen or fifteen years, the trade with Spain has entirely ceased, in consequence of the heavy duties imposed on foreign grains in that country, and the impulse thereby given to cultivation at home, and the encouragement afforded by the Viceroy of Egypt to the growth of cotton, in preference to other agricultural produce, has gradually diminished the export of corn to all the countries that formerly received supplies from hence. The cultivation of *flax* has suffered from the same cause, and though 50,000 to 60,000 quarters of linseed have been exported from Egypt in former years, the quantity has fallen off gradually, and for six or seven years not a single cargo was exported till last year, during which the shipments, including the stock still on hand, may be estimated at about 10,000 quarters.

"The exportation of *linseed* has, however, been lessened by the removal of some of the restrictions on crushing the seed in the country for oil, as the cultivators find it more for their interest to crush the seed than to sell it to government.

"*Rice and safflower* (not saffron) have for many years been exported from Egypt, the former almost exclusively to Turkey, in consequence of the preference given in the markets of Europe to the rice of Italy and America, on account of its superior cleanness. The *tobacco* grown in Egypt is of very inferior quality, and its use is confined to the labouring classes among the natives. Upper Egypt possesses great capabilities for the production of *sugar;* but the want of capital required for working the plantations, and the little inducement held out by government, have now limited the supply to a small *portion* of the internal consumption. Neither *silk* nor *rum* can yet be said to figure among the exports of the country. What little silk is produced is worked up in the native manufactories, and the distillation of rum is yet in its infancy.

"Of *opium*, the small quantities hitherto exported have been found so imperfect as to be almost unsaleable in China, the country where the article is consumed on the largest scale; but, under an improved system of culture, it may, hereafter, become of considerable importance. The last crop of *opium* consisted of about 22,000 lbs. English.

"Indigo was produced by the Egyptian peasants at a very remote period, and was employed by them in dyeing the stuffs of the country, but had never been adapted for the European markets till the viceroy brought from Bengal some Armenians acquainted with the management of the indigo plant in that quarter.

"*Short staple cotton* was, also, for many years one of the products of Egypt, but has become almost extinct since the introduction of the *long staple cotton*, to which the name of Mahò

was given, in consequence of the plant having first been discovered in the garden of Mahò Bey, at Cairo, where it had probably been introduced, during the French invasion, from the island of Bourbon. The growth of this article may be carried considerably beyond its present extent in Egypt; and, though the markets of Europe have not of late held out the same inducement as for some years past, still, from the lowness of the price of labour, it may, no doubt, under a proper system of administration, be cultivated with advantage in this country.

"The export trade of Alexandria with Europe, is conveyed almost exclusively in European bottoms. That of Damietta (with the exception of rice shipped to Constantinople) is confined to the coast of Syria and the neighbouring islands, and is carried on by country vessels belonging to *native* Mahometans and Christian merchants.

"The mercantile shipping belonging to the port of Alexandria, consists at present of 16 vessels from 100 to 300 tons, with crews composed of 9 to 18 men.

"The pacha has also allotted a frigate, and five disarmed ships of 400 to 600 tons, with 18 or 20 transports of smaller burden, for the accommodation of trade with Syria, Candia, and the neighbouring ports.

"The principal articles of export being sold by government, are disposed of by public auction at irregular periods, and paid for in ready money. Those of import are seldom sold for cash, but generally at a credit of two to four months.

"The *excise duties* now levied on wines and spirits, which come under the denomination of prohibited articles, are as follow:

"French brandy, gin, and rum—3 piasters per gallon, and 20 paras additional for retailing.

"Spirits of wine and other spirits; $2\frac{1}{4}$ piasters per oke, including retail duty.

"Common wine; 4 paras per oke, and 12 paras additional for retailing.

"Marsala wine, &c.; 6 paras per oke, including retail duty.

"Superior wines in bottle; 4 paras per bottle, including retail duty.

"The interest of money varies from 10 to 18 per cent, according to the state of credit and the wants of commerce.

"The Mahometan law does not sanction the charge of interest, but the viceroy allows 6 per cent to those European houses which are under advances to him.

"I beg to refer you to the annexed prices current for the prices of articles of general consumption.

"The food of the more opulent classes of the native population, consists of wheaten bread, beef, buffalo-flesh, mutton, fish, poultry (though animal food is consumed by them in smaller proportions than by the generality of Europeans), butter, olive oil, rice, pulse, vegetables, dates, and other fruits.

"The labouring classes consume very little animal food, with the exception, occasionally, of salt fish cured in the country; they live chiefly on beans, lentiles, and other pulse, salted olives, vegetables, dates, water melons (in summer), rice very seldom; their bread is made of barley or Indian corn flour; and in cooking they employ linseed, sesame, and other inferior oils

"The summer dress of the Egyptian peasantry is made of coarse cotton or linen, wove in the country, and sometimes dyed blue; in winter they wear a coarse woollen stuff of domestic manufacture.

"About 10 years ago, a tribunal was formed by the pacha for trying commercial causes between foreigners and natives, in which the latter are defendants: the court is composed of eight judges, two of whom are Europeans, two Levantine Christians, and four Mahometans. The natives are also obliged to have recourse to this tribunal for the settlement of their commercial differences; but the Mekemeh is the superior court in civil causes."

STATEMENT of the Export of Cotton from Egypt, between the Years 1822 and 1837, inclusive.

The number of vessels arriving in 1826 was 698, the whole number from Great Britain was only 13; the departures were 678, those for Great Britain were but 25. In 1837, of 523 vessels that arrived, 49 were from British ports; and of 379 that departed, 33 were bound for Great Britain. In 1826, 19 cargoes were shipped for Liverpool; in 1837, 32 cargoes. The great decline is to be found in the Turkish trade; for in 1826, 316 vessels arrived from Turkish ports, and 295 departed; while in 1837 only 172 arrived from, and only 153 departed for, ports of the Ottoman empire; a diminution of nearly 50 per cent. A similar decline in the Tuscan trade took place.

The following dues are levied at the town gates of Alexandria for account of government: On every head of oxen intended for slaughter, 74 piasters; on buffaloes 42½ ditto; and on sheep, 3½ ditto.

"Fishermen contribute one-third of all the fish they take.

"Wheat pays a consumption duty of 20 piasters per ardeb. Barley, beans, Indian corn, and other pulse, 15 piasters per ditto.

"Government articles sold at public sale:—Provisions, cotton, Mocha coffee, elephants' teeth, gum arabic, Muscovado sugar, indigo, buffalo-hides, cow-hides, flax, opium, rice, linseed, saffron, saltpetre.

"The ports of *Damietta* and *Rosetta* would, by their position on the two mouths of the Nile, seem to offer great advantages to trade, but the badness of their harbours, and the facility which is now given by the Mahmoudieh canal, which communicates between Alexandria and the Nile at Atfeh, have caused a gradual declension of their trade. That which exists, is mainly with Syria, Cyprus, and Candia. English vessels seldom enter, though now and then a vessel from the Ionian Islands enters Damietta.

		Spanish dollars.		Spanish dollars.
In 1823 the exports at Damietta were		381,170	. . . Imports	867,000
1824	,,	628,500	. . . ,,	822,000
1825	,,	311,800	. . . ,,	246,000

"Rice is the principal article of export, but its cultivation is much on the decline.

"The trade of *Cairo* is much diminished. It has ceased to be a depot, as it formerly was, both for articles of export and import; Alexandria, from the greater facilities which its position offers, has supplanted it in importance, and it is now a great market only for gums and some other secondary articles. The stocks of manufactures which exist are principally for the consumption of the place, the buyers for the interior finding it more advantageous to supply themselves from the warehouses of the importers at Alexandria. There is no English commercial establishment at Cairo.

"*Credit.*—In the Cairo market the nominal period of credit is four months, but it is frequently extended to more than six or eight, the high rate of interest being a perpetual motive to the delay of payments. Acceptances for goods payable at a given epoch are little in use. There are in Cairo about 24 Turkish foreign merchants, 15 European houses, 10 Catholic Greeks, and 6 Schismatic ditto.

"*Egyptian Weights and Measures.*—It is difficult to give any exact standard of Egyptian weights and measures. They not only vary in different parts of the country, but

have been changed by capricious legislation in the same way in which the currency has been at different times altered by firmans from Constantinople.

"The feddan approaches an English acre. The malakha is the distance from one station to another; but gives a very vague idea of space.

"In measures of corn, 4 rubahs = 1 ouebeh; 6 ouebehs = 1 ardeb = about 5 bushels English. 100 ardebs = 63 imperial quarters. The kunkhah, or wheat grain, is about $\frac{3}{4}$ of a grain English; the khebbeh, barley, 1 grain English; the kirat is 3 grains English; the dram = 48 grains; the rottolo = 15 oz. 13 dr. avordupois; the oke = $2\frac{3}{4}$ lbs.; 100 rottoli = 1 cantar = $98\frac{3}{4}$ lbs. English; 100 okes = 275 lbs. avoirdupois.

"The *cloth measure* is the pic; 100 pics = 75 English yards.

"*Money.*—The coins which have been struck at Cairo are—the kirieh of 9 piasters, which weighs $4\frac{1}{2}$ carats, three fine gold, $1\frac{1}{2}$ alloy; the sadyeh, 4 piasters; two carats, two-thirds fine gold, one third alloy. In silver there are piasters and pieces of 20, 10, and 5 paras; the smaller coins are much adulterated. These bear the cipher of the sultan, and the date of Mehemet Ali's accession to the pachalic, viz., 1223 of the Hegira (1808-9).

"*Accounts* are kept in piasters (khirsh Arabic) and paras (fuddah Arabic), but when the amount is large, the term *kis* (or purse) = 500 piasters, or 5*l.* sterling, is used.

"The other currency of the country is the Constantinopolitan kirieh, of 20 piasters, which circulates at $17\frac{1}{2}$ piasters, Spanish doubloons, Venetian sequins, Dutch ducats, Hungarian sequins, Spanish dollars, Imperial dollars, and sovereigns; all of which have a currency equivalent to their standard value.

"The charges on the sales of imports, including freights, vary from 8 to 12 per cent. On exports, the charges of purchase, &c., vary from $5\frac{1}{2}$ to 8 per cent. The import duties are 5 per cent; the export duties 12 per cent; but *Russia* is said to claim by her recent treaty with the Porte, the privilege of only paying in Egypt 3 per cent import and 3 per cent export duty. A *bank* has lately been established with a capital of 700,000 dollars: of which the pacha has invested 400,000 dollars.

"*Quarantine Charges* are, on ships, 5*l.* to 6*l.*; on goods, 4 piasters or $9\frac{3}{4}d.$ per package.

Total	1219	144,451	1118	132,253
Of which the coasting trade consisted of	1548	111,443	967	100,475

The following is the number and tonnage of the French vessels contained in the above account in the direct trade between Alexandria and France:

31 vessels of 6158 tons were entered, and 29 vessels of 5499 tons were cleared.

In the coasting trade 9 vessels of 1556 tons were entered, and 3 vessels of 478 tons were cleared.

The trade of Alexandria in the year 1840, compared with 1839, exhibits a decrease in the tonnage of vessels of 7360 tons or about 2½ per cent, which seems to be in the coasting trade, which in 1839 amounted to 219,000 tons, and in 1840 to only 212,000 tons.

VALUE of Imports into, and of Exports from, the Port of Alexandria, in the Year 1840.

COUNTRIES.	Imports.	Exports.	TOTAL.
	£	£	£
England, Malta, and Ionian Isles	439,576	172,139	611,715

Belgium	7,932	7,956	15,888
Sardinian States	....	6,800	6,800
Total	1,327,396	1,072,033	2,399,429

"The total value of imports and exports in the year 1840, compared with 1839, exhibits a decrease of 626,451*l.*, or more than 26 per cent. The imports of 1840 were less than those of 1839 by 516,964*l.*, or 39 per cent; and the exports by 109,487*l.*, or 10 per cent.

"This decrease is attributable to the political circumstances which occurred in the year 1840.

"The following are the chief articles in which the above decrease is observable:

"In *Imports—coals*, a decrease of 153,200*l.*; *iron, in bars, and iron wire*, 122,920*l.*; *woollen caps and barragans*, 76,240*l.*; *tissues of cotton*, 61,160*l.*; *hardwares*, 58,000*l.*; *wood for building*, 40,840*l.*; *cloths*, 17,760*l.*; *tissues of silk*, 2280*l.*; *glasswares, crystals, and plate glass*, 21,920*l.*; *cochineal*, 15,600*l.*, &c. &c. There is an increase in *arms*, however, of 12,000*l.*

"In *Exports—cottons*, 249,360*l.*; *gums*, 24,000*l.*; and *rice*, 24,000*l.* There is an increase on *corn*, &c., of 166,960*l.*; and on *dates*, of 12,000*l.*

"There are in Alexandria 110 British residents, chiefly connected with trade, and about 700 Ionians and Maltese: the whole population being about 60,000. Of 10 English mercantile houses, 6 were in 1842 engaged chiefly in exporting the pacha's produce and executing his commissions in various countries, and 4 were engaged in importing British manufactures, and exporting produce; and 3 minor firms in general business. There are two Ionian houses: one imports largely British manufactures. The Maltese are chiefly engaged as shopkeepers, clerks, fishermen, &c.

The principal articles composing the above trade were as follow:

Imports.	£	Countries whence imported.	£

By comparing the direct trade between Alexandria and France in the year 1840 with that in 1839, we find a decrease of 16,000*l.* in the value of articles *imported* into Alexandria, and of more than 40,000*l.* in those *exported* from Alexandria. The chief decrease in *imports* has been in *cloths*, where there is a falling off of 14,400*l.* There is also a decrease in *cochineal* of 13,120*l.*; in *hardwares, haberdashery, and cutlery* of 8400*l.*; in *wines and liqueurs* of 6320*l.*; but there is an increase in *earths, hosiery, drugs, furniture, salted provisions*, &c.

In *Exports* from Alexandria there is a decrease of 77,720*l.* on *cotton wool*; and an increase on *nitre* of 16,000*l.*; on *coffee* of 10,000*l.*; on *gums* of 4280*l.*; on *soda and natron* of 2400*l.*; and on *mother-of-pearl* of 2400*l.*

The monopolies have all been abolished, and public sales have been revived.

Prices of the following Articles at Alexandria in January, 1843.

"On comparing the above figures for the years 1841 and 1842, we find that the value of the Imports into Egypt show an increase upon the trade with Turkey of about 25 per cent; with Syria, of upwards of 50 per cent; whilst upon those from Belgium there is an extraordinary addition of 900 per cent. On those from Great Britain, France, and Austria, there is observable but a small increase of value.

"As regards the Exports from Egypt to the above countries, there is a *decreased value* in those sent to Great Britain, of 50 per cent; to the Ionian Islands, of 230 per cent; to France, of 45 per cent; and to Syria, of 36 per cent. Upon those to Austria, there is an *increase* of 68 per cent; whilst the exports to Belgium show an increased value equal to 300 per cent.

CHAPTER VII.

MISCELLANEOUS.

PLAGUE AND QUARANTINES, TRIBUNALS OF COMMERCE, AND EDUCATION.

The Board of Health at Alexandria was originally established by Mehemet Ali; but having little faith himself in its utility, though he paid the expense of its maintenance, he left its management to the European consuls. It has not been in any way efficacious in suppressing or preventing the pest, and the statements made in a former part of this work on the quarantines of the Mediterranean, include much that apply to the Lazarets of Egypt. All the reports given by the Board of Health at Alexandria on the pest in Egypt and Syria, supply abundant proof that quarantines never have prevented the annual visitation of plague in Egypt.

A Tribunal of Commerce was established at Cairo in 1826, invested with authority from the viceroy to settle all commercial disputes between rayahs (native Christians) and between rayahs and Europeans, Europeans being plaintiffs. It examines all questions of disputed accounts, even those of debtors to the government. The members of the tribunal are chosen from among the different nations who are settled in Egypt; there are two Turkish merchants, three Egyptians, two Mogrebis, two Greek Levantines, two Schismatic Greeks, two Armenians, two Jews. A Turkish merchant presides. It holds its sittings three times a week for the despatch of business. The president has the right to arrest and imprison an insolvent debtor. There is a similar tribunal at Alexandria. British subjects are under the control of English laws, administered by the consuls, who are, in the Ottoman empire, vested with very extraordinary powers.

Corporations.—There exist in Cairo no less than 164 guilds or corporations who associate for the purpose of protecting or promoting the different trades which they represent. Every corporation has a sheikh or head, to whom the affairs of the body are referred, and who is invested with a certain jurisdiction over its members, having the power to inflict punishment for misdemeanors. There is a sheikh of the sheikhs, who purchases his situation from the government, and who exercises an authority over the whole. The text in the Koran which says, "See how we have established ranks amongst men; in the future life, ranks will be much more distinct, much more glorious,"—is constantly referred to by the Mussulmans as an authority for the organization of their various corporations, and serves to give them a certain religious character in the eyes of the people. In the Egyptian corporations, the sheikh becomes responsible for the payment

of the tribute or poll-tax of all the members of the corporation, who are thus released from individual responsibility to the government, and protected from the exaction to which they would otherwise be exposed, from the rapacity of the public functionaries. In the same view, the different corporations have associated themselves with the religious rights and ceremonies of the country, taking part in all the great processions, such as the departure of the caravans for the holy cities, so that opinion throws round the corporations a considerable amount of protection. The government has by this organization a means of action, through the sheikhs, over large bodies of individuals. In cases of complaint against an artisan, or any other individual belonging to a corporation, the simplest way of obtaining redress is by application to the sheikh, whose influence is almost unlimited, and who, on ordinary occasions, willingly interposes to obtain redress for any wrongs that may have been done. Domestic servants, water-carriers, donkey-drivers, and people exercising the very lowest and meanest functions, are members of some corporation, and recognise the authority of a sheikh. The sheikhs are considered to have a right of access to the pacha: a right they exercise when any matter of great importance occurs. When the members of the corporations assemble to take part in the grand festivals or processions, those of them who are connected with manufactures generally exhibit some remarkable specimen of their art. If a corporation, in consequence of death, the conscription, or any other cause, is reduced to an insufficient number of members, the sheikh is authorized to draft in new members from the fellahs or agriculturists, who are very willing to obtain the protection, and share the immunities of these constituted bodies. The fellahs, indeed, are accustomed to be agriculturists, manufacturers, or navigators in turn, being habitually called on to engage in either employment, according to the want of hands in any one of these occupations, or the redundancy in others. The corporations do not apprentice their members to masters, but allow any man to quit his employer at will. They do not interfere in questions of wages, in disputes between buyers and sellers, but leave all matters of contract perfectly free.

Education.—Mouktar Bey gives the following statistics of education in Egypt:

"It is to his highness that Egypt owes the introduction of elementary and specific education. The following is the general system of public instruction: 50 primary schools—

		Pupils.
3	in Cairo, composed of	600
1	in Alexandria, composed of	200
1	in Es Siout, composed of	200
45	in other towns of the provinces, each composed of 100 pupils	4500
Total 50	primary schools, containing	5500

"In these the pupils are taught reading and writing in the Arabic language, and the four first rules of arithmetic; after studying three years, the pupils are admitted into the two preparatory schools, one of which is established at Abouzabel, and the other at Alexandria.

		Pupils.
1	preparatory school at Abouzabel, composed of . .	1500
1	„ at Alexandria, „ . .	800
Total 2	preparatory schools, containing	2300

"In these are taught the Arabic, Persian, and Turkish languages, all the rules of arithmetic, the elements of geometry and algebra, geography, history, and drawing. The last-mentioned schools in four years prepare their pupils to enter specific schools, of which there are 11:—

		Pupils.	
The school of	Medicine, composed of . .	300	
„	Veterinary „ . . .	120	
„	Cavalry „ . . .	300	also a squadron of trumpeters.
„	Artillery „ . . .	300	
„	Infantry „ . . .	800	
„	Polytechnic „ . . .	225	
„	European Languages, composed of	150	
„	Music „	150	
„	Agriculture „	50	this will be increased.
„	Midwifery „	20	this is to contain 100.
Total 11	special schools, containing	2415	
„ 2	preparatory „	2800	
„ 50	primary „	5500	
Grand Total 63	schools, containing .	10,715	

"All these schools are provided with professors, as many European as natives. The time for study varies from three to five years. The pupils of all these schools are garrisoned, subjected to military discipline, clothed, fed, and paid by his highness.

	1st year.	2d year.	3d year.	4th year.	5th year.
The pupils of the primary schools receive .	8 pias.,	10 pias.,	12 pias.		
The pupils of the preparatory schools receive	15 „	20 „	25 „	30 pias.	
The pupils of the specific schools receive .	40 „	50 „	60 „	70 „	80 pias.

"Besides the schools which belong to the regular system of public instruction, there are regimental schools established for the soldiers. From 4000 to 5000 pupils are educated in the schools of the mosques at Cairo, and about 15,000 in the mosques of other towns in Egypt, and also of villages. Private establishments have also been formed under the administration of his highness, which are directed by Europeans, to spread instruction through all classes, without regard to nation or to opinions.

"*Pauperism.*—The government desiring to put an end to mendicity, has established asylums, where those are provided for who are unfit for work. There is also at Cairo a hospital, which has been long founded, named 'Moristan.' Part of it is open to aliens, and endowed with dotations and revenues. His highness has also lately established at Cairo a hospital for the sick poor; it contains 300 beds for men, and 200 beds for women. To the school of midwifery is also annexed a lying-in hospital, which is attended by the professors and pupils of the school. The assistance granted by his highness to a number of orphan children, the payment of five piasters a month, and a ration of bread, given by his orders to the children of soldiers, the number of public and private works which employ labourers, make pauperism confined to those who prefer begging to work. This consideration is the more striking, that the number of workmen is not sufficient for the works that are undertaken.

"When boys distinguish themselves in the elementary schools, they are sent to the military establishments, as a recompence for good behaviour. The director of the school states that the Arabs are equally intelligent with the Turks.

"The *manège* for horse exercise is an immense building, 40 metres long and 30 wide.

"The school of artillery at Tourah was founded by a Spanish general, Seguera Bey.

The military penal code adopted in Egypt is that of France; but the divans which sit in judgment on military offences are held in public.

"The *infantry school* is supplied from the preparatory schools. The plan of instruction is—1st, elementary fortification, attack and defence of forts; 2d, topography and plan-drawing; 3d, theory and manœuvres of infantry, and exercise of the bayonet; 4th, duties of home service, police, discipline of garrisons, quarters, and campaigns.

"The *cavalry school* receives—1st, officers who are proposed to become military instructors; 2d, pupils from the preparatory schools; 3d, young soldiers intended for non-commissioned officers, brigadiers, and trumpeters. All the regiments of cavalry and horse artillery of the guard and the line are to send an officer to the cavalry school yearly; the squadrons of train artillery, train engineers, and waggon train, an officer every two years: the officer to be a lieutenant, aged at least thirty.

"The pupils from the preparatory schools must have passed the preliminary examinations. The course is of three (or at most four) years; after which they are to be spread among the different regiments.

"The education of the cavalry school is wholly military, comprising cavalry service in campaign, forts, and quarters, riding, foot and horse exercise, rifle and pistol shooting, manœuvres, knowledge or management of horses, and the same system of examination and advancement as in the other special schools.

"There is a trimestrial and annual examination as in the other schools, and a special report of the progress of every pupil to the Public Instruction Council. The artillery school receives its pupils from the polytechnic school. If this establishment do not furnish a sufficient supply, they shall be provided by the school of Tourah. The 300 pupils now in the school of Boulaq are to be formed into four divisions of 75 each, who are to be instructed in—

"1st, Mathematics, *i. e.*, in arithmetic, elementary geometry, algebra, trigonometry, and descriptive geometry; 2d, linear topography and plan-drawing; 3d, theory of infantry and cavalry manœuvres; 4th, theory of artillery manœuvres; 5th, the construction of batteries; 6th, making of fireworks of war; 7th, artillery service in regiments, in the field and in forts; 8th, course of transitory and permanent fortification, attack and defence of fortresses; 9th, bridge-building; 10th, construction of fascines, saucissons, gabbions, clay sand-bags, &c.

"*School of Languages.*—The object of the school of languages is to furnish translators for the different public departments, and monitors for the preparatory schools.

"The pupils are taken from the preparatory schools. The course of instruction is of five years, but may be extended to six. There are five divisions, representing the different years of admission, but the advance from one division to another must be justified by examinations.

"The instruction given is in Arabic, Turkish, French, elementary mathematics, history, and geography. The courses may be modified by the annual meetings of the council of instruction of the school.

"*Medical School.*—The medical school is intended to form officers for the medical department of the army, and for the civil service. The students are furnished by the preparatory schools. The courses last at least five years, but may, on cause shown to the council of instruction to the school, be extended to six years.

"There are five classes, representing the years of study. The courses are: 1st, anatomy; 2nd, physiology; 3d, surgical pathology; 4th, medical pathology; 5th, hygiene; 6th, chemical surgery; 7th, chemical medicine; 8th, pharmaceutical chemistry; 9th, physics; 10th, botany; 11th, zoology; 12th, materia medica; 13th, pharmacy; 14th, widwifery.

"The *school of veterinary medicine* receives its students from the preparatory schools and the school of languages. The studies are for five (or at most six) years, and the divisions representing the annual progress are five.

"The courses are—1st, anatomy; 2d, physiology; 3d, surgical pathology; 4th, medical pathology; 5th, hygiene; 6th, chemical surgery; 7th, chemical medicine; 8th, chemistry; 9th, physics; 10th, botany; 11th, materia medica; 12th, exterior; 13th, farriery. The yearly distribution of studies to be arranged by the council of instruction.

"These regulations are, for the most part, judicious, and well adapted to the Egyptian

people. The machinery, it will be remarked, is wholly coercive, for the system of conscription extends even to education. A certain number of children are required to be furnished by the different districts, and these are sent to the public schools to be fed, clothed, lodged, and instructed at the government expense. It often happens that the number taken exceeds the amount which ought to be exacted. As the wants of the children are provided for, their parents sometimes consent willingly to send them to the schools; though in many cases much repugnance is felt less the children should be detained as soldiers, and be compelled to quit their beloved river and the localities that are so dear to them.

"The schools introduced by the pacha are no doubt an improvement upon those that preceded them. They are far inferior to the well-organized schools of Europe. The great want is of fit teachers and appropriate books, and of a change in the system of discipline, which consists wholly of corporal punishment. The works published by the government press at Boulaq, in Turkish and Arabic, are beyond the reach of the primary schools, being for the most part of a scientific character. Perhaps the error has been a desire rather to introduce superior education for the few, than a universal system of primary instruction for the many; for the want of primary instruction is obvious even in the higher schools, for whose teachings the groundwork is very imperfectly laid.

"Independently of the government schools, it is estimated that about 15,000 children are educated in the different religious establishments of the country, and 5000 more in the capital. Instruction in these is almost confined to reading the Koran and to writing, which is not universally taught. These schools are almost wholly attached to the mosques, and the instructors are the Mahomedan priests. Some paternal education is given, and children are often seen in the houses and in the shops learning verses from the Koran.

"The *schools of the Copts* resemble those of the Mussulmans, with the exception that, instead of the Koran, the psalms in Arabic are almost always the elementary book. The best of the Coptic schools are about on a level with the worst village schools in England, with the exception that as the Copts are almost all intended for scribes, they are universally, or with few exceptions, taught to write. The number of Coptic children in the schools is about 2000.

"In the schools conducted by the ministers of the Church of England Missionary Society, who inhabit Cairo and officiate in the English church there, are instructed a considerable number of the children of Coptic Christian parents, and a few Mahomedans. They are taught to read and write Arabic, the elements of geography, natural history, arithmetic, and the easier rules of geometry. A few of the boys speak English. The missionaries who have had hitherto the direction of these schools are Germans, and they appear to me to discharge their duties with zeal, prudence, and efficacy.

"Attached to, and in some respects connected with, the boys' school of the Church Missionary Society is a girls' school, consisting of about 100 scholars.

"*Female Education.*—Hekekyan Bey, who received his education in England, and is the director of the polytechnic school, has been prominently useful in directing the attention of the pacha to the all-important subject of female education; and, should the attempts which are now making in the higher regions of society descend, as they are likely to do, to the lower, it is impossible to estimate the beneficial results which may be the ultimate consequence of the important step which has been taken.

"*Medical Schools.*—The medical schools in Egypt are peculiarly interesting, because the prejudices which had to be surmounted for their establishment were immense. When it was determined by Mehemet Ali to introduce the military system of Europe into Egypt, and European, principally French, officers were employed to establish the discipline of the West, the necessity of providing medical aid for the troops was strongly pressed on the pacha, and its importance was speedily recognised by him; but the unwillingness of the Mussulmans to touch, and still more to dissect, the dead, seemed to present insuperable difficulties. The steady perseverance of Clot Bey and his assistants vanquished all obstacles: Christian subjects were first used, and the students, after a short time, became so interested, that they would take home portions of the body to study. By these means their friends saw their proceedings with less repugnance; and as recompence and advancement invariably accompanied the successful anatomist, objections gradually ceased, and the youths were even encouraged by their parents to persevere. The spread of medical science

has created a demand for and a confidence in it. At the present moment patients travel hundreds, nay thousands of miles to be operated on. There are many instances of negroes coming from Sennaar, Arabs from Upper Egypt, and Bedouins from remote parts of the desert.

"In the medical schools pregnant women are admitted for delivery; and there is a class of young women who are taught, theoretically and practically, the science of midwifery. They consist not only of Egyptian fellahs from the borders of the Nile, but of Nubian negroes and of girls from Abyssinia. When a sufficient number of females are instructed, it is the intention of the viceroy to distribute them over the country for the purpose of instructing others, and of lending their assistance to those who require it. Some of the more intelligent of the girls had received with their medical some general literary education."

ARMY.—Before the evacuation of Syria, the army of Mehemet Ali consisted of 127,000 men—viz., 97,500 foot, 12,750 horse, 7600 artillery, besides the Bedouins and irregular troops. This large army has been reduced; but it is still maintained on too great and expensive an establishment for the country.

NAVY.—The state of the Egyptian navy is generally satisfactory. The Arabs of the Nile, accustomed from infancy to a life that is almost amphibious, make excellent sailors. The officers of the navy are chiefly Turks; the crews native Egyptians. The vessels are admirably kept, with the greatest neatness and order, the police on board is good; and the appearance of the fleet, except in the costumes of the sailors, much the same as that of an European navy.

Mahommed Bey, who was educated in England, has had the superintendence of all the vessels which have lately been built.

The naval code adopted in Egypt is that of France, whose introduction must be traced to the number of French sea officers who have entered the Egyptian navy, and many of them obtained elevated command.

Very essential services have indeed been rendered to the Egyptian marine by French naval officers, especially by Cerisy Bey, who had for many years charge of the arsenal at Alexandria, and Besson Bey, who was second in command in the fleet.

The sailors are employed indiscriminately for sea or land service. The Egyptian Arabs being accustomed to navigate the Nile favours this arrangement.

"The *arsenal*, or more properly speaking the dock-yard of Alexandria, was commenced in 1827, by M. Cerisy, the French ship-builder, brought from France expressly for the construction of the pacha's navy. At the time M. Cerisy commenced this establishment, the spot it occupies was a piece of waste ground, with the exception of the mosque and one or two small buildings at the entrance. M. Cerisy therefore is entitled to the credit of having formed this establishment; and although it is very far from being perfect, or bearing any comparison with any of the British dock-yards, still considerable praise is due to him for having done what he did in so short a time, and with such means and materials as were afforded him, particularly when it is recollected that the native workmen, at the time of being handed over to him, with but little exception, were common labourers and ploughmen. It must also be stated, that in founding this establishment, he had the assistance of a number of French, Italian, and Maltese artisans, to teach the natives the various branches of trades, without which, of course, it would have been physically impossible to have made any thing like progress; and another great facility given him in the execution of his task was that of having absolute control, and the pacha afforded him every thing he required. If this establishment is viewed as one of permanency, certainly M. Cerisy has committed a great fault in not forming it on a larger scale.

"The dock-yard occupies a site of about sixty acres, possessing a fine frontage on the sea-coast of about a quarter of a mile in length. It possesses slips, adapted for line-of-battle ships and frigates, as well as having room for the construction of smaller craft; the whole close to the water's edge; thus affording good convenience for launching. The slips are composed of masonry; but, in the opinion of the writer, they are made too sloping, thus subjecting the vessel to strain in the operation of launching. At the upper end of the dock-yard a wharf-wall was constructed by M. Cerisy, composed of a series of wooden caissons, built in the inside with stone, and sunk. This wall juts out into the port about 400 feet, and thus forms a wet basin for fitting the ships after their being launched; and this is the only approach they have at present to any thing like a dock or basin. In entering the dock-yard, the first buildings which present themselves are the smithy and a small brass foundry. The first contains about twenty hand-forges, of small size, and are only capable of making small articles; the heavier ones are procured from Cairo and Rosetta, as well as sheathing for coppering the vessels. All the anchors, cables, tanks, and ordnance are procured from England. The brass foundry has about a dozen of small air-furnaces; but these are competent to make such articles as are required of that material.

"There is also a turnery, with about fifteen or twenty lathes, part of which are driven by two oxen, and the others by hand; but none of them are competent to do heavy work, the utmost they can compass being a piece of 1 cwt., or a shaft of two to three inches diameter. The establishment contains a very good mast-making shop, joiners' shop, and sail lofts, tolerably well adapted to the work they have to perform; and also sundry magazines and stores for the different articles used in the various departments; and also a cordery of about 600 feet long; but there is hardly any machinery employed in the latter, and the quantity of rope it produces is trifling and of very inferior quality. The seamen's clothes are also made in the establishment, but the shoes and tarbouches are furnished by the fabries of Fouah and Cairo.

"Very few Europeans are now engaged, and although the natives cannot be compared to European workmen, still, considering their education, they do wonders, particularly the ship carpenters, who are the nearest approach to European workmen of any other branch.

"M. Cerisy gave up his appointment as ship-builder and director of the dock-yard in 1835, in consequence of meeting with continued opposition from those under him, to whom, in fact, he had taught all they knew, which was just sufficient to induce them to imagine they were competent to go on by themselves; and, to use his own words, delivered to the writer, 'he had observed the arsenal retrograding during the last year of his being in the service, and therefore he did not wish to remain to see its massacre.'

"After his departure, the ship-building department was managed by a M. Henry, his foreman of shipwrights, who was a very good man in his department, but unfit for the entire direction. This M. Henry returned to France in the beginning of 1837, when he was succeeded by a young Turk, Mahomet Effendi, who was educated in England as a ship-builder in one of the government yards. The control and management of the yard is left to Latif Bey, the intendant-general, who, although not in any way versed in ship-building, being a captain in the pacha's navy, and possessing business capabilities *à la Turc*, seems to keep the establishment in tolerably good order. He has, since his direction, introduced much cleanliness and order in the yard, which is a very unusual quality in a Turk; in fact, the yard is better *in this respect* by far than when M. Cerisy had the management, although there is still much room for improvement, as will be evident to any visiter viewing it. Under all circumstances, however, it is most astonishing that in a country where there exists so much confusion and dilatory habits, that such an establishment should have been created, and by it a powerful fleet in the short space of six years.

"In May, 1835, the pacha decided on having a dry dock, seeing the imperative necessity for it, as many of his ships had been strained and hogged, in heaving them down for repair. A plan and model were submitted to his highness by an old Turk, many years in his service, Shaker Effendi, who had no further knowledge of such matter than having seen such a thing at Constantinople. The model submitted by this professed Turkish engineer consisted of a series of caissons, composed of wood, to be filled with stone, and

sunk in the port, so as to form four main walls, the interior of which was to form the basin. Operations were commenced in the arsenal making the caissons, and as fast as finished sunk in the required spots; but, what will hardly be believed, without ever examining the ground on which they were to lodge. After spending several months, and upwards of 30,000*l.*, the pacha's eyes were opened to the actual state of things, and he became convinced of the utter incapability of Shaker Effendi to perform what he had undertaken, and consequently dismissed him."—*Report by Mr. Galloway.*

"*Barrage of the Nile.*—The barrage intended to regulate the waters of the Nile by a huge dam, with sluices, near the fork of the Delta, was originated by the scientific men of the French expedition. M. Linant, who has had the direction of the work, estimates that it will irrigate 3,800,000 feddans, even in the lowest inundations, and without the aid of machines; and that with the aid of machines a very large quantity in addition, up to a distance of eight leagues above the barrage, would be supplied with water. He represents that it will ameliorate the canal navigation; improve both the Damietta and Rosetta branches of the Nile, give sufficient water to Mahmoudieh canal, and allow the largest vessels to communicate from that canal to the Nile. He reports, that it will enable canals of 3 or 4 metres wide (Nili) to supersede the *seffie* of 8 metres; these latter, under the present state of things, requiring to be cleared every year. He asserts, that it will, at a small charge, enable the government to make the canal of Suez navigable; undoubtedly one of the most important undertakings that can be suggested for the improvement of Egypt, and the commercial interests of mankind. It will give water to the *Kalish* of Cairo all the year round, in supplies as sufficient as are provided by the most favourable inundations. He objects to the present system of irrigation, that the making canals does not raise the level of the water, while every year the canals get more and more filled with mud. He shows, that in the uncertainty of the inundations no calculation can be made as to the probable agricultural produce of the country. He estimates that the work would require five years for its completion, and that the expense would be 7,758,164 dollars, or 310,322 purses, 288 say 1,550,000*l.* sterling.

"On this report orders were given for commencing the stupendous undertaking; a work, if practicable, worthy the land of the pyramids. But it seems to have been entered on without due consideration, and, after a large expenditure, has been abandoned or deferred. Immense masses of materials have been collected. 2,000,000 of stones, &c., covering no less than 2000 acres of good land, which have been thus thrown out of cultivation. A railway has been formed, connecting with the Nile the quarries of the Mokattam mountains, behind Cairo, (out of which the stones of the pyramids were hewn,) in order to furnish stones for the work. Arrangements had been made for a vast supply of forest timber from the woods in the neighbourhood of Scanderoon. A very large body of workmen was collected, consisting, I believe, of 12,000 men.

"When the construction of the barrage was first determined on, the work was pursued with the greatest possible dilligence: 34,000 purses (equal to more than 170,000*l.* sterling) was expended, and very little security obtained for its proper application.

"*Hydraulic Machines.*—So much has the power of the steam-engine for raising water been increased, and such is the economy of fuel introduced of late years (particularly in Cornwall), that it is probable the scheme of the barrage will be superseded by the introduction of less expensive hydraulic machinery. Inquiries are now on foot, and an opinion is gaining ground that the barrage could neither be the most safe nor the least expensive plan of irrigation."

CHAPTER VIII.

NUBIA AND KORDOFAN.

NUBIA, the ancient Ethiopia, is, for a great part, a country of rocks, streams, mountains, and plains. It is supposed to extend over a surface of 350,000 square miles, and the amount of the population is unknown. It is divided into Lower Nubia, through which the Nile flows amidst rocks and mountains, and Upper Nubia which lies chiefly between the triangle formed between the White Nile and the Blue Nile. Divided into Sennaar, Shendy, and Halfah. From Buba, plain of Shendy rich.

When the civilization now in progress advances from Egypt, from the Red Sea, and from the coast south of the straits of Babelmandel, into Nubia, Abyssinia, Shoa, Kordofan, and Darfour, a region capable of providing abundant products will be open to enterprise and commerce. In illustrating the great national advantages of North Eastern and Eastern Africa, and the influence which the policy of Mehemet Ali may have over the destinies of those regions, we have drawn up the following sketches from the travels of Drs. Holroyd and Rüppel, and from manuscript statements and letters sent us by Dr. Beke, who has, during the last three years, been travelling in Egypt, the coasts of the Red Sea, and the interior of Abyssinia and Shoa.

"The parts of Egypt and Soodan which Dr. Holroyd visited are those comprised between Alexandria and Sennaar on the Blue Nile, and the White Nile, as far as Monkara, or Wed Shellaye, and El Obeid, the capital of Kordofan. This latter place is at the extremity of the pacha's dominions in the south-west of Africa. The country of *Nubia*, comprised within the pacha's dominions, is situated 24 deg. N. latitude between Essouan and Wady Halfah, near the second cataract in 22 deg. N. latitude, extending south from Essouan about 150 miles. The inhabitants of Nubia enjoy more privileges and are under less restraint than those of any other place subject to the pacha. It is rare to find here deserted villages; the Fellahs are not often seized for military service because the population is small, and the territory confined to the narrow valley inclosed between the mountainous banks of the Nile, and probably from a fear that those left would betake themselves from the valley of the Nile to the Desert. They are occasionally pressed into the *barks* employed by the government, but this they do not regard as a banishment from their native soil, as circumstances may carry the boats into which they have been pressed to the villages to which they formerly belonged. It does not appear that there has been an increase in the population of Nubia since Mehemet Ali has been Viceroy of Egypt, if, perhaps, we except Derr, the capital, which contains a thriving and increasing population: at the same time the inhabitants have not diminished. The population appears nearly stationary. Derr is the residence of a kaschef, and the pacha has appointed a Nubian, who seems to give general satisfaction; and, though he obeys the orders of the divan with rigour, and governs with discipline, he is not guilty of acts of tyranny and oppression. In Nubia, Mehemet Ali has adopted a better plan of government, by trusting to native sheikhs, rather than placing each village under Turkish kaimakans, or Arab soldiers; a system which, though adapted to the Arabs, is obnoxious to the Nubians. In many places the cultivable land is only a few feet in width, increasing in others to a quarter of a mile. The best land is between

Korosko and Ibreem (the Desert reaching to the edge of the river on the opposite bank), and the islands which are formed by the alluvial soil of the Nile. The *shadoof*, or pole and bucket, is not used for irrigation in Nubia, but as a substitute we find a water-wheel, with buckets for raising the water, of a rude construction, and which requires the draft of two oxen at a time, though six or eight are wanted to relieve those which are fatigued.

"The productions of Nubia are *hennah* grown at Kalabshe, &c., wheat, barley, dhourra, dates, and a little coffee; and a calculation was made by Burckhardt, who is even now tolerably correct, that between Korosko and Ibreem no less than 20,000 date-trees were taxed by the government, the tax upon each of which averages about one piaster. The people do not wish to grow much more grain than is sufficient for their use, and to answer the demands of the pacha. The commerce of Nubia is limited, the inhabitants having recourse to the bazaar of Essouan for commodities which they require, or trusting to the merchants casually passing to the Belled of Soodan, with whom they barter dhourra and dates for articles brought from Cairo or Upper Egypt. The Nubians are a fine strong hard-working, industrious people; they possess a considerable share of pride and natural courage, and condemn most violently the unnatural propensities which are common among the Turks and many Arabs. They are independent in their feelings, and though they have suffered from injustice practised upon them by the Turks, they still retain sufficient spirit to resist wanton attacks. The women are remarkable for their chastity, and their feelings are social and domestic. The men are generally dressed in a large shirt of blue or white calico, and shoes or sandals. Some allow the hair to grow, whilst others shave the head and wear the tagheea and turban. The women dress in cotton dresses, or content themselves by arranging a fold of cotton round their bodies and bringing it over their heads. They devote themselves more to agriculture than manufactures. The women spin a little cotton yarn, and make mats, baskets, and plates of the leaves of the *doum* trees. There are very few schools among them, and a man who is able to read and write is accounted a person of consideration. The munificence of the pacha in establishing public schools in Egypt is not yet extended to Nubia. The seminaries for instruction are private. If the Nubians were well governed they would be an improving, as they are a high-spirited people; but Turkish misrule has had the effect of eradicating, in a great measure, those good qualities for which they were formerly renowned.

"The Belled of Soodan.—The country to which this name has been given by the Turks is that situated to the south of Wady Halfah, commencing at Wady Abka, extending eastward to the Red Sea, southward to Abyssinia and the parts beyond Gebel Fungi, Denka, and Gebel Nuba, and westward as far as Bornu; and thus it appears they include many countries under this denomination which are not subject to Mehemet Ali Pacha. From Wady Halfah the population is very scanty as far as Semneh, only a few cottages being occasionally noticed. At Semneh there was formerly a small village, but it has been lately abandoned, and the only habitations at present are those of the sheikh and kaimakan. The villages at Tanjoor, Okme, and Dal are also decreasing daily in size and population. Sak-i-yet el Abt is a hamlet which has sprung up within the last fifteen years, in consequence of the Nile having deposited sufficient soil for the employment of five irrigating wheels. Nearly opposite Sak-i-yet el Abt is Aamara, a village surrounded by a large plain; the former exhibiting many ruined huts, and the latter much land out of cultivation. The island of Sy commences a little to the south of Sak-i-yet el Abt, is about ten miles in length, of an elliptical form, and about a mile and a half in width at its broadest part; the population here has diminished considerably. Here are several ruined villages, and much land of the richest quality out of cultivation. It is asserted by Burckhardt, that in his time a large quantity of excellent wheat was produced on the island. The cultivable land on the west bank, which is scarcely more than a few feet in width, increases at Derr Hammeed; here grain and cotton are grown, but the principal article of commerce is dates. The dates of Derr Hammeed have long been celebrated for their large size and fine flavour, and the groves are continued with little intermission along the banks of the Nile to Dongola. In this line of route the dates in greatest request are those in the southern part of Sukkot, and through the whole province of Mahass; from hence they are exported to Dongola, Meroe, Berber, Shendy, Cartoom, and Kordofan. Koyeh is pleasantly situated at the bend of the river; here senna grows indigenous. Tinareh is a large village, and the population

are in tolerable circumstances, and the land in better order. Goorgote and Koké are villages of considerable size; the inhabitants in tolerable circumstances, and abundance of cotton and grain produced. Here are many merchants, and a caravan leaves Goorgote once or twice a year for Darfoor, from whence it returns with slaves. Koké is the residence of a kaschif, the governor of the Mahass, as Abbah is of the governor of Sukkot and the Batn el Hadjar. At Hannek (the third cataract of the Nile) and at Haffeer are many ruined habitations, and much land untilled. At this latter place there is a large quantity of indigo produced. The bazaar of Haffeer is held on Thursdays; it is large, for the Belled of Soodan, and numerously attended. The things exposed for sale are principally those consumed by the peasants of the country, and very little produce from Egypt or Cairo find its way into this market. All the peasants preferred selling their bahmia, onions, sandstone containing muriate of soda, &c., for dhourra, rather than money. The pacha has here an indigo manufactory. The island of Argo is about thirty miles in length, and six or seven in the broadest part. It is a magnificent island, formed by the rich alluvial deposit of the Nile; it contains several villages; its population has diminished under the Turkish system of government; its productions are grain, cotton, indigo, and a few dates; but, from a deficiency in labour and capital, not more than one-tenth of the land is applied to agricultural purposes, and that portion close to the banks,—for here, in consequence of the absence of canals and periodical rains, the interior is useless. The men are agriculturists, and to many of the houses are attached hand-looms for weaving a coarse cotton cloth, which the inhabitants use for a covering; the best is made in the Mahass, and is called "soap cloth," because the thread is washed with soap before it is wove. The women are employed in spinning cotton yarn; a few of them, and the children, look after the flocks. On the banks of the Nile they breed some cattle, sheep, and goats; but the largest flocks of sheep, goats, and camels are reared by the Bedouins in the desert.

"*New Dongola* is a place of some consideration. It is the seat of an aga who commands the kaschifs from the second cataract to the country of the Monasir Arabs. The town contains a large number of inhabitants, including the military troops and their families. The town has sprung up since Mehemet Ali has subdued the country, and is a thriving place, because all the caravans from Kordofan, and most of those from Kartoom and Sennaar, pass this way, *en route* to Cairo, in preference to traversing the Great Nubian Desert from Aboo Hamed to Korosko. Agriculture is here much neglected; for immediately in the neighbourhood of New Dongola are some thousands of acres uncultivated, in consequence of the want of cattle and population, and the difficulty and expense of irrigation. Here the pacha has an indigo manufactory, from which he derives a considerable revenue, as well as from letting the duties, which are farmed to an aga. The customs are let for a specific time. A duty is exacted of 30 piasters the camel-load upon goods passing through New Dongola, and 15 piasters are levied upon each head of slaves which are brought through on their way to Lower Egypt and Cairo. The bazaar is principally supplied with coarse calicoes, common printed cottons and handkerchiefs, a little rice, sugar and coffee, hardware, shoes, kumaradeen and scents for the women. The trade is carried on by merchants who have purchased their goods at Cairo, and who dispose of them by retail to the owners of the stalls in the bazaar. Butcher's meat is obtained with difficulty; but excellent bread is made by the natives of Cairo. There is also a daily bazaar for sheep, goats, cattle, camels, asses, wood, vegetables, &c. Goods are transported from Wady Halfah to New Dongola by camels, and the merchants most commonly travel on the west bank of the Nile, as they invest money in dates in the Mahass which they may have obtained for articles that they have sold on the road from Cairo, and which yield them a considerable profit higher up the country. The merchants having purchased from the government or soldiers part of the produce of the Gazzua, and the caravans from Kordofan, which pass the Desert of Simrie to Debbah, do not generally leave until the autumn, as they are in a measure indebted to the periodical rains for a supply of water along this line of road.

"After leaving New Dongola the first place of any consideration is *Handak*, formerly a town of some importance, but has been rapidly dwindling into ruins. Much indigo is produced in the neighbourhood, and there is a manufactory. There are also large granaries for wheat, dhourra, and barley, belonging to the government, and a considerable quantity is always housed in these magazines.

"*Old Dongola*, formerly a place of great consideration, is situated on the east bank of the Nile; from the prevalence of northerly winds the sand has been carried from the desert towards the river, so that it has surrounded the houses, and in many of them the inhabitants, from this cause, are obliged to enter through the roof. The town is in ruins, presenting a melancholy spectacle, containing about 300 inhabitants, and appears to have been abandoned, since the trade has been transferred to New Dongola. There is no land capable of cultivation around Old Dongola; and, in fact, almost all the east bank of the river, between the two Dongolas, is useless for agriculture, in consequence of the daily accumulation of sand towards the river; there were some quantities of grain found here in the government shoonahs, the produce of the islands in the vicinity, and part of the land on the opposite bank.

"*Debbah* is only remarkable as being the residence of a kaschif, containing government magazines, and being the point at which caravans start for Kordofan.

"*Ambukol* is situated about a mile from the Nile; the cultivated land extends from the village to the river, but only a small portion is tilled, though much more might be used were the facilities for irrigation increased. A north-easterly wind blows almost universally, and in consequence the government permits the captains of all boats ascending the river to press the men employed at the water-wheels to tow the boats to the next wheel, or until persons are found to relieve them—a system of oppression which falls heavily on the peasantry, as it not unfrequently happens that several boats pass the wheels during the same day.

"Between New Dongola and Ambukol less land is waste on the islands than on the banks; most of them are tolerably well cultivated, and produce abundant crops; the peasantry, however, appear in a state of great poverty. There is a bazaar at Ambukol every Tuesday and Friday; that on the former day is best attended. The principal articles are dhourra, cattle, sheep, goats, asses, butter, grease, and cotton; the latter of excellent quality.

"The inhabitants of Ambukol are good Moslims, and abstain rigidly from the use of ardent spirits, whilst many of the people of New Dongola drink *arrakee* to excess."

The sheikh, Mahomed Sala, with whom Dr. Holroyd lodged whilst at Ambukol, informed him that, "The taxation upon each water-wheel annually is 302 piasters; the expense of erecting a wheel is 180 piasters, exclusive of labour; the number of head of cattle employed at each wheel varies from four to eight, and the price of each head is from 100 to 150 piasters. An average crop of dhourra from one wheel is 40 ardebs; one crop of dhourra is produced during the year. Whether the crop of dhourra is good or bad, two ardebs go to the government in lieu of 30 piasters, and this 30 piasters is deducted from the 302, the tax levied upon each wheel. An ardeb of barley is received by the government instead of 15 piasters, and wheat at the same price. If the farmer grows wheat or barley, he only gives one ardeb to the government, instead of two, as is the case with dhourra. The price of wheat in the bazaar is 50 piasters; dhourra, 30 piasters; barley, 25 piasters. There is no tax upon cotton. Indigo must be sold to the pacha, as he monopolizes the privilege of manufacture. The government pays 12 piasters the cantar for it, as it is pulled out of the ground green, and including the wood. The most profitable thing for the agriculturist to grow is dhourra. Guereer is a small village a few hours eastward of Ambukol, situated on the banks of the river, is renowned for its bazaars, which are held on Tuesdays and Saturdays for the sale of cattle, calves, sheep, goats, asses, dates, coarse cotton cloth, perfumes, and grease, &c.

"A large quantity of indigo is grown near Meroe; there is a manufacture for it at Meroe. There are 1177 water-wheels under the kaschif of Meroe; of this number 1000 pay the tax of 302 piasters each to the government. The remainder, belonging to the sheikhs, are taxed only two piasters each per annum, and they are permitted to possess as many as they please. The prices at the government magazine are as follow:—Wheat 25 piasters the ardeb, barley 17 piasters, dhourra 17 piasters, and they are all of the very finest quality. The quantity of grain collected in the pacha's magazines at Meroe is sometimes enormous. About five years ago they contained at one time 16,000 ardebs.

"When the government requires butter for the military rations, it levies this tax upon the water-wheels. It pays 25 paras a rottolo, and resells it at 30 paras. The value of butter of the same quality in the bazaar varies from one and a half to two ps."

Dr. Holroyd says, "The character of the people of the Sheggea is much altered since the visits of Burckhardt, Waddington, and Hanbury (*vide* 'Modern Traveller,' vol. ii., p. 246). I found them, in 1837, reduced to poverty and the greatest state of degradation by Turkish misrule and Mahomedan despotism. They are no longer an independent people. Their grain does not incommode their granaries, but, as soon as thrashed, is conveyed to the magazines of the government, and their cattle are seized for the pacha. Their reputed wealth is nominal; their possessions limited. They are hospitable by compulsion or from motives of gain, and in some instances from fear. Very few schools exist among them. Those who can read and write are called *fickees* or saints. The learning of their most learned men rarely extends beyond a superficial knowledge of the Koran. They are superstitious to the highest degree. They are all Mahomedans, and abstain from the use of vinous and spirituous liquors. The women are dissolute, and prostitution is common in all the large villages. Their merchants have dwindled into mere pedlers, who carry their wares from one bazaar to another through the province. Coats of mail are no longer seen amongst them, and they have given up carrying weapons of defence. The independent yeoman is now reduced to the grade of a common labourer. He knows liberty only by name, and his courage is changed to cowardice. It grieved me to see so great an alteration in a province which formerly bore so high a character for courage, hospitality, and independence.

"At Berber I observed a great deal of rich alluvial land uncultivated; it had been tilled not many years ago, as in several places I noticed ruined water-wheels and small canals which had formerly been used for irrigation. I may state here, generally, that between Berber and Kartoom much land is idle, which might be advantageously employed in the production of grain and tobacco, but especially of cotton and indigo. There is great room here for colonization. *Abbas Aga* is the governor of Berber; he is an excellent person, though rigid in the administration of justice, and rules with a rod of iron. A short time previous to my visit a man stole from him an amber mouthpiece. The thief was detected, found guilty, and immediately condemned to be placed at the mouth of a cannon and blown to pieces, which punishment was carried into effect. Just previous to arriving at Berber, a merchant happened to be travelling in a boat with a person who was carrying specie for the government. During the absence of the latter, the former entered the cabin of the boat, broke open a box, and abstracted 50 purses (about 250*l.* sterling). A man was taken up on suspicion, and Abbas Aga ordered him to receive 1000 lashes with the korbadj, and his right hand to be burnt, to extort confession, and inform him where the money was deposited. In spite of protestations of innocence the whole of the punishment was carried into effect. The reis and crew were then summoned to be punished; they declared also that they were innocent; and the former said it was useless punishing them, as the only person who had entered the cabin was the merchant. The reis and crew being liberated, the merchant was taken before the tribunal of justice; he received 1500 lashes, and during the whole time insisted that he was not guilty. Abbas Aga then ordered his feet to be burnt; before this was carried into effect, fear induced the merchant to confess that he was the thief; he showed where he had buried the money, and, upon excavating, the 50 purses were found. The tribunal of justice decided that all his effects and merchandize should be sold to pay his debts, and that his right hand should be cut off, but, instead of this latter part of the sentence being executed, it was afterwards decided that the criminal should purchase three slaves at 500 piasters each, and liberate them. The innocent man who was punished so severely, received from the government as a recompense, 100 piasters; and the tribunal decided that the merchant should also pay something more in addition, after he had liberated the three slaves and liquidated his debts.

"Abbas Aga was making a canal at Berber; he had pressed 500 or 600 fellahs into his service, and obliged them to work 12 hours a day; they were not paid a single para, and they were obliged to maintain themselves. Overseers were placed over them, who lashed them unmercifully, and especially during the time of the governor's visit.

"Berber contains between 8000 and 9000 inhabitants. It is the rendezvous of the slave-merchants from Sennaar and Kartoom, who proceed to Cairo by the desert of Korosko. Considerable traffic in slaves is carried on here; the value of an adult negro is 450 piasters, of a female about 500 or 600. There is a daily bazaar, badly supplied, and ill attended.

The vendors of grease appear to have the most to do. I found a *Bimbashi* at Berber raising troops for the Hedjaz; he had been there six months, and had procured 800. These recruits were slaves pressed by the government from the fellahs, and seized for 300 piasters each, though the intrinsic value in the bazaar was, in most cases, half as much again.

"*Eddahmer*, formerly a town of considerable size and trade, is now fast going to decay; and the population is decreasing, and much land is uncultivated, which appears to have been used when the town was in its prosperity; the houses in the town, like those of Berber, are built of mud, of a square form, and isolated. Many of them are now roofless, the walls only remaining. The bazaar is tolerably well supplied, and there were cattle, sheep, and goats for sale. I purchased five lambs about eight months old, for 29 piasters. El Beggrouweeah is on the site of the ancient Meroe. The land is exceedingly rich, but that only is cultivated which is on the bank of the river. The cultivable land is about half a mile in width; what is cultivated is sufficient for the wants of the people. Indigo grows here very luxuriantly. The inhabitants between Berber and Kartoom are addicted to lying to a greater extent than any other people I have met with.

"The only place worthy of remark between El Beggrouweeah and Shendy is Boaydah, where the peasants manufacture a coarse salt, which they dispose of in the bazaars of Shendy and El Metemneh.

"Shendy presents a miserable spectacle, the effect of Mehemet Ali's wars fifteen years ago. It is in ruins; the walls of many roofless houses are still standing; here and there one finds a house roofed, repaired, and inhabited. A bazaar is held on Mondays and Thursdays, and here were camels, cattle, sheep, goats, and asses for sale, as well as straw, jars, salt, onions, baskets, plaited straw, beads, cotton, cloth, grease, and a few common articles for the consumption of the country. There was very little dhourra and wheat in the bazaar; but what there was of the former was of the yellow variety, and the grain remarkably fine and large. The senna plant is indigenous, both in the neighbourhood of Shendy and El Metemneh; it abounds in large quantities, and is of first-rate quality.

"Nearly opposite Shendy is El Metemneh, where a large bazaar is held on Fridays. The goods for sale were similar to those of Shendy; there were more camels, and a quantity of raw cotton and coarse cotton cloth manufactured here, and for which this part of the country is celebrated. Some of these pieces of cotton were ornamented with deep crimson worsted borders, and they are worn by the men over a calico shirt; they are highly esteemed in the neighbourhood. From El Metemneh caravans proceed to Meroe or Ambukol. Little trade is carried on at El Metemneh, except with merchants *en passant*, and at Shendy none at all, Kartoom and Berber having superseded the commerce of Sennaar and Shendy.

"Between Shendy and Benagga Kebeer the land still continues rich, but very little of it is cultivated. At Benagga Soreiah, I was informed by the sheikh that during the last year eighty men were taken by the government for soldiers from his village, and ordered to the Hedjaz, but that most of them died on the road between Berber and Souakim. The sheikh of Benagga Kebeer took 250 mounted Moggrebins with him in the expedition against Abyssinia; and of this number I heard that all were massacred except six."

Kartoom, situated at the confluences of the two great branches of the Nile, is the seat of government, and has sprung up since Soodan has been conquered by Mehemet Ali Pacha. It contains about 16,000 inhabitants. "The two principal merchants," says Dr. Holroyd, "are M. Vizière, and Soliman Aga, a Turk; the former is a Frenchman, and has many years been engaged in trading first between Kordofan and Cairo, and subsequently between Kartoom and Cairo. For some years he enjoyed the monopoly of gum arabic, but the pacha having discovered that he was realizing a considerable sum by his speculations, refused to renew his contract; he therefore went to Kartoom, and was allowed to have the sole privilege of purchase and sale of Abyssinian coffee; his exertions and success again excited the envy of the Pacha, and after M. Vizière had brought to Cairo at one time, about two years ago, 400 camel-loads of coffee, the viceroy declared that the monopoly should be held by the divan.

"The goods adapted for the market of Kartoom are broadcloth, calico, chintzes,

pistol-belts, saddles and saddle-cloths, bridles, rice, tea, sugar, soap, mishmish, kumeradeen, sweatmeats, shoes, rugs, crockery, hardware, lanterns, &c., and some macaroni, vermicelli, wine, and a few other luxuries for the resident Europeans. There are stalls in the bazaar for the merchants, and a daily market for necessaries for the peasants, and perishable articles. Most of the selling is conducted by means of criers, who act the part of auctioneers; and one may be seen disposing at the same time of many articles of wearing apparel, guns, a mouthpiece, a dromedary, and two or three head of slaves. Each article is disposed of to the highest bidder.

"Merchandize is transported from Cairo to Kartoom by the Nile to Korosko, then by camels by the great Nubian desert to Berber, and from thence by the river to Kartoom; or to New Dongola, in the manner already mentioned, and from thence by water to Ambukol, and across the desert of Bayudah with camels to Kartoom; or lastly from Dongola to Ambukol or Meroe, and then across one of the deserts to El Metemneh, and from thence by water. The slaves are brought from Kartoom, generally, either by Berber and the great Nubian desert to Korosko, or by El Metemneh, Ambukol, New Dongola, &c.

"Almost all of the houses at Wad Medinah are built of straw, a general substance for habitation in the Belled of Soodan."

Dr. Holroyd says, "There are bazaars in the desert near Wad Medinah, the one held at Sorreebah, and the other at Selameeah, which furnish all the requisites for the peasants, and which are attended by the people for many miles round. I visited that of Sorreebah; it is held on Mondays and Thursdays, and the village is about five miles from the Nile. The road to it is over a plain of rich alluvial soil, apparently formed by the Nile. I noticed that dhourra had been produced in some patches after the rains, though all might be used, and the whole might be made available for a succession of crops if proper means were employed for artificial irrigation; but the want of capital and labour prevents this land being employed. I purchased two sheep at the bazaar for nine piasters. There were several sandal makers, and a pair might be bought for 10 or 20 paras. Several blacksmiths were employed in making knives, spear-heads, &c.; and some workers in leather were engaged in making knife sheaths, scabbards, and in covering heggabart or amulets. Between Wad Medinah and Sennah there are very few villages. I observed only one water-wheel, and that in ruins and useless. The banks of both sides of the river are sparingly cultivated; it is well adapted for grain, indigo, tobacco, and cotton; the peasants only grow sufficient dhourra, after the periodical rains, to satisfy their wants during the year; during a great portion of the year they live in idleness.

"Since Sennaar has been subject to Mehemet Ali it has lost all its trade and much of its importance. It is fast going to decay, and exhibits many fragments of ruined habitations; the houses are generally of straw. The principle articles of manufacture are mats, straw covers for plates, silver zurfs, amulets, weapons of war, knives, &c. There is a daily bazaar in which the most ordinary articles are exposed for sale.

"About a mile and a half from Sennaar is the village of Kadero, where a large market is held twice a week; in addition to the articles just mentioned there were sandals and ivory bracelets for sale in abundance, as well as provisions adapted to the wants of the natives. The principal merchants in Sennaar are Hassan Santa Lober, Mahmood, his brother, and an Armenian named Yackoob. The first is the one who does the most business; he is a native of Sennaar; he is the proprietor of, it is said, at least 100 slaves; and about 50 females are permitted to prostitute themselves, each paying a dollar a month, and finding her own maintenance; and should any of them bear children he sells them as soon as they can be separated from their mothers. I made some purchases of him; had great difficulty in bringing him to terms, and, when I succeeded, the bargain was greatly in his favour.

"The system of pressing men to tow the boats on the Blue Nile is sanctioned by the government; and on the White River women are seized for the same purpose. The people through the Belled of Soodan are extremely superstitious, and put great faith in amulets.

"From Wad Medinah I proceeded through Aboot and Monákil to Monkara or Wad Shellaye on the White Nile.

"Aboot is situated about twenty miles from Wad Medinah; between these two places is a dead level, the land of the richest quality, but from the want of capital and population,

little is cultivated, and that little only after the commencement of the rainy season, when the peasantry are satisfied with a crop of dhourra or wheat sufficient to maintain themselves during the year. A bazaar is held once a week; it is ill supplied, badly attended, and little business doing. At four hours (10 miles) from Aboot is Monákil, where a bazaar is held weekly, and is said to be the largest and best attended of any in the desert; the peasantry and merchants bring their wares from a great distance to this bazaar. The land is not cultivated between Aboot and Monákil. From Monákil to Monkara the land is generally excellent; it might all be tilled and yield a considerable profit to the husbandman. I have come to the conclusion that the country from Gebel Moel, near Sennaar, as far as Kartoom to the north, and probably to Aleis to the west, has been formed by the alluvial deposit of the Nile. The soil is precisely similar to the deposit which the Nile makes near its banks. Then it is almost all plain, hardly any hills or rises, and the Nile, even now during its increase, reaches to within two or three feet of the top of its banks, both in the Blue and White rivers. If a canal were cut from Wad Medinah to Monkara, with branches north and south, almost all the land might be used for the production of indigo, cotton, tobacco, grain, &c. Much might be accomplished by means of tanks for collecting the rain-water, and also by sinking wells.

"*Monkara* is a boat-building station of the pacha. There is a great quantity of wood in the neighbourhood, but little of it is used in the construction of the barks, as larger and better timber is found at Aleis and in the country of the Shillooks. I observed 18 or 20 pair of sawyers at work, and 5 boats on the stocks; the sawyers are slaves or prisoners, and are paid 10 piasters a month and rations. Between the White Nile and *El Obeid*, the capital of Kordofan, are many villages. The land is a light, sandy soil, and only suitable for the growth of *dhukn*, a grain from which excellent bread is made. But to satisfy the demands of the government, much of the dhukn had been seized from the people, and in many places the natives were making bread of a seed called askanit, which abounds in the desert, and which possesses a purgative power, especially to those not habituated to it as an article of food. The increase of population at El Obeid has been rapid: the town now containing, it is said, 30,000 inhabitants.

"The duty upon merchandize entering or passing New Dongola is 30 piasters the camel-load, without any reference to the kind of goods transported; a duty is also exacted, upon entering Kartoom, of one-tenth of the value of the goods; thus, if a merchant takes 100 pieces of calico to Kartoom, he pays a duty amounting to the value of 10 pieces. The duty upon goods entering Kordofan is 150 piasters the camel-load, and this is exclusive of the duty at New Dongola.

"I heard that at Kartoom a man was discovered having stolen a saucepan from Korschid Pacha, and the thief was sentenced to have his right hand cut off, which was actually done. A French gentleman was robbed in his dwelling-house at Kartoom of 6000 piasters, and the thief was punished with transportation with hard labour at the boat-building station at Monkara, where he received pay and rations the same as the slaves and other convicts.

"The monopolies of the pacha at Kordofan are—1st. Gold and silver, but especially the former; and though great vigilance is adopted, still much is sold clandestinely to private individuals. The price of pure gold here is 450 piasters the ounce, which ounce is equal to 624 grains, apothecaries' weight. English silver is bought and sold by weight against Spanish pillar dollars. Both metals are free from alloy. 2d. Cattle-hides, which the government compels the people to sell at 3 piasters each, and sheep-skins at 20 paras; these are sent to Cairo, and the Pacha disposes of the former there for 75 piasters each. 3d. Gum arabic, for which the government pays to the peasants at Kordofan 150 piasters the camel-load of 5 quintals, and the same quantity is worth at Cairo from 1200 to 1300 piasters. I was told that 5000 camel-loads of gum arabic were sent from Kordofan to Cairo during the last year. The pacha also takes from the peasantry and farmers cattle and camels.

"I could ascertain little about the fiscal system of the pacha in *Soodan*. His revenue is derived from his monopolies, consisting of Abyssinian coffee, gold, indigo, gum arabic, hides, taxation upon the water-wheels, letting the customs, and his purchase of cattle and camels; and though he derives considerable advantages from these sources, I was informed that his expenditure in Soodan exceeded his revenue annually by 14,000*l.*, and that he holds

this country under the present system of tyranny and oppression, because he has never forgiven, still less forgotten, the fate of Ismail Pacha at Shendy.

"During my travels in the Belled of Soodan, I must acknowledge that I received the very greatest attention from the Turkish governors, especially from Korschid Pacha, of Kartoom, Mustapha Bey, of Kordofan, and Abbas Aga, of Berber. All my requests were attended to immediately; and they, in short, offered me every facility in prosecuting my observations and researches. Kartoom is an important post; it has sprung into a place of consideration within fifteen years. It was a village not containing more than 200 inhabitants when Mehemet Ali first made it the seat of government for Soodan, and now it contains 15,000 or 16,000 souls, and is daily increasing both in size and population. A resident there would be a check upon the government, without which I fear that slave-dealing, though it may be abolished in Cairo, will still quietly be carried on in some parts of Soodan."

Since Dr. Holroyd travelled five years ago in Nubia and Kordofan, the policy of Mehemet Ali towards that great region has been greatly changed. The following is an account of his visit to that country in the autumn of 1838:

"The pacha's attention was long before directed to Nubia and Soodan, with the view of abolishing the slave trade, and to introduce a reformation in the customs, commerce, and agriculture of the inhabitants. He repaired thither in person, embarking in a steamboat on the 15th of October, 1838, accompanied by his confidential attendants, and several scientific persons, collected, not only from his own country, but from the continent of Europe. In passing the cataracts he had to endure hardships, and was exposed to considerable danger. After passing the first cataract, he had to remain during a night without provisions or attendants. In the attempt to pass the second, the boat in which he was seated was dashed violently on the rocks, and it was with difficulty that he effected his escape, while the vessel was carried away with the current. On the 11th of November, the cataract of Annek was reached: it appears from the narrative, that this was the first attempt that was ever made to pass it. From Dongola he crossed the Desert to Kartoom, the capital of Sennaar, at the confluence of the Blue and the White Nile; he proceeded along the Blue Nile, where he was joined by some pupils of the schools of language and mineralogy. At Fazoglo, hearing of depredations committed, according to custom, by a tribe of mountaineers on their more feeble neighbours, he despatched a force against them, under the command of a superior officer, who returned with 540 prisoners. His highness had them brought before him, and he addressed them at great length on the odiousness and barbarity of stealing and selling their fellow-creatures; then, wishing to join example to precept, suffered them to depart, after having distributed to every one ten days provisions, and providing dresses to five of the chiefs. Learning that some prisoners had been taken at Kordofan, he ordered them to be dismissed, with permission to return home, or to establish themselves as cultivators on the banks of the White Nile, issuing at the same time a manifesto, declaring that the qûaras or slave-hunts were strictly forbidden; and that if any quarrels should arise between neighbouring tribes their differences were to be brought before the governor-general, who would decide them.

"At length he arrived at the mouth of Fazangoro, where, after inspecting the gold mines, he laid the foundation of a town, which he called by his own name and to contain houses for 1500 families.

"The chiefs of the country showed their readiness to co-operate with him, by offering a much larger force for the working of the mines, which he, however declined.

"He pays his workmen wages, and provides them with dresses adapted to the climate; he has granted land to Arab agriculturists for the formation of model farms, supplied them with the necessary implements and animals, and declared them to be exempt from taxes for five years. The soil of Sennaar is extremely fertile, and said to readily return sixty for one; the *dowrah* grows quickly, and produces very rich ears; animals and wood abound; cotton succeeds at little cost, and produces more wool than that of Egypt, which is cultivated at a great expense. Cultivation has been neglected.

"The pacha invited an assemblage of the Sheikhs, made them presents, and addressed them, according to our translation, as follows:

"'The inhabitants of other parts of the world were formerly barbarians; they have had instructors, and, by labour and perseverance, they have civilized themselves; you have *heads* and *hands* like them; do likewise; you will also raise yourselves to the rank of men; you will acquire riches and secure enjoyments of which you can at present, from your profound ignorance, form no conception.

"'You have a vast extent of land, plenty of cattle, and wood: your population is numerous, your men strong, and your women fruitful. Hitherto you have had no guide: you have one now, you have Mehemet Ali. I will show you the road, and lead you to civilization and to happiness. In every country, except yours, the value of labour is understood, and a preference for good and useful things is common. Men devote themselves with ardour to trade, which produces wealth, pleasure, and glory—words which you cannot even comprehend.

"'Egypt itself is not an extensive country; yet, by the industry of its people, it is rich, and will become more so: distant provinces are acquainted with it; and the region of Sennaar, which is much larger than Egypt, produces little, because its inhabitants remain as idle as if they were without life.

"'Understand well that industry produces all things; and that without labour nothing can be had.'

"The pacha then explained to them the advantages of agriculture and of commerce. His auditors are said to have been astonished at what they heard, begged him to take them into Egypt that they might be instructed. 'You had better,' he said, 'send your children there; they will learn more readily because they are younger, and will remain longer useful to your country when they return. I will place them in my schools; they will learn there that which is useful and ornamental. They shall be my adopted children; and when they are sufficiently instructed in the sciences, I will send them back to be a comfort and joy to you, and a glory to your country.'

"The sheikhs readily accepted the pacha's offer; each wished to send his children into Egypt; the most powerful among them, named Abdel-Kadir, having no son, asked the privilege for his nephew.

"The pacha then recommended Ahmed Pacha to labour for the welfare and civilization of the people of Sennaar; and said he should return the next year in order to judge of the progress that might be made.

"He departed on the following morning, and returned to Fazoglo on the 1st of February, and addressed similar exhortations to the sheikhs of that district. He then proceeded to Kartoom, where he rejoiced to find good effects from his recent visit; some land, then waste, being on his return in full cultivation.

"He visited the White Nile, and on returning to Kartoom, he commenced the building of a Christian church.

On leaving the country, he proclaimed the freedom of trade in Indigo, which the provinces of Dongola and Berber produce in considerable quantities, and ordered the governor to supply implements and other necessaries for the improvement of its cultivation. He then embarked with his suite, leaving M. Lambert with the charge of making two reports; one upon a projected railroad in that part of the desert which separates Abu-Muhammed from Kurusku; the other on the formation of a canal between the White River and Kordofan, destined to furnish water for the irrigation of the land, and to facilitate the carriage of the iron ore of the mines. The cataracts were repassed on his return; and on the 14th of March, the cannon of the citadel of Cairo announced to Egypt the arrival of the viceroy, after an absence of five months and four days."

The effects of the pacha's visit to Nubia, and the measures he adopted to suppress slavery, have been, considering all the circumstances of the country, satisfactory. We will advert to them again when noticing the Mussulman slave trade.

CHAPTER IX.

RESOURCES AND TRADE OF THE STATES OF AFRICA, EXCLUDING EGYPT.

AFRICA.—Notwithstanding the great fertility of many of its regions, Africa scarcely enters into the statistics of civilization, if we exclude Egypt and the European settlements. The want of broad inlets from the sea and the pestiferous nature of the vegetation of the low lands through which the rivers falling into the Atlantic flow, and the vast breadth of sandy deserts which extend over a great portion of the broadest part of this quarter of the globe, have no doubt been among the leading causes of its barbarism.

In Africa, nearly all forms of *government*, or rather *misgovernments*, are found, from theocracy and despotism, to the most licentious anarchy.

The small Arab state of *Damer*, in Nubia, is a monarchical theocracy. Senegambia, the States of Fouta-Toro and Fouta-Jallon, are described as oligarchical theocracies.

The Empire of Bornou, which extends in Central Africa from the mountains of the Moon north to the Desert, has an absolute warrior Arab Scheik, and a Sultan, who shares the honours of the throne: the authority of the latter may, however, be considered only nominal.

The governments of Morocco, the Barbary States, Darfour, Benin, Yarriba, Bordou, Bourb Jolof, the country of the Fellans, Moropua, Ashantee, and all Guinea, are despotisms; in which, with considerable exception in favour of Morocco and the Barbary States, the grossest ignorance, brutality, and tyranny prevail.

In Abyssinia, and some other States, both monarchical and feudal despotism rule in absolute force.

In the country of the Mandingoes, Cameroons, Bonny, and several small states, various forms of Republican government prevail.

In Benguela, anarchy and despotism prevail.

Sennaar had, until lately, an absolute king. A council, or assembly of chiefs, now exists, which assumes the right of deposing and condemning the king to death.

The *Quacys* are like the Hindus, divided into castes; the *Arabs* are attached to the distinction of hereditary rank; and the *Mamelukes*, like the Moors and Turks of Africa, and the Indians of North America, admit generally no other than personal distinction.

The *Caffres*, and other erratic tribes, are under no other than chieftain subordination.

In Madagascar, among the Ova race; in Abyssinia, and in some other states, hereditary privileges are common.

M. Douville says, of South *Nigritia*, "that in this vast country all the principal tribes, or states, are under monarchical governments, more or less remarkable in their forms, and in which the sovereign governs according to fixed laws, or if he fails to do so, the chief persons of the State convoke a general assembly, for the purpose of deposing him.

"Among the Dembos, and several other nations of these parts of Africa, titles of nobility form the recompense of certain *determined* actions or services.

"The crown is hereditary, but restricted to qualification for governing, by the heir not having been guilty of any tyranny or illegal act; which is determined by the general assembly of the people convoked by the chief nobles. The tribute paid to the sovereign is scarcely sufficient for his subsistence; and his family are, in consequence, subjected to cultivate the soil for their maintenance. The wives and daughters of the chiefs labour also in the same way."

Barbarism, cruelty, and ignorance may be said to constitute not only the character of the several governments, but of most of the nations of Africa. Little progress has been made among them in agriculture, the arts or commerce, since the time when Herodotus wrote. On the west coast, the intercourse with Europeans has made the people expert in their dealings; but except in the use and repair of firearms, they have learnt but little else of European art.

In regard to the statistics of Africa, we are unfortunately almost compelled to say with Balbi, "that the title of African statistics ought to be rejected as absurd;" and nearly to agree with him in persisting in his first determination of excluding Africa, Oceanica, and the greater part of Asia, from his "*Balance Politique du Globe.*"

AFRICA may be divided into seven great regions.

1. THE REGION OF THE NILE, which we have comprised under the heads of Egypt, Nubia, and Kordofan.

2. REGION OF THE NORTH, which is situated between the Mediterranean and the great desert of Zahara, and extending from Egypt west to the Atlantic, generally known to the English as the States of Barbary: namely, Morocco, Algiers, Tunis, and Tripoli: *M. Balbi* designates this division the Region du Maghreb, or *Arab-el-Maghreb; Contrée du Couchant.*

In this region *despotism, military anarchy, Islamism,* and the *Morisco-Arabic language* prevail, but many other dialects are spoken. The inhabitants may be considered chiefly as of Arabic, Saracenic, and *Amazig*, or *Berber* race; among the whole it is estimated there are nearly 1,000,000 Jews, 200,000 negroes, and several European renegades. The French population, military and civil, are not included. The soil and climate of this region ripen the choicest productions.

3. THE THIRD REGION comprehends the vast desert of Zahara, west from

Fezzan, and Darfour to the Atlantic, and south from the Barbary States to Senegambia, Soudan, and Bornou.

4. THE FOURTH REGION comprehends Nigritia, or Western Africa, extending from the south boundary of the Western Desert to the south boundary of Benguela, in about latitude 16° south.

5. THE FIFTH REGION comprehends the Cape of Good Hope colony, the country of the Caffres and Hottentots, and the extensive dry desert coast north of of the Hottentot country, to Benguela; and on the great unknown Southern Desert.

6. THE SIXTH REGION, OR EASTERN AFRICA, extending along the sea-coast, and to an unknown inland limit, from Delagoa Bay, in latitude 26° south, to the frontiers of Abyssinia.

7. THE SEVENTH REGION, comprehends the states of Abyssinia and Somaula, extending from Cape Ras-Asser, or Guardafo, to Zeylah, and along the Red Sea to the territories of the Pacha of Egypt.

CHAPTER X.

RESOURCES AND TRADE OF THE FIRST REGION.

1. EMPIRE OF MOROCCO.

THE Empire of Morocco is the most powerful of the Barbary States. It occupies the north-west of Africa, from 28 deg. 50 min. north, to 35 deg. 40 min. north, and 9 deg. of longitude, from the Atlantic east to the boundary of *Algiers*. Its superfices are estimated at 130,000 geographical square miles; its population at 6,000,000; and by some at 8,500,000. The latter is probably correct. Although rudely cultivated, its soil yields, in abundance, wheat, of excellent quality, barley, maize, olives, hemp, and cotton; lemons, grapes, figs, oranges, almonds, and most fruits and forest trees. The sugar-cane, tobacco, date, palm, and cotton thrive where cultivated. Wood for construction is scarce; but cork-trees, oaks, and other trees, grow on the slopes of the mountains, and white cedar in some parts. This country with ordinary industry would be one of the most productive in the world. Islamism, however, wherever it extends, seems to wither industry.

Pasturage is followed in preference to agriculture, and the number of goats is very great.

It has mines of iron, tin, copper, antimony, and salt; the latter only appear to be worked.

The domestic animals are several varieties of camels; two species of goats;

horned cattle (which are small); sheep, one kind of which affords excellent wool; Arabian horses, deteriorated in the breed, mules in great number for general use, poultry and bees are reared in great plenty; the lion, panther, and hyena, prowl in the woods. On the borders of Zahara, ostriches are plentiful.

The capital called also *Morocco* (*Merâkasch*) contains about 70,000 inhabitants. This city is adorned with several mosques, with the principal palace, which is said to be 4500 feet long, and divided into courts, and with gardens, fountains, &c.

TREATIES for the security of trade and navigation against piracy, and for the security of persons and property, have been concluded by England at various periods with the States of Barbary. Those with Algiers have, since 1830, merged into our treaties with France; and with Tripoli and Tunis into the treaty of 1838 with Turkey. The numerous stipulations of several treaties with Morocco, are all of any value to trade or commerce embodied in the following treaty, which is considered as still in full force.

TREATY between Great Britain and Morocco. Signed at Fez, 14th June, 1801. (Confirmed 19th January, 1824.)

ART. I. The English king may appoint one or more consuls in the dominions of the Emperor of Morocco and Fez; he or they may reside in any of the Emperor of Morocco's ports, or in any of his towns, at the election of the consul, where he may think it convenient for his king's subjects, or for the benefit of his commerce.

II. The consul who may reside in the dominions of the Emperor of Morocco, shall be treated with the utmost respect, according to his employment, and his house and family shall be taken care of; they shall not be molested by any body, nor affronted in any way whatever, and they who may be guilty of so doing, shall be severely punished, in order that they may serve as an example to others; the said consul may choose for his service either Moors or others, and none of his dependants shall pay any tax, (which is commonly paid by the Jews,) nor any thing of the kind; the said consul may establish a place of worship, and hoist his national colours at all times, either upon his house, within or without the town, or in his boat if he goes out to sea. The said consul shall be free from the payment of any duties on whatever he may bring for his use, or the use of his house, in the dominions of the Emperor of Morocco. Should the said consul be called home to his king's service or otherwise, he shall not be hindered from going, or be stopped, either he or his dependants, or any thing that belongs to him: he shall be at free liberty to go and come when he pleases; he shall be treated with the utmost respect, and if any thing more should be granted to any consul of another nation, it shall also be granted to him and to his agents.

III. English subjects shall be permitted to come, with their vessels and property of whatever kind, to any of the dominions of the Emperor of Morocco; they shall also be permitted to reside therein, as long as they please, and to build warehouses for their merchandise: the good friendship shall continue between the subjects of both nations for ever, so that no harm be done on either side.

IV. English subjects or merchants residing in the dominions of the Emperor of Morocco, shall, themselves and their property, be in perfect security: they may follow their religion without being molested; they may also choose a place proper for a burying-ground for their dead, and may go out with a corpse to bury it, and return in safety. They are also at liberty to send any of their agents, either by land or sea, for the purpose of their service, without their being hindered or stopped; and if any English merchant should happen to have a vessel in or outside the port, he may go on board himself, or any of his people, without being liable to pay any thing whatever.

V. English subjects shall not be compelled to sell their property, or to make purchases unless at their own option, and no Moor shall take any property belonging to an English subject, unless it be given by the good will of the proprietor, or by mutual agreement; the same shall be practised towards Moorish merchants in the English dominions.

VI. No English subject shall be answerable for any debts, contracted by another individual, unless, under his own hand, he be responsible for the same.

VII. Disputes between Moorish subjects and English subjects, shall be decided in the presence of the English consul, provided the decision be conformable to the Moorish law, in which case the English subject shall not go before the Cadi or Hacam, as the consul's decision shall suffice.

VIII. Should any dispute occur between English subjects and the Moors, and that dispute should occasion a complaint from either of the parties, the Emperor of Morocco alone shall decide the matter; if the English subject be guilty, he shall not be punished with more severity than a Moor would be; should he escape, no other subject of the English nation shall be arrested in his stead; and if the escape be made after the decision, in order to avoid punishment, he shall be sentenced the same as a Moor would be who had committed the same crime. Should any dispute occur in the English territories, between a Moor and an English subject, it shall be decided by an equal number of the Moors residing there and of Christians, according to the custom of the place, if not contrary to the Moorish law.

IX. Moorish subjects who escape from the Emperor of Morocco's dominions, and go on board of any English ship of war, or to any of the English ports, shall be restored to their country, without being sent as prisoners; and English subjects who come to the dominions of the Emperor of Morocco, whether from their own country, or from any other place near the Barbary coast, such as Ceuta, from whence they may have made their escape, shall be delivered up to the consul or his agent, in order that they may be embarked for Gibraltar.

X. Renegades from the English nation, or subjects who change their religion to embrace the Moorish, they being of unsound mind at the time of turning Moors, shall not be admitted as Moors, and may again return to their former religion, but if they afterwards resolve to be Moors, they must abide by their decision, and their excuses will not be accepted.

XI. If any English subject turn Moor, and have in his possession effects or papers belonging to English subjects, he shall deliver them up to the English consul or his agent, in order to their being returned to their respective owners.

XII. English subjects, resident in the Emperor of Morocco's dominions, either in peace or war, are at liberty to go to their own country, or elsewhere, either in their own or in any other vessel; they may dispose of their effects or houses, &c., and take their value with them, as also their families and servants, even though they should have been born in Barbary, without impediment whatever; and the same shall be practised towards Moorish subjects residing in the English dominions.

XIII. When an English subject dies in the Emperor of Morocco's dominions, his effects shall not be searched or touched by any of the governors, but shall be delivered into the hands of his executors, or his heirs, if present; but if no heir or executor appear, the consul or his agent shall be executor for the same, he taking an inventory of all such effects found, to be delivered to the deceased's heirs or executors. If the deceased made no will, the consul or agent shall take charge of the effects, in whose possession they shall remain until the heir appears. If any debts were owing to the deceased, the governor of the place shall assist and compel the debtors to pay their debts to the consul, or his agent, to be kept for the heir.

XIV. All the treaties concluded between the English and the Moorish agent, are to be considered as extending to any territories the English may have in Germany, and to their inhabitants, the same as if they were natives of England, as also to Gibraltar and its inhabitants, who shall be considered as natives of London; they shall also extend to any other town and its inhabitants, which may hereafter be under the dominion or protection of England, as if they were included, from the beginning, in the treaties.

XV. English subjects, in addition to what is mentioned in those treaties, shall enjoy any other privileges which other powers enjoy at present, and if hereafter any further in-

dulgences be granted to any other power, the greatest share shall be extended to this friendly nation by the Emperor of Morocco.

XVI. The navigation between the English subjects and vessels and those of the Emperor of Morocco, shall be free, and if an English man-of-war or privateer meet at sea, with a Moorish man-of-war or merchantman, the latter shall not be hindered of their navigation, provided they are furnished with their passes given to them by their respective governors, certified by the English consul or his agent; but, if no passport be found on board, certified as above, the vessel being under Moorish colours, and the greater part of the crew being Moors, it shall not be molested or hindered of its navigation.

XVII. If a Morocco man-of-war meet with an English vessel at sea, not being in the English sea, the Moorish man-of-war may send his boat with two officers, on board of the English vessel to examine her pass; the two officers only shall be permitted to go on board; and, after so doing, the boat shall return, and the vessel continue its voyage: if an English vessel come out of a port with which the Emperor of Morocco may be at war, or go into it, no mariners, pilot, or strangers shall, in either case, be taken from it; nor shall any one be allowed to search the said vessel for the purpose of taking any ammunition or goods from the English vessel, under the pretence of receiving them from the captain as a present, or otherwise; and all prizes taken by the King of England's ships, and met with at sea by the Emperor of Morocco's cruisers, even without a pass, shall not be molested or hindered from their navigation, a letter or affidavit, either of the captain by whom the capture was made, or of the governor of the place from whence she sailed, being deemed sufficient.

XVIII. The Emperor of Morocco's cruisers, and his subjects, shall not cruise near the English ports, so that the commerce of the said ports be interrupted, nor shall English vessels so cruise near the Emperor of Morocco's ports.

XIX. If a Moor of the Emperor of Morocco's subjects be on board a vessel of a nation with which the King of England is at war, and the vessel happen to be taken a prize, neither the Moor nor his effects shall be seized, but shall be liberated; the same shall be observed, if an English subject be found on board a vessel with whose nation the Emperor of Morocco may be at war, and which may be taken as a prize, the English subject and his effects being liberated.

XX. If an English vessel capture a prize, and bring it into any of the Emperor of Morocco's ports, the vessel or cargo may be sold without being hindered by any body, or the prize taken away wheresoever they please.

XXI. If an English vessel run from a vessel with which it may be at war, and come within gun-shot of the Emperor of Morocco's ports, the latter shall be fired upon and the utmost shall be done to protect the former: the same condition shall be observed in respect of the Emperor of Morocco's cruisers, when near the English ports.

XXII. If a Morocco cruiser meet with a vessel of any nation, under convoy of an English cruiser, such vessel shall be considered as belonging to the King of England, she being under the protection of the English, and the Morocco cruiser shall not detain her, or hinder her navigation, on any pretext whatever; the same shall be practised by the English, if they find a vessel under convoy or protection of the Emperor of Morocco's cruisers.

XXIII. Cruisers belonging neither to Morocco nor England, but having a pass from a nation with which the Emperor of Morocco or the King of England may be at war, shall not be allowed to enter any port of either party, nor to sell a prize therein, neither shall they be allowed to take any stores or provisions, excepting only such a quantity of provisions as may be sufficient for their voyage home.

XXIV. If vessels of a nation with which the King of England is at war, enter any of the Emperor of Morocco's ports or bays, wherein there should happen to be English vessels, it shall not be permitted to the enemy to do violence to the English, or to molest them in any way, nor shall the enemy be permitted to follow an English vessel from the harbour till twenty-four hours after her departure; the same shall be practised towards vessels of the Emperor of Morocco in English ports.

XXV. If an English fleet, cruiser, or merchant-ship, come into a port of the Emperor of Morocco, or into any of his bays or rivers, and want provisions, they shall be allowed to buy what is necessary, at the current price paid by other nations that are at peace.

XXVI. Packet-boats, furnished with the King of England's pass, or with a passport from the person authorized to despatch king's packets, shall be considered as ships of war.

XXVII. The inhabitants of Gibraltar, which is under the English command, as also the inhabitants of any other town which may hereafter be in the possession of the English, shall be considered as native Englishmen, and be permitted to travel, and navigate, and fish, under English colours, with the governor's pass, without being hindered or molested.

XXVIII. Vessels of either party, or its subjects, that enter into the ports or bays of either party, and do not choose to come into harbour, or to anchor in the port, being bound for another place, shall not be obliged to exhibit their cargoes, nor to sell any part of them, nor shall they in such case be searched.

XXIX. If an English vessel land part of its cargo in any of the Emperor of Morocco's ports, it shall only pay the duties inward, on the quantity landed, but not for the remaining part of the cargo, which has not been landed, and it shall be at liberty to depart with the latter to any place whatsoever.

XXX. No English captain shall be compelled to take on board of his vessel any passenger or person, or goods belonging to any person whatever, against his will, nor shall the captain be compelled to go to any port without his consent, nor be prevented from going where he pleases.

XXXI. If a subject of the Emperor of Morocco freight an English vessel, for the purpose of loading or taking passengers from one of the emperor's ports to another; and, on his voyage, be driven by the wind and weather into another of the Emperor of Morocco's ports, he shall not pay any anchorage or other duty whatever in such port.

XXXII. English vessels meeting with distress at sea, and entering any of the Emperor of Morocco's ports to repair their damages, shall be allowed to come in, and shall be assisted with all requisite stores, &c., to continue their voyage to their destination.

XXXIII. If an English vessel strand, or be wrecked on the Emperor of Morocco's coast, it shall be protected and assisted in every respect as becoming friendship; the vessel, and what may be saved from such wreck, shall be delivered to the consul or his agent, for the use of the owners; and the crew shall be at liberty to depart when they please: the same shall be observed, in a similar case, towards the Emperor of Morocco's vessels on the English coast; and if any English vessel be cast away at Wadnun, or the sands near, the Emperor of Morocco shall do his utmost to ensure the safety of the crew, and their being sent to their country; the English consul or his agent may also use his endeavours in procuring their liberty, and shall be assisted in that object by the governor residing near the place.

XXXIV. If an English subject, or person under the King of England's protection, come to the dominions of the Emperor of Morocco to load provisions, he shall be allowed, on payment of the existing duties, to export them to other Christian nations, with which he may be at peace, it being understood that their coming over for that purpose shall be at proper seasons of the year, or once or more, according as may be agreed upon, as he is not permitted so to come and export without stipulation, and out of season.

XXXV. If English ships come to a port where ships of other nations happen also to be, and want a supply of provisions, and the place do not afford sufficient to satisfy both, it shall be divided in proportion to the number of vessels, and shall be paid for at the current market price, without its being permitted to the ships of other nations to take more than their portion; and if, henceforward, the garrison of Gibraltar should be in want of provisions, provided they be abundant in Barbary, the Emperor of Morocco shall permit their exportation, for the use of the troops, and the inhabitants, at the same duties that are paid by other nations at the same period.

XXXVI. If an English subject come to the Emperor of Morocco's ports with ammunition or naval stores, he shall not pay any duty for the same.

XXXVII. If an English subject have imported any merchandize into the Emperor of Morocco's ports, and have paid duty thereon, and choose afterwards to remove the said merchandize to another of the Emperor of Morocco's ports, he shall not pay any further duty; and if any goods be smuggled by subjects of either party, the goods which they have smuggled shall be seized, but no other punishment shall be inflicted, to serve as an example to others.

XXXVIII. All the treaties concluded with Muly Ishmael, Muly Abdala, and Muly Mahomed Ben Abdala, shall be in force without alteration; excepting such articles as may be contrary to this treaty between both parties.

XXXIX. If any of the subjects or cruisers of either party break through these treaties, either by mistake or purposely, the peace shall not, therefore, be disturbed, but shall continue until after a complaint be made to the respective king; and if any subject of either party be guilty of an infraction of these treaties, he shall be severely punished by his king.

XL. If a rupture of the peace happen, and war ensue (which God forbid), all English subjects, as also all Morocco subjects, of whatever description, may proceed to any part of the world they please, with their families, property, and servants, whether born in Barbary or not, on board the vessel of any nation, and six months' notice shall be given to them, in order that they may have time to dispose of their effects, and settle their affairs; and, during the said six months, they and their property shall continue in safety, without being molested or injured in any way, on account of the declaration of war; and they shall be assisted by the respective governors in recovering their debts without delay; the same shall be practised with the Emperor of Morocco's subjects in the dominions of the King of England.

XLI. This treaty of peace, concluded between the Emperor of Morocco and the King of England, shall be published to the subjects of both parties, that the conditions may not be concealed, and copies shall be given to the governors and commissioners of imports and exports of the Emperor of Morocco, and to the captains of his cruisers, this being the end of the abovementioned articles, concluded on the foregoing date, which corresponds with the 14th June, 1801, of the birth of Jesus, the Messiah, Son of Mary. Peace to him.

(L.S.) MULEY SOLIMAN.

Explanatory Articles between Great Britain and Morocco. Signed at Fez, 19th January, 1824.

The preceding treaty was produced before the Supreme Lord of the Believers, Emperor of the Muselms, the Honourable Emperor Mulana Abderahman Ben Mulana Hisham, Ben Mulana Mohamed Ben Abdala, Ben Mulana Ismael, whom may God protect,—on the part of his Majesty the King of Great Britain, King George the Fourth, by James Sholto Douglas, his ambassador, and his consul residing at Tangier, for the purpose of renewing and confirming the treaty of peace which has so long subsisted between the two governments, as it appears in the present treaty, consisting of 41 articles, produced by the said consul, sealed by our sanctified Lord Mulana Soliman, whom may God have in his glory.

His Majesty the Emperor of the Faithful has been pleased to order that the said treaty should be read in his presence, for his Majesty's information, and after having heard the contents of the different articles, one by one, he approves of what his uncle has done for the benefit of the subjects of both nations, and confirms the said treaty, from the 1st Article, wherein it is mentioned, that his Britannic Majesty shall have one or more consuls in the Empire of Morocco, to Article 41, inclusive, excepting the two Articles, 7 and 8, which have been altered as follows:

VII. All disputes that may arise between Moorish and British subjects shall be decided by the governor of the place, the chief judge, and the British consul, and in case either of the parties disapprove of the decision, he is at liberty to appeal to the emperor.

VIII. If any dispute arise between Moorish and British subjects, or those under his Britannic Majesty's protection, and that serious personal injury be experienced by either party, in consequence of such dispute, the Emperor of Morocco alone shall decide the cause. If the English subject be guilty, he shall not be punished with more severity than a Moor would be. If the offender make his escape, no other British subject shall be apprehended in his stead. If the offender escape, before or after condemnation, from fear of punishment, he shall be subject to the same sentence as a Moor would be under similar circumstances Should any dispute occur in the British territories, the matter shall be decided according to the laws and customs of England, with liberty to make the customary appeals.

This concludes the two beforementioned articles.

Ratified by the Emperor of Morocco, at the Imperial Palace at Fez, the 18th Jumad the first, 1239.—A. D. 19th January, 1824.

CHAPTER XI.

TRADE AND NAVIGATION OF MOROCCO.

MOGADOR, on the Atlantic, has a good harbour for vessels of 150 tons, and a town with 30,000 inhabitants.

RABUT, has good shelter except with strong westerly winds. Population 21,000, of which 3000 are Jews.

EL-ARAICHE, is defended by batteries, and only admits vessels of 100 tons; but large ships anchor in the road. 3000 inhabitants.

DARBEIDAH, a little town with good anchorage in its bay.

SAFFEE, a town with 12,000 inhabitants, and good shelter except during winter gales from the west.

TANGIER, within the strait of Gibraltar, has 10,000 inhabitants, and is a most conveniently situated port, yet it has little trade.

CEUTA, belongs to Spain, has 3600 inhabitants, and little commerce.

TETUAN, is a large town (20,000 inhabitants) a league distant from its harbour, which is small. The road affords anchorage for large vessels, and the trade of the town with England is considerable.

The following details, from the *Lex Mercatoria* of Beawes, describe the trade of the Barbary States previous to the year 1770.

"The most considerable ports are Tripoli, Gouletta (the Port of Tunis), Algiers, and Sallee, in which last the principal trade of Morocco and Fez is carried on, though a good deal is done at Tetuan, and some at Arzilla, Alcasson, Azamon, Saphia, and Santa Cruz. The kingdom of Algiers has besides its capital, Tremecen, Constantine, Bona, Bugia, Gigery, La Calla, Cape Rosa, Collo, and that called the *Bastion* of France.

"Besides Gouletta, Tunis has Biserta, and Port Fariana. The Tripolines have only the port of their city, with some few on the coast, where little or no trade is carried on.

"The European merchants have warehouses only in the principal cities, and rarely land in any others on account of the impositions practised upon them—trading among these people, as the saying is, pike in hand, being always on their guard.

"Sallee is the principal port of the kingdoms of Fez and Morocco.

"European merchandize is immediately landed and warehoused on its arrival, and afterwards sold by wholesale to the Moors or Jews, who send it to their correspondents at Morocco, Fez, Mequinez, Tarudant, and Illoc. The greatest part of the merchandize imported is consumed in these five cities, particularly at Mequinez, twelve leagues from Fez, where there are large magazines of the principal products of Morocco and the adjoining small states. What goods may remain undisposed of in these five towns are sent to the kingdom of Tafilet and Touat, where the Arabians take them in barter for gold-dust, indigo, ostrich feathers, dates, and occasionally elephants' teeth. The gold-dust and ivory are brought by the Arabians from part of Guinea, distant about four hundred leagues from Morocco. The ostrich feathers come from Sara, a country towards the sea of *sand*, where the Moors and Arabians kill the ostriches in great numbers, and sometimes take them alive and bring them to Morocco.

"The *Benizegriers*, a people of Africa, in the province of *Habat* in the kingdom of Fez, have among them a number of weavers and curriers, who carry on a great trade in linen and hides. There is also a trade in honey, wax, and cattle.

"*Santa Cruz* in the kingdom of Morocco, on the confines of that of *Sus*, near to Mount Atlas, is a small town, and carries on a trade chiefly with Marseilles.

"*Algiers*, M. Savary says, contains above 3000 foreign families which trade has drawn there, though he supposes it arises from the sale of prize goods.

"Their imports consist of gold and silver stuffs, damasks, draperies, spices, pewter, iron, hammered copper, lead, quicksilver, small cordage, bullets, linen, sailcloth, cochineal, tartar, alum, rice, sugar, soap, cotton in wool and thread, copperas, gums, brimstone, &c. The quantity imported, however, is small, the natives depending principally on these articles being brought in by the prizes taken by their privateers. Its exports consist principally in corn, olives, oil, figs, raisins, honey, wax, sheep, and goats.

"The *Bastion* of France is a small fortification and port in Algiers close to the frontiers of Tunis. It was given to the French by Soliman II. in 1561. The French have had it in their possession ever since. They pay for it 39,500 French livres yearly. The French have also Cape Rosas, Bonna, and Colla in their grant; from all which places they export annually some wheat, 11,000 measures of barley, 5000 of beans, pulse, about 80,000 skins, wax, and wool. In their coral-fishery they take about 600 quintals yearly."

France	82,840	79,560
United States	20,680	11,560
Portugal	7,560	14,680
Spain	7,160	7,560
Sardinia	....	12,200
Belgium	2,320	1,440
Holland	3 360	....
Tunis	....	440
Total	581,680	481,000

The principal articles composing the trade in 1839 were as follow:

IMPORTS.	£	£
Tissues of Cotton	191,200	
Wool	64,240	
Silk	11,720	
Flax and hemp	5,120	272,280
Raw silk		48,230
Sugar, raw and refined		27,900
Metals—steel, iron, lead, tin and brass		21,300
Spices, drugs, and dyes		19,400
Hardwares		10,400
Tea		8,800
Porcelain, delf, and glasswares		4,520
Leather		4,120
Cotton wool		3,880
Paper		3,720
Coffee		3,560
Empty casks		2,920
Sulphur		1,760
Taffia		1,360
Perfumery		960
Specie		135,400

EXPORTS.	
Fruits, fresh and dried	90,840
Wool, and tissues of	84,720
Olive oil	43 240
Wax, raw and manufactured	38,900
Hides, raw, and tanned	35,030
Grain and small corn	33,080
Oxen	22,200
Gums	19,360
Bark and tan	7,000
Leeches	5,400
Fowls and eggs	3,320
Ostrich feathers	2,160
Elephants' teeth	1,200
Gassoul (mineral soap)	880
Specie	94,400

"By comparing the above returns for 1839 with 1838, we find a considerable increase in 1839; viz., in tonnage, of 2403 tons, and in the value of imports and exports, of 272,040*l.*, or 25½ per cent.

"This increase has been principally in the value of specie imported from, and exported to, Tangier and Gibraltar. It will be seen that the greater portion of the trade of Morocco has been with England.

"The value of the trade between the States of Morocco and France, in 1839, amounted to 162,320*l.*, of which 82,800*l.* was for exports from France. In 1838 the amount was nearly the same; viz., 161,640. The fluctuations which have taken place since 1834 have caused a certain decrease in the trade between France and the States of Morocco. The chief decrease has been in sugar, while there was an increase in tissues of silk and wool.

STATEMENT of the Trade between France and Morocco in the Year 1839.

Imports from France to Morocco.	£	£
Tissues of Cotton	5,280	
Tissues of Silk	5,200	
Tissues of Wool	4,960	15,760
Tissues of Flax and hemp	320	
Raw silk		9,760
Sugar, raw and refined		5,840
Spices, drugs, and dyes		4,120
Hardwares		1,840

As a contraband trade is carried on to a great extent on the coast of the Barbary States, especially in Morocco, the above figures may be considered as much below the actual amount of import trade. The most accurate returns give an increase of about one quarter to the value of imports.

PRODUCE of Morocco exported from its principal Ports for those of Great Britain and her Dependencies. Also Produce exported to other Nations, during the Year 1839.

For Ports of Great Britain and her Dependencies.						For Ports of other Nations.

"Of the British vessels which arrived at Morocco in 1839, 77 entered at Tangier, 51 at Tetuan, and 25 at Mogador. The remainder entered the minor ports of Rabat, Mazagan, Dar-al-Baida and Saraiche.

"There was a great increase in the demand for British cottons and woollens that year as compared with previous years, while those from France had decreased.

"The articles sent of late from England have been of a better quality, to which is mainly to be attributed the increased consumption, and they sell at fair remunerating prices to the importer.

"British woollens are again in repute, and are preferred to French and German, because they keep their colour better.

"The value of British goods imported into Morocco in 1839 was declared at 299,100*l.* of which, in British vessels, 213,984*l.*

"The value of British goods imported, was declared at 35,977*l.* in British vessels, and 47,888*l.* in foreign vessels: total imports, 382,965*l.* This amount, however, was probably one-third under the real value. The declared exports were valued at 188,936*l.* by British

vessels, and 185,426*l.* by foreign vessels: total, 374,362*l.* This amount is also believed to be far less than the real value.

"The total declared value of the produce of Morocco exported to Great Britain and her dependencies, during the year 1841, was 197,281*l.* sterling; and to all other nations, 148,577*l.* sterling. Of the exports to Great Britain, &c. the principal articles were 2334 seroons sweet almonds, value 21,575*l.*; 745 seroons bitter, 5718*l.*; bark, 18,940*l.*; ostrich feathers, 3991*l.*; gum arabic, 17,211*l.*; hides, 2206*l.*; leeches, 6936*l.*; 147 pipes oil, 2943*l.*; 2804 oxen, 13,594*l.*; calf, goat, and sheep skins, 32,552*l.*; 2301 seroons wax, 28,569*l.*; wool, 27,000*l.* Of the exports to other countries the principal were, calf, goat, and sheep skins, 61,231*l.*; wool, 62,000*l.*; wax, 11,576*l.*; almonds, 2462*l.*; leeches, 2708*l.*; oil, 1298*l.*"—*Abstract of Consular Return.*

The principal manufactures of the city of Morocco are silks, embroidery, and leather, but all the arrangements are barbarous. The trade of Morocco with the interior of Africa is conducted by caravans, the principal of which is that which accompanies the pilgrims across the whole continent of Africa, to the Red Sea and the tomb of Mahomet at Mecca. The value of investments in this caravan has been usually estimated at two millions of piasters. The caravans which penetrate the interior of Africa depart from Tetuan, Morocco, Fez, and Tardouan, and meet at Tafilet, in order to cross together over the Great Desert of Zahara. The trade of Morocco is greatly restricted by monopolies: among these are the trade in leeches and the coral-fishery. The cultivation of the soil is free, but none of the products can be exported until a duty is paid to the emperor, by those who have a monopoly under him of the export trade. These must renew their privilege annually. A competition arises between Jews, Moors, and others, to obtain this monopoly, which is accorded to those who agree to pay the highest export duty to the emperor. In 1836 the export duty on wool was fixed at 4 piasters and 2 lbs. of powder per quintal = 119 lbs. avoirdupois. Since then the duty has been often changed, and the exportation of wool washed in the fleece prohibited, except from Mogador, on paying a duty of $9\frac{1}{4}$ piasters = 40 fr. per 119 lbs. avoirdupois. In all the ports except *Mazagau* 2 lbs. of powder is exacted, besides the export duty. In 1841 wool was allowed to be exported at a duty of 8 Spanish dollars and 4 lbs. of powder. The importation of unmalleable iron was prohibited.

The Import Duties are sometimes arbitrarily raised, and they are often corruptly levied; but 10 per cent on the value is the general rate of import duty: the value is, however, often underrated, by means of bribes or otherwise.

The commission on sales is $2\frac{1}{2}$ per cent, and the charges for landing goods, &c., about 1*s.* 8*d.* per package.

But charges and duties, especially export duties, are all arbitrarily charged and imposed in this barbarous yet naturally rich country.

"There is no fixed duty for the anchorage (harbour duty) in the port of Morocco. The sum is named by the custom-house officers. The high or low price depends upon the good or bad humour which the officer happens to be in; or upon the good or bad understanding that might be existing between the consul, or foreign agents, and the custom-house officers. A brig pays from 18 to 27 hard piasters in one sum.

" If a merchant vessel weighs anchor in order to land the smallest article of its cargo, or to take in victuals, the duty of anchorage sometimes is not claimed: at other times the whole is exacted, or else only the half of the duty; it entirely depends upon the caprice of the collector. This non-fixation of duties is an obstacle in our capitulations with Morocco.

Note.—The units indicated in this tariff show the relation with the French units hereafter mentioned.

		kilogrammes.
Pound or rottolo . .	at Mogador	0.538

CHAPTER XII.

REGENCY OF TUNIS.

The states of Algiers, Tunis, and Tripoli, possess nearly if not the same natural advantages in respect to climate, soil, and productions as *Morocco:* the former now belonging or occupied by France, comes under the head of that kingdom. (Which see.)

Treaties.—If the Bey of Tunis should not be deemed bound by the provisions of the Turkish treaty and tariff of 1838, he is, by former treaties with England, bound to charge no higher duties on the import trade of British subjects than 3 per cent, and, in other respects, to nearly similar stipulations as those contained in the existing treaty with Morocco.

The state of Tunis has a more temperate climate than Morocco. This ad-

vantage is attributed to the Mediterranean breezes, and the ramifications of the Atlas mountains. The Bey is hereditary, but tributary to the Porte, from whom he receives the *caftan*, otherwise he is quite independent. The wool and wheat of Tunis are of excellent quality, and mines of silver, copper, antimony, and various metals are said to abound in the mountain district. The superfices of Tunis is estimated at 40,000 geographical miles. The population at 1,800,000 inhabitants, and by some authorities at 3,000,000. The slave trade has recently been abolished. (See slave trade hereafter.)

The mineralogy of the country is little known. The ancient Carthaginians exported copper, and there is a mine of quicksilver: sulphur is found and said to be abundant. A thin layer of salt increasing to a foot in depth, covers the bottom of the Skibbah lake when dry in summer.

This country abounds with rich and fertile soils, but the extortions of the Bey dishearten the agriculturists, who, whether they cultivate much or little corn, have seldom left them sufficient for their maintenance. They cannot under such circumstances be expected to be industrious, for the benefit, not of themselves, but of the Bey and his subordinates.

The manufactures of Tunis are principally *red caps*, tarbouches, of which there are exported annually the value of 1,800,000 francs. Soap, at Susa chiefly. Some shawls and handkerchiefs. Wheat, maize, oranges, grapes, and all kinds of fruits; olive-trees, cotton, sugar-canes, carobs, saffron, and whatever is sown or planted, thrive in this fertile region. Horses, cattle, sheep, buffaloes, and other domestic animals are bred.

None of the African states are more conveniently situated for trade.

The exportation of wheat is not prohibited. We are utterly at a loss for any British consular returns, which give any information relative to this country, except of the mere navigation of Tunis. The following statement is condensed from the French consuls' returns published in the bulletin of the Minister of Commerce. Among the exports, oil and wood are the most important.

The value of imports in 1832 was estimated for duty at 13,103,600 francs = 524,140*l.*; the value of exports at 13,584,500 francs = 543,380*l.*

The principal articles IMPORTED were cochineal, 847,700 francs; raw silk, 785,000 francs; coffee, 337,400 francs; sugar, 317,600,600 francs; Spanish wool, to make tarbouches, 269,100 francs; woollen cloths, 180,300 francs; wine, 105,200 francs; specie (Spanish dollars), 3,724,500 francs.

The EXPORTS were red caps, or tarbouches, to Turkey, 1,755,600 francs; olive oil, 6,511,900 francs (chiefly to Marseilles to make soot); sheep's wool (unwashed), 3,331,300 francs; wheat and flour, 47,777,000 francs; salted hides, 220,600 francs.

The average annual exports are estimated by the French consul as follow:—

Olive oil, 4,000,000 francs; wool, 1,500,000 francs; red caps, 1,800,000 francs; other woollens, 509,000; wheat and pulse, 280,000 francs; nuts, dates, 90,000 francs; cattle, 100,000 francs; sponges, 200,000 francs; wax, 40,000; hides, 230,000 francs; senna, 50,000 francs; soap, 60,000 francs; elephants' teeth and gold-dust, 400,000 francs. Total average, exports = nearly 400,000*l.* sterling.

The revenue of the bey is estimated at about 8,000,000 Spanish dollars, or about 1,600,000*l.*; but the people pay twice as much, the collectors and subordinates retaining the difference. He keeps up an army, which, with the contingent cavalry of Arabs, is equal to 50,000 men. He has a corvette, and a few smaller ships or schooners armed, and thirty-two gunboats.

SEAPORTS.

Tunis has a population of 120,000, of which 30,000 are said to be Jews, 1500 Christians, and the rest Mahomedans. Its port, on a salt lake, communicates, by a canal or strait, with the sea; large ships anchor in the road or bay; the anchorage is excellent.

Biserta has rather a roadstead than a harbour. It is exposed to all winds from the north-west, round to the south-east. The anchorage is good.

Farina is a small port between Biserta and Tunis; near it are considerable salt-works.

Hammamet has 8000 inhabitants, and a tolerably safe roadstead, with good anchorage.

Susa is a small gulf, which will admit the largest vessels. It is exposed to the violence of easterly winds. 10,000 inhabitants.

Monastier, Sfax, and Gerbis are the other ports.

Number and Tonnage of Vessels which entered and cleared at Tunis in 1839.

* The piaster of Tunis which was worth about 12½*d.* a few years ago, is stated by the British Consul to be worth no more than 7¾*d.* in 1813.

The principal articles composing this trade were as follow :

IMPORTS.		piasters.	piasters.
Raw silk			650,000
Sugar			611,000
Tissues of	Wool, cloth	395,000	607,000
	Silk	212,0 0	
Wine, brandy, and spirits			491,000
Wool, Spanish			419,000
Coffee			383,000
Dyes—cochineal and vermilion			3?2,000
Timber and planks			326 000
Corn and meal			306 000
Manufactures (not distinguished)			140,000
Cotton thread			121,000
Spices—pepper, cloves, cinnamon, &c.			100,000
Haberdashery			90,000
Metals—iron in bars			91,000
Plated and gilt wares			89,000
Arms			68,000
Jewellery			63,000
Specie—gold and silver			25,310

EXPORTS.		piasters.	piasters.
Tissues of wool	Caps, &c.	1,431.000	1,681,000
	Other articles	250,000	
Wool			1,188,000
Hides, &c.	Leather, dried or curried	410,000	502,000
	Sheepskins	92,000	
Fish tunnies			351,000
Corn and meal			201,000
Fruit—dates			105,000
Live animals	Oxen	85,000	104,700
	Horses	19,700	
Olive oil			66,000
Wax			28,? 00
Soap			14,000

The total amount of trade carried on by Tunis in 1839 was less than in 1838. In navigation there was a decrease in 1839 of 11,128 tons, or about 21½ per cent, and in the value of goods imported and exported of about 27 per cent. This decrease consisted chiefly of manufactured articles imported, and of corn and fruits exported.

The trade of France with Tunis has also experienced a falling off.

The value of articles exchanged between the two countries, which in 1838 amounted to 5,020,000 piasters, in 1839 only amounted to 3,914,000 piasters.

The following are the articles composing the trade between France and Tunis in 1839.

Imports from France into Tunis.		piasters.	piasters.
Tissues of	Wool, cloth	383,000	495,000
	Silk	112,000	
Sugar			250,000
Coffee			247,000
Dyes—cochineal and vermilion			168,000
Wool, Spanish			132,000
Timber and planks			100,000
Wine, brandy, and spirits			89,000
Plated and gilt wares			78,000
Spices—pepper, cloves, cinnamon, &c.			50,000
Silk, raw			42,000
Arms			31,000
Jewellery			26,000
Cotton thread			21,000

Exports from Tunis to France.		piasters.
Wool		467,000
Leeches		106,000

Arrivals.—Of the 54 British vessels, there were from Malta, 41; Constantinople, 1; Monastier, 6; Bona, 1; Gallipoli, 1; Susa, 1; Algiers, 2; Sfax, 1.

Departures.—Of the 55 British vessels, there were for Sfax, 2; Malta, 45; Bona, 2; England, 1; Stora, 1; Algiers, 2; Alexandria, 1; Gibraltar, 1.

In 1841, 44 British and Maltese vessels arrived at Tunis.

Port of Sfax.—29 Vessels under the British flag arrived from Malta, at the Port of *Sfax*, in 1841, with wine, spirits, iron, sugar, coffee, cotton, beans, and British manufactures; and 2 from Sicily and Tripoli. Total, 31 vessels, and value of their cargoes, 13,950*l.* The same vessels carried back wool, hides, wax, barilla, sponge, oil, almonds, salted fish, nuts, bones, dates, tar, cattle, &c. The value of the exports cannot be ascertained. The whole commerce at this and other ports of the regency of Tunis forms a competition and struggle of interests between Malta and Italy; between British and foreign mercantile supremacy of Tunis, Leghorn, or other towns on the shores of the Mediterranean.

Navigation Duties in the Port of Tunis. (1)

	TUNIS.				SUSA AND MONASTIER.				SFAX AND GERBIS.			
	Piasters.		Francs.		Piasters.		Francs.		Piasters.		Francs.	
	p.	cbes.	fr.	cen.	p.	cbes.	fr.	cen.	p.	cbes.	fr.	cen.
Anchorage duty (2)	10	8	12	16	4	4	5	10	4	4	5	10
Captain of the port's tax	....		....		1	0	1	20	1	4	1	50
Water-tax (3)	5	0	6	0	0	8	0	60				
Odabaschi-tax (4)	2	10	3	15								
Totals (5)	18	2	21	75	5	12	6	90	5	8	6	60

(1) These duties are the same for all vessels, without reference to their tonnage, number of masts, and the depth of water they draw.

(2) These 10 piasters 8 caroubes are only collected once, on the arrival and departure of English, French, and Sardinian vessels. Spanish, Neapolitan, Austrian, and even Tunis ships pay 17 piasters 8 caroubes for anchorage duty on entering, if the vessel has a full or a part only of her cargo; and 17 piasters 8 caroubes anchorage duty at their departure in the same case as before mentioned. No duty is imposed if in ballast.

(3) This duty is 8 caroubes for each sailor. It is calculated upon ten men, and the duty is always imposed whether the vessels water or not.

(4) The Odabaschi duty is for the officer who grants the bill of health.

(5) Besides the fixed there are incidental duties peculiar to the Port of Tunis.

1st. All vessels which enter the Goulett Canal, for repairs or for any other purpose, are subjected to an entrance and departure duty of 20 piasters; and 5 piasters besides, daily, if the vessel is above 50 tons burden; if of less tonnage 2 piasters 8 caroubes.

2d. A vessel taking in ballast from the land, is taxed with a duty of 15 piasters.

3d. On every vessel which finds itself unsafe in the roadstead on account of the bad quality of its cables, or for any other reason, and wishes to get under shelter of the mole of the Goletta, a duty of 12 caroubes per ton is imposed as long as it remains there, but if for more than six months, the same duty is renewed. Besides these 12 caroubes per ton, the captain of the port receives in all 3 piasters.

This anchorage duty is not imposed when the captain can prove by the usual register (Teskeret), that he has already paid it in one of the ports of the Regency. All nations except England, France, and Sardinia, pay 16 piasters, instead of 4 piasters 4 caroubes at the ports of Susa and Monastier, and 12 piasters at Sfax and Gerbis.

Vessels driven into port from stress of weather, are not, either on arrival or departure, liable to anchorage duty, except when trading operations are transacted. This duty is not imposed when it has been paid in any other port of the Regency.

Coasting Trade.—The coasting trade is permitted to all foreign vessels without paying any other duty than those in the regular tariff.

Monies, Weights, and Measures.—The *piaster* has usually been valued at 12½*d.* to 13*d.* sterling: the present depreciated value is only 7½*d.* It is divided into 16 *caroubes*. The *cantaro* of 100 lbs. = 111½ lbs. avoirdupois. The *kafir* = 16 *kewibas* = 14$\frac{5}{10}$ imperial bushels. The *millerole* liquid measure, 14½ imperial gallons. The pic for cloth measure, 26½ inches; fustians, 18½ inches; and for silk, 24¾ inches.

Quarantine.—The quarantine duty is divided as follows:

Quarantine of observation fixed at 10 days is only for 7 or 8 days, but one pays for 10 days on all vessels coming from any port of the Mediterranean, at 5 piasters per day.

QUARANTINE Charges, at 12½*d.* per piaster.

No distinction of duty whether the vessel be national or foreign.

CHAPTER XIII.

TRIPOLI.

THIS regency is considered the most advanced of all the Barbary States, in civilization. It has a vast sea-coast, extending 350 leagues from Tunis to Egypt. The northern or maritime part, for a few miles from the coast, has, with the exception of where the Desert meets the sea near Mouktar, the same fertility and productions as Morocco and Tunis; the interior consists of little more than sandy deserts and arid hills. The area of Tripoli is estimated at 208,000 geogra-

phical square miles, and its population at only 600,000 inhabitants. Some writers have estimated the population at 1,500,000; they are chiefly Moors, Arabs, Berbers, and some Turks, Jews, and a few Christians intermixed.

The trade is chiefly continental, and with Malta, Tunis, and the Levant. The Pacha, who is of a Moorish family, rules despotically under the authority of the Porte. He monopolizes the trade in horses, mules, wine, liqueurs, potashes, &c.; but as the treaty of 1838 comprises Tripoli, these are, or should be abolished. The pacha continues, however, to tax the Jews and merchants, and to exact a great portion of the produce of the soil as a land-tax. Christian slavery and piracy are abolished in this state as well as in Tunis.

The caravans from Morocco to Mecca pass through Tripoli. Two caravans arrive annually from the interior of Africa with slaves, ivory, and gold-dust. The immediate environs of Tripoli, the capital, are described as beautifully picturesque, and embellished with country-houses, gardens, fountains, orange, mulberry, olive, and date trees. Cattle, poultry, vegetables, apples, plums, oranges, olives, grapes, dates, nectarines, peaches, almonds, figs, melons, and other fruits are abundant in its market.

The inhabitants of this state are described as slothful, improvident, and vicious; their chief food during a great part of the season being dates: plantations of date and of olive trees surround each village.

The *Manufactures* are few, and consist of some carpets, coarse woollens, palm-leaf mats, goats'-hair sacks, pottery, morocco leather, &c.

Seaports.—Tripoli situated on a promontory, has a population of 25,000 inhabitants. Its roadstead is tolerably safe.

Bengazi is a tolerable port sheltered by small islands. 5000 inhabitants.

Dernah, at the bottom of a bay, is exposed to the northern and easterly winds. There are many other small ports along the coasts of Tripoli; but they are of little or no importance.

Fezzan adjoins Tripoli to the South, and is tributary to it. Its area is not clearly defined; but the only productive part of any value is its *Oasis*, which occupies a greater surface than any other that we know of in the Great Desert. Fezzan is traversed by ramifications of the Atlas mountains. There is said to be neither rivulet nor river flowing through any part of it, and it seldom rains, but water is generally to be procured by digging 8 or 10 feet into the ground. The climate is oppressively hot in summer and cold in winter. Wheat in small quantities is grown, but dates constitute the staple production, and, with maize, and a kind of barley, the food of the people. Horses, cattle, and other domestic animals, are also fed on dates. This extensive region has but few commercial resources.

TRADE of Tripoli during the Year 1839, translated from the Bulletin of the Minister of Commerce, Paris.

Of the 23 British and Maltese vessels which arrived at Bengazi in 1842, 6 brought British goods from Malta, 4 with boards, and the rest in ballast.

Of the 23 departures, the greater number carried cattle, hides, and grain to Malta.

CHAPTER XIV.

THE THIRD REGION OF AFRICA.

THIS region comprehends the vast desert of Zahara and all Central Africa west of Egypt to the Atlantic, along which it comprehends a barren country, extending from Morocco to near Portendic: including the country called *Belled-el-gerid*, and the interior, as far south as Timbuctoo and Bornou, within ten degrees of the equator, including also the Lake of Tschad, Darzalch, Darfour, and the country of the Tibbous. Of this vast and arid region we know, and are long likely to know, little that can be introduced statistically.

The country called *Belled-el-gerid*, or land of Dates, extends along and from the southern declivity of the mountains of the Atlas from Fezzan, to the Atlantic; and with the exception of those elevated spots called *Oases*, or in such parts as there is water, this region may be considered a part of the Great Desert.

The mountains of the moon, in which are the sources of the principal rivers of Africa, intersect the continent from the east to the west coast, in the parallels of about 10 degrees to 12 degrees S. lat. South of these mountains, and north of the lands of the Kaffres, it has lately been ascertained that another vast desert covers a great portion of Africa south of the Equator, but this region has not yet been to any extent trodden by Europeans.

TRADE OF CENTRAL AFRICA.

NOTWITHSTANDING the general sterility of the soil, there has long been carried on a considerable trade by caravans with the interior of Africa, the

following extracts, translated from M. de Montvéran's work, *Etudes Statistiques sur l'Afrique boréale*, contain the best information that we possess on this trade.

"I have included under the title of northern Africa, that part comprised between the Equator, the Valley of the Nile, the Mediterranean, and the Ocean, and containing about 900 square degrees. This I suppose divided into four zones, the first extending from the Equator to the tenth degree of latitude, now known under the name of *Belled-el-Soudan* (country of the negroes), or *Belled-el-Abyd* (country of the slaves).

"The second from the tenth to the eighteenth degree of latitude, including Tokrour, Meli, and Senegambia. This portion of Africa is the most populous, the richest, and the furthest advanced in civilization. The space extending from the second zone to the thirtieth or thirty-second degree of latitude, and covered with yellow and burning sands is the desert. The fourth zone comprises the four states of Barbary—viz., Tripoli, Tunis, Algiers, and Morocco.

"The four deserts—viz., *Ouaday* (Wadai), *Bargah*, the *Libyan*, and *Saahrah* have spots of vegetation in them which are called *oases*. Sixty are now known.

"The following are very considerable *oases*:

"Darfour, or country of the Fourens, between Ouaday, and the desert of Libya, which is nearly 110 leagues long, and two or three broad, except at the extreme north, where it presents an oval of eighteen or twenty leagues at the widest part.

"Between the desert of Libya and Saahrah is the largest of the oases, the Fezzan, of about 700 square miles, enclosed between the chains of Hhaouruchs and Ghyâats. The country is arid, and consists of rocks, freestone, or sand. It is the ancient *Phazania* of the Romans. Morzouk is the capital of Fezzan, which is governed by a sheik, who is tributary to the Pacha of Tripoli. The tribute consists of 9000*l*., and a certain number of black slaves. The governor of Fezzan levied on each caravan passing Morzouk, six to eight Spanish piasters on each head of cattle, and three on each slave.

"Without being so extensive, the oases near the Libyan and Atlas mountains are richer, and enjoy a considerable trade. Such are the two oases of Hammon, the Great *Syouah* and *El-Bahyreh*. Aoudgélah, Ghadamés, Touzer or Téqort, Erouaghah, Mozâb, Tafilet, the country of Drâ or Dârâh, &c.

"There are no returns to show the population of these oases. It is supposed that there are 360,000 inhabitants of Fezzan, and 150,000 of Darfour. The inhabitants of Mozal are estimated at 250,000; of Erouaghah, at 100,000; of Tegoart, at 120,000; and those of the western portion of the desert, the tributaries of Morocco, Moors, Arabs, and Loudayas, at least 1,500,000.

"These vast deserts are traversed by six different lines of commercial communication, by means of caravans, or *kafilahs*, generally consisting of from 1800 to 2000 camels; five of these are from south to north, and one from east to west. At the points of arrival and departure, there are many lines communicating with the places in the deserts or on the coast, they are traversed by *gazzies*, or small caravans with camels, by mules, asses, men and women.

"These six lines of communication are as follow:

"1. The Kafilah of Darfour from South to North. From Qorbi, on the frontiers of the valley of the Nile to Syout in Upper Egypt, *viâ* El Karged, being a 31 days' journey. The caravans formerly started every six months, but now only once in 15 months. They consist of from 1000 to 1100 camels, carrying brass, hides, gums and drugs,—and of from 1500 to 1800 slaves.

"2. The Kafilahs of Ouaday and Dar-Ssalch, to the amount of five annually, follow a direction which lies between the lines of march, followed by the caravans of Darfour and those which traverse the Fezzan. These caravans consist of about 1000 camels, which carry principally brass, hides, drugs, and provisions for the 2000 or 2500 slaves conveyed by them to the merchants of Aoudgellah, who sell them in Egypt. These caravans, in their new direction, which has made it necessary to dig wells, to build caravansaries, magazines, &c., have been established posterior to the European prohibition of the slave trade on the coast of Guinea. 50 days are occupied in reaching Aoudgellah.

"3. The Kafilahs of Bornou assemble on the Yaoury and lake Tschadd. There are two annually. They proceed directly north, arriving at Morzouk *viâ* Bylmah and the oases of Tibbous. Here they divide into several caravans or *gazzies*. Those intended for the north-west, proceed by the mountains of the Ghyâats to Ghadamés, Touzer, Tunis, the island of Gerbéh and Tripoli. Those to the north, go by two routes to Tripoli *viâ* Sognâ. From Sognâ the caravans of Aougdellah and Egypt proceed to the north-east. The kafilahs consist of 2000 camels richly laden. They escort from 1800 to 2000 slaves, and are 70 days in arriving at Morzouk.

"4. The caravans of Hhaousâ form at Agghadez, the oasis of the Touraiqs. They proceed by the oases of the Touats to Ghadamés, whence they separate into the different routes leading to the ports and cities on the coast of the States of Barbary. At Temymouw, the metropolis of the oases of the Touats, they meet with a portion of the kafilah of Timbuctoo, intended for the merchants of Ghadames, Tunis, Tripoli, and even of Constantine. This caravan of 2000 camels, with 1500 or 1800 slaves, occupies from 58 to 60 days between Agghadés and Ghadamés. There are at least two a year.

"5. The great Kafilah of Meli, Oussolo, and Ouanqârah, assembles at Timbuctoo and El-Arâouân. It proceeds north-west to Tafilet, and thence to the ports of the empire of Morocco, to the Ocean, to Fez, Tangier, Tethouân, Tléméeen, and Oran. It consists of from 1800 to 2000 camels, and 700 or 800 slaves. This caravan is richly laden, being almost entirely intended for the Moorish merchants of Morocco. It occupies from 78 to 80 days in arriving at Fez from Timbuctoo, and if there are many slaves, 90 days. There are three or four annually.

"6. The Kafilah of pilgrims from Morocco (*Maghreb*) formerly traversed the limits of the desert from west to east, outside the declivities south of the Atlas. During the latter period of the rule of Algiers, it entered this country above the desert of Angad, arrived by a gorge of the Ouanascherischs in the valley of the Séthyf and the lake of Tythery, and thence to Constantine and Tunis. It followed the borders of the gulf of Kabés to Tripoli, and thence entered the deserts of Bargah and Libya. On arriving at Cairo, the caravan, having been increased on the road, consisted of from 2500 to 3000 camels, and included as many as 3000 or 4000 men, women, and children. This Kafilah employed a whole year in going to Mecca, paying the devotions there, and in returning.

"Since the year 1830 the coast of Africa has been agitated by civil war at Tripoli; by the French occupation of Algiers; and the intrigues of Constantinople at Tunis. Hence the caravan to Mecca has been discontinued.

"The trade of the eastern part of the deserts is carried on with Bengazi, Derna, Sl'ten, and Porto-Magra, and Alexandria. All the force of these Kafilahs is concentrated on the empire of Morocco. The inhabitants of Erouâghah and Mozah, tributaries of Algiers, carry on a direct trade with the oases of the Touats. Before the war between Tunis and Algiers in 1782, and the plague of Tunis in 1783, a caravan left Constantine monthly for Tunis, carrying goods to a value of from 100,000 to 120,000 Spanish piasters, and occupying 18 days on the journey. This caravan has been resumed and daily increases in importance.

"*On the demands, &c. of Central Africa.*—The articles required by Central Africa from the ports of the Mediterranean and European industry, are furnished chiefly by Marseilles, Leghorn, Venice, and Trieste, and the entrepôts of Malta and Gibraltar.

"The principal articles needed by the oases of the desert, are the corn and fruit provided by the coast of Africa, and the countries situated at the foot of the south and east declivities of the Atlas.

"The caravans of Darfour received from Egypt, by Syoat and Cairo, silk manufactures; cotton cloth, striped, blue and white; glass, glasswares, and false corals; coral beads for bracelets, gold lace, Indian merchandize, spices, coffee, a little sugar, gum benzoin, alum, tartar, oil of vitriol, verdigris, sulphur, nails, metals, corn, carobs, and fruit.

"The caravans of Aoudgellah carry into Ouaday and Begharmed the above articles, and also hardwares, paper, snuff and tobacco, and corn and fruit.

"Tripoli furnishes the caravans of Fezzan and Ghadamés with the following articles: Writing-paper, marked with three moons; coral, false coral, glass beads, and coloured Venice glasswares, crystals, bottles and glasswares assorted; delf and china basins, the

same in brass, coffee-cups, silk stuffs, real or false damask, gold lace, Lyons stuffs worked with gold, cloth, common, red, or green, barracans, fine, and *bernousses* of Tripoli and the coast; caps and coifs, red and black; turbans; Mésuratha or Smyrna carpets, five or six feet long; printed cotton cloths, calico, white, fine and ordinary, in pieces, and striped muslins; shirts, large and trimmed, in cotton cloth, striped or white; muslin handkerchiefs, white and common cotton ditto, white; Turkish breeches of red cotton cloth, and cotton cafetans; fine cloth and linen handkerchiefs; guns and pistols, bullets, and gunpowder; cutlasses, knives and razors; brass wire and vessels, and plates of copper and brass; incense, amber, perfumery, &c.; spices, coffee, and tea; and salt meat, principally mutton.

"The port of Tunis provided Ghadamés, by the caravans of Touzer and Teqort, Quairouân, and the island of Gerbéh, with the same articles as Tripoli, with the addition of dates, soap, salt, &c., receiving in exchange, madder, &c. Since the French occupation of Algiers, the exports from Tunis to Central Africa have doubled, as have those of the ports of Tripoli and the kingdom of Morocco, though the trade between Tunis and Central Africa has never been extensive.

"The ports of Morocco, by the caravans of Mekines and Tétouan, by Fez and the Tafilet, D'azamor, Rabatt, Mogador, &c., furnish the desert, Meli, Senagambia, and Hhaousâ with the above articles of exchange, and with inferior Morocco silk manufactures for girdles, cafetans, caps, handkérchiefs, &c.; with common blue cloth for the inhabitants of Tokrour; and with tea. The soil of this empire (Morocco) is more fertile than that of the other states; and more corn and fruit is exported to central Africa; and a greater number of slaves, and more gold-dust, &c. are received in return.

"The caravan of the pilgrims to Mecca, which traverses Africa at its widest part, and near the Mediterranean, contributes largely to the trade of Central Africa. It conveys to Mecca the Indian cloths and muslins deposited at Morocco by European vessels, silk coverlets, red and yellow Morocco leather, khol, henna and souak, antimony and fine indigo. It brings in return from Mecca, the merchandize of the East Indies, musk, myrrh and aloes, &c., balm of Mecca, opium, naphtha, &c., Cachemire shawls, precious stones and pearls, Mocha coffee, yemen, pistachios, &c.

"It will be seen by the above, that whatever progress in civilization may have been made by the upper classes, very little has taken place with regard to the lower orders. To effect this, there should be a greater trade in hardwares, cutlery, utensils, and such kinds of articles, and as this would lead to a greater demand for native produce, considerable impulse would be given to agriculture, &c.

"*State of Civilization of Central Africa.*—In the different zones into which that portion of Africa lying between the Mediterranean and the equator has been supposed above to be divided, civilization is very far from being what it is in the south of Europe, in Asia, and under the same parallels. Arabia alone resembles Africa in this respect, and this may be attributed to the similarity of soils and climates. Moreover, the inhabitants of Africa, descended from nearly the same stock, have been successively intermixed with Arabic tribes. The invasion and conquest of 653, the adoption of the same worship, and of the Arabic characters introduced into the *Schouyah* language; and finally the Arabic of the Koran, with which nearly all the religious Africans are acquainted, have completed the fusion and assimilated their conditions of civilization.

"The Arabs, Moors, and Berberes are less barbarous than the inhabitants of Bornou, Hhaousâ, Meli, and Ouanqârah. Among the Touats, the Erouâghains and the inhabitants of the oases to the north-east of the desert, there is a greater improvement in the arts, and more industry than in the rest of Central Africa; they boldly contend against the unfavourable nature of their soil.

"The slave trade was the cause, in Tokrour and Senegambia, of wars between nation and nation, tribes and tribes, and ceaseless depredations, which perpetuated the state of barbarism in which Central Africa was placed. Mr. Wilberforce brought forward the question of the abolition of the slave trade in 1798. In 1815 the slave trade was generally prohibited. Unhappily this movement has been frustrated as far as Central Africa is concerned.

"The *Foullas*, a savage Mahometan race of the Empire of Saccatouse, make it a

point of their religion to deprive the infidel negroes of their liberty, and then traffic in them. They make excursions into the Soudan, Mandara, &c., in order to surprise the inhabitants and make slaves of them.

"Unfortunately the slave trade, which has been prohibited in the west, has been encouraged since 1816 in the east and north, by the Viceroy of Egypt. In 1820 he sent expeditions into Upper Nubia to carry off the blacks, for the purpose of recruiting his infantry. He expected to take 40,000 Nubian negroes, whereas the expedition commanded by his son, Ismael Bey, only procured 8000 men, women, and children, of all ages. He then turned to the traffic carried on in the interior of Africa; the more so as he had lost many men in Arabia, and against the Oualhhabytes. The caravans of Dongolah and Kordoufan, Darfour, Aoudgellah, and Fezzan, procured from the south-east of Africa and Bornou as many as 40,000 individuals of all ages and both sexes. Upwards of 40,000 soldiers in the Egyptian army, which consists of 78,000 infantry, are negroes. All the negroes not required in the Barbary States are sent to Alexandria.

"Tripoli received in each year from 1820 to 1828, on the average, from 7000 to 8000 negroes of all ages and both sexes, by the caravans of Ghadamés; Bengazi and Derna about 6000, and Algiers 4000 or 5000.

"Morocco receives from 3000 to 4000 from the south and west of Sahrâh by the caravans of Tafilet and Segelmessah; and three times as many from the coast of the Atlantic and Loudayah by the kingdom of Sôuz; half the army, which consists of 16,000, is composed of them.

"Prior to 1828 the Turks made many prisoners of war among the Greeks and sold them to Egypt, Tripoli, and Tunis. Since the battle of Navarino and the establishment of the Kingdom of Greece, this has no longer been done. The number of slaves annually furnished to Turkey by Central Africa is estimated at 80,000, which at the average value of 20*l.*, makes a trade of 1,600,000*l.*

"It will be seen that the political events of the last twenty years, combined with the European prohibition of the slave trade, have led to a great extension of the trade of Africa, and especially of Central Africa.

"*The Produce and means of Exchange of Central Africa.*—The following articles are furnished by the oases of Tibbous, Touarigs, and the Moors, by Bornou, Ilhaousâ, and some parts of Meli and Senegambia: Corn—viz., sesame, millet, maize, rice, &c.; cassara, ignames, potatoes, &c., and some inferior indigo.

"There is some tolerably good flax and hemp in the Kanémeh and on the banks of lake Tschadd. The cotton plants are very bad in general.

"From 90,000 to 100,000 quintals of palm oil, valued at 100,000*l.*, are annually exported to Great Britain for the soap manufacture.

"The following is a statement of the export of gum from Senegambia:

	Quintals.
To France	9,000
England	6,000
Portugal, Holland, United States	4,000
Other ports of Central Africa, by the caravans of Fezzan and Morocco	6,000
Total	25,000

which at 4*l.* amounts to 100,000*l.*

"The English and French each export about 52,000 kilogrammes of wax from Senegal, of a value of 4120*l.*

"Tokrour and Ouaday export copper ore of a tolerably good quality, which is taken from Mandara and the mountains of the moon, and exported to the coast by the caravans of Aoudgellah and Fezzan.

"Gold-dust is an important article of commerce. Four principal districts of gold-sands are found in Northern Africa; viz., at Dâr-Fazôgle, in Upper Nubia; in the mountains of

Mandara, under the tenth degree of latitude; at Bourré, in the Ouassolo; and at Banbouq, in the Ouanqârah. The produce of these is estimated at from 60,000 to 70,000 ounces at 4*l.* per ounce. The produce of the Fazôgle district is retained in Nubia and Egypt. From 45,000 to 50,000 ounces of gold-dust are exported by Senegambia, Morocco, and the other lines of caravans.

STATEMENT of the Value of Articles exported from Central Africa to the Coast of the Mediterranean and that of the Ocean.

		£
80,000 slaves		1,600,000
4000 camels, horses, mules, and asses, at 6*l.*		24,000
Honey and wax		16,000
Cochineal		6,800
Opium		60,000
Indigo		60,000
Ostrich feathers		10,000
Tusks and teeth of elephants, rhinoceroses, and hippopotami		32,000
Hides and skins, &c.		88,000
Gums, Senegal and Acacia		120,000
Gums of other sorts	12,000	32,000
Resins and varnish	6,000	
Drugs and perfumes	8,000	
Spices	6,000	
Palm oil		100,000
Wood, cabinet		20,000
Plants, lichens and wood for dyeing		34,000
Gold-dust		200,000
Copper and lead ore		20,000
Natron, alum, salt, &c.		32,000
Expenses of transport, &c. on 21,000 camels, at 8 Spanish piasters per load		33,600
Profits and wages of factors, agents, &c.		372,000
Total		£2,860,400

"This trade is carried on by the caravans in the following proportions:

"One from Darfour every fifteen or eighteen months consisting of about 1100 camels.

"Five caravans annually from Ouaday to Aoudgellah, 5600 camels.

"Two caravans from Bornou to Morzouk, Cairo, Tripoli, and Ghadamez, 4000 camels.

"Two caravans from Aghadez to Ghadamez, thence branching off to Tripoli, the island of Qabés, Tunis, and the Oases of Belled-el Géryd, 4000 camels.

"Three caravans from Timbuctoo and El-Araouân, and the neighbouring oases to Tafilet, 8000 camels. On arriving at the Atlas Mountains, they divide and convey the loads on mules and asses to the ports of the Empire of Morocco, Telemsen and Oran.

"All these caravans, with the exception of that of Darfour are richly laden. The value of articles exported to Morocco from Central Africa has been estimated at 2,000,000*l.*; but this is probably exaggerated.

"4000 camels are continually employed in the trade of the oases of the deserts of Libya, Syouyah, El-Bahyreh, El-Garaih, Farofréd, El-Kharget, and Qasr-Dakel.

"The establishment of a direct caravan trade between the South and the Kingdom of Algiers would have a great effect upon the civilization of Africa.

STATEMENT of the Trade of various Countries in the North of Africa.

		Imports.	Exports.
Alexandria	in 1832	£ 1,471,520.	£ 1,232,240
Tripoli, Bengazi, and Derna	„ 1833	37,556	41,104
Tunis	„ 1833	670,640	342,328
Algiers	„ 1834	802,616	873,752
Morocco	„ 1832	222,012	202,212
		£ 3,204,344	£ 2,691,636
Total of Imports and Exports		£ 5,895,980	
Senegambia, &c.		£ 440,000	£ 400,000
Total of Senegambia, &c.		£ 840,000	
Grand Total of Imports and Exports		£6,735,980	

" The contraband trade between Gibraltar and the States of Morocco, is estimated to convey 913,500 kilogrammes weight of goods : that between Gibraltar and Algiers 456,750 kilogrammes. That of Malta and Corfu is unknown.

" The trade of Morocco presented a value of from 600,000*l.* to 640,000*l.*, before the emperor gave the monopoly of the customs to Jewish houses.

" The following is a statement of the trade of France with the various countries of Northern Africa :

	£
Alexandria	279,440
Tripoli, Bengazi, and Derna	32,000
Tunis	332,136
Algiers	650,594
Morocco	95,668
Senegal (St. Louis)	288,000
Total	1,677,838

STATEMENT of the Goods, &c., which would be conveyed by a Caravan of 1800 Camels from the south of Africa to Bôna and Stora by Constantinople.

		£
600	slaves	12,000
500	camels, horses, and mules	4,000
2,000	ounces gold-dust	8,000
100,000	kilog. gum senegal, &c.	6,000
50,000	„ wax	4,000
50,000	„ hides and skins	1,800
40,000	„ horns of animals	1,300
4,000	„ elephants', rhinoceroses', and hippopotami's teeth	1,300
1,000	„ ostrich feathers—white and gray	3,000
70,000	„ drugs, dyes, and spices	6,800
15,000	„ copper ore	1,200
40,000	„ *trona*, alum, and dates	600
		£50,000

" The line of caravan from Timbuctoo by the Tafilet to Tangier and Telemsen, occupies . . . . . 84 days, and is 1500 miles long.
Ditto, ditto, by Ghadaméz and Tonzer to Tunis . 84 „ „ 1503 „
Ditto, ditto, by Ghadaméz to Tripoli . . . 73 „ „ 1320 „
Ditto, ditto, by El-Eghouâth to Algiers . . . 63 „ „ 1130 „
Ditto, ditto, by the Mozal to Constantine and Bôna, 60 „ „ 1100 „

" There is only a three days' journey between Constantine and Bôna, half of which is

over level ground. The road from Constantine to Algiers is three times as long, and much more impassable.

"There would be doubtless three or four caravans annually by the above route, if we had possession of Constantine. The Touats, who are the most advantageously situated for carrying on the trade between the south and the coast, would probably send ten or twelve caravans annually to Constantine of from 800 to 900 camels, which would occupy much less time than kafilahs of from 1800 to 2000 camels.

"It is also probable that Ouanqarâh, Jenné, Ségo, Sansanding, Yamina, and Bama-Ron would transmit their produce direct to the oases of the Touats, and receive back through them the produce of the coast of the Mediterranean, rather than trust to the Moors of El Araouân, when a journey of 80 days is necessary, the wells being few and far between, and the water brackish.

"The establishment of a French caravan would have a great effect on the trade of Central Africa. It would enrich the tributaries of the kingdom of Algiers, and the Arabs and Qobails, and furnish in return a market for their produce."

CHAPTER XV.

FOURTH REGION.

THE fourth division is that which M. Balbi terms the region of Nigritia, extending south from the latitude 17 degrees north to 18 degrees south, where it borders on the region of Southern Africa. The region of Nigritia or Negro-land, comprehends Senegambia, the whole coast of Guinea and Benin, in which the English, French, and Portuguese have settlements.

The climate of this territory is generally more fatal to European constitutions, than that of any other country. The productions of the soil, where cultivated, are rich and abundant. Cotton, sugar-cane, rice, maize, indigo, tobacco, spices; in short, all known tropical fruits and plants. The vegetation is generally rank and luxuriant. This region is divided into countless governments or nations, often at war with each other. It is, and has always been, the very empire of the traffic in human beings; and, in connexion with slavery and the wars between tribes which this traffic has caused, and continues to cause, the cargoes of fire-arms and gunpowder shipped annually from the port of Liverpool alone for this part of Africa, form a curious subject of inquiry.

St. Louis, Goree, James's Fort, Bathurst, Cacheo, Free Town or Sierra Leone, Kingston, Cape Coast Castle, Saint George de la Mina, Christianberg, Benin, Old and New Calabar, Losango, Cabinda, St. Paul de Loanda, and St. Philippe de Benguela, are the principal ports in this division.

The slave trade, and the present commercial resources and trade of the western coast of Africa, as carried on from the Atlantic boundary of the Great Desert to the northern limits of the Cape Colony, constitute a subject of the most interesting and important inquiry. The following account of the resources and commerce of this vast fertile and prolific region drawn up by the author of

the *Lex Mercatoria*, when the British and African slave-trade was at its height, will enable the reader to compare the past with the present commerce of Western Africa.

"Very little trade has been carried on, nor has there been any settlement of Europeans on the coast from the kingdoms of *Morocco* and *Sus* to the neighbourhood of Cape Verd; near which cape, and in the space between the river Senegal (which is one of the branches of the Niger) and that of Sierra Leone, the French and Portuguese have some factories, as the English and Dutch formerly had, but the one abandoned them, and the other yielded them to France. Since then, however, the English have driven the French from all their settlements on the coast of Africa.

"Cape *Verd*, so named from the evergreen trees that cover it, is situated between the rivers Senegal and Gambia. The trade practised in going up these two rivers, either on the coasts of Senegal, or on those which extend from Gambia to the Cape of Sierra Leone, consists of gold-dust, ivory, wax, hides, gums, ostrich and heron's feathers, musk, rice, millet, indigo, cotton coverings for negroes, and in slaves.

"The Portuguese have had great settlements on all these coasts, but at present their habitations are somewhat more inland, especially up the river St. Domingo, which is about thirty leagues from the Gambia: their residence is at *Cacheo*, where the African company of Lisbon have their magazines for depositing their European goods and that which the country produces.

"They bring the latter down the river, which is navigable for above 200 leagues. The quantity they annually collect is about 100,000 lbs. of wax, 50,000 lbs. of ivory, and from 800 to 1000 slaves, which they send to the island of St. James and the Brazils, besides those they sell to the English and Dutch, who come here yearly to seek them. The Portuguese carry on their commerce in barks of about forty tons burden, with which they trade up the rivers Cazuma, Pongues, Nonnes, and even to that of Sierra Leone; the first furnishing them with the greatest quantity of wax; Pongues and Nonnes with indigo, and Sierra Leone with fruit called *cosse*, with which they drive a great trade; and from all these places they get a great quantity of ivory and slaves, in exchange for negroes' clothing, brandy, iron, pewter, &c.

"The English had formerly many habitations and some forts on the Gambia: that called St. James, belonging to the South Sea Company, situated a little above its mouth, was taken and destroyed by the French in 1695. The river has two openings, the one to the north, the other to the south; in which latter (being most used), ships of 300 or 400 tons may enter, but cannot go up more than six or seven leagues, vessels of 150 tons can go up much higher. The English, in lighter vessels, have proceeded upwards as far as 150 leagues, and brought back slaves, gold, and ivory, to *Majaugard*, where they had a magazine. They had also a fort on an isle in the river, about seven leagues from its mouth.

"*Cantory* (Cantor) is a kingdom of Africa, in Negroland, on whose coasts the French have a tolerable good trade, and a fort for its security and protection. The principal traffic is in skins and hides, for which duties are paid at Beyhouta.

"*Calbaria* (Calabar) is a province in Africa, where the Dutch have a trade, chiefly carried on at the town of that name; their fort being there, and their traffic in slaves is a good one, though the greater part of the natives on this coast are man-eaters. The exchange for slaves is unpolished copper, or small bars of hammered brass, each weighing about a pound and a quarter, and about two feet and a half long, of which fourteen or fifteen are given on an average for a slave of either sex. They use the copper for ornaments, making it into bracelets, &c. The French Company of Senegal, united to that of the West Indies, in 1718, and after 1719, swallowed up in the great India one, have two principal establishments on this coast; the one at the Island of Goree, and the other at the Isle of St. Louis, at the mouth of the Senegal river. The Dutch were the first who occupied the Island of Goree, and built there the forts of St. Francis and St. Michael, though under other names at that time. The French seized it in 1678, and in 1692 the English took it from them.

"The French, however, retook it the following year, and the Senegal Company have oc-

cupied it ever since, and from thence carry on a considerable trade, but the greatest part is transacted on the coast of St. Louis, and on that of the Senegal.

"These places were taken by the English in 1758, and on the peace of Versailles, in 1763, the Island of Goree was restored to France. The trade of the river Senegal, with the forts and factories of St. Louis, Podor, and Galam, were ceded to the King of Great Britain; and soon after the fort of Senegal and its dependencies were vested in the African Company.

"All that the French obtained in the whole of these settlements, Senegal included, might amount in a common year to six thousand bull and ox hides, fifty quintals of yellow wax, seven thousand pounds of elephants' teeth, some ostrich and heron's feathers, and ambergris.

"They also traded in great numbers of slaves. The chief traffic of gum is with the Moors, who bring it on horses to a place called *Terrier Rouge*, fifty leagues from the coast, going by the river of Senegal; of which the sales begin in the month of April, and last about six weeks.

"Higher up on the coast is found the kingdom of the *Jaloses* and that of the *Ceratique;* and it is to the last that the customs are paid for liberty to navigate and trade on the Senegal.

"The proper merchandize for the river Gambia are bars of iron, brandy, beer, copper basins, copper plates, yarn, coarse blue serges and cloths, red and yellow rattines, red, yellow, and white combed wool, coloured glass beads, rough coral, sabres, copper trumpets, red caps, padlocks, knives, coarse and fine shirts, linen, earthenware, blankets, shoes, glass bottles, &c.

"For Senegal the goods were partly of the same description, with the addition of looking-glasses, scarlet cloth, &c.

"Arms, such as muskets, fowlingpieces, pistols, &c., powder and balls, shot and flints, are equally proper for Gambia and Senegal; but one of the best articles are the Maldivean shells, called *cauris,* in India, and *bouges,* on the coast of Africa.

"These shells are only current from Cape Blanco, to and including Judia (or Xavier) on this side of the river Ardres.

"Angola, where the greatest purchase of negroes for America is made, does not admit these shells in trade.

"It is true that the inhabitants of Congo do also make use of shells, by them called *zimbi, or zinibi;* but these are carried to them only by the Portuguese, who are in a manner masters of this great kingdom.

"*The Commerce of the African Coasts, from the Cape of Sierra Leone, to the River of Ardres (Rio Volta).*—It is from the river of Sierra Leone, that the coast of *Malaguete* begins, so called from a sort of pepper, that makes the principal trade of the blacks of this part of Africa. The English and Portuguese share this traffic.

"The merchandize this country supplies, are elephants' teeth, rice, civet, and a little ambergris. The capes of *Monte* and *Miserado* would be good places for trade were the natives more tractable. The *Ivory* coast joins the preceding, and produces only teeth and a little gold for trade. Iron rings and small bells please them most. The places of greatest trade on this coast are the *Grand Drouin,* situated on an Isle formed by a small river, *Growa, Tabou, Little Tabou, Tao, Rio Fresco, St. Andrew, Giron, Little Drouin, Bortrou, Cape la Hou, James la Hou, Wallochk, and Gammo.*

"The Gold Coast begins at the river *Sueiro da Castos,* and is about a hundred and thirty leagues long, east and west. This coast is above all others frequented most by Europeans, and here the English, Dutch, and Danes have considerable settlement. The great quantities of gold found and sold on this coast, have given it the name, and its chief market-places are *Atchim, Acera, Acanni, Acherva,* and *Fetu.* That of *Atchim* is the best.

"*Abasson* is the first kingdom on this coast westward—its frontier on the coast is only about seven leagues, although how far inland it runs is not known. On sailing eastward, the villages and little states of *Albiani,* and *Tabo* are met with. The ships anchor opposite these villages, and the Negroes come off to trade with them.

"The kingdom of *Guiomere* is the nearest to *Cape Apollonia.* The trade here is considerable in gold, ivory, and slaves. Eight leagues to the eastward of *Cape St. Apollonia* is the village of *Atchin* before alluded to.

"After Atchin, is *Cape de Trois Pointes.* The subjects of the King of Prussia were once settled here and had a fort. The Dutch now possess it. It carries on a considerable trade in gold, ivory, and slaves. The Dutch have another fort called *Botrou* (Boutrie, near Dix Cove), about two leagues to the eastward of the cape, and another six leagues to the east of *Botrou*, named *Witsen* (Taccory).

"*Sama*, or *Chama*, is one of the chief places on the Gold Coast, it belongs to the Dutch who carry on a considerable trade.

"*Gnaffo*, or *Commendo*, is a kingdom about four leagues to the east of Sama. It was formerly united with *Fetu* and *Sabou*, but since its separation it has fallen off very much. This part is generally called Little Commendo, now British, to distinguish it from Great Commendo which is further inland. All this country is extremely fertile. The French have a settlement here for the purpose of supplying their ships with refreshments going to and from the east.

"*Castle of the Mina*, known by the name of *St. George de la Mina*, is the principal factory, and the best fortress which the Dutch have on the Gold Coast, being the residence of the director and general commandant, and the centre of their commerce.

"The soil is not fertile, and the blacks of *Commendo*, *Fetu*, and *Cape Corse* furnish provisions to the miners.

"*Cape Corse* (Cape Coast Castle) is about four leagues from the Mina, and is the chief settlement of the English in these parts; it is the residence of the director-general of the London company, who has authority over all the settlements which the English have in Guinea. The fortifications are here so strong, as to have resisted the Dutch fleet under Admiral Ruyter. The village occupied by the negroes contains about 200 houses, and has a diurnal market, where every necessary can be had. By a joint agreement of the English and Danes, when they captured this place from the Dutch, the Danes have a fortified settlement here, called *Fredericsbourg*, commanded by the principal commissary of the Danish company, which carries on a considerable trade here.

"Although the fort and village of *Cape Corse* (coast) are dry and arid, yet the rest of the kingdom is very fertile and abundant, and the natives numerous and laborious.

"The Dutch have a fort here called *Nassau*, about a league from *Fredericsbourg*.

"*Fantin* (Fanteen) is a rich, populous, and powerful kingdom—the largest village is *Cormantin*. The Dutch have a good trade and a fort here.

"*Aguvanna* (Aquapim) is a small kingdom on the Gold Coast; it carries on a trade in gold-dust and some slaves.

"*Acara* (Accra) is a large kingdom at the extremity of the Gold Coast, where the English, Dutch, and Danes, have each a considerable fort, *which renders them masters of the gold and slave trades.*

"*Lampi*, *Juda*, and *Ardres* (on or near the *Rio Volta*, or *Ardres*) come next, and carry on a considerable traffic in slaves; a great number can be supplied from this part at about eighty French livres on an average. The kingdom of Ardres exports nothing but provisions and slaves.

"*Benin.*—The Europeans trade but little with this kingdom, though it has 250 leagues of coast; and the inhabitants are less savage than the negroes of Guinea.

"The merchandize found here are cotton habits (striped), afterwards sold on the Gold Coast; and others blue, intended for the trade of the river Gabou and Angola; Jasper stones, female slaves (for they will sell no men), leopard-skins, pepper, and Acori, a species of blue coral which grows under water.

"In exchange they take gold and silver stuffs, red and scarlet cloths, red velvets, flowered stuffs well coloured, red glass earrings, looking-glasses, thread and linen, earthenware, candied oranges and lemons, and other green fruits, brass bracelets, iron bars, &c.

"The Dutch are the only Europeans who have a warehouse here, which is at *Golou*, a large village on the river of Benin; and this commerce they enjoy uninterrupted, as the country produces neither gold, ivory, hides, gums, wax, nor men slaves, though they are much more honest and civilized than their neighbours.

"Captain Snelgrave in his Treatise of Guinea, published in 1734, says, 'that the river *Congo* in the sixth degree of southern latitude, is the most distant part that the English trade to, whose commerce has so greatly augmented since the peace of Utrecht, that

instead of 33 ships in 1712, on the coast of Guinea, it was demonstrated to the commissioners of trade, that in 1725 there were above 200.'

"*Congo.*—The Portuguese, who discovered this kingdom in 1484, are the only Europeans who trade here; all other nations stopping only for refreshment, which they purchase from the blacks for small looking-glasses, beads, &c. The principal settlement of the Portuguese is at *Loanga*, the residence of the viceroy, and the capital of what, it may be said, the whites possess in this kingdom.

"The slave trade is the most important one the Portuguese have at Congo, and they send immense numbers yearly to the Brazils.

"They also hold considerable numbers for use at their settlement on this coast, varying from 50 to 3000. A religious society at *Loanda* have the enormous number of 12,000, among whom are blacksmiths, joiners, turners, stone-cutters, &c., and who bring in to their masters from 400 to 500 reis per day gain, by working for the public.

"Besides the slaves, Congo produces ivory, wax, honey, and civet, and some very trifling mines of copper and iron produce a little. *St. Salvador* is properly the rendezvous of the Portuguese merchants where they bring gold and silver stuffs, brandy and wine, also shells which serve for small money, and all the best sorts of merchandize commonly brought to Africa.

"*Angola* is, of all the African coasts, *that which furnishes Europeans with the best negroes*, and in the greatest quantities, although it scarcely extends 30 leagues along the sea-shore; it runs a considerable distance back. The capital is *Loanda St. Paolo.*

"Although the Portuguese are extremely powerful in the interior part of the kingdom; and though they may have subdued the greatest part of the negroes to be the vassals of the king of Portugal, to whom they pay a yearly tribute in slaves, yet the negro trade, which is transacted on the coast, has always remained free to the other nations of Europe; and the English, French, and Dutch, send yearly a great number of vessels, which carry off many thousands of those unhappy wretches, for the supply of their American settlements, or for sale in those of the Spaniards.

"The Portuguese, however, deal the most, and ship off every year nearly 15,000 for Brazil. The villages of *Chambambe*, *Embaco*, and *Massingomo*, furnish the most slaves to the Portuguese, and are paid for them with the usual merchandize.

"The Portuguese have also a settlement at *Benguela*, the climate of which is unwholesome.

"*Loango, Malimbo,* and *Cabindo.*—The negro trade that is carried on in these three places is considerable. Europeans prefer the slaves from this part of the country, as they are considered to be more able to sustain the fatigue and labour of the culture and manufacturing of sugar, tobacco, and indigo, than any others, and they command a higher price in consequence."

BRITISH TRADE WITH WESTERN AFRICA.

The Portuguese engrossed the whole trade of Western Africa until 1536; when it was first attempted by private adventurers from England, but there being little security for commerce at that early period, it was discontinued until 1618, in which year a company was formed under charter from James I. This company became discouraged and dissolved itself, and no trade was carried on by England to Africa until after 1631, when Charles I. granted an exclusive charter to Sir Kenelm Digby and others, to trade and "occupy all the west of Africa. This Company erected forts, which the East India Company afterwards took possession of, by authority of the Rump Parliament.

The *interlopers*, or unlicensed free traders, however, interfered with these

charters and ruined the corporate trade, except when it was carried on with armed powers by the East India Company for four years.

In 1661 Charles II. granted a charter in favour of his brother James, then Duke of York and Albany, "for the term of *a thousand years*, with full power to trade all over the western coast of Africa, from the port of *Salee* in South Barbary, to the Cape of Good Hope;" the patent was soon after revoked by the king, with the duke's consent. In 1663 a charter was granted to a new company.

The principal associates of this new company were, Queen Catherine of Portugal, his Majesty's consort, Queen Mary of France, his mother, the Duke of York, Duchess of Orleans, Prince Rupert, and most of the high nobility of England. The persons charged with the direction of the company's affairs were chosen from among the principal merchants of London, especially those who had previously carried on the trade which was by the charter vested exclusively in the company, under the title of the *Royal African Company*, with the following privileges:

"That it should be erected into a body politic, both in name and effect, and in this quality should be capable in law, to have, get, acquire, solicit, receive, possess, and enjoy, all manors, lands, hereditaments, rents, liberties, privileges, &c., which any other of his Britannic Majesty's subjects might till then possess and enjoy.

"For its government, to be chosen annually by a plurality of the persons named in the charter, and other adventurers interested in the company, a governor, deputy, and sub-governor, with twenty-four, or thirty-six assistants, as they shall think proper.

"The governor and assistants to hold courts and meetings whenever they think proper, and a competent number being so assembled, may make, ordain, constitute and establish laws, ordinances, and regulations for the government of their company, and to impose and inflict penalties on the violators of them, either by fines or imprisonment.

"The partners and adventurers may grant and transfer all or any part of the stock which they shall have in the company to whomsoever they please, provided the said cessions and transfers be made in full court and registered.

"The company to have the possession and property of all the gold and silver mines that were or should be found in all the extent of their grant: and that *it only* should deal there (exclusive of all other English traders) in all merchandize, the growth of the said countries, as well as in the traffic of the negroes.

"That it might equip such, and as many vessels as it pleased to send on discoveries; and to make the necessary settlements.

"That only the company's ships, or those to whom the governor and assistants should give permission in writing, might trade in Africa within the limits described, or bring any of those merchandizes to England under penalty of seizure and confiscation of the said ships and goods.

"The king reserved to himself and successors the liberty of coming in, at any time, as sharer in the company's adventures, on bringing in a proportionate fund to that already made by the other partners.

"The company, or its governors and assistants, might nominate captains and governors, to command in the colonies that should be established: to which governors and captains, his majesty would grant power to command the military forces in these colonies."

One of the contracts of this company was to supply the British West India plantations with 3000 negro slaves annually.

Under this charter the Royal African Company was established, and commenced operations by carrying on a considerable trade, the profits of which, as well as their capital, was, as might have been calculated, absorbed in the vast expenditure of building and maintaining fortifications, maintenance of troops and factors; the frequent broils and altercations about trade possessions with different African nations; and the dishonesty or mismanagement of the company's servants. They soon began to solicit aid from the national revenue, got deeply in debt, and finally petitioned parliament for relief.

A fourth company was substituted, and 37,000*l.* allowed to the Royal Company for their forts at Cape Coast Castle, Sierra Leone, and the River Gambia. This company was ruined by their extravagant management, and by the *interlopers*, who supplied the West Indian planters, "as the latter affirmed, with the best negroes." Parliament afterwards settled the debts of this company, which caused great expense to England, from the parliament granting money annually, after 1730, to maintain the African forts. Before 1750 the affairs of this fourth African company became desperate, — it was dissolved in 1752, and a new company for *extending and improving the trade to Africa*, was substituted.

It is remarkable that every public attempt made by government or by joint stock companies, either in the trade with, or in the civilization of, Africa, have proved highly expensive to the country, and disastrous to the lives and fortunes of British subjects.

In 1752 the sum of 142,000*l.* was voted by parliament to remunerate the dissolved African company for their forts.

The new company, which was substituted for the dissolved company, was termed a regulated company, and the preamble of its act states,

"That the trade to and from Africa, being very advantageous to Great Britain, and necessary for the supplying the plantations and colonies belonging thereto with a *sufficient number of negroes at reasonable rates*, ought for that purpose to be free and open to all his Majesty's subjects. *It is therefore enacted*, that it shall be lawful for all the king's subjects to trade to and from any place in Africa between the port of Salee in South Barbary and the Cape of Good Hope, without any restraint whatsoever, save as is hereinafter expressed.

"His Majesty's subjects so trading to be deemed for ever a body corporate and politic, by the name of the *Company of Merchants trading to Africa*, with powers to sue, and liable to be sued, &c.

"The company *shall not* trade to and from Africa in their *corporate* or *joint* capacity; nor possess any joint or transferable stock, nor borrow money on their common seal.

"Persons intending to trade to or from Africa, having paid on or before the 30th of June, 1750, into the hands of the Chamberlain of the City of London forty shillings each for their admittance into the freedom of the said company, into the hands of the clerk of the merchants' hall in the city of Bristol, the like sum of forty shillings, or into the hands of the town clerk of Liverpool, the like sum of forty shillings, were empowered to meet and choose, in each place, three persons; and the nine persons so chosen to form the first annual committee, and to continue in their office for one year, and until others should be chosen in their room."

The trade with Africa from this period was carried on by individuals on their own account. The general fund of the company being appropriated, not in trade but in paying the expenses, &c., of their establishments. In 1764 the Fort of Senegal was vested in the company.

The trade consisted chiefly in bartering European commodities for negroes, gold-dust, and ivory.

In 1769 the numbers of Africans carried, during the year, into slavery by the vessels of different nations are stated to have been as follow:

By British and Colonial vessels, 59,400; by French vessels, 23,520; by Dutch vessels, 11,300; by Portuguese vessels, 17,000; and by Danish vessels, 1200. Total, 97,120. The number actually captured and killed in the slave hunts, and those who died during the voyage to America and the West Indies, may be estimated to have increased the whole number who lost their lives, and of those subjected to slavery at not less than 120,000. The number of 100,000 at least were purchased in exchange for European goods, at the value of about 10*l.* (some state 15*l.* each). About 1,000,000*l.* in value of goods were exported from Europe in 1670 for the slave trade alone.

In 1783 the abuses of the trade to Africa, and the mismanagement of the African Company, rendered parliamentary interference necessary, and the forts and settlements on the coast were taken from under the jurisdiction of that company and vested in his Majesty. In 1788 the total suppression of the slave trade was brought before the serious consideration of parliament and the public, but nothing was done further than passing a temporary bill, which was evident to all would soon lead to putting down that horrible traffic. This bill regulated under strict rules the manner of carrying slaves across the Atlantic.

Mr. George Chalmers, a most careful political arithmetician, states as follows: the *real values* of Exports from Great Britain to all countries and to Africa, during the years 1805 to 1811, inclusive, the period of Napoleon's continental system, were—

1805	To all countries	£51,109,131	To Africa	£1,156,955
1806	„	53,028,881	„	1,655,042
1807	„	50,428,881	„	1,022,745
1808	„	49,969,746	„	820,194
1809	„	66,017,712	„	976,872
1810	„	62,702,409	„	693,911
1811	„	43,939,620	„	409,075

The *British Possessions* on the west coast of Africa are—Sierra Leone, situated in 8 deg. 30 min. N. lat., on a peninsula 35 miles long and 25 broad. Opposite Freetown, the capital of this colony, the estuary of the Rokelle, or Sierra Leone, is seven miles in width, and there is scarcely any other safe harbour between Cape Verde and Fernando Po. In 1787 there were sent 340 American refugee negroes to this place at the expense of private individuals. Of these negroes, and of 119 settlers who went out in 1792, only about 80 of the whole 459 were

alive in 1793. This year, 1131 American negroes, who had followed their masters to Nova Scotia, were sent to Sierra Leone, where, of whom and their progeny only 578 were living in 1827. 550 Maroons were sent to the colony in 1800; of these and their descendants only 70 remained in 1841, most of them having abandoned it for other places. In 1818 about 1250 negro soldiers, who served in the West India regiments, were sent to Sierra Leone, making a total of 2259 negroes, who were sent philanthropically to perish in this unhealthy colony. There were living in the whole territory of Sierra Leone in 1840, 99 whites, 24 of which were women; 39,034 negroes and coloured British subjects, and 927 who were not subjects. The negroes and coloured races consisted of 2000 industrious Kroomen, who had never been slaves; and the remaining 39,034 British subjects, consists of the very few who existed of the 2259 sent to the colony from Nova Scotia and the West Indies, and of the 70,809 African slaves which had been captured and emancipated up to that period. Such, exclusive of the destruction of British life on this coast and in this place, and exclusive of the late fatal expedition into the interior of Africa, has hitherto been the result of our humanely intended but ill conceived philanthropic efforts, to civilize Africa, and to abolish its slavery and slave trade.

The settlements on River Gambia are included within the government of Sierra Leone. Bathurst is situated in 13 deg. 30 min. N. lat., on St. Mary's Isle, at the mouth of the river Gambia.

It was settled in 1816, on the island being purchased by the chief of Comba, for a yearly quit of 200 dollars. A steep island, 1 mile broad, and extending 35 miles along the bank of the river opposite to Bathurst, was purchased in 1820 from the chief of Barra. The population of Bathurst consisted, in 1840, of 42 whites and 3470 negroes and coloured people. The territory adjoining Cape St. Mary, and extending up the south side of the Gambia, and Macarthy's Island, 175 miles up the Gambia, has been purchased, and a barrack and mission-house and some other buildings have been erected on it. Large vessels can ascend to this island; above it the trade is carried on in small vessels. There are about 1200 inhabitants on this island.

The British settlements on the Gold Coast are, *Accra*, in 5 deg. 33 min. N. lat.; Cape Coast Castle, in 5 deg. 6 min. N. lat.; Dixcove, in 4 deg. 44 min. N. lat., and Annamaboe. These places are little more than trading stations, and the whole country is described as a thickly-wooded or jungle wilderness. However valuable this coast, and that of Gambia and Sierra Leone, are in regard to the barter trade, all experience has proved the fatality of extending our settlements beyond mere trading ports; and the civilization of Africa will never advance from the west, but from the north, east, and south.

FRENCH SETTLEMENTS ON THE WEST COAST OF AFRICA.

THE French have establishments on several small islands, and on parts of the continent, at the mouth of the river Senegal. They are divided into two arrondissements or governments. The *first*, St. Louis, comprises the isles of St. Louis, Safal, Gheber, and Barbagne at the mouth of the Senegal river; the neighbouring district of Oualo, and several establishments on the banks of the Senegal. The most distant fort, St. Joseph, is said to be 400 miles up that river.

ST. LOUIS, the principal town, has a population of about 6000 inhabitants. It is the chief centre of the gum trade.

GOREE is another *entrepôt* of France on the coast of Senegambia. It has a spacious roadstead; gold-dust, ivory, and woods are the exports to France. The value of which and of imports are included under the head of Senegal.

The average annual imports from Senegal into France for the ten years, 1827 to 1836, inclusive, amounted to 81,000*l.*

The exports from France to Senegal amounted to 80,000*l.* or somewhat less than the imports.

In 1831 there arrived in France from Senegal 25 vessels of 2706 tons, and there departed for Senegal 29 vessels of 3058 tons. The imports into France, chiefly gums and skins, from Senegal, were valued at 3,445,087 francs = 137,803*l.* The exports from France to Senegal at 3,093,815 francs = 123,752*l.*[1]

In 1839 the exports from France to Senegal amounted in value to 212,000*l.*, and to other parts of the West Coast of Africa 28,000*l.* The imports from Senegal into France entered for consumption to 76,000*l.*, from other parts of Africa 24,000*l.* (See France and French Colonies.)

[1] "The European establishments on the coast of Senegambia supply the demands of the populations of the Ouolofs, Foules or Peuls, Dahomêts, Ashantees, and Moors. They consist of tissues of flax, cotton, wool, and silk; of cordage, hardwares, and haberdashery, jewellery, and corals; fire-arms, especially the double-barrelled guns of Saint-Etienne, gunpowder, and many other articles.

"The following is a statement of the value of exports from France to Senegal in the year 1833.

	£
Tissues of flax, &c.	14,117
„ cotton	17,680
„ wool	1,768
„ silk, &c.	252
Cordage	974
Dresses	916
Building materials	57
Wines, &c.	16,089
Carried forward	£51,853

	£
Brought forward	51,853
Jewellery and corals	1,344
Hardwares	1,398
Haberdashery	2,287
Fire-arms	3,549
Gunpowder	1,482
Miscellaneous articles	26,106
Total	£88,019

"Prior to the war with the Moors, the annual exports from France to Senegal amounted to 144,000*l.*"—*Bulletin of Minister of Commerce.*

PORTUGUESE SETTLEMENTS ON THE WEST COAST OF AFRICA.

The Portuguese have still numerous settlements in Western Africa, situated on the river Cacheo, the St. Domingo, and the Rio Grande, and several ports and places for fairs in the interior. The slave trade (which see hereafter) is the chief pursuit of the Portuguese not only in this, but in Eastern Africa. Their chief settlement in Guinea is in the island of Loando, and in Benguela, that of St. Philippe in 12 deg. 8 min. S lat. This place is the Portuguese rallying-point for their trade with the coast for slaves.

The settlement of Liberia, situated on the low north coast of Guinea, was formed by the American Colonization Society, for the humane purpose of transplanting to that place emancipated and free negroes. It has been a more successful experiment than those made by the English at Sierra Leone. The territory is remarkably fertile. Coffee, the sugar-cane, oranges, and all tropical fruits grow wild; the ground pea, or nut, which yields fine oil, grows abundantly; and the territory belonging to Liberia is said to extend 220 miles along the coast, and about 20 miles inland, where the lands rise to a considerable elevation. It is capable of yielding valuable productions, such as rice, indigo, coffee, cassava, yams, bannanas, &c. Its rivers are navigable for small vessels only.

It is an independent republic. The governor, a white man, is the agent of the American Colonization Society. It has two legislative assemblies, churches, schools, and printing-offices. Not only negroes and freed slaves from America, but many of the Africans taken from the captured slave-ships have been settled at Liberia. It has certainly been the fairest and most practical experiment which has hitherto been attempted to civilize and better the condition of the African races. But what is the result? After 23 years' trial, under the most favourable circumstances, the result, we regret to find, is not satisfactory. Of the surrounding millions, who live in the most brutalized condition, and who annually shed the blood of thousands of human beings as sacrifices to their superstitions, or in the wars between the countless tribes, scarcely any have been

brought within the civilization of Liberia. The whole population of the settlement, does not, according to the best information we have obtained, exceed 4000, and their condition is said not to be prosperous.

In closing this sketch of the productive and commercial resources and trade of Western Africa, we may observe that this region, extends from the northern frontiers of Senegambia to the southern boundary of Benguela,—a distance, following the shore, of about 3500 miles; that the Senegal and Gambia, and especially the Niger, are navigable for large vessels for many hundreds of miles inland; that the soils of the sea-coasts, and of the banks of the rivers, and of the valleys, plains, and table-lands, for several hundred miles of the interior country, are generally rich, and yield, or may be made to yield, in unlimited abundance, the most useful and most valuable products; that wild and domestic animals thrive and multiply; that among these abundant products we may enumerate—gold, and probably many other metals; maize, rice, wheat, millet, dhourra, and other grains; palm nuts, ground nuts, cocoa, castor nuts, and other oil and edible nuts in great variety; oranges, lemons, limes, dates, plantains, pineapples, and all other tropical fruits; sweet potatoes, yams, arrow-root, and a great variety of other edible roots and vegetables; sugar-canes, coffee, cotton, tobacco, india-rubber; aloes, cassia, senna, and other drugs; gums and resins of various kinds; indigo, carmine, and numerous dyewoods and dyestuffs; teak, ebony, lignum-vitæ, and a great variety of the most durable and useful woods that this region affords; ivory, bees' wax, ostrich, and other feathers, the skins of domestic and wild animals, and all articles of great commercial value; and, finally, that notwithstanding the abundance of these valuable products, and the almost unlimited capabilities of the soil in yielding them, our trade with Western Africa has never been of comparatively great value to us. The intercourse of Europeans with that region has been a curse and not a blessing. At all times when its pestilential shores have been resorted to by Europeans, for the purposes of carrying on, or suppressing the horrible slave-trade, or of interchanging commodities, or in attempting to form settlements, and of penetrating the interior, the results have been fearfully, and too often criminally, fatal. The loss of European life during the last 200 years,—the cruelties of the slave trade, the introduction of fire-arms and gunpowder among the natives, and the consequent bloodshed, and increase, instead of diminution, of barbarism, and of the traffic in human beings, surely constitute calamities and crimes that no profit nor advantage which Europe has ever, or ever shall derive from Africa, can counterbalance or obliterate.

The chief difficulties of civilizing Western Africa, are actually caused by the rank, magnificent, and rich character of her vegetation and productions. It is this vegetation growing out of and covering a soil with living and with decayed

matter, which renders and will ever render the climate fatal to European constitutions, and her soil indomitable to European settlements. All our attempts to civilize the country by settlements, or by Niger expeditions, have proved, and, we believe, will prove, abortive. The suppression of the slave trade must be effected by abolishing the market for slaves. While there exists a market for slaves, they will be captured or purchased and carried to that market. As to the general civilization of Africa, we are not sanguine. Fair trading along the sea-coast may be carried on with considerable advantage to the Africans, and to British traders: deducting at all times, and from all advantages, the loss of life among those engaged in that traffic. The advance of civilization in the northern and north-eastern regions is probable; but, with the exception of Egypt, its march will be slow: nor has it proceeded rapidly in or from the British colony of the Cape of Good Hope.

We honour those good men who have exerted themselves in the attempts to ameliorate the condition of, and civilize, the African races. We deplore the ill-success of their efforts. We hope the experience of the past, and the fate of the late Niger expedition, will convince Englishmen, and Englishwomen, that any further attempts to establish new or extend old European settlements, on this coast, or in the interior of Africa, will constitute no less than a voluntary sacrifice of the lives, or of the health of those, whose devotion to a cause, intended to benefit the Africans, may lead them into expeditions which must, in the very nature of all the circumstances we have stated, end ruinously.

CHAPTER XVI.

STATISTICS OF THE AFRICAN SLAVE-TRADE.

Of the civilized nations which have been engaged in the African slave-trade, Denmark was the first which declared its inhumanity. On the 16th of March, 1792, the King of Denmark promulgated a royal decree, prohibiting any of his subjects to be in any way engaged in purchasing, selling, or transporting slaves, whether in, or from, Africa, or any other foreign country whatever.

As early as 1776, Mr. Hartly, member for Hull, moved in the British house of commons,—"That the slave trade was contrary to the laws of God and the rights of man." The motion was seconded and dropped. Ten years afterwards Mr. Clarkson published a powerfully-written work against the trade,—and, on the following year, that excellent man was joined by Mr. Wilberforce, Mr. Grenville Sharp, and others, as a committee for the abolition of the slave trade. A society was formed about the same time at Paris, for the same laudable purpose; among the members of which, were Lafayette, Condorcet, and many of the best men in France.

It is due to the memory of Mr. Pitt, that he entered at once, honestly and earnestly, into a consideration of the facts connected with this horrible and unchristian traffic; and, as a sincere advocate of its abolition, he was soon joined by Mr. Fox and Lord Grenville: this occurred in 1788. It was estimated, by the information and statements collected for the Board of Trade, that there were, at that time, 450,000 negroes in the British sugar-colonies, valued by the owners at 50*l.* each = 22,500,000*l.*; and the estates cultivated by them, including cattle, &c., at 45,000,000*l.*, and the value of other property, and vessels, involved in the question of the slave trade, and slavery, at 22,500,000*l.* more: being a total value of property and slaves, in the slave colonies, of 100,000,000*l.* The estimate of Mr. George Chalmers, of the Board of Trade, did not diminish this amount. The City of London, at the same time, to its everlasting honour, sunk the question of its many individual interests, as that city has so often done on great philanthropic and patriotic occasions, and presented a strongly-expressed petition to parliament for the abolition of the slave trade. This petition, and the measure of abolition, were however obstinately opposed. Mr. Wilberforce being taken ill, Mr. Pitt came nobly forward, and in May, 1788, carried a resolution, aided by Mr. Fox, Mr. Burke, and other eminent men, pledging the house to take the question of abolition into full consideration on the following session of parliament. Liverpool, and its representatives in parliament, obstinately opposed any interference with the horrible traffic.

The advocates of abolishing the trade struggled boldly in the cause, while they were opposed, by some, in any interference whatever, and by a majority, among whom was Mr. Dundas, who advocated merely regulating the traffic for seven years longer. Mr. Wilberforce's bill for the entire abolition of the trade was brought forward in February, 1795, and lost by a majority of 19, although the bill was ably supported by Mr. Pitt, Mr. Fox, Mr. Grey, Mr. Burke, Mr. Wyndham,* Mr. Whitbread, Mr. Sheridan, Sir William Scott, and many of the ablest men among the tories and whigs. In the house of peers, Lord Thurlow was the great advocate of those who opposed the abolition.

On the previous year, 1794, the Congress of the United States did itself and that country the honour of being the second on the list of Christian nations, who passed a law "Prohibiting the carrying on the slave trade from the United States to or from any foreign place or country."

In 1798 a new and powerful advocate of humanity appeared in the person of Mr. Canning. "Never!" said that great and good man, "never was the word RIGHT so prostituted, not even when the Rights of Man were talked of, as when the *Right* to trade in man's blood was asserted by the members of an enlightened assembly!" The motion for abolition on this occasion (1799) was lost by a majority of 8. Mr. Pitt, who as early as 1788, after he had concluded his memorable commercial treaty with France, proposed to the French government

* Mr. Wyndham afterwards opposed the abolition on the ground of *expediency*.

an union with Great Britain to abolish the slave trade, did not live to see accomplished one of the greatest objects of his parliamentary advocacy. He died in January, 1806, a little before the time, when he knew, that this act of humane and honourable legislation would be carried.

In June following Mr. Fox moved a resolution similar to that carried in 1788 by Mr. Pitt; and "called on the friends of this great man to show their respect for his memory by their votes." The resolution was, however, only carried by a majority of 9.

Mr. Fox died in October following, and on his deathbed declared, "Two things I earnestly wish to see accomplished—PEACE WITH EUROPE, and the ABOLITION OF THE SLAVE TRADE: BUT OF THE TWO, I WISH THE LATTER."

Lord Grenville brought forward the measure of abolition on the 2d of January, 1807, in the house of peers, and though obstinately opposed by Lords Eldon and Vincent, and many others, the bill was carried by a majority of 16, and sent down to the commons on the 10th of February.

It was opposed, and an amendment substituted, in the house of commons by Sir C. Pole, General Gascoyne, and the other member for Liverpool, and by Mr. Addington; but supported by the energetic powers of Mr. Canning, Lord Henry Petty, Mr. Whitbread, Mr. Perceval, and finally carried by a majority of 108; and sent immediately to the peers, printed, and passed on the 24th of March, 1807, by the house of lords.

On this very day, after its passing, it was feared, by the friends of humanity, that the bill would not become a law. George III., displeased with his ministers, on account of suffering the Catholic Officers Bill to be introduced into parliament, signified his intention of removing them from office. On the 25th of March, Lord Grenville pressed for the royal assent to the slave trade abolition bill. It was given on that day; and Lord Grenville, on returning to the house of lords with the act now to be carried into effect as the law of the realm, tendered his resignation, and immediately rendered up the seals of office.

According to papers presented to parliament, in 1819, the whole number of slaves carried into America and the West Indies, from Africa, on the abolition of the British slave-trade, amounted to nearly 100,000 annually; being about the same number as in 1787, before the French Revolution, when the numbers were as follow: By the British, 38,000; by the French, 31,000: by the Portuguese, 25,000; by the Dutch, 4000; by the Danes, 2000: total, 100,000. The numbers who died on the passages not included.

In April, 1807, Mr. Secretary Canning commenced his negotiations with foreign courts for the suppression of the slave trade, and this meritorious policy he continued until his lamented death. It is also proper to observe, that each of his successors, at the Foreign Office, have invariably followed the policy of Mr. Canning in their negotiations relative to the slave trade.

Great Britain has entered into treaties for the suppression of the slave trade with most of the following powers, and the others have declared by laws or decrees that the slave trade should be abolished: viz.—

1. AUSTRIA, in 1815, by the declaration of the Congress of Vienna, jointly with *France*, *Russia*, *Portugal*, *Prussia*, *Spain*, and *Sweden*, for the consideration of the most effectual means of suppressing the slave trade; and by declaration at *Verona*, in Nov. 1822; by decree, dated Vienna, Nov. 1823, by which every slave touching Austrian ground is declared free.

2. BRAZIL, Rio Janeiro, by treaty Nov. 23, 1826. By law, dated Rio Janeiro, April 12, 1832. Ordinance, as to vessels from Africa, 1837; by Portaria, 1838; by mixed commission, &c.

By the treaty between his Britannic Majesty and his Majesty the Emperor of Brazil, signed at Rio Janeiro, on the 23d of November, 1826, for the final abolition of the African slave-trade (the ratifications of which were exchanged in London on the 13th of March, 1827), it is stipulated that, "At the expiration of three years, to be reckoned from the exchange of the said ratifications, it should not be lawful for the subjects of the Emperor of Brazil to be concerned in the carrying on of the African slave-trade, under any pretext or in any manner whatever; and that the carrying on of such trade, after that period (that is, after the 13th of March, 1830), by any subject of his Imperial Majesty, *shall be deemed and treated as piracy*;" and by the Imperial law of Brazil, dated Rio Janeiro, the 7th November, 1831, "it was decreed and made known to all the subjects of the emperor, that all slaves entering the territory or the ports of Brazil from abroad *are free*, with the exception of those who are enrolled in the service of vessels belonging to a country where slavery is allowed, so long as they are employed in the service of those vessels;" and also of "those who may have escaped from the territory or vessels of a foreign country; in which case they shall be delivered up to their masters, who claim them, to be re-exported from Brazil;" and, "that all importers of slaves into Brazil shall incur the corporal punishment awarded by Article 179 of the Criminal Code, together with a fine of 200,000 reis for each imported slave, besides the payment of the expense of re-exporting the same to some part of Africa."

3. *Buenos Ayres*, by treaty, Nov. 26, 1830.

4. *Denmark*.—By treaty, Copenhagen, 26th July, 1834.

5. *France*.—Decree for abolition of slave trade; Paris, 29th March, 1815.—Ordinance for suppressing slave vessels; Paris, 8th Jan. 1817.—Law for punishment of slave-dealers; Paris, 15th April, 1818.—British convention with France for abolishing the slave trade; Paris, 21st Nov. 1831. This treaty has been made the basis to which several other states (which see) acceded afterwards.

6. *Hanseatic Republics*.—By treaty, Hamburg, 9th June, 1837.

Haiti, in 1839, by treaty.

7. *Madagascar.*—Treaty signed at Tamatave abolishing slave trade and piracy, October 23, 1817; additional articles, 1820 and 1823.

8. *Mascate* Treaty, 10th Sept. 1822.

9. *Netherlands.*—Decree for repression of slave trade; Hague, 15th June, 1814. —Treaty for abolition of; Hague, 4th May, 1822, and 25th Jan. 1823, and 7th Feb. 1837.

Portugal.—Declarations for abolition by treaty of Vienna, 22d Jan. and 8th Feb. 1815; additional convention; London, 28th July, 1817.—Equipment of slave vessels in Portuguese ports declared contrary to law; Lisbon, 22d July, 1835.—Decrees, prohibiting importation and exportation of slaves, penalties, &c.; Lisbon, 10th Dec. 1836, and 2d March, 1838.—Treaty with England for suppressing slave trade; Lisbon, 2d July, 1842.

Prussia.—Declaration; Vienna, 28th Nov. 1822.

Russia.—Protocol for suppression of slave trade; Paris, 26th July, 1815.—Declaration at Vienna, 28th Nov. 1822.—Circular; St. Petersburg, Dec. 1835. —Punishment of offenders, &c.

Sardinia.—Treaty of adhesion to treaty of England and France, for suppressing slave trade; Turin, 8th Aug. 1834.—Circular; Turin, 1st March, 1837.

Two Sicilies.—Treaty; Naples, 14th Feb. 1838.

Spain.—Treaty for suppression; Madrid, 23d Sept. 1817.—Treaty; Madrid, 28th June, 1835.—Royal order; Madrid, March, 1838.

Sweden.—Declaration; Vienna, 8th Feb. 1815.—Proclamation against slave trade; Stockholm, 7th Feb. 1823.—Treaty; Stockholm, 6th Nov. 1824, and 15th June, 1835.

Tuscany.—Treaty; 24th Nov. 1837.

United States, by act of congress, 15th May, 1820, declares the slave trade piracy.

Venezuela, declares slave trade piracy; treaty, Caraccas, 15th March, 1839.

By the treaties of England with Haiti (1839), Buenos Ayres (1839), Peru-Bolivia (1837), the Equator (1841), Bolivia (1840), Chili (1839), Uruguay (1839), New Granada (1841), Columbia and Mexico (1841), and Texas (1840), Venezuela (1839), it was agreed that the slave trade should be abolished. By these treaties, Britain has authority from every power in Europe, except Belgium, Greece, and Hanover, to search and detain vessels in certain latitudes, suspected of being engaged in the slave trade. The same power has been accorded by all the American governments, excepting that of the United States, the Equator, Peru, and New Granada. The Pacha of Egypt has adopted measures to suppress the slave trade; and the Bey of Tunis has abolished the slave trade and slavery. In April, 1841, his highness actually prohibited any further importation or exportation of slaves by sea. This was the first step taken to prepare the spirit of his people for any measure which could be consistent with the limited circumstances of the Tunisian treasury, and the sensation which it created among both the

Mussulman and Christian population was only surpassed by the bey prohibiting the public sale of slaves in the market, which he rendered impracticable, by causing the market, to be pulled down, that had for centuries been the resort of all the slave-merchants coming from the interior to traffic in human flesh and blood.

Some months passed to conciliate the public spirit with these measures. As soon as the proper time was matured, the introduction of men of colour, under any pretext, from the interior, was declared illegal, and any negro thus imported after the date of the proclamation was to be considered absolutely free.

The bey has ultimately issued a proclamation to the authorities under him, ordering that all negroes who shall be born after the 8th of December, 1842, shall be free, and considered and treated as Mussulmans.

Any new supply of negroes either by land or by sea being against the law, the number which now exist in Tunis will in the course of a few years be no more.

ABOLITION OF BRITISH SLAVERY.

In March, 1824, Mr. Canning brought forward measures for ameliorating the condition of the slaves in the British West Indies—viz., to provide for their religious instruction,—to abolish Sunday markets, and the flogging of females,—to regulate the punishment of male slaves,—to prevent the separation of man and wife,—or children and mother on the sale of slaves,—to secure to the slave his property,—to allow the evidence of slaves in courts of justice,—and to facilitate the manumission of slaves. Mr. Peel, Mr. Brougham, Dr. Lushington, Mr. Denman, Mr. Wilberforce, and Mr. Buxton, supported Mr. Canning.

This and other measures led, after the most perverse resistance, to the complete abolition of slavery throughout the British Empire. This great and most glorious measure cost the country a large sum, for which the British public have willingly taxed themselves; but great as that sum undoubtedly has been in its direct and indirect amount, we consider it small when balanced in the great account of humanity.

The amount paid for the abolition of slavery during the ten years, 1834 to 1843, inclusive, we estimated as follows:

	£
Amount paid for redemption	20,000,000
Tax, as protection duty on sugar for 10 years, say on 4,000,000 cwt. per annum at 10*s.*	24,000,000
Tax on coffee, say at least 25,000,000 lbs. at 3*d.*, for 10 years . .	3,125,000
Total . .	£47,125,000

The amount which England has paid for the suppression of the slave trade on the coasts of Africa and America, has also been very great. Probably more than 12,875*l.*: which would increase the amount paid, to at least 60,000,000*l.* sterling: exclusive of the expense of the settlement of Sierra-Leone,—of the

amount paid to the United States for the slaves during the late war,—and of the free negro settlements in Nova Scotia.

The African slave trade has not, however, been abolished, and while Cuba, Porto Rico, and Brazil, the only slave-importing American countries, are allowed to carry on the slave trade, or be supplied with Africans, the barbarities of this horrible traffic will continue.

The importation into Cuba has diminished from 25,000 slaves landed in 1839, to about 15,000 landed annually for the three years, 1840, 1841, and 1842.

The annual importations in the four years ending 1820 was estimated at 39,000.

The importation of slaves exported into Brazil from Mosambique and other places in Africa, amounted, according to estimate in 1838, to 94,000.

In 1839 the number has been estimated at 56,000. Mr. Bandinel states that a much greater diminution took place in 1840. But we suspect that these estimates must be vague, and we know that the slave trade into Brazil and Cuba is still carried on with great activity.

We believe that the slave trade now carried on by Christians from Africa cannot be estimated under at least 50,000 negroes per annum. The Mussulman slave-trade is carried on to an equal extent.

Mussulman Slave-Trade.—We have already noticed the measures taken by Mehemet Ali to suppress the trade in slaves in his dominions. That these measures have not been completely successful is true, and the enormities of that traffic, and especially of the slave hunts as carried on by the Nubians and even Abyssinians, are still abominably cruel.

The slave hunts, or *gazzuas*, were formerly the principal sources of the supply of negroes, on the frontiers of Mehemet Ali's dominions. The wages of the pacha's troops were frequently paid in slaves, at a price considerably above the market value; and there is sufficient evidence that horrible atrocities are still committed in the capture of slaves. It is stated that in some cases, where the blacks had retreated to caves and caverns, fires of straw and brushwood have been kindled at the entrance in order to force them out by fear of suffocation. Resistance leads to frays and bloodshed; generally the poor slaves have been seized, by men in ambuscade, from their mothers when in the fields, from small parties of blacks who are surprised or waylaid by the soldiery, or by kidnapping. Wars were and are entered upon for the purpose of making prisoners to be sold as slaves; quarrels with petty communities were made for no other purpose than to hand over the weaker party to the *jellab* or slave-dealer.

The gazzuas are graphically described by an eyewitness, Dr. Holroyd.

"The most cruel mode of replenishing his army and increasing his revenue, and one unparalleled in modern times, is by the gazzua or annual war which he wages against the Blacks. For this purpose two or three expeditions are despatched in different directions in the months of September and October. The troops at Kordofan are generally ordered to Gebel Nuba; those at Sennar and Wadey Medineh to Gebel Fungi, Gebel Lidduk, or

Deaka; and those at Kartoum, with reinforcements from Wadey Medinah, to the country of the Shellooks on the White Nile, or to the confines of Abyssinia on the river Rahad. Immediately upon my arrival in Kordofan, in the month of March, I visited the then governor, Mustapha Bey, who had just returned from the gazzua at Gebel Nuba, with 2187 captives, including men, women, and children. A great many more had been killed, or rendered useless by maiming. The physician to the forces was selecting the able-bodied men for the army; but so repeatedly has the war been carried on against this chain of mountains that the population has been completely drained, and from the above number only fifty men were deemed fit for military service. These unfortunate individuals were marched down to Kartoum, fourteen days' journey, completely naked, and to add to their misery, a wooden stake, six or seven feet long, and forked at one extremity, was attached to the neck of one, by means of a cross bar, retained in its position by stripes of bull's hide; to the other end of the stake an iron ring was fastened which encircled the throat of another of these poor and harmless creatures. They were thus unmercifully driven to Kartoum, with scarcely any thing to eat on the journey, and compelled to traverse a burning desert with a very sparing and scanty supply of water. They were despatched in companies of fifties, and so great were their privations and fatigue on the journey, that a letter arrived at Kordofan, addressed to Mustapha Bey, from Koorshid Pacha, of Kartoum (the governor-general of Soudan), and which was publicly read during a visit I made to the divan of the former, in which the latter stated that of fifty slaves who had left Kordofan some days before, only thirty-five were living on the arrival of the caravan at Kartoum. But this is not the most heart-rending and appalling sequel of the *gazzua*, and I would gladly have spared myself the narration of a fact of which I was an eyewitness; but as the circumstances of the disposition of the remaining prisoners are not generally known, nay, are scarcely credited, even in Cairo, I feel on this account less compunction in stating that which I actually beheld. At my first visit to Mustapha Bey, on the 30th of March (the day of my arrival at Kordofan), I found him in the court before the divan arranging between 300 and 400 slaves, part of the produce of his expedition, for the purpose of distributing them to the soldiers in lieu of pay. The slaves were arranged according to size and sex. In one division were placed the old and infirm women, the pregnant females, and young girls; in a second, boys about the age of from 8 to 12 years; in a third, children from 4 to 8 years old; and in a fourth, infants from $1\frac{1}{2}$ to 4 years old. If they could be said to have any pretensions to beauty or utility, the women and girls were also placed according to their appearance,—but the females were the refuse of their sex, the handsome having been previously disposed of by sale for the harems of the Turks and Arabs. The disposition was made according to the military rank of the individual, and he was compelled to receive one-half of his arrears in human flesh, and the other half in money. In distributing them, one or two were taken from each division, and an officer with the rank of captain received four adults and three children in lieu of 1800 piasters, whilst one adult slave was given between two private soldiers. Upon receiving the slaves, the officers and soldiers immediately conducted their property to their habitations, and whilst one of the former was leaving the court my attention was attracted to an infant two years and a half old, who rushed towards a female (whom I afterwards learnt was its mother), and seizing her, clung with the most filial affection, imploring her to resume that parental protection which it so highly valued; until a Turkish soldier, aroused from a state of apathy by the cries of the child, tore it from its fondest hopes, and instantly separated it for ever from her who alone could afford it comfort and consolation in such a necessitous and helpless condition. Revolting as such sights are to the feelings of an Englishman, I cannot, however, omit mentioning one other fact:—A soldier who had been taken from Gebel Nuba, a year and a half ago, and who had repaired to the divan to receive his share of the produce of the gazzua, recognised amongst the crowd his younger brother, a boy about five or six years old, who had just been captured. He had placed him upon his knee, and was caressing him most affectionately, when Mustapha Bey observed the circumstance. He inquired from the soldier who the boy was, and learning that he was his brother, turned to the scribe and inquired his value; the latter replied, four or five dollars; 'then,' said the governor, 'let him take him for three, and place this sum to his account.'"

The recent measures adopted by Mehemet Ali will greatly ameliorate the

atrocities of the slave hunts, but while the Mahometans of Turkey, Persia, and Arabia continue to purchase Africans, the Mussulman slave-trade will continue in full activity.

Dr. Holroyd, gives the following additional particulars relative to the interior slave trade of Africa. The two principal merchants at Kartoum are M. Vizière, and Soliman Aga, a Turk; the former is a Frenchman, and has many years been engaged in trading first between Kordofan and Cairo, and subsequently between Kartoum and Cairo.

"At Kartoum, M. Vizière always appears in the bazaar in a Frank dress, and wears the decoration of the legion of honour. From the pacha having monopolized all the exports of Soodan, nothing is now left for the merchant to bring to Cairo except slaves, and M. Vizière has consequently, from his immense capital, become one of the largest slave-merchants in the Belled of Soodan. It is reported that he hoists the tricoloured flag over his cargo of slaves on descending the river from Wady Halfah to Cairo. Soliman Aga also takes slaves to Cairo, and both he and M. Vizière return with similar commodities adapted for the market. These consist of broad cloth, calico, chintzes, pistol-belts, saddles and saddle-cloths, bridles, rice, tea, sugar, soap, mishmish, kumaradeen, sweetmeats, shoes, rugs, crockery, hardware, lanterns, &c. Some of the merchants also bring with them macaroni, vermicelli, wine, and a few other luxuries for the resident Europeans. There are stalls in the bazaar for the merchants, and a daily market for necessaries for the peasants, and perishable articles. Most of the selling is conducted by means of criers, who act the part of auctioneers; and one may be seen disposing at the same time of many articles of wearing-apparel, guns, a mouthpiece, a dromedary, and two or three head of slaves. Each article is disposed of to the highest bidder. Much traffic in slaves is done in the bazaar; but besides public sales, many are sold by private contract. Slaves are most abundant after the gazzua and during the commencement of the khareef, or rainy season in the months of May, June, and July.

I was at Kartoum in the former month, and the prices were about as follow:

	Piasters.	£ s.	£ s.
A good adult male slave	400 to 500	4 0 to	5 0
An ordinary adult	150 „ 300	1 10 „	3 0
A male slave from Denka	70 „ 100	3 10 „	5 0
An Abyssinian boy	600 „ 1000	6 0 „	10 0
A female adult slave	200 „ 400	2 0 „	4 0
A female from Denka	100 „ 200	1 0 „	2 0
An Abyssinian girl	600 „ 1500	6 0 „	15 0

"Children are cheaper than adults, except they have been long in the country, can speak Arabic, and undertake a little service."

"Almost every person in Kordofan is a slave-merchant, and if an individual can gain only a few piasters by the sale, the unfortunate captive is sure to change hands. I hardly ever entered a house in El Obeid without noticing one or more slaves in irons, and I ascertained that they were obliged to adopt this plan of restraint, as they frequently absconded to Gebel Dair, a chain of mountains only one day distant from Kordofan, and not subject to Mahomet Ali Pacha. The price of slaves is about 25 piasters each less than the list already given, and the largest number is exposed for sale during the months of March, April, and May, when the troops return from the gazzua. Upon purchasing a slave in the Belled of Soodan, the buyer is allowed to have him or her in his house three nights before the purchase is completed, giving a deposit of one-fourth or one-fifth of the price agreed upon by the seller. The grounds of return are madness, incontinence of urine at night, snoring, and the venereal disease. If the slave is free from these complaints, the buyer completes the purchase; but if not, he sends back the slave and receives the deposit. If the slave is a young girl, and the party intending to purchase has connexion with her during her period of probation, he cannot return her, but he is compelled to take her. A slave who has had the smallpox is preferred; and the purchaser always inquires if the slave has suffered from this contagious disease.

"The duty upon merchandize entering or passing New Dongolo is 30 piasters the camel-load, without any reference to the kind of goods transported; a duty is also exacted, upon entering Kartoum, of one-tenth of the value of the goods—thus if a merchant takes 100 pieces of calico to Kartoum, he pays a duty amounting to the value of 10 pieces. The duty upon goods entering Kordofan is 150 piasters the camel-load; and this is exclusive of the duty at New Dongola. The duty upon each slave, black or Abyssinian, male or female, large or small, at Kordofan, is 45 piasters. The duty at Kartoum is for a very pretty black or Abyssinian, 60 piasters; for ordinary slaves, 45 piasters. If the duty has been paid at Kordofan, and the slave is taken through Kartoom, there is no extra duty, unless the merchant sells, when there is an additional tax of 25 piasters per head; if the merchant takes his slaves to Cairo by the Nubian desert and Korosko, he does not pay a tax at El-Metemneh or Berber, unless he disposes of any, and then the tax is 25 piasters, similar to what is paid at Kartoum. At Aboo Hamed there is a duty of 1½ piaster each. The duty upon slaves of all kinds at New Dongola, is 15 piasters each. The duty at Darrou is 34 piasters each; and at old Cairo 11½ piasters. The slave-merchants from Darfoor pay a duty of 25 piasters per head at Essiout, and 11½ at Old Cairo. The duty upon eunuchs is the same as upon other slaves; the taxes are generally paid by the vender."

Berbera, on the Gulf of Oman, is the rendezvous of the slave-merchants from Sennaar and Kartoum, who proceed to Cairo by the desert of Korosko. Here is a large traffic in slaves, the price of an adult male negro being about 450 piasters (4*l.* 10*s.*), and of a female, 500 to 600 (5*l.* to 6*l.*).

Slavery in Christian Countries.—There are no slaves in any European country, except Turkey, unless the serfs of Russia and Hungary be considered slaves. In the United States of America the number of slaves is about 2,750,000.

In Brazil, slavery is in its fullest meaning, recognised by law. The number of slaves is, however, unknown: but in all the republics of America, slavery has been declared by law to be put down gradually.

In Mexico, slavery may, by the laws, and by *practice*, be considered extinct.

Buenos Ayres has not declared that any citizens found engaged in the slave trade shall be treated as *pirates*. In Buenos Ayres the census of the population gives from 600,000 to 675,000 of Spaniards and mixed breeds, but no slaves; nor does it appear that there are any unless they be domestic servants. The pastoral nature of the country, and the little attention to agriculture, would seem to warrant that slavery has been discontinued, as was intended on the Declaration of Independence, on the 3d Sept. 1826. Slaves were, however, allowed to be imported in small numbers as domestic servants only. The law was annulled on the 25th of October of that year, and further, by decree, in 1833. There does not appear, however, any authentic proof that slavery has actually ceased to exist, and the probability is, that there are household servants held as slaves, and very few, if any, agricultural slaves in the republic.

In the three states which formed the republic of Colombia, there were, in 1834, viz.—

In New Granada, Whites, 1,058,000; Indians, 376,000; free coloured, 168,000; slaves, 84,300. Total, 1,686,300.

The slaves should, since that period, have nearly all been freed, according to the law for gradual abolition, but this does not appear to be the case.

In the Republic of Equator there were, in 1834, viz.—Whites, 157,000; Indians, 393,000; free coloured, 42,000; slaves, 8000. Total, 600,000.

These slaves have, it is supposed, been nearly all freed by the present time.

In Venezuela there were, in 1834, viz.—Whites, 200,000; Indians, 207,000; free coloured, 433,009; slaves* abolished, 600,000. Total, 900,000.

In Peru-Bolivia there appears to be little, if any slavery. No slaves are given in the returns.

Within the republics of New Granada and Venezuela only, does the *legal* process of abolition, seem to have been interrupted and neutralized by practice; but it does not appear, in consequence, that slavery has become virtually permanent.

Those countries which grow sugar by slave labour and export it, but with which Great Britain has no treaties of commerce, are Spain, in Cuba, and Porto Rico: France, in the West Indies, and Isle of France; possibly the Birman Empire, where previously to 1820, a great number of Siamese were captured in war; of whom about 16,000 are stated to have been made slaves; but they are said to be employed as domestic slaves, *i. e.* household servants and not field-labourers.

CHAPTER XVII.

THE FIFTH REGION OF AFRICA.

The fifth region or division of Southern Africa, comprehends the Hottentot country, the district of the Cape and Caffraria. With the exception of the arid and steril coast, between Benguela and the Hottentot country, and the Desert extending north of the Tropic of Capricorn, this region is generally fertile, and the climate temperate and salubrious, yet uncertain; and the ground often parched by the long droughts, or deluged by rains. The native inhabitants, with the exception of the Caffres, are still more ignorant and degraded, if possible, than the negroes. The soil, although difficult to be brought under cultivation, from the woods being naturally almost impenetrable, yields wheat, culinary vegetables, flax, hemp, grapes, mulberries, &c. Salt is plentiful. Iron, copper, and petroleum are considered abundant. For Europeans this portion of Africa is probably better adapted than any other. It may chiefly be considered under the dominion of England; and its commerce, agriculture, and pasturage, especially its sheep pasturage, have become of considerable value. Yet the want of good roads, in the

* The slaves in Venezuela, should nearly all have been freed by enactments, made in 1819, and afterwards; but this does not appear to have been the case.

Cape colony, forms a great impediment to cultivation, and to bringing the wine, or any other product of the soil, to market. The area of the colony of the Cape of Good Hope is calculated at 110,256 square miles, being only one-tenth less than the area of the United Kingdom. If Great Britain, however, extends the territory of the Cape colony so far as to include Port Natal, the area of the whole will greatly exceed that of the United Kingdom.

The population in 1839 consisted of 68,180 whites, and 75,091 black and coloured people.

In 1839 the live stock, and the arable land and produce of the colony are stated by Mr. Porter, from official returns, as follow:

"Horses, 56,703; horned cattle, 300,809; sheep, 2,329,191; and goats, 393,601.

	Acres.		Bushels.
Wheat	74,838	produces	395,329
Barley	21,499	„	283,323
Rye	5,536	„	32,010
Oats	33,487	„	185,759
Maize and millet	2,939	„	32,068
Peas, beans, potatoes, &c.	1,794	„	39,912

As an agricultural country, whether from negligent husbandry or from the nature of the climate, this colony has been so far a failure, and the returns per acre of wheat, although of good quality, appear to be less than six bushels. The culture of grapes and the making of wine has been attempted to be encouraged by low duties on the latter, in England. The quality of the wine has not improved, nor has the quantity greatly increased of late years. The *Boors*, settled in the country, attend rather to their flocks than to agriculture. The climate is favourable to the breeding of sheep. The colonists of the Cape draw up a very different account of the country to the descriptions of several visiters and travellers. An article inserted in a recent number of the Graham's Town Journal states—

"Every objection that has been made to the extension of civilized society in South Africa is opposed by the evidence of our senses, and by a long series of indubitable facts.

"Had neither Van Riebeck, or any other European adventurer, ever set foot on the shore of this country it might, and would most probably, have been still in the exclusive possession of wandering hordes of Hottentots, 'living without God and without hope,' their only desire self-gratification, their only mental exercise, the best means for the circumvention and destruction either of the wild beasts of the country or their weaker neighbours. By an all-wise and overruling Providence, this has not been permitted—a little band of Europeans were led to the extreme point of this vast continent—they there sowed the seeds of colonization, and these have sprung up and spread, not merely to this frontier, but also to the tropic. And the process must still go on. No merely human power can stay it—can say 'so far shalt thou go and no farther,' and hence it remains for the British government to decide as to whether it will wisely take the initiative in this stupendous and glorious work, or whether with weak and coward steps it will linger in the rear, and tardily follow, as in the Natal case, a movement, which it may encumber, but cannot possibly prevent.

"The last twenty-three years afford eminent examples in each of these respects. Refer for instance to the returns below, and what do we learn therefrom? Why that in one solitary instance, where the government has *led* colonization, the most important benefits have resulted therefrom to the whole colony. The Albany settlement was planted in 1820, at an expense to the nation of 50,000*l*., and what do we already behold as the

result? The desert converted into a garden; towns, villages, and hamlets, presenting themselves where all before was a cheerless solitude; the busy hum of industry heard in every direction, the establishment of just laws, education and religion diffusing their benign and sovereign and eternal influences throughout the land, and a trade created which absorbs merchandize, chiefly English manufactures, to the extent of upwards of 160,000*l.* per annum, raising and sending home raw material in one year to the extent of 113,000*l.* There is no brighter example in the world's history of the advantages of colonization than is presented within a circle of country from the centre of which we now write. But still let it be borne in mind, that this success, great and decisive as it is, is the mere foreshadowing of what may, with the blessing of Providence, be reasonably expected."

"The great staple of the province, wool, is only the product of the last twelve years—and yet recent as this is, it amounts already in quantity to 1,000,000 lbs. for the past year, the estimated value of which is within a fraction of 47,000*l.* In the next ten years this, with moderate success, may be quadrupled.

"Now look at the reverse of this picture. At Natal the government have obstinately *opposed* the progress of colonization. To stop it altogether was beyond the power of any government. And what has been the deplorable consequences? We have been *talking* of philanthropy, and *acting* so as to occasion the destruction of thousands of human lives—preaching economy, and squandering treasure like dirt—showing the duty of allegiance, and exciting to disaffection—calling for peace, and provoking to hostility. And after all the very measure must be adopted, which had it been taken at the outset, would have prevented all the mischief.

"An important circumstance should not be overlooked in reference to these returns, and that is the wool export of the Eastern Province, of only twelve years' creation, exceeds the staple and ancient export of the Western Province, wine, by 7845*l.*!

"Another subject of deep consideration for those who legislate for the colony, is the relative progress of its two great divisions—the eastern and western.

"The extraordinary increase, too, in the amount of the revenue of customs in the Eastern Port, from 1369*l.* in 1835 to 10,846*l.* in 1842 must also strike every person, who will take the trouble of looking into these returns, and it very naturally suggests the question—Why, when the government of the colony builds, manages, and keeps in repair three jetties at Cape Town, the beautiful structure now complete at Port Elizabeth to the length of 481 feet of wooden piles and decking, besides 207 feet of the best-built masonry abutment (entirely by private contributions, to the extent of 6000*l.*) should be left to languish for want of a few hundred pounds from the government purse, the purpose being exclusively that of facilitating the commerce of the colony."

The commercial regulations, navigation and trade of the colony of the Cape will be comprised hereafter, under the head of BRITISH POSSESSIONS.

CHAPTER XVIII.

THE SIXTH REGION OF AFRICA.

THE sixth region of Eastern Africa, extends along the sea-coast, from the latitude of 20 deg. S. bounding on Southern Africa, or the Cape district, to 12 deg. N. (bounding on Abyssinia), and including a vast interior country, with the coasts of Sofala, and Mosambique, where the Portuguese have long had establishments; the coast of Zanguebar, Ajan, and Soumalis. We may also include as appendages the islands of Madagascar, Mauritius, and Bourbon, and the small islands which lie off the coast.

This immense region is occupied by ignorant barbarous races, ruled or commanded by despotic chiefs; and its numerous states are generally described as having ever been in a state of confusion and anarchy. We have, however, no information to justify our saying much on this or any other subject relative to Eastern Africa. The journals of the jesuit, Antonia Fernandez; reports made at different periods to the Portuguese government; the information collected by Malte-Brun; by M. Brué, and introduced on his admirable chart of Africa; by M. Balbi, and by the editors of the *Annuaire du Commerce;* and the reports and journals of English naval officers and traders, enable us to say little more of Eastern Africa, than that the coasts of Mosambique and Sofala are indented with bays, and in many parts skirted with islands, and have several, but few good, harbours; that the Zambeze, supposed to flow from Nigritia through these countries, appears to be a great river, which, with its other mouths, the Quilimana and Couma, discharge into the straits of Mosambique; that many other rivers which fall into the Indian ocean, although considered to be of great length, and navigable, are only known to Europeans at the sea-coast; that Mosambique and Sofala have excellent soils, which produce, where cultivated, indigo, sugar-cane, rice, wheat, potatoes, beans, maize, all kinds of fruits; and in a wild state, oranges, lemons, oleaginous plants and trees; senna, rhubarb, and countless medicinal plants; the vine, mulberry, and olive; and excellent teak and other valuable timber trees.

Wild fowl are abundant, and a great variety of fish is stated to frequent the rivers and coasts—the crocodile and hippopotamus infest the Zambeze; the lion, tiger, rhinoceros, elephant, and numerous fierce animals and reptiles inhabit the forests; gold-dust is still considered to be abundant; iron and copper plentiful. The whole country is still, however, in the wildest state of barbarism; and the blacks who inhabit it are in the most ignorant and degraded condition.

England has scarcely any commercial intercourse whatever with this extensive section of the world. The Portuguese, and the Arabs of Mascate, are, and have long been, the traders to Eastern Africa. One of the partners of an enterprising English house who visited the coast, three years ago, for the purpose chiefly of obtaining information, has stated tour that its neglected resources are of valuable commercial importance.

The following sketches of the principal places along the sea-coast, are founded on the authority of some recent Portuguese accounts, Milburn's *Oriental Commerce*, the *Annuaire du Commerce* and the Bulletins of the Minister of Commerce, Paris.

CHAPTER XIX.

SEAPORTS AND TRADE OF EASTERN AFRICA.

PORT NATAL, now taken possession of by the British, is situated in latitude 29 deg. 56 min. S., and longitude about 31 deg. 30 min. E. The river is wide at its entrance. The bar is very dangerous, not having more than 5 feet at low water, and the sea rises but 5 feet more, except in the months of September and October, when there is about 12 feet at high water. The course over the bar, which is very narrow, is to the S. W. the swell being very great; two or three seas will carry a vessel over it, and then the water deepens to 3, 4, and 5 fathoms.

This place was much frequented by the earlier voyagers to India, and afterwards by the Portuguese from Mosambique, who imported coarse piece-goods, chiefly blue cloth, iron, beads, tobacco, and spirits; and received in return, elephants' teeth, cattle, and sometimes ambergris. The natives are said to be inoffensive, but generally go armed with lances, and bows and arrows; and that their houses built nearly all of straw and mats, but in a neat manner. The river abounds with fish, and turtle is occasionally to be met with.

DELAGOA BAY is of considerable extent, being about 7 leagues broad from east to west, and near 20 leagues deep from north to south; but the channel on account of the shoals on both sides, is not more than five miles in breadth. The north point, or Cape St. Mary's, the N. E. point of the island of the same name, is in lat. 25 deg. 58 min. S., and long. 33 deg. 15 min. E. This island is separated from the mainland by a narrow rocky channel.

This bay has three principal rivers; viz., Manica, Delagoa, and Machavanna. Manica, the northernmost, when discovered by the Portuguese in 1545, was the only one navigable for large vessels; here they formed a settlement and built a fort, but abandoned it in consequence of its entrance being choked with sand. The Delagoa river, which has a bar with about 15 feet on it at low water, is the only one at present frequented by English vessels. The Dutch settled a factory here, which they held till 1727, when a strong squadron of English pirates who had their rendezvous on Madagascar, after plundering the Dutch warehouses, razed them and the fort to the ground. In 1777 an establishment was made here, on account of the Ostend East India Company, under the command of Col. Bolts, who built warehouses, and erected a battery of 12 guns on the south side of the river. In consequence of a protest from the Portuguese government, the cabinet of Vienna disavowed the settlement, and a force was sent from Goa, who treated the Imperialists in a similar manner to that in which the Dutch were treated by the pirates in 1727; their ships, effects, and men, having

been seized and carried off. The Machavanna river, about 8 leagues south from Delagoa river, is not navigable for vessels drawing more than 6 feet water; such vessels can proceed about 90 miles above the entrance, where the trade is carried on, and where the chief usually resides.

Delagoa river has been much frequented by South Sea whalers, as the bay, which is very commodious and safe, abounds in whales. It is navigable by vessels drawing about 12 feet water, for upwards of 40 miles, and for large boats for about 200. Ships commonly lie about two miles up the river, where they have deep water, and are perfectly secure from all winds. A considerable trade was formerly carried on at the rivers in the bay, for elephants' teeth and gold-dust. The huts of the natives are neat, and circular, about 15 feet in diameter, having only one entrance, and surrounded with palisadoes about four feet high. The natives are Caffres, of a bright black colour. They seem a goodnatured and harmless people, but are sharp and cunning, and ask three times more than they will take for their goods. They are great beggars, particularly on the north side of the river: the natives at a distance up the rivers are reckoned more treacherous and ferocious than those in the bay.

Imports and Exports.—The Portuguese used to send a ship occasionally to this river, from Mosambique, and the Parsees, on the Malabar coast, have sent small vessels at different times, their imports consisting of Arrangoe beads, buttons, brass wire, cutlery, copper, iron, piece-goods, pipes, sugar, spirits, tobacco, and wearing-apparel.

Their returns were principally elephants' teeth: the Portuguese have also taken slaves to Mosambique. Ambergris is occasionally to be met with, likewise gold-dust in small quantities, and hippopotami's teeth.

Provisions.—Mr. Milburn says, "Provisions and refreshments are to be procured in plenty, and very reasonably, after permission of the chief is obtained. There is a kind of master-attendant here, called the king of the water; he informs the chief of the arrival of any ship in the bay, and you cannot purchase any bullocks till the chief comes down to his house at the landing-place, where you must make him a present of some old clothes and liquor: he gives you in return a bullock, after which you may get what you want every day. The master-attendant has a great number of cattle; he comes on board your ship, remains as long as you please, and will accompany any officer on shore to trade: by keeping on good terms with him, you can get every thing that can be procured here. The bullocks are very good; for a piece of coarse Surat piece-goods, one weighing between three and four hundredweight may be got; fowls for an iron hoop each, or two metal buttons; vegetables, and fruit, for old clothes, empty bottles, &c. Turtle is sometimes to be met with. Firewood and water are in plenty, and easily procured. The bay and rivers abound with a variety of excellent fish, which are brought off by the natives in their boats, and cost a mere trifle."

From Delagoa Bay to Cape Corientes, in latitude 24 deg. 1 min. S., and longitude 35 deg. 51 min. E., the coast has been seldom visited by Europeans, and has been hitherto little known, except probably to the Portuguese.

Inhamban Bay is five leagues to the northward of Cape Corientes, about three miles to the westward of which, is the entrance of the river, in latitude

23 deg. 47 min. S., and longitude 35 deg. 52 min. E.; but on account of the numerous shoals in the bay, it is only frequented by small vessels. Inhamban Town is situated about eight miles from the entrance of the river. The Portuguese have here a resident, and a few troops for his protection. Vessels from Mosambique come here to trade for slaves, elephants' teeth, and gold-dust.

Sofala is situated up a river, navigable only by small vessels, having a bar at its entrance, which has only 12 or 14 feet on it at low water. The fort of Sofala is on a point of land, insulated at high water, in latitude 20 deg. 15 min. S., and longitude 34 deg. 45 min. E.; the town, which principally consists of huts, lies on the north side of the river. The anchorage is about four miles from the fort, in five fathoms, having the flagstaff bearing N. 33 deg. W. Ships ought not to enter this place without a pilot. A Portuguese resident, with a party of men, are stationed here; there are also some merchants, who procure elephants' teeth, slaves, gold-dust, &c.

Sofala was visited by the Portuguese soon after their discovery of the passage round the Cape of Good Hope. They were kindly received; and in 1507, notwithstanding the opposition they experienced from the Arab merchants frequenting the port, obtained permission to build a fort, which they have held ever since: the climate is extremely unhealthy, and its commercial importance is greatly diminished.

The imports are coarse piece-goods, and other articles suitable to the taste of the natives; the returns are gold, elephants' teeth, and slaves. It is said that, from the mines in the neighbourhood of Sofala, more than 2,000,000 metigals of gold were formerly extracted, the value of which was estimated at 1,666,666*l.* sterling. The trade in slaves is still considerable. The Arabs have long carried on an extensive trade with this part of the eastern coast.

At Sofala, and other places where the Portuguese have residents, a guard is usually placed on board any vessel that may touch, to prevent illicit trade; but, by gaining the favour of the commandant, trade may be transacted at most of these places. They are all subordinate to Mosambique, and all the Portuguese coasting-vessels belong to that port.

Ships touching at different parts of the east coast of Africa, little frequented, ought to be careful in landing with their boats, as the natives of many places are much prejudiced against Europeans; and not without cause. Both French and English vessels, as well as Portuguese, who formerly visited the coast, after enticing the natives on board, carried them away, and sold them as slaves. A vessel from the Cape of Good Hope was famed for procuring slaves in this manner; and it is said that, before the abolition of British slavery, when this vessel was lurking at an island called Chulawan, to the southward of Sofala, the son of the chief, governing the country on the banks of the river opposite the island, with several of his subjects, were allured on board, under

pretence of friendship, and carried away to the Cape, where most of the slaves were formerly procured in this perfidious manner.

The CUMA or Zambeze river, is in many places more than a league broad. About 20 leagues from its joining the sea it divides itself into two branches, the southernmost of which is called Luabo; this also divides itself into two branches: the other principal arm is the Quilimane. In the middle of the river there are several islands. The entrance of Luabo river is in about 19 deg. S. latitude; that of Quilimane in 18 deg. 10 min. S., and longitude 37 deg. 30 min. E.

The town of QUILIMANE is situated on the north side of the river, about five leagues from its entrance. The river has a bar, having only 2½ fathoms on it at low water; here the Mosambique vessels discharge their cargoes into small boats, to proceed to Sena, the principal Portuguese settlement on the river, which is more than 60 leagues distant, in latitude 17 deg. 37 min. S. Large quantities of gold-dust have been annually procured at Sena, likewise elephants' teeth, wax, rhinoceros-horns, hides, &c. The Africans from the interior have sometimes arrived from distant regions,—taking two or three months' time to travel to Sena, to purchase European and Indian goods for gold. This part of the coast of Africa has been considered the Peru of the Portuguese; gold was formerly so common in the interior, that many of their household utensils were made of this metal. The slave trade is still carried on from Quilimane; but the trade in gold and ivory has decreased.

MOSAMBIQUE ISLAND is situated in lat. 15 deg. 1 min. S., and long. 40 deg. 40 min. E. It is the principal settlement of the Portuguese on the east coast of Africa, and the metropolis to which the others are subordinate. The harbour is one of the best on the coast, and is formed by the islands of St. Jago and St. George, which are to the southward of its entrance, and that of Mosambique, about three miles to the north-west of the others. Mosambique Island is not above three miles in circumference, to the westward of which is the harbour. Ships generally anchor within St. George's Island, and wait for a pilot to carry them to the proper anchorage.

Mosambique was first visited by the Portuguese, under De Gama, in 1498. It was then described as "a large town, full of merchants, who traded with the Moors of India for spices, precious stones, and other commodities." The natives received De Gama in a friendly manner, taking them to be Turks. On discovering them to be Christians, it is asserted, that they laid a plan for their destruction, which was discovered in time for De Gama to remove from the harbour; but that being in want of water, he took the place by force, and previous to his departure for India he cannonaded and destroyed a great part of the town. In 1510 the Portuguese obtained permission to settle a factory at Mosambique, under the pretence of wanting a station to procure refreshments for their out-

ward and homeward bound ships. They soon after expelled the inhabitants, and have retained possession ever since. Its climate is said to have improved.

Mosambique is strongly fortified, and has several large churches, convents, and other public buildings. Many of the houses are well built, but the principal part of the town consists of an assemblage of huts. Water is scarce, and preserved in large cisterns.

The Portuguese ships have generally stopped here on their voyages to and from India; and a considerable trade was long carried on with the neighbouring places on the coast, principally for slaves. About 10,000 were annually exported to the islands of Mauritius and Bourbon, the Portuguese settlements on the coast of Brazil, and to India. Although, under the treaty between England and Portugal, this traffic is illegal, it is still carried on to a great extent, and in a horrible manner.

Immediately on the arrival of a vessel, a guard is placed on board, to prevent illicit trade; notwithstanding which, with proper management, whatever goods are required, may be readily obtained.

Coins, Weights, and Measures.—The coins current are Spanish dollars, crusados, and testoons; 4 testoons making 1 crusado, the exchange of which with Spanish dollars varies from 250 to 270 crusados per 100 dollars.

The weights are the frazil and the bahar; 20 of the former making one of the latter, which is considered equal to 240 lbs. avoirdupois.

The duties on foreign goods when imported is about 20 per cent *ad valorem*.

Imports and Exports.—The principal article of trade is slaves. Gold is annually brought from Sennaar and Sofala; and amber, ambergris, elephants' teeth, columbo-root, tortoiseshell, and cowries.

The trade carried on between Mosambique and the British settlements in India was at one time considerable. It is now of little value.

Mosambique is chiefly dependant on Madagascar and other places for provisions, which are consequently dear. Water is very scarce, there being only two good wells,—one on the island, and the other on the main; the rest are brackish. Wood is procured from the mainland, where the Portuguese have gardens, which produce vegetables and fruits of various kinds. An English mercantile house has been lately established here.

QUERIMBA is the name given to a chain of islands extending as far as Cape Delgado along the coast. That called Querimba, which gives its name to the whole, is in lat. about 12 deg. 20 min. S., and longitude 40 deg. 58 min. E., being about four or 5 miles long, and the most considerable of the group. These islands were formerly inhabited by Arabs, but the Portuguese, in their early voyages into these seas, not only plundered them, under the pretence of their being Mahometans, but murdered them all, without sparing either age or sex. They remained uninhabited a long time, till at length some Portuguese from Mo-

sambique and Goa settled upon them, and brought slaves to till the ground, and defend them. On Quecimba there are some well-built houses, not contiguous to each other, but scattered like so many farmhouses. The church stands in the centre of them, and mass is performed by a priest.

Macaloe bay or harbour is situated about 18 leagues to the northward of Quecimba, and is formed between the mainland and the island Macaloe. Should a ship wish to stop here, it will be necessary to make the signal for a pilot. On the north side of the point on the main, is the town, directly opposite the island Macaloe, where the sultan resides, and where vessels that trade to this place anchor in seven or eight fathoms, good holding-ground, mud and sand.

Mongallou River opens to the N. W. of Cape Delgado, in lat. 10 deg. 7 min. S. It is difficult of access, but has from 9 to 11 fathoms in the fair channel up to the anchorage above the town, which is a little within the north point of the river. Provisions are to be procured in abundance, likewise firewood, but good water with difficulty. A considerable trade was carried on some years ago, and to some extent still by the Arabs, in slaves, elephants'-teeth, &c.

Lindy River.—About six leagues from the former, is large, and easy of access, having many villages around, the principal of which is Lindy, on the northern side. It is said to be an excellent harbour, where provisions, wood, and water may be easily procured.

Coast of Zanguebar.—The climate of this country is remarkably hot, and said to be very unhealthy.

Quiloa, is situated on an island, in latitude 8 deg. 41 min. S., and longitude 39 deg. 47 min. E. The island is about six miles long from north to south. The harbour is between the island and the main, and is capable of receiving ships of any size, where they lie secure in all weathers. The entrance is intricate. The town is represented as large and well built; the houses of stone, two or three stories high, having terraced roofs. The streets are very narrow: on one side of the town is the fort, where the governor resides; it is strong, and surrounded by a ditch. Quiloa was first visited by the Portuguese in 1500, who were kindly received by the reigning prince; but in consequence of the character given of them by the Arab merchants frequenting the port, the intercourse with them was broken off, and they were refused to trade in his dominions; they therefore proceeded to India, attacking all the Arab ships they met with in their way, in revenge for the affront they had received from those of Quiloa. In 1505 the Portuguese, under D'Almeyda, attacked and took the town, built a strong fort, and left a garrison of 500 men, who were afterwards driven out by the Arabs; since which period it has remained in their hands; or rather, like the whole coast of Zanguebar, in the possession of the Imaum of Mascate, under whose sovereignty it now is.

The trade of this port, which was formerly, but not now, important, is carried

on by the Mascate Arabs; they import piece-goods of various kinds, suga arrack, spices, &c., and receive, in return, slaves, and elephants' teeth. Th place has been seldom visited by Europeans.

ZANZIBAR is the largest island on this part of the coast, and on sailing along, it has a most beautiful appearance; its north end is in latitude 6 deg. 26 min. S., and longitude 39 deg. 46 min. E. It was first visited by the Portuguese in 1503, when they took a number of vessels belonging to the place, whereupon in retaliation the king made an attempt upon the Portuguese ships; but being defeated, peace was concluded, the king agreeing to pay tribute. In 1509 the inhabitants having neglected to pay the tribute, the town was attacked, plundered, and destroyed by the Portuguese. The English first visited it in 1591; but it has since then been rarely frequented by the English.

There are two harbours, the outer and inner, both fit for receiving large ships. The British ships of war, Leopard and Oresfes were forced into Zanzibar in 1799 for refreshments; the following were the observations entered in their journals:

"Got a pilot on board, and ran close into the inner harbour at low water, through a very narrow channel, scarce three-quarters of a mile wide, and anchored about a mile from the town. The fort saluted with three guns, as did a ship under Moorish colours, bound to Mascate. The town is composed of some few good houses; the rest are huts of straw mat, which are very neat. The latitude of the town is 6 deg. 6 min. S., and longitude 39 deg. 33 min. E. The inhabitants made every profession of serving us; but they were so slow and indolent, that we had but little assistance from them by boats. We completed the water within a few tons with the ship's boats; by watching the tides, you get plenty of water at Freshwater River, which is about four miles to the eastward of the anchorage; you roll your casks some distance from the beach, and bale out of the stream; but at high water it is rather brackish; it is therefore advisable to fill with the falling tide, and take them off with the flood. There are several wells in and about the town, but they will not allow the water to be taken from some of them from religious motives. They will supply you with plenty of wood.

"Here you can obtain many kinds of refreshments; but as the governor made a monopoly of the sale of all kinds of articles, we paid exorbitantly dear for them: the inhabitants sell their things much cheaper. We got very fine bullocks, goats, poultry, rice, cocoa-nut oil, &c. The fruits are very delicious, and they have all kinds. There is good fishing here, and turtle is occasionally taken. The small trading-vessels from Mascate and the Red Sea, after discharging their cargoes, which are chiefly dates, always dismantle, and move into an inner harbour at the back of the town, and wait the return of the monsoon. This island is tributary to the Imaum of Mascate, and the governor is appointed by him. They have a great trade with the French from the Mauritius, in slaves and coffee, and many of them talk that language in consequence. The inhabitants profess the Mahometan religion. In their modes of traffic they are very singular; a guinea is of no value, but an anchor button, or a button of any kind, is a gem in the eyes of the lower class of people; an instance occurred on board the Leopard, where they refused a guinea which was offered in change for some fowls, and a marine's button put an end to the bargain. They always go armed, and appear very timid, except when a considerable number are together."

This account is still applicable.

The following account of its trade was lately published in the bulletin of the Minister of Commerce, Paris:

"The trade of Zanzibar with the states of Europe, is still unimportant.

"The principal articles exported from Zanzibar are as follow:

"*Ivory.*—This article is brought from the East Coast of Africa by the natives of Mouyao, Moyaco, Mocamba, Mongourou, Mokami, Moussagara, and Manamouezi. The ivory from this last place is esteemed the best, being heavier, whiter, and the teeth larger. About 12,000 frazhélas, of 35 lbs. each, are annually brought to market.

"*Resin Copal.*—This is found at various places on the coast between the Cape del Gado and Mombaa. About 30,000 or 32,000 frazhélas are annually sold.

"*Rhinoceros-horns.*—These come from the coast through Quiloa, the ports of the south, and Brava.

"*Ox-hides.*—These come from Brava and Laamo.

"*Wax.*—This is from the coast near Coachi. About 150 or 160 frazhélas are annually exported. The greater part is made into candles, and sent to Mascate.

"*Sesame and Millet* is also brought from the coast to Zanzibar.

"*Cloves.*—The plantations on the island produced, at the last harvest, about 9000 frazhélas, which were exported to America, India, Mascate and Mocha.

"*Cocoa-nut Oil.*—About 18,000 frazhélas are annually manufactured in Zanzibar, and this might be easily doubled. Almost all is exported to America and England.

"The following articles are also brought to market in Zanzibar:—Tortoiseshell, aloes, myrrh, and a small quantity of gum arabic and frankincense.

"The principal articles imported into Zanzibar are as follow:

"*Glassware*, viz., necklaces, rings, and bracelets, made of glass beads. These find a ready sale at Zanzibar, and the surrounding coast. They come from Italy through Egypt and Djeddat. The value imported is about 23,760*l.*

"*Cotton Manufactures.*—800 or 1000 bales of white calico are annually imported from America, and 250 or 300 of a finer quality from England.

"*Cotton Stuffs.*—Printed cottons come from India to the amount of about 500 pieces, in Arab vessels.

"*Brass and Iron Wire.*—These articles are in great demand on the coast. About 15,000 frazhélas of brass are annually imported.

"*Sugar.*—This is brought from India, and a small quantity from America. Only about 400 or 500 bags are annually consumed in Zanzibar.

"*Rice.*—A large quantity comes from the island of Pemba, and Bombay and Madagascar also furnish it.

"In addition to the above articles, the following are imported into Zanzibar:

"*From India.*—Earthenware, hardwares, betel-nuts, pepper, and various spices, cutlery, nails, and native stuffs.

"*From America.*—Naval stores, furs, and gunpowder.

"*From England.*—Glasswares, hardwares and utensils, silks, cloths, &c.

"*From Mascate.*—Stuffs for turbans, dates, raisins, almonds, coffee, and drugs."

MOMBAZ.—This port, which is also under the Imaum of Mascate, is formed by a narrow arm of the sea, which extends round Mombaz island, situated inside of the two points that form the entrance. The town and forts are on the island, a little within the harbour, in latitude about 4 deg. 4 min. S., and longitude 40 deg. 2 min. E.

Mr. Milburn (in 1815) describes "the town as large, and many of the houses handsome and well built; the streets are straight and narrow; the two forts are strong, and well furnished with cannon. The Portuguese, under Vasco de Gama, arrived here April 7, 1497. In 1507 Almeida, on his way to India, sent his vessels to sound the harbour, when they were fired upon from the shore; in revenge for which, he burnt the shipping, landed his troops, plundered the town, and reduced the greater part of it to ashes. It was afterwards rebuilt, but plundered a second time by D'Acunha in 1529, and the fort which was strong, they took possession of, and retained till about 1631, when the king of the country having a quarrel with them, retook it by storm, and put all the Christians in the country to death. Since that period, few European vessels visit this part of the coast, more particularly Mombaz, where the government has in general endeavoured to allure and seize the

European ships that touched here for provisions. In the event of a ship being in want of water or other articles, she ought to proceed to Zanzibar, which is preferable to any other port on the coast, and there is less chance of treachery, it being under the government of Mascate, and more civilized. There is a great trade carried on here, and the place is much frequented by Arab vessels from the neighbouring places."

Mombaz has, like other towns on the eastern coast, greatly decreased.

MELINDA.—This town is in latitude about 3 deg. S., and longitude 41 deg. 2 min. E.: it is large, and had formerly a number of Portuguese churches, and other large buildings, which are now in ruins. The town is represented as being large, the mosques and houses, built of stone. The place of anchorage is a considerable distance from the town ; the coast is very shallow. It is still a place of considerable traffic, carried on by Arabian vessels, who exchange silks, cottons, firearms, gunpowder, &c., for ivory, skins, wax, &c. Vessels from the Red Sea, and Persia frequent this place, the caravan trade with the interior being important. Vasco de Gama visited Melinda in April 13, 1498, where he was kindly received, and furnished with pilots to proceed to India. A few years afterwards, in consequence of some offence taken by the Portuguese, they plundered and destroyed the town; it was afterwards rebuilt, and possessed by the Portuguese until they were expelled by the Arabs, about the year 1698.

Cattle, and many other articles of provision are plentiful and cheap. The whole coast, extending from near the equator, including Brava, Magadoxo, and Ajan, to Cape Guardafui, is described as steril and arid.

CHAPTER XX.

MADAGASCAR.

IT may be geographically annexed with propriety to Eastern Africa. It lies about 100 leagues from the coast of Mosambique. Its northern point is in 11 degrees 40 minutes south latitude, and its southern point is in 26 degrees 20 minutes south latitude; consequently it is 880 geographical miles long, and in breadth about 300 miles. Its superficies 225,000 geographical square miles, and according to Balbi and others, its population amounts to at least 2,000,000; others make the number amount to 4,000,000. Its configuration, aspect, and climate, are remarkably unequal. Mountains, precipices, lofty peaks, fertile valleys and plains, woods, rocks, marshes, fens, &c., diversify its surface. In the fenny parts, the climate is exceedingly insalubrious. This island has, in consequence, long been called the cemetery of Frenchmen, who have frequented it for the purpose of trade and settlement.

Its soil is generally rich, and yields cotton, indigo, peppers, ginger, cinnamon, saffron, tobacco, sugar-cane (indigenous), grapes, and all tropical fruits

and productions: forests cover the greater part of the island; and the timber trees are usually of great size and excellent quality. From all descriptions there appear few, if any countries, richer in natural resources. Lead, tin, iron, copper, mercury, talc, rock-salt, saltpetre, rock-crystal, and precious stones, are stated to be found abundantly in the mountains. Numerous wild animals abound in the woods: the wild ass, wild sheep with large tails, the zebra, among others. The variety of birds of beautiful plumage is great; and others, such as the pheasant and wild duck are delicious eating. Fish, some said to be of poisonous quality, others excellent, frequent the coasts and rivers. During the rainy months, whales, often in great numbers, appear; sharks also frequent the shores, and enormous crocodiles infest the rivers. Beautiful shells are plentiful

The French have small establishments on the island.

Madagascar appears to have been, from the time that Europeans have first known it, subject to anarchy and the wars of petty chiefs.

The Ovas are the principal nation; they, and the other tribes, appear to be of the Malay race; but this origin is doubted.

About twenty years ago, *Radama*, then a young chief of the Ovas, subdued the greater part of the island, and founded the kingdom of Madagascar. The country of the Ovas occupies the interior of the island and is described, by M. Fontmichel, as an elevated table-land, remarkably fertile and populous. The capital, *Tanarives*, or Tananearrivou, is a close assemblage of numerous villages, having in all a population stated at about 50,000.

Radama would appear to have the spirit, genius, and ambition of Peter of Russia, or of Ali Pacha of Egypt. He established schools; sent some of his young men to be instructed in London, Paris, and the Mauritius. He embellished his capital, formed a troop of artillery, cavalry and foot, and with his regular army of from 30,000 to 40,000, would in all probability, before this time, have brought the whole island under his government, and destroyed for ever the feuds and anarchy, which has prevented the prosperity of a country so eminently rich in the natural elements of wealth and power, but on July 27, 1828, the queen Ranavala Manjoka with her accomplice, a young handsome African, poisoned Radama, and after murdering his nearest relations, succeeded, not, however, without opposition, to his throne: several chiefs have rebelled against her government, and the whole island seems again involved in anarchy.

The following sketch of its principal seaports are from Milburn's *Oriental Commerce*, and from French accounts in the *Annuaire du Commerce*, &c.:

"*St. Augustine's Bay.*—At the entrance of this bay, about two miles from the southern shore is Sandy island, which is in latitude 23 deg. 39 min. south, and longitude 44 deg. east. After passing it, and standing to the eastward, there is high land close to the sea, on the south side of the bay, and high land appears in the interior; the entrance of Dartmouth river is then open to you.

"On a ship anchoring, some of the king's people come off, whom they call pursers,

and who on the occasion adopt English names and titles, such as Prince of Wales, Duke of Kent, &c. Small presents are given for permission to procure provisions, &c.

"This is an excellent place for refreshments, more particularly provisions. The bullocks being large and fat, weigh from 600 to 700 lbs. each; they have all a hump on the shoulders similar to the Indian cattle. They are procured by barter for English commodities. The following extract is from an account, drawn up by a gentleman, of the expenses incurred by the ship in which he visited the bay some years since, and we are informed that but little change has taken place either in the prices or quality of provisions or other articles since that period.

"The European articles in demand were chiefly gunpowder, small looking-glasses, brass nails, brass pots, muskets, common scissors, razors, tin tea-kettles, pewter tankards, iron pots of 2 or 3 gallons, powder-horns, and flints.

"Glass beads of five colours; viz., green, yellow, white, transparent, and orange. Arrangoes about 3 inches long, bored, and artificial coral beads. Silver is in great request; they make it into bracelets for the women, and it is in general preferred to gold.

"On our first arrival they asked 8 Spanish dollars for a bullock, or 8 measures of gunpowder, each 9 pounds, or one musket; but latterly they were purchased for 2 measures each, and one measure for a cow, and sometimes a powder-horn for one; these horns should be black and white, and the musket-stocks very brown; a fat sheep may be had for a measure of powder, and two goats for the same.

"*Summary of Goods exchanged, with an Estimate of their Value.*—Gunpowder 6 barrels, valued at 34*l.* 2*s.* 6*d.*; 4 cartridges, 18*s.*; 26 muskets, 27*l.* 6*s.*; 2 pistols, 1*l.*; 350 flints, 8*s.* 6*d.*; 15 gallons brandy, 4*l.* 2*s.* 6*d.*; 12 powder-horns, 18*s.*; 100 musket-ball, 5*s.*; 2 cutlasses, 10*s.*; small looking-glasses, 1*l.*; 3 pairs scissors, 3*s.*—Total 70*l.* 13*s.* 6*d.* For which were received in return, 47 bullocks, 27 dozen fowls, 7 goats, 8 guinea-hens, 1 cask lime-juice, 25 pumpkins, plantain-trees, grass for stock, grain for poultry, yams and sweet potatoes, limes, and oranges. Of the 47 head of cattle, the ship's crew and passengers, near 300 men, had fresh provisions for 9 days, about 5000 lbs.; 15 tierces beef salted, which served about 11 days, 4500 lbs.; 25 live cattle carried to sea, which served about 13 days, 6000 lbs.—Total 33 days' provisions, 15,500 lbs. About a penny per pound for the meat, besides hides, suet, &c. A part of the above enumerated articles was given as presents to the Prince of Baba, the princes of his family, and his principal attendants. The bullocks were killed in the afternoon, and cut up at two in the morning, salted, and put in casks, and about noon taken out, placed on four thick deals supported on casks; then four deals laid over the meat, and large stones and other heavy articles placed thereon, to press out the pickle, &c., for three or four hours; then salted, packed in clean casks, and headed up. Boiled pickle, with a little saltpetre in it, was, when cold, poured into the casks at the bung-hole, till quite full.

"No good water is to be had at St. Augustine's Bay, except by sending boats 4 or 5 miles up the river for it: and instead of filling the casks at low water (as is the case in most other rivers), they are filled at about a quarter-flood. The reason assigned is, that the river has a communication with the sea at other places, as well as with the channel of St. Augustine's Bay; and that the sea-water brought into the river by the flood-tide is not discharged till a quarter-flood of the next tide in St. Augustine's Bay, and that for three miles at least up the river, the water is always brackish. The river and bay abound with various sorts of fish, and alligators are occasionally seen in the river; and the boats' crews should be prevented from going into the water to bathe."

Bembatooka Bay is large and safe; the entrance is in latitude 15 deg. 43 min. S., and longitude 46 deg. 28 min. E., and is about three miles wide. On the east side of the entrance is the village Majuinga. Bembatooka town is on the south side of a point of the same name, about three leagues within the entrance of the bay on the east side: here ships may lay land-locked and sheltered from all winds, close under the point near the town. Captain Inverarity, who visited this bay during a trading voyage, observes—

"Should the English government ever intend to have a settlement on this island, of consequence, I should certainly recommend Bembatooka as one of the most commodious, healthy, and easy of access, it being near the capital of the country, and supplied with as fine beef as any in the world, at the moderate price of from one to two dollars each bullock. The merchant would also find this a most excellent situation for trade, the country supplying many commodities, as well as a sale for East India goods. The French purchase in this part of the island, with dollars brought for that purpose, their slaves and cattle, which are driven across to Fort Dauphin by the natives of the Fort Dauphin district, the French putting implicit faith in those men, who seldom betray their trust. At Bembatook beef may be salted, as well as at Fort Dauphin, where the French salt provisions for their European ships, as well as their colonial consumption. There is no pork to be had here, except the wild hog, which is in great plenty. Rice may be had in any quantity, at two gamels a dollar, the gamel weighing 38 lbs. avoirdupois. It is necessary to speak in time to the natives, as the grain is generally purchased here in paddy, and beat out as they consume it. This place is frequented by the Arabs from Mascate and the neighbouring places, who carry on a small trade here, and Arabic is spoken by many of the natives."

PASSANDAVA is a large bay, of a square form, extending six leagues to the southward. The town is at the bottom of the bay, in latitude 13 deg. 45 min. S., and longitude 48 deg. 23 min. E.

Bullocks and other refreshments, wood and water, may be procured in great plenty, and on reasonable terms. The inhabitants are shy of strangers, until acquainted with their business.

From Passandava Bay to Cape Ambro, the northern extremity of the island, there does not appear any place of resort for shipping. The ports on the eastern side of the island are seldom visited by English ships.

The principal places on the east side are Fort Dauphin, Manouro, Tamatave, Foul Point, St. Mary's Island, and Antongil Bay.

FORT DAUPHIN is in latitude 25 deg. 5 min. S., and longitude 46 deg. 35 min. E. The fort commands the road, being 150 feet above the level of the sea; it is a long square, encompassed with walls of lime and gravel well cemented, and might easily be made secure against the islanders, but the situation is unhealthy. This part of Madagascar is very populous; almost all the villages are situated on eminences, and surrounded with two rows of strong palisadoes, somewhat in the manner of fences, composed of hurdles and turf; within is a parapet of solid earth, about four feet in height. Large pointed bamboos placed at some distance from each other, form a kind of loopholes, which contribute towards the defence of these villages, some of which are besides surrounded with a deep ditch. Bullocks, poultry, and other provisions are abundant, and at reasonable prices; water is found at the landing-place, by digging in the sand; it is very indifferent, and will only serve for cooking and for the use of the live-stock; at a short distance inland there are several springs of very excellent water. The trade carried on at Fort Dauphin is chiefly in bartering European articles with the natives, for rice, poultry, cattle, turtle, oranges, and other fruit, all of which are abundant, and exported to the Mauritius and Isle Bourbon.

In this part of the island and farther north, numerous herds of cattle and much poultry are reared. More rice is grown than is consumed, and large quantities have been frequently sent to the Mauritius and Bourbon. The natives manufacture beautiful mats, and from the fibres of a plant, make a stuff of various-coloured stripes, about eight yards long, not much inferior in beauty of colour to silk, but not so soft or pliant: they likewise manufacture several articles from the cotton produced on the island.

Foul Point.—The anchorage here is formed by a large reef, which begins at the shore, and extends about three miles N.N.E.

Opposite the anchorage, in latitude 17 min. 41 deg. S., and longitude 49 deg. 36 min. E., is situated a large village, named Mahaveti.

Plenty of large and fat bullocks, are to be procured here, with other refreshments. To the south of the village is a small river, where vessels obtain fresh water; but a boat cannot pass over the bar at low water.

St. Mary's Island called by the natives Nossi Ibrahim, or the island of Abraham, is about forty miles N.N.E. from Foul-Point, and extends from 17 deg. 5 min. S., to 16 deg. 33 min. in a direction about N.E. by N. On the west side, about two leagues from the south point, there is a bay, with an island, called Quail's island, at the entrance. The French settled on it in 1740, and left 120 men there, who were three months afterwards cut off by the natives; they, however, repossessed it in 1743, but abandoned it in 1761, on account of the unhealthiness of the place.

About the year 1696 the English buccaneers, Kidd and Avery, who infested the Indian Seas, established a fortified station here, and brought in their prizes. Kidd was taken, and hung in chains at Tilbury, in 1701. In 1702 two men-of-war were sent out to suppress them; but it was many years before their depredations were effectually put a stop to. The French have reserved their station on this island, in order to furnish Isle Bourbon with provisions.

Antongil Bay, called Manghabees by the natives, takes its name from Antonio Gil, a Portuguese captain, by whom it was discovered. At the bottom of the bay are several small islands, the principal of which, Marotto, is about a mile in extent, and the same space from the shore; it is situated in latitude 15 deg. 25 min. S. The common anchorage is to the northward of this island, at the distance of a musket-shot, opposite to two small sandy coves, in 11 or 12 fathoms. Wood and water are procured here with great convenience, and the tents may be erected safer than on the main, where provisions are obtained. The river bears N.N.W. from Marotto, and is navigable for boats. The anchorage of the river was called Port Choiseul by the French.

Exclusive of the places described, there are many other bays and harbours on the East Coast of Madagascar, where small vessels may anchor and procure refreshments, although not so convenient for large ships as those named.

Comoro Islands.—These are four in number—Comoro (which gives its name to the group), Mohilla, Mayotta, and Johanna.

Comoro.—Is the largest of these islands, being about 12 leagues long, and 5 or 6 broad. The anchorage is to the N.W. of the island, where the principal town is situated, in latitude about 11 deg. 20 min. S. The town is large, with rows of cocoa-nut trees, and a smooth sandy beach before it; it is the only place where a boat can land; shoal water runs off about a quarter of a mile. This island is seldom visited by Europeans, Johanna having the preference. Fat bullocks are to be procured here at about six dollars each, likewise sheep and goats at moderate prices. Oranges, lemons, and plantains are to be had for knives. No water, except rain water, can be procured.

Mohilla.—The smallest of the islands, is about 12 leagues S.E. by S. from Comoro, and at one time was considered the best for supplying provisions. There are several small villages; one to the southward, which is reckoned the best anchorage, is behind some small islands; another to the northward. The watering-place is about 200 yards from the beach, up an easy ascent to a kind of ravine, about 12 feet deep. The run of water is clear and constant from the mountains. There is a reef of rocks, which runs from the town across the little bay, where the watering-place is, which prevents boats working the last quarter ebb, and the first quarter flood. Small bullocks, rice, paddy, plantain-trees, and fruit of various kinds, are to be procured here; and the sea abounds with fish. The town, where the king resides, is about 4 leagues S.E. by S. from the above place; but the coast is very dangerous, and ships cannot approach within two miles of the town, where there is a large surf, which renders it difficult and dangerous watering there.

Mayotta.—Is the southernmost of these islands, and being surrounded with reefs, is less frequented, and less known than the others. Here water and refreshments can be procured, but it is attended with danger.

Johanna.—This island has been long frequented by European ships for provisions, on their outward-bound voyage. The best anchorage is about three miles to the westward of the town, near the sea, having a large black rock to the eastward, between them and the town, with the rivulet where water is procured, at their western extremity; the bearing, when at anchor, is the rivulet S. by E. and the mosque E., rather more than a quarter of a mile from the shore.

The island is said to contain about 12,000 inhabitants: those on the coast are Mahometans. They carry on a trade with Arabia in vessels from 70 to 100 tons each, and carry cocoa-nuts, cowries, and occasionally a few slaves. From this trade, the natives of Johanna have learned the use of money in purchasing piece-goods and other Indian commodities from the Arabs.

The following European articles are always in demand:—Small oval looking-glasses; ditto, paper mounted; beads, white, blue, and yellow; iron in rods and

square bars; nails of various sizes; large coarse razors; clasp-knives; lascar knives, with sheaths; cloth, red and blue; shirts and other apparel; muskets, pistols, cutlasses, gunpowder, and flints.

The inhabitants have no other means of payment than cattle, poultry, and other articles of provisions. The few dollars paid them for provisions have been carefully reserved for the purchase of Surat goods, which are occasionally imported in vessels from Surat, the returns for which are usually made in cowries, red beetle-nut, dammer, wax, cocoa-nuts, and corn. The demands under the head of port charges are, chiefly presents to the chief of a barrel of gunpowder, a few yards of scarlet cloth, and two or three muskets; and to his attendants, who mostly assume English titles, are as follow:—The Prince of Wales, 15 dollars; the governor, Duke Burkit, 2 dollars; the purser, 20 dollars; governor Abdallah, five dollars; keeping watering-place in order, five dollars; watching casks at night, one dollar.

Independently of the above, the Prince of Wales asks for, and expects a barrel of gunpowder. They solicit those who visit the island, particularly all passengers, to contribute a dollar or two towards improving the navigation which they carry on with the continent of Africa; and by way of persuasive example, produce lists of persons who have subscribed for that purpose, so that they sometimes collect 30 or 40 dollars from a ship; and when the ships depart they generally procure from the master a certificate of good usage.

The bullocks are fat, but seldom weigh more than four cwt., poultry, excellent yams, and sweet potatoes in abundance.

Pineapples of a most delicious flavour, measuring 10 to 12 inches in circumference; oranges, limes, plantains, guavas, &c.; these are brought off by the natives in their canoes, and may be purchased by the ship's crew for knives, old clothes, bottles, &c. The water is very good. Firewood is scarce.

This place is admirably well suited for procuring provisions and recovering the health of scorbutic people.

Socotra lies about 40 leagues eastward of Cape Guardafui; it extends nearly E. S. E. and W. N. W. is 27 leagues long, and 7 broad, and in general composed of high and mountainous land. There are two anchoring-places, generally used according to the prevailing monsoon. The Bay of Tamarida, on the N. E. side of the island, is the most eligible place for refreshments; it is in lat. 12 deg. 39 min. N., and long. 53 deg. 33 min. E. The anchorage is in 10 to 12 fathoms, the body of the town bearing south, about a mile off shore.

Bullocks, goats, fish, &c. are to be procured at reasonable prices, and the inhabitants are in general civil to strangers. The water is very good but not generally abundant. Firewood is scarce.

Its situation renders it very convenient for ships coming from India, Mada-

gascar, or Mosambique, to trade with Arabia Felix, or with Aden, Mocha, Mecca, and other cities of the Red Sea. It produces aloes, ambergris, indigo, civet, incense, dragon's blood, and other medicinal gums; rice, tobacco, and dates in such quantities as to serve them instead of bread.

The British Trade with Eastern Africa and with Madagascar, is of very trifling importance. A few cottons and other articles were exported to Delagoa Bay in 1838, none elsewhere to Eastern Africa since, nor for many years before. A few hides and elephants' teeth, have been imported.

CHAPTER XXI.

SEVENTH REGION OF AFRICA.

This region comprises the states of Abyssinia, Somaulis, and the coast extending from Cape Ras-Asser, or Guardafui, along the Red Sea to Suez.

Abyssinia, situated on the western side of the Red Sea, at the southern extremity of the same, and extending along its shores and those of the sea of Babelmandel, from the 11th to the 16th deg. of N. latitude, is generally described as a fertile and luxuriant country. The population is estimated at from 4,000,000 to 5,000,000 of inhabitants.

The author of the *Lex Mercatoria*, in his commercial account of Abyssinia, observes,

"The Portuguese, after they had taken the island and city of *Ormus*, in the Persian Gulf, Muscate on the coast of Arabia Felix, and the isle of Zocotora, at the entrance of the Arabian Gulf, soon opened a passage to Ethiopia, and established a considerable commerce there, and afterwards brought many Portuguese families to form a colony, if possible.

"The new guests, however, becoming objects of suspicion, the Abyssinians drove them out, and all trade was forbidden with them. After this expulsion the emperors of Ethiopia would not suffer their subjects to have much correspondence with the European nations, nor suffer any European to settle in the country under the plea of trading. Gold, silver, copper, and iron, are the metals this vast region of Africa produces, also cardamoms, ginger, aloes, myrrh, cassia, civet, ebony, ivory, wax, honey, cotton, stuffs of various colours made from it, and I might add, sugar, hemp, flax, and excellent wine, if the people had the art of preparing the cane's juice, to cultivate the vine and press the grapes, to spin and weave the flax and hemp properly, as all these things grow plentifully in their country."

With respect to the value of the trade of Abyssinia, our information is still imperfect. The above account of the articles of interchange are the same as now enter into commercial transactions. The total value of exports and imports of the port of Massoura was about 20 years ago estimated by Valentia at $400,000 (80,000*l.*) per annum; and this estimate is in the present day confirmed by the German traveller, Dr. Rüppel, who, in the first volume of his

Reise in Abyssinien, recently published, gives the following particulars of the articles yearly brought from Abyssinia to Massoura, which was furnished him by one of the *cartrotters* at the custom-house of that port:

	Average Price.	Amount Taleri at 4*s*. dollars.	£
2000 slaves, of both sexes	60 per head	120,000	24,000
150 horns of musk, at 30 ounces per horn	2 per oz.	9,000	1,800
300 elephants' teeth, of various sizes	20 each	6,000	1,200
400 cwt. of wax	20 per cwt.	8,000	1,600
100 cwt. *Narea* coffee	10 per cwt.	1,000	200
Tanned leather and raw hides	in all	1,500	300
Chêle, a peculiar spice from *Narea*, sent in considerable quantities to India	in all	1,000	200
2000 cwt. butter (ghee)	8 per cwt.	16,000	3,200
Honey, grain, &c., exclusively for the consumption of Massoura	in all	6,000	1,200
2000 ounces of gold	20 per oz.	40,000	8,000
Total	dollars	208,500	£41,700

With respect to these items, Dr. Rüppel remarks that he considers the slaves, elephants' teeth, and gold, as estimated too high. He regards the *total* amount of the trade, however, as not at all exaggerated.

Of the port of *Berbera*, in the sea of Babelmandel, the annual trade *in coffee alone*, has been estimated by Lieutenant Wellsted, in his *Travels in Arabia* (vol. ii., p. 364), at 15,000 tons, which, at the above price of $10, or 40*s*. per cwt., quoted by Rüppel, gives no less a sum than 3,000,000 of dollars, or 600,000*l*. This is perhaps too high an estimate.

In the month of February, 1837, the two brothers, MM. d'Abbadie, assisted by the French government, penetrated from Massoura into Abyssinia, accompanied by a Catholic missionary whom they took with them from Cairo, and established relations with the Chief Cassai of *Agame*, the elder of these brothers returned to France for the purpose of obtaining fresh instructions, and to support the younger brother, having remained for the purpose of keeping up the connexion during the absence of the elder, who has since returned to Abyssinia under the auspices of his government. Great calamities it appears have been spread over Abyssinia by the inroads of the Galla tribes from the interior of Africa during the last three centuries. In consequence this great country has been separated into numerous governments and petty states. The three principal states are, Tigre, Amhara, and Shoa.

A merely *titular* emperor of Abyssinia is said still to exist, who is a mere puppet, set up and again dethroned at the will of any of the ascendant chiefs.

Tigre, the province of Abyssinia best known to Europeans from its connexion with the port of Massoura, was, at the time of Mr. Salt's mission in 1810,

under the rule of the powerful chief *Ras-Willed-Selasse*. After his death, in 1816, it passed by conquest into the hands of Sabigudis, from whose character and disposition, Mr. Salt had anticipated great results, and even the possible regeneration of Abyssinia; but that chief having been slain by the Gallas in 1831, the province of Tigre was conquered by Oubra, the chief of Samer, by whom it is at present held. This chief, who is now about 42 years of age, has by this extension of his dominions become very powerful, being now the ruler of the northern portions of Abyssinia.

In the provinces of Jemben or Againe, however, (a part of Tigre,) the chief Cassai was the only surviving son of Sabigudis.

KINGDOM OF SHOA.

SHOA, which lies on a lower level than Efat, is celebrated for its fine pasturage and fertile valleys, containing large towns and a great number of monasteries. The missionary, Gobat, who quitted Tigre in 1833, says in page 341 of his *Journal of a Three Years' Residence in Abyssinia*, Shoa is entirely separated from the rest of Abyssinia, in all its agitations. The actual king, Sahela Selasse, the seventh of the same family, aged 33 years, has already reigned 18 years, to the satisfaction of his people, who are very proud of him. During the last few years he has much extended the frontier of his kingdom to the south and the east. The provinces of the Gallas, which he has subdued, have gradually embraced the Christianity of Abyssinia.

Ankobar, the capital of Shoa, is laid down in Mr. Salt's map, at a distance of about 180 geographical miles from the nearest point of the coast of Zeila, and the territories of Sahela Selasse on the same map to extend only about 35 miles to the eastward of the capital; thus making the distance from Zeila to the frontiers of Shoa in a direct line about 145 geographical miles.

Between Shoa and Zeila lies the country of Adal, or Soumali, which in former times, when it was under the rule of independent Mahomedan princes, opposed an effectual obstacle to the passage of any Europeans to the interior. But the present state of this country is very different. The barbarous Galla tribes, who in their approach from the south were checked in their course of devastation by the mountains of Shoa and Efat, turned off to the left and to the right, and whilst they, in the former direction, overran and desolated the provinces of Christian Abyssinia, they, in the latter direction, in like manner devastated the Mahomedan state of Adal, and annihilated its power. So far the intercourse with Shoa and Efat is less difficult and dangerous than formerly; and a mission was in 1841 sent to the country by the Bombay government; and Dr. Beke has also succeeded in reaching Ankobar.

The following account of the resources and trade of the Kingdom of Shoa

is condensed from a report, dated January 5, 1842, on that kingdom, by Captain W. C. Harris, who was sent from Bombay in charge of the mission to Shoa in 1841. It is stated as introductory to this report,

"That if commerce were to be restricted to the kingdom of Shoa, few advantages present themselves to counterbalance the expensive and hazardous land-carriage to the coast; but the commencement of Mercantile dealings therein may be expected gradually to open up the road to the interior, to the extreme limits to which caravans can proceed, and with the influence of the king, if properly directed, will in due process of time have the effect of drawing thither all the rich kafilas or caravans from Enarea, Caffa, Godjam, Damot, and other unexplored regions, which, laden with coffee, civet, myrrh, frankincense, ivory, gold-dust, and costly peltries, at present leave the dominions of *Sahela Selasse* to the eastward, on their way to the seaport of Massowah, by the long and circuitous route of Gondar Tigre, nearly impassable for camels. Those through Godjam already come from Gondar to Shoa, and the traffic must necessarily be augmented by the operation of the treaty now concluded.

"That time alone can be expected to reveal the hidden treasures of the interior of this vast continent, and continued intercourse with civilized nations can alone lead to the complete removal of the existing despotic restrictions, which operate to limit the sale of European goods among the subjects of Shoa. But the king must soon see his advantage in remodelling this prohibition which even now does not extend to traders from the coast, who, paying an import duty of 10 per cent in kind or specie at the option of the crown, and an export duty of four amoles upon every slave, are at full liberty to purchase from the merchants of the interior, who resort hither, whatever articles they please. So far as our acquaintance yet extends with the countries beyond, the people are uncontrolled, and possess both wealth and a passion for trinkets and finery, which must favour an extensive sale of European merchandize. In Enarea especially, to which highly interesting state I have resolved to penetrate whenever leisure and a fitting opportunity present themselves, glassware, cutlery, beads, trinkets, blue cloth, and linen manufactures are in universal demand. A direct communication at present exists betwixt Hurrur and Gurogue; but it is in the power of Sahela Selasse by the occupation of the latter country, in which he has already placed one foot, to close the road to Hurrur, and to secure to himself the caravan routes from Enarea, Caffa, Zingero, and Cambat; thus turning the whole of the lucrative trade through the Northern Provinces, to the advantage of other European powers, and, the complete exclusion of the British.

PRESENT STATE OF TRADE IN THE KINGDOM OF SHOA.

"1. Christian Abyssinia, long torn by intense feuds, imperfectly explored by British research, and distracted by barbarian inroad, has not hitherto presented that smooth and unruffled field so essentially requisite for extensive commercial intercourse with civilized nations; and the kingdom of Shoa, in particular, has until lately been hemmed in by savage Galla hordes, the greatest check on whose despoiling progress has been their relative weakness and fierce internal disputes.

"2. The present despotic power of King Sahela Selasse has, however, had the salutary effect of taming the spirit of these wild marauders, of reducing them to a wholesome subjection, and of thus rendering, under certain conditions, a part of the coterminous countries comparatively safe and traversable.

"3. Although every article which the inhabitants of these elevated regions imperatively require, is produced abundantly at home (for whilst the mountains form almost impregnable defences against foreign invaders, their rugged sides and valleys, with little effort, produce, in plenty, every thing they desire to cultivate), yet still, the country, in a commercial point of view, presents great objects of interest, possessing the nearest route hitherto discovered, from the sea-coast to the interior of North-Eastern Africa; a route which can be traversed by camels to within a short distance of the crossing point of the

great caravans, and possessing all the presence of a powerful despot, whose mere will and pleasure can at any time alter the course, or entirely prevent the passage of these richly-laden kafilahs.

"4. There is already a considerable traffic existing with the coast which may hereafter be greatly increased, and a rising craving for European goods and comforts, which ought to be fostered and satisfied. The wants and wishes of the inhabitants of the interior on this point are neither few nor trifling, and may be most satisfactorily ascertained from the fact that the large sum of 96,000*l.* sterling, the produce of the slave trade from the ports of Berbera, Zayla, Tedjurra, and Massowa, is only one item of the total annually invested in various European goods and manufactures, which are readily disposed of to the natives of the immediate interior, even at the present price of the monopolist, who, being generally a trader of limited means, may be supposed to drive a very hard bargain for his luxurious wares.

"5. It is useless to speculate upon what mercantile treasures are kept in store for the adventurous spirit who successfully performs the quest into the interior, but we are already aware that gold-dust, and ivory, and precious gums and spices, form a part of the lading of every caravan, notwithstanding that the tedious transport over a long circuitous route presents considerable difficulty, and the overreaching disposition of the Indian Banians of Berbera and of the Arab merchants at Massowa, offer but a small reimbursement for the toil and trouble of the journey.

"6. The rich and productive soil so admirably adapted for the growth of all colonial produce, the cool alpine climate so suitable for European constitution, together with the highest capabilities for the development of British industry, for the research of science, for the employment of capital, and for the labours of Christian missionaries, to which may be added the pleasant prospect in future, that his Majesty of Shoa (should any benefit to his revenues be the probable result) may be induced to encourage the advent into his own dominions of those great trading caravans from the interior, which now skirt his possessions, and proceed by way of Gurague and Gondar to the eastern coast, throwing their treasures at a small value into the hands of the Arabs, the Egyptians, and other foreign nations.

"7. The following rough calculation regarding the profit to be derived from one of the Abyssinian products, without reference to the profit on the bartered European goods received in exchange, may tend in some degree to set forth the advantage to be derived from a commercial intercourse with this country of Shoa. The prime cost of coffee sold in the market of *Ali-Ambah* is, for one pound, twopence-halfpenny. The cost of 400 lbs. (a camel-load), 1000 pence; hire of camel, &c., to coast (20 dollars), 960 pence; freight, insurance, &c, to England, 440 pence; altogether amounting to the sum of 10*l.* for 400 lbs. of coffee: which would bring the expense of one pound in England to sixpence sterling. The coffee is of a very superior quality, and of course is to be obtained even at a more reasonable rate on the plantation.

"8. Moreover, any trade must be important to England which carries off manufactured goods of all kinds, and furnishes in return raw materials; and caravans for the purposes of trade are, in Abyssinia and in the neighbouring countries, considered as in a certain degree sacred, and are permitted to pass unmolested even through the hostile hordes of the Galla, on payment to the chieftain of a few small presents; and more especially if accompanied by Europeans their passage would be rendered more particularly safe from the ordinary difficulties attending any journey through savage lands, from the acknowledged respect and admiration which invariably follows the possession of superior medicines and firearms.

"9. Thus a wide field for discovery and profit is perfectly free and open for any enterprising trader, to which no limit can be set. Trade and barter are sufficiently understood and appreciated by the natives themselves: tribe after tribe may be visited to the very centre of Africa; and the dominions of Shoa, as a starting-point, would afford the advantages of a cool, healthful climate, and a protection for private property, two desideratums rarely known in other mercantile stations of this vast continent.

"10. Although other villages in the immediate vicinity occasionally hold markets for

the detestable traffic in human flesh, yet Ali Amba may be regarded as the chief site for legitimate commerce to the south of Sasta, all the intercourse between the kingdom of Shoa with the seaports of Tedjurra, Zeyla, and Berbera, being carried on at this place.

"11. The village of Ali Ambah (the peak of Ali), stands on the crest of one of the thousand conical eminences into which the entire mountain-side is broken on its junction with the plain of the Huwash, and situated 2000 feet below the level Ankobar, the climate is milder than that of the cold summit of the range, and more congenial to the habits of the Mahomedan traders, who find a temporary residence in a collection of 300 or 400 huts whilst they are disposing of their goods in Abyssinia. The market is held on every Friday, when a scene of unusual bustle and confusion animates this otherwise most quiet and uninteresting location. Early in the morning, wares of every description are displayed in the open air; and people flock from all parts of the country to lay in their weekly supply. The Amhara farmer exposes for sale or barter the produce of his estate, honey, cotton, grain, and other articles of consumption; the Danakil merchant exhibits his assortment of beads, metals, coloured thread, and glassware; the wild Galla squats beside the produce of his flocks; the Moslem trader from the interior displays ostrich feathers or some other article of curiosity from the distant tribes; bales of cotton cloth, and bags of coffee, are strewed in every direction: the wandering Hebrew is not even wanting to complete the scene of traffic; whilst horses and mules in numbers are shown off at speed amongst the crowd, and add greatly to the turmoil of haggling and barter, which continues without intercession until late in the afternoon.

"12. In consequence of the utter terror and abhorrence which the Abyssinians entertain towards the low country and its attendant dangers, the Danakil tribe have nearly the whole trade exclusively in their own hands, and are treated by the King of Shoa with much deference and respect.* Caravans arrive every month during the fair season from Oussa and Tedjoura, and the trade, considering the many drawbacks, may be said to be brisk and profitable.

"13. Four or five caravans also proceed annually from Ali Ambah to Hurrur, which from its vicinity is the more immediate mart for the supply of the seaports of Zeyla and Berbera, the merchants bartering zinc, brassware, beads, red thread, blue calico, and frankincense, for slaves, mules, and cotton cloths. These articles are conveyed to the coast, along with one of the grand annual caravans from the interior, which, debouching from the south-eastern corner of Gurague, passes through Hurrur in progress to the great October fair of Berbera, carrying slaves, gold-dust, spices, ostrich-feathers, peltry, civet, and ivory.

"14. The provinces of Shoa and Gurague abound in cattle, corn, coffee, cotton, and other farm produce of every description. The chief production, however, for export, at present consists in a manufactory of coarse cotton cloth, which is close, warm, and durable; the staple is produced in great quantities on every farm, and the cloth is fabricated in every village, but the red thread inserted as borders is imported from Arabia. The Abyssinian cotton is cheap and abundant, as the plant produces two crops during the season, and appears to possess an excellent lignine; the woven cloth is in great demand, being used by all the inhabitants of this portion of Abyssinia, from the king to the peasant, and supplying the vestments of the intermediate tribes towards the sea-coast.

"15. Black woollen blankets are also in request, and are of excellent material and workmanship; the other exports which pass through Ali Ambah are civet† and ivory in small quantities, coffee, wheat, juwaree, tanned leather, mules, horses, and slaves.

"16. Although the prices of many of these articles are very much below their intrinsic value, yet from the reason that the trade is an entire monopoly in the hands of

* Should a Danakil kill an Abyssinian, the murder is passed over in silence; but, on the other hand, should the reverse prove the case, the property of the unfortunate Abyssinian is confiscated, and his person handed over to the tender mercies of the Danakil.

† The civet cat is found in Gurague, Caffa, and Enarea, and is kept confined in a cage until sufficiently large and fat to undergo the process of sweating before intense heat, by which alone the perfume can be extracted.

merchants, who are men of small capital, and owing to the fact that the king of the country can alone purchase coloured cloths, and other imported choice wares, and is also sole proprietor of all sulphur, civet, ivory, and gold-dust; the trade in these articles is of course limited. Slaves are exported in great numbers, 2500 being disposed of at the fair of Ali Ambah and the villages in the immediate vicinity, whilst 8000 or 10,000 annually proceed through this portion of Abyssinia on their way to the sea-coast.

"17. These slaves are chiefly children of from six to fifteen years of age, and are the produce of forays into Guragué and the country of the Gallas, or kidnapped amidst the everlasting feuds of the interior tribes, and conveyed by Mahomedan traders from the inland countries, to await at Ali Ambah and the neighbouring villages the arrival of the Danakil and Hurrur merchants, or carried through Guragué and Gondar, direct to Berbera and Massowa.

"18. Water-tight baskets and mats, of very superior quality, of high colours and handsome patterns, are woven from the inner fibre of the incel, a species of plantain, and a very superior light stout cordage is also fabricated from the same material. Ginger abounds, together with other spices, amongst which may be mentioned the kurarima, combining the flavour of the cardamom with that of the caraway. Aromatic grasses and gums used in fumigation are also exported from this province.

"19. Coarse parchment is prepared in every village, and the very rare Ethiopic manuscripts are to be found only in Ankobar and the monasteries and caves in the neighbourhood: as the Gallas, during their occupation, destroyed all those valuable relics in Gondar, the capital of the ancient empire.

"20. The hide of the long-haired sheep, lofeeza, is cured with the fleece appended; the length of the hair, which is of a dark colour, varies from six inches to one foot, and this article of peltry is in great request as a cloak, and is only worn by the more wealthy inhabitants.

"21. Gold-dust is brought by the caravans from Enarea. His Majesty of Shoa, however, appropriates the entire quantity, settling with the merchants his own price in cloths and mules; nor is the precious metal permitted to quit the kingdom, but it is worked up into bars and ornaments, and forthwith transmitted to swell his amassed property in the caves of the mountains of Um Muraut. The use or even possession of this metal is strictly forbidden to all the inhabitants of this province; but a surreptitious sale to a small extent is carried on at the rate of one dollar's weight, or 430 grains of gold, for eight dollars in money.

"22. Ivory is also a royal monopoly, and is dealt out with a niggardly hand in presents to his governors and favourites; and although the elephant abounds in many parts of the kingdom, he is difficult and dangerous of approach to the Abyssinian hunter. Ivory is, however, obtainable among the tribes of the Galla and Adaiel, who form very troublesome neighbours, and from them a small quantity finds its way to the coast.

"23. The forests contain dyewoods, the use of which is perfectly unknown; and many valuable medicinal plants, amongst which the 'cargo' may be particularized; M. Gobat having taken specimens of this drastic purgative to Germany, where the test exceeded the most sanguine expectations. A species of wild indigo is spread over a large tract of country, on the eastern slope of the great mountain-range, the verdant meadows are covered with wild thyme, and the valleys are studded with the Socotrine aloe.

"24. Cattle-hides and sheep-skins, either raw or prepared, may be procured in any quantity; and the ghee of the coast and the inland country is shipped in large cargoes from the seaports of Tedjoura, Berbera, and Zeyla, for Arabia and India, in which latter country it is sold as the celebrated 'kurrachee ghee.'

"25. The soil and climate of Giddem and the low valleys on the eastern frontier are peculiarly adapted for the production of sugar, cotton, coffee, and indigo; European talent, industry, and capital, being alone wanting to cultivate these products to any proposed extent. The lime-tree grows wild in many of the forests, and the temperature of the climate is favourable for the fixing of citric acid. The cultivated plant flourishes in profusion in almost every garden of Efat, and the fruit is cheap, juicy, and abundant.

"26. The sugar-cane exists at present in small patches amongst the valleys, and is consumed in its natural state, as the Abyssinians are totally unacquainted with the art of ma-

nufacturing sugar. Planted in May, and watered only by the rains of heaven, it yields a fair crop without any of those expenses attending the cultivation and irrigation of the plant in all other countries.

"27. *Coffee grows like a weed over Manchetty Efrata,* and the adjacent mountains of the Itto and Wollo Galla, and is of a most superior quality; the berries are, however, allowed to rot below the bushes, owing to a monopoly of import existing in the person of the ruler of Hurrur, and the small consumption among the Christian inhabitants of Abyssinia, whose prejudices forbid the juice of the berry, as savouring too strongly of the abhorred Moslem. Still there is an abundant supply in every bazaar, and when there happens to be scarcity in the slave-market, the merchants load their camels with this article; and thus a portion finds its way to the coast, and to Arabia, where it is vended as the celebrated 'Mocha coffee.' The plant is said to abound in Gurague, Enarea, and Caffa, and the berry is freely used by the inhabitants of these countries.

"28. The country, and more especially the province of Bulga, is rich in iron-ore, which is rudely smelted in deep pits, alternate layers of ore and wood being smouldered together; and the metal thus obtained, though very soft, is used for sword-blades, spears, bridle-bits, &c. The geological formation of the country between the eastern coast and the great Abyssinian range is of such a nature as to preclude all hopes of discovering coal; there exists, however, a very fair chance of realizing this valuable article among the sandstone rocks of Bulga.

"29. Sulphur,* nitre, and alum abound in many districts; but the gunpowder manufactured is of a very coarse grain, and of very inferior quality, the Shoans being unacquainted with the proper proportion of the ingredients. A powder-mill was erected at Angollallah by Mons. Rochet, but since the departure of that French adventurer, it has been suffered to fall to decay.

"30. The hides of the lion, the leopard, and the ocelot are brought in numbers from the interior, but find their way to the royal stores, from whence they are distributed to the warriors for brave conduct and gallant bearing in the battle-field.

"31. The number of trades is of course limited amongst a people whose temporal wants are few, who are entirely ignorant of luxuries, and whose churches and monasteries contain one-fourth of the population. The scribe, the painter, the carpenter, the blacksmith, the weaver, the tanner, and the potter, filling up the scanty list.

"32. Pictorial art is held in high esteem, although the science has not emerged from the most primitive attempts at delineation. A very indifferent charcoal outline being filled with daubs of the most glaring colours obtainable; still these specimens of the art are much sought after. The churches are filled with them, and the prices demanded for a 'byon' are sometimes, comparatively speaking, extravagant.

"33. The carpenter is seldom called upon to perform his functions: a rough bedstead or a door being the most ingenious specimens ever required of his talent. Large saws are unknown in the country, and, in consequence, a noble tree is sacrificed in the preparation of a single plank.

"34. The working in iron, brass, and silver, is the province of the blacksmith, in general, throughout the country, and considering the indifferent tools, is performed, although in a dilatory manner, altogether creditably to the native craftsman †

* Sulphur is included in the list of royal monopolies, confiscation of property and imprisonment following any attempt at sale or export. It is obtainable in any quantity from the mountains in the plain, and is easily cleaned and prepared by a slight boiling with a little grease.

† This trade is also considered one of the learned, being joined to that of medicine; the head blacksmith, besides being principal physician to the king, is the only man intrusted with the secret of the deposit of his Majesty's savings, which are concealed in holes and caves about the mountain of Um Mummut, the iron coverings being made and fastened by this confidant, who has the ennobling appellation of "Ayto" prefixed to his name. The blacksmith is also endowed with supernatural powers by the credulous Abyssinians, and is supposed to possess the power of transforming himself at pleasure into the likeness of a wolf or hyena. The cunning practice being common among the craft of secretly encasing the whelp of one of these animals in a metal collar, which being retained in after life, strengthens, in the eyes of the uninitiated, the fabulous stories in circulation.

"35. The art of tanning skins is well understood, and the soft pliable leather produced, forms a considerable article of export. The process is a simple one, the hide being steeped for eight or ten days in water, saturated with chalk, and the leaves or bark of the tree 'kurrut.' It is then exposed to the sun, and well stamped with the juice of lemons.

"36. Weaving is carried on in the open air, and the locomotive loom consists of a few rough uprights planted in the ground for the day to support the cotton twist, and a simple shuttle for throwing through the crossing thread. The custom exists of handing over to the weaver a certain quantity of the raw material for fabrication, a scale being fixed for the remuneration of labour. Ten pieces of *salt*, equal in value to 2*d.* worth of cotton, produces a thick cloth 30 cubits in length and one cubit and a half in breadth. The fee for weaving is seven pieces of salt, equal in value to 1*s.* 5½*d.*, and the increased prices arise from the fineness of the texture, and the introduction of the red worsted stripes imported from Arabia.

"37. The large earthen utensils for holding liquid and grain, are well fashioned of strong adhesive clay, thoroughly dried and burnt, and the fireplaces, lamps, and pots for securing the peaks of the thatched houses, are excellent, but the smaller articles, coffee-pots, drinking-vessels, &c, are of rude shape and manufacture.

"38. Rookhie, on the mountain of Yerrur, is the mart where the merchants of Gurague and Shoa assemble for barter, and the principal markets in Shoa are those of Ali Ambar, the Chaka Ssililli and Booli Workee, which are held weekly on fixed days, and where articles of every description are exposed for sale. On other days, in all the towns and villages of Abyssinia, there being neither open shop nor bazaar, the Owenian system entirely prevails, and the proprietor of any article who wishes an exchange perambulates the streets calling aloud the nature of his goods, and exposing his wants until he finds some individual willing to make the desired barter.

"39. The king's duties are ten per cent of the value or quantity, which are levied, at his option, either in money or kind, on every article of import or export, excepting on slaves, for which he receives a tax of four pieces of salt, or 10*d.* English money, on each individual passing through his dominions, and the royal right exists of pre-emption in all exposed for sale.

"40. There is no possibility of obtaining correct tables as to the amount of sales in the kingdom, but the probable average of the king's duties taken in the bazaar of Ali Ambah, amounting to between 2000 and 3000 German crowns, would give an annual sale of 20,000 German crowns' worth of goods in that village alone.

41. TABLE of Market Prices of Different Articles of Consumption produced in Abyssinia.

Quantity and Names of Articles.	Price.	English Money.	Quantity and Names of Articles.	Price.	English Money.
1 Bullock	1 to 3 German crowns.	4*s.* to 12*s.*	30 lbs. of Tuwarre	1 amolee	2½*d.*
1 Sheep	2 to 5 amolees	5*d.* to 1*s.*	30 lbs. of Beans	ditto	2½*d.*
1 Dozen of Fowls	....	6*d.*	30 lbs. of Peas	ditto	2½*d.*
600 Eggs	....	6*d.*	2 lbs. of Gram	ditto	2½*d.*
1 lb. of Honey	1 amolee	2½*d.*	1 lb. of Onions	....	½*d.*
1 lb. of Butter	....	1½*d.*	100 of Lemons	....	1*d.*
1 lb. of Ghee	1 amolee	2½*d.*	1 lb. of Cotton undressed	....	2*s.* 4*d.*
Oil	royal monopoly.		Sulphur	royal monopoly.	
30 lbs. of Wheat	1 amolee	2½*d.*	10 gallons of Beer	1 amolee	2½*d.*
55 lbs. of Barley	ditto	2½*d.*	Hydromel	royal monopoly.	
30 lbs. of Teff	ditto	2½*d.*			

42. TABLE of Market Prices of Exports for the Ali Ambah Bazaar.

Quantity and Names of Articles.	Price.	English Money.	Quantity and Names of Articles.	Price.	English Money.
1 Horse	1 to 15 German crowns.		1 Leather Skin tanned	5 to 7 amolees	1*s.* 2*d.* to 1*s.* 5*d.*
1 Mule	5 to 15 do.		1 lb. of Coffee	....	2*d.*
1 Female Slave	12 to 25 do.		1 lb. of Cotton uncleansed	....	½*d.*
1 Male Slave	9 to 16 do.		Cotton Cloth 3 cubits in length, 1½ cubits in breadth	10 to 120 do.	2*s.* to 24*s.*
1 Ass	1 to 2 do.		1 Black Woollen Blanket	6 to 10 do.	2*s.* to 2*s.* 1*d.*
Civet	royal monopoly.		40 Pods of Koorarimah	1 do.	2½*d.*
Ivory	do.		40 Roots of Ginger	1 do.	2½*d.*

43. TABLE of Market Price of Imports into the Kingdom of Shoa.

Quantity and Names of Articles.	Price.	English Money.	Quantity and Names of Articles.	Price.	English Money.
1 lb. of Spices	....	1*s.*	1 Skin of Red Leather, Arabian	....	8*s.* to 12*s.*
1 lb. of Pewter	....	2*s.* 9$\frac{3}{4}$*d.*	1 lb. of Antimony	....	1*s.* 6*d.*
1 lb. of Copper	....	ditto	1 Bundle of Beads, small seed, golden	....	4*s.*
1 lb. of Zinc	....	ditto	1 lb. of Salt	....	2*d.*
1 lb. of Blue Silk Cord	....	6*6s.* 8*d.*	1 Transparent Callian, glass bottom, used as drinking-vessels	....	1*s.* 3*d.* to 4*s.*
1 lb. of Blue Silk Thread	....	ditto	1 lb. of Frankincense	....	6*d.*
40 Large Yarn Needles	....	2$\frac{1}{2}$*d.*	Slaves	....	20*s.* to 30*s.*
1 Clasp Knife, inferior	....	10*d.* to 15*d.*	Hides, Lion, Leopard, Occlot	royal monopoly.	
1 Minor 1st size	....	1$\frac{1}{2}$*d.* to 2$\frac{1}{2}$*d.*	Ostrich Feathers	ditto	
1 Ditto 2nd size	....	1*d.* to 2*d.*	Civet	ditto	
1 Bale Blue Cotton Calico, 30 cubits	....	12*s* to 15*s.*	1 lb. of Gums aromatic	....	6*d.*
1 Iron Cooking-pot	....	16*s.* to 24*s.*			
50 Sheets Arabian Paper, coarse	....	4*s.*			
1 Basket of Black Pepper.	....	2*6s* 8*d.*			
1 lb. of Tobacco	....	1$\frac{3}{4}$*d.*			

"44. The following Articles are in demand and might be imported with profit: broad cloth, blue and scarlet; bright chintzes of high colours; tannah cloth; long cloth; white shawls, English, cheap; tartans; blank-paper books, well bound; woollen rugs; linens; coloured silk threads, the deepest blue; glassware; gilt galloon buttons; black pepper and cloves; amber and coral beads; spectacles and scissors; knives of all sorts; sword-blades and spear-heads; guns and pistols; coloured leather, crimson and green; pewter, zinc and brass; coloured sheep-fleeces, crimson; padlocks; iron cooking-pots of all sizes; blue silk cord, thin, and of deepest blue; razors and mirrors; imitation jewellery, earrings, &c.

"45. The Abyssinian weights are the *wukut*, the *amolee*, and the *rottol*; the wukut is the German crown weighing 430 grains. The amolee weighs somewhat above the English pound, and the rottol is of two descriptions, one of 12 and one of 18 wukuts, resembling the troy and avoirdupois scales; the latter, however, is generally in use in Northern Abyssinia.

"46. The measures are the kona, the wauchoo, and the finjan; the kona varies in different villages, and even in houses of the same village, the average being about eight pounds. The wauchoo or horn, contains nearly a quart, and the finjan somewhat more than a gill.

"47. German crowns* as integrals, and pieces of rock-salt cut into the form and size of the sharpening stones of English reapers, as fractions, form the current coin of the country. The people are very capricious in the choice of the crowns, which must have certain marks, otherwise they are received at a very inferior rate. Beads and needles pass in exchange for articles of consumption, bread, fowls, &c., the small bead of the deepest blue, and that of the brightest golden colour or imitation amber, being those most in request.

"48. The course of the river Huwash may in aftertimes be rendered available for mercantile purposes, and other water communication may be discovered leading many hundred miles from the sea-coast; but even if these more convenient inlets be found wanting, still the experience of centuries has taught us that the *living ship* (the camel) of the desert is a machine of transport, sufficient for carrying on the most important traffic.

"49. British commerce has not only forced its way, but has created markets, customers and produce, in many a wilder and more inaccessible part of the globe than favoured Abyssinia, and would no doubt in a few years bind both the people and the ruler to us by the strong chains of personal interest; finding, the one for their wants and comforts, and the other for his increased revenues, that they could not do without our presence.

"50. Should the village of Zeyla be ultimately selected as a suitable port to afford merchants the protection of the British flag, should the tribes in the intermediate country

* The German convention crown of Maria Theresa, 1780, and must possess seven perfect raised beads on the head fillet, the star on the right breast very prominent, and the letters S. F. at the bottom clear and distinct.

be duly restrained to receiving the trifling present which they claim as custom on the passing of a caravan, and above all, should his Majesty of Shoa be induced, according to his engagement, to allow of free purchase amongst his subjects, and lend his authority towards changing the present route of the great caravans; the intercourse would prove in every way beneficial, by opening to the Abyssinian the means of improvement, and by fully reimbursing the merchant for his toil and trouble, the rude empty huts would give place to comfortable dwellings, the inherent love of display would prove of reciprocal advantage, and ultimately this intercourse would lead to a diffusion of civilization in this benighted kingdom, and an easy entrance afforded to the hitherto unexplored and mysterious regions of the interior of Africa.

(Signed) W. G. HARRIS."

The kingdom or country of SOMAULI or ADEL, which extends from Cape Guardafui to the entrance of the Red Sea, has two ports, Berbera and Zeyla, of considerable importance in regard to the commerce of Arabia with the coast and interior of this part of Africa.

ZEYLA.—This town, or rather village of tents, is situated at the bottom of a large bay, in latitude 10 deg. 15 min. N., and longitude about 44 deg. E. It was formerly of considerable importance; and previous to the arrival of the Portuguese in these seas, it was the place through which the greatest part of the merchandize that was carried into the interior of Abyssinia commonly passed.

BERBERA.—Berbera is situated on an island at the bottom of a bay, in latitude about 10 deg. 45 min. N., and longitude 46 deg. 15 min. E. It has long been a place of considerable trade, and has been always a kind of rival in commerce to Zeyla. A great fair is annually held here from October till April, the caravans from the interior coming in during that period, with gum arabic, myrrh, &c. Olibanum is produced chiefly on the coast between Berbera and Cape Guardafui; it is exported from a small port near Cape Felix, in Arab vessels. A small proportion of these articles finds its way to Bombay, and from thence to Europe; the larger proportion goes up the Red Sea to Egypt, and some is consumed in Arabia and Persia. From the fair at Berbera, Arabia draws considerable quantities of ghee, a great number of slaves, horses, mules, and asses, the returns for which are made in India piece-goods, generally sold at a great profit. There are many Banians from Mocha, Aden, and various parts of India, who carry on a trade with their respective ports. Many chiefs in the interior send down caravans of their own to purchase, with gold, elephants' teeth, &c., the produce and manufactures of India.

Berbera was taken by the Portuguese fleet in 1517, and plundered and burnt: they expected to find a considerable spoil in it, but were disappointed, the inhabitants having had sufficient time to convey themselves and their most valuable effects to the continent. The place is rather an encampment than a town, and the trade is at present chiefly monopolized by the Arab banyan merchants.

Extract from a letter which we have received from Dr. Beke, dated "*Ankobar, 24th August*, 1841."

"The following list of the articles imported into and exported from this country will give some idea of its trade, not merely as it is at the present moment, but as it might be made with proper management.

"*Imports.*—From the Salt Lake, eating-salt; from Tigre, rock-salt, which passes as money, 20 pieces or thereabout passing for an Austrian convention dollar of 1780; from the country of the Ibboo Gallas, east of the Hawash, coffee and tobacco in vast quantities; from the coast, dollars, iron in bars, iron pots, coffee, zinc, cutlery, needles, swords, looking-glasses, writing-paper, glass bottles, Arabian tanned leather, black pepper, glass beads, white, red, and blue cotton cloths, coarse muslins, woollen cloths, frankincense, cochineal and dyestuffs in small quantities, blue silk cords, &c.; from beyond the Hawash, sulphur; from the interior, slaves, gold-dust, and civet.

"*Exports.*—To the country beyond the Hawash, wheat, maize, cotton cloths, and leather; to the coast, slaves, ivory, gold-dust, and civet, imported from the interior.

"If trade were encouraged, the country might be made to export cotton, logwood, safflower, iron, and probably many other articles; but in its present state of apathy, the people think of nothing beyond mere living; and the great fertility of the country enables them to do this at a very cheap rate. Two measures of wheat, of remarkably fine quality, weighing (the two) about 20 lbs. net, may be bought for one piece of salt, equal to 2½*d.* stg. Barley is about half the price. Sheep may be bought four and five for a dollar; fine goats, two for a dollar; oxen, a dollar and a half to two dollars each; fowls, five for an amolee; eggs, five for one darning needle.

"The dollar is worth 50*d.* sterling, the amolee 2½*d.* You will see, thus, that living is not dear here.

"The duty upon imports is 10 per cent, *ad valorem*. Upon slaves, however, it is 4 amolee (10*d.*) a head, the whole number imported being about 5000 or 6000.

"Coffee, which is generally supposed to be the growth of Abyssinia, is not found in this country, at least not for consumption, although I hear that the plant is found here and there in the villages. What little is used, which is only by the Mohammedan inhabitants, is brought from the hilly country of the Ibboo Gallas, to the east of the Hawash. But in the neighbourhood of Harur, between this and Zeyla, I understand it is grown in considerable quantities, from whence it is taken down to the coast and exported to Arabia. In the countries further to the west, it is also produced plentifully, and from a native of Narea I hear, that in his country there are large forests of it. From him, too, I obtained the important information that between Narea and Caffa there is an immense river, according to his account two miles and more in width, which runs down to the Indian ocean. Should this river be navigable to its mouth, it would afford a splendid opening by which to carry trade into the very heart of Africa.

"The rainy season is now on, but as soon as it ceases I purpose extending my peregrinations a little further westward, when I hope to learn a little more about these matters."

The bulletin (1842) of the French minister of commerce, contains the following abstract on the trade of Abyssinia and the Port of Massaoua:

"The greater part of the European merchandize destined for Abyssinia comes through Alexandria; the remainder comes from the Indian manufactories to Mocha, Djeddah, and Massaoua.

"Those goods which pass through Alexandria, ascend the Nile as far as Cairo, where they are bought by Europeans, by whom they are resold to the caravans of Arab merchants, at which time they have increased 25 per cent on their original value, to which must be added the expenses of transport, the heavy dues payable at the ports, and frontier cities of Abyssinia, &c.; so that on arriving at Adouah, Antab, and Gondar, these goods have increased enormously in value. Notwithstanding this, it is certain that the Arab merchants realize cent per cent profits.

"The average expenses of freight from France to the port of Amphilah, is estimated

at 4*l.* per ton, so that goods carried in French ships would be subject to less charges, than those arriving by caravans.

"*The Isle of Massaoua.*—This small island is on the west of the Red Sea, and is dependant on Mecca, under the immediate jurisdiction of the Prince of Arkeko, to whom it pays an annual tribute. The governor of Massaoua is, however, absolute king of the island, the population of which is estimated at 4000. It is extremely steril, producing neither fruits nor vegetables. It is the principal port of Abyssinia.

"Massaoua may be considered as favourably situated for the trade between Bombay, Djeddah, Mocha, and Yemen, Abyssinia, and the country of the Gallas, Souakin, &c.

"The trade of Massaoua has hitherto been carried on solely by seven or eight Banian merchants, and the Arab merchants of Djeddah and Mocha.

"There arrive annually 250 Arab boats of from 40 to 200 tons, and one or two European vessels of from 300 to 400 tons.

"There are no fixed custom-house regulations, &c., in existence at Massaoua, but much depends on the officers employed. The treaties made between the Sublime Porte to whom Massaoua lawfully belongs, and the states of Europe will necessarily have the effect of modifying this custom.

"The following are some of the regulations in existence:

"*Navigation Dues.*—The Arab vessels have hitherto paid, as a kind of duty for permission to trade freely, 10 or 11 francs; to the chief of the gun-boat stationed at the port. European vessels are exempt from this duty, but pay a sum to the governor, which is regulated by the size of the vessels, and the pleasure of the governor.

"*Duties on Merchandize.*—As has been observed above, there is no fixed tariff at Massaoua.

"The Abyssinian merchants seem especially to suffer from these arbitrary imports. Besides the custom-house dues on the island, they have to pay to the Prince of Arkeko, a city on the African coast, a duty of 10 per cent in kind, and of 10 per cent *ad valorem*. In addition to this, they pay what is called *bakchish*, which is a present to the officers, which all traders have to pay; so that these men pay an additional tax of more than 20 per cent. Hence the price of Abyssinian articles in Massaoua is very great.

"The following is a statement of the value of the principle articles imported in the year 1840.

	£
Corn, maize, and rice	19,960
Pearls, gold-dust, and gold in ingots	15,560
Cotton stuffs, red and blue, printed calicoes, and handkerchiefs	17,960
Counterpanes, with red and blue stripes	8,200
Calicoes, unbleached and bleached	7,400
Napkins, &c.	6,000
Stuffs, silk and mixed cotton, velvets, &c.	3,240
Muslins, &c.	2,200
Cotton wool	5,680
Glasswares, mirrors, &c.	7,520
Guns, swords, hardwares, razors, iron, lead, tin, &c.	6,680
Elephants' teeth	5,680
Spices and provisions;—coffee, pepper, wax, honey	7,200
Cloves, oil for lamps, butter, dates, &c.	6,320
Coral, &c.	

"The European vessels which come to Massaoua are laden with red wines and spirits, which find a ready sale."

CHAPTER XXII.

IMAMAUT OF MASCATE.

THIS part of Arabia, which includes all *Oman*, is of great importance, in respect to its power and its government. The sultan has opened an intercourse with several European powers. He is in fact a magnificent prince, and possesses a more efficient naval force than all the native emperors and princes, from the Cape of Good Hope to Japan.* His revenues are more than adequate to meet his expenditure, and derived chiefly, from commerce, in which he is engaged, and in which he has a great number of merchant vessels; from duties on foreign merchandize; and from tribute money, and presents received from various princes, all of which produce a large sum.

His possessions, real or assumed, in Africa, extend from Cape Delgado to Cape Guardafui; and from the frontiers of Aden in Arabia, to Ras-el-Harid, and from Ras-el-Harid they extend along the northern coast of Arabia, or the coast of Oman, to the entrance of the Persian Gulf; and he claims also the sea-coast and the islands within the Persian Gulf, including the Bahrein islands, and the pearl fishery contiguous to them, with the northern coast of the gulf nearly to Scinde. It is true that only a small part of this immense territory is garrisoned by his troops, but all are tributary to him.

In Africa he owns the ports of Monghow, or Mongallow, Lyndy, Quiloah (Keelwah), Melinda, Larmo, Patta, Brava, Magadosha, and the valuable islands of Monfeea, or Mafea, Zanzibar, Pemba, Socotra, &c. From Africa he exports gum copal, gum arabic, aloes, columbo-root, and a great variety of other drugs; ivory, tortoiseshell, rhinoceros' horns, hides, bees'-wax, cocoa-nut oil, rice, millet, ghee, &c.

The exports from Mascate are wheat, dates, horses, raisins, salt, dried fish, and a great variety of drugs, &c. Mascate being the key to the Persian gulf, is

* The following list exhibits the naval force of the sultan of Mascate in 1837.

Names.	Rates.	Where Built.	Names.	Rates.	Where Built.
Liverpool	74	Bombay.	Fulke	18	Demaun.
Shah Allum	56	Ditto.	Soliman Shau	18	Ma-cate.
Caroline	40	Rangoon.	Curlew Brig	12	Bombay.
Prince of Wales	36	Demaun.	Pysche do.	12	Cochin.
Hemmingshaw	36	Cochin.	Tage Yacht	6	Malabar Coast.
Piedmontese	32	Ma-cate.	Vestal	6	Ma-cate.
Mussafa	24	Cochin.	Elphinstone	6	Bombay.
Rahmani	22	Bombay.			

Also 50 baghelas, carrying from 8 to 18 guns; and 10 balits, carrying from 4 to 6 guns. The baghela is a one masted vessel, of 200 to 300 tons. The balit is also a one-masted vessel from 100 to 200 tons. Part of those vessels were convoying vessels to the Persian Gulf, some in Africa, &c.

a place of great resort in the winter months for vessels from the Persian gulf, and the western parts of India.

The productions of Africa, of the Red Sea, of the coast of Arabia, and of the countries bordering on the Persian gulf, may be had there.

Their vessels trade, not only to the countries named, but also to Guzerat, Surat, Demaun, Bombay, Bay of Bengal, Ceylon, Sumatra, Java, the Mauritius, the Comoro islands to Madagascar, and the Portuguese possessions in East Africa, bringing Indian, African, and European articles. The number of vessels employed on these voyages are not ascertained with any degree of exactness; but no number named was less than 2000. Of these, a very large proportion are smallcraft, having but a few ships and brigs. The naval force of the sultan is very respectable in point of numbers, and the crews are daily becoming better sailors. The officers understand and calculate lunar observations, and possess excellent chronometers. His force is sufficient to give him entire control over all the ports in East Africa, the Red Sea, the coast of Abyssinia, and the Persian Gulf.

He has an abundance of sailors, and although he has but a small number of regular troops, yet he can command any number of Bedouin Arabs he may want, by furnishing them with provisions and clothing. His naval force consists of about eighty sail of vessels, great and small, carrying from seventy-four down to four guns each.

Previous to the conclusion of the recent treaties, British and American vessels paid generally *seven and a half* per cent upon imports, and *seven and a half* per cent upon exports, with anchorage-money and presents; the governors of the outports claimed the right of pre-emption in both cases; and they resorted to the most nefarious practices to accumulate wealth.

The currency of Mascate differs materially from that of the Persian Gulf or Africa. It is as follows: viz.—

Twenty gass-rauz-auz or rauhzee make 1 mamoody; 142 pise or pesos make 1 Spanish dollar. But the dollar varies according to weight or rate of exchange from 120 to 150 pesos.

The value of a Spanish dollar, in this copper coin, is styled a "*black* mamoody." The abovenamed copper coin is the quarter *ana* of the British East India Company. 11½ "white mamoodies" constitute 1 Spanish dollar—this is invariable. It is a nominal currency, or money of account. 3¾ Persian rupees make 1 Spanish dollar at present; 2¼ Bombay rupees, less 5 pise, 1 Spanish dollar; 2¼ Surat rupees, less 5 pise, 1 Spanish dollar.

The Spanish doubloon is worth from 14 to 16 dollars, according to weight; but more than 15 dollars are rarely obtained.

The weights of Mascate are as follow: viz.—24 kiass make 1 maund. The custom-house maund is 8¾ lbs. The bazaar maunds is 8, 8½, and 8½ lbs.

CONVENTION of Commerce between her Majesty and his Highness the Imaum of Mascate.—Signed in the English and Arabic Languages, at Zanzibar, May 31, 1839.

Her Majesty, the Queen of the United Kingdom of Great Britain and Ireland, and his Highness the Sultan of Mascate, and its dependencies, being desirous to confirm and strengthen the good understanding which now subsists between them, and to promote, by means of a convention, the commercial intercourse between their respective subjects; and his Highness the Sultan of Mascate, being, moreover, desirous to record in a more formal manner the engagements entered into by his Highness on the 10th of September, 1822, for the perpetual abolition of the slave trade between the dominions of his Highness and all Christian nations. They have accordingly appointed as their plenipotentiaries, that is to say:—Robert Cogan, Esq., a captain in the naval service of the East India Company, on behalf of her Majesty the Queen of the United Kingdom of Great Britain and Ireland, &c. &c., and Hassan Bin Ebrihim, and Mehabat Alli Bin Naser, on behalf of his Highness the Sultan of Mascate, &c. &c., who, having communicated their full powers, found to be in due and proper form, have agreed upon and concluded the following articles:

Art. I. The subjects of his Highness the Sultan of Mascate shall be at liberty to enter, reside in, trade with, and pass with their merchandize through, all parts of her Britannic Majesty's dominions in Europe and in Asia, and shall enjoy in those dominions all the privileges and advantages with respect to commerce or otherwise, which are or may be accorded therein to the subjects or citizens of the most favoured nations; and the subjects of her Britannic Majesty shall, in like manner, have full liberty to enter, reside in, trade with, and pass with their merchandize through all parts of the dominions of his Highness the Sultan of Mascate, and shall, in those dominions, enjoy all the privileges and advantages with respect to commerce or otherwise, which are or may be accorded therein to the subjects or citizens of the most favoured nations.

II. British subjects shall be at liberty to purchase, sell, or hire land or houses in the dominions of his Highness the Sultan of Mascate.

The houses, warehouses, or other premises of British subjects, or of persons actually in the service of British subjects, in the dominions of his Highness the Sultan of Mascate, shall not be forcibly entered, nor on any pretext searched, without the consent of the occupier, unless with the cognizance of the British consul or resident agent. But such consul or resident agent, on just cause being adduced by the authorities of his Highness the Sultan of Mascate, shall send a competent person, who, in concert with the officers of his Highness the Sultan of Mascate, shall conduct the search, and shall prevent the use of unnecessary violence or of improper resistance.

III. The two High Contracting Parties acknowledge reciprocally to each other the right of appointing consuls to reside in each other's dominions, wherever the interests of commerce may require the presence of such officers. And such consuls shall at all times be placed, in the country in which they reside, on the footing of the consuls of the most favoured nations. Each of the High Contracting Parties further agrees to permit his own subjects to be appointed to consular offices by the other contracting party; provided always, that the persons so appointed shall not begin to act without the previous approbation of the sovereign whose subjects they may be.

The public functionaries of either government residing in the dominions of the other, shall enjoy the same privileges, immunities, and exemptions which are enjoyed, within the same dominions, by similar public functionaries of other countries.

IV. Subjects of the dominions of his Highness the Sultan of Mascate actually in the service of British subjects in those dominions, shall enjoy the same protection which is granted to British subjects themselves; but if such subjects of the dominions of his Highness the Sultan of Mascate shall be convicted of any crime or infraction of the law requiring punishment, they shall be discharged by the British subject in whose service they may be, and shall be delivered over to the authorities of his Highness the Sultan of Mascate.

V. The authorities of his Highness the Sultan of Mascate shall not interfere in disputes between British subjects, or between British subjects and the subjects or citizens of other Christian nations. When differences arise between a subject of the dominions of his Highness the Sultan of Mascate and a British subject, if the former is the complainant, the cause shall be heard by the British consul or resident agent, who shall administer justice thereupon. But if the British subject is the complainant against any of the subjects of his Highness the Sultan of Mascate, or the subjects of any other Mahometan power, then the cause shall be decided by the highest authority of his Highness the Sultan of Mascate, or by any person nominated by him; but in such case the cause shall not be proceeded in, except in the presence of the British consul or resident agent, or of some person deputed by one or other of them, who shall attend at the court-house where such matter shall be tried. In causes between a British subject and a native of the dominions of his Highness the Sultan of Mascate, whether tried before the British consul or resident agent, or before the abovementioned authority of his Highness the Sultan of Mascate, the evidence of a man proved to have given false testimony on a former occasion shall not be received.

VI. The property of a British subject who may die in the dominions of his Highness the Sultan of Mascate, or of a subject of his Highness the Sultan of Mascate who may die in the British dominions, shall be delivered over to the heirs or executors or administrators of the deceased, or to the respective consuls or resident agents of the contracting parties, in default of such heirs, or executors, or administrators.

VII. If a British subject shall become bankrupt in the dominions of his Highness the Sultan of Mascate, the British consul or resident agent shall take possession of all the property of such bankrupt, and shall give it up to his creditors, to be divided among them. This having been done, the bankrupt shall be entitled to a full discharge from his creditors, and he shall not at any time afterwards be required to make up his deficiency, nor shall any property he may afterwards acquire be considered liable for that purpose. But the British consul or resident agent shall use his endeavours to obtain for the benefit of the creditors any property of the bankrupt in another country, and to ascertain that every thing possessed by the bankrupt at the time when he became insolvent has been given up without reserve.

VIII. If a subject of his Highness the Sultan of Mascate should resist or evade payment of his just debts to a British subject, the authorities of his Highness shall afford to the British subject every aid and facility in recovering the amount due; and, in like manner, the British consul or resident agent shall afford every aid and facility to subjects of his Highness the Sultan of Mascate in recovering debts justly due to them from a British subject.

IX. No duty exceeding 5 per cent shall be levied at the place of entry in the dominions of his Highness the Sultan of Mascate, on any goods the growth, produce, or manufacture of the dominions of her Britannic Majesty, imported by British vessels; and this duty shall be deemed to be a full payment of all import and export and tonnage duties, of licence to trade, of pilotage and anchorage, and of any other charge by government whatever, upon the vessels or upon the goods so imported or exported. Nor shall any charge be made on that part of the cargo which may remain on board unsold; and no additional or higher duty shall be levied upon these goods when afterwards transported from one place to another in the dominions of his Highness; but the abovementioned duty having once been paid, the goods may be sold by wholesale or retail without any further duty. No charge whatever shall be made on British vessels which may enter any of the ports of his Highness for the purposes of refitting, or for refreshments, or to inquire about the state of the market.

X. No article whatever shall be prohibited from being imported into, or exported from, the territories of his Highness the Sultan of Mascate; but the trade between the dominions of her Britannic Majesty, and those of his Highness the Sultan of Mascate shall be perfectly free, subject to the abovementioned duty upon goods imported, and to no other. And his Highness the Sultan of Mascate hereby engages not to permit the establishment of any monopoly or exclusive privilege of sale, within his dominions, except in the articles of ivory and gum copal, on that part of the east coast of Africa, from the Port of Tangate, situate in about 5½ deg. of S. latitude, to the Port of Quilla, lying in about 7 deg. S. of the Equator, both ports inclusive; but in all other ports and places in his Highness's do-

minions there shall be no monopoly whatever; but the subjects of her Britannic Majesty shall be at liberty to buy and sell with perfect freedom, from whomsoever and to whomsoever they choose, subject to no other duty by government than that before mentioned.

XI. If any disputes should arise in the dominions of his Highness the Sultan of Mascate, as to the value of goods which shall be imported by British merchants, and on which the duty of 5 per cent is to be levied, the custom-master, or other authorized officer acting on the part of the government of his Highness the Sultan of Mascate, shall be entitled to demand one-twentieth part of the goods in lieu of the payment of 5 per cent; and the merchant shall be bound to surrender the twentieth part so demanded, whenever, from the nature of the articles, it may be practicable to do so; but the merchant having done so, shall be subject to no further demands on account of customs, on the other nineteen-twentieths of those goods, in any part of the dominions of his Highness the Sultan of Mascate, to which he may transport them. But if the custom-master should object to levy the duty in the manner aforesaid by taking one-twentieth part of the goods, or if the goods should not admit of being so divided, then the point in dispute shall be referred to two competent persons, one chosen by the custom-master and the other by the importer; and a valuation of the goods shall be made; and if the referees shall differ in opinion, they shall appoint an arbitrator, whose decisions shall be final, and the duty shall be levied according to the value thus established.

XII. It shall not be lawful for any British merchant to expose his goods for sale for the space of three days after the arrival of such goods, unless, before the expiration of such three days, the importer and custom-master shall have agreed as to the value of such goods. If the custom-master shall not, within three days, have accepted one of the two modes proposed for ascertaining the value of the goods, the authorities of his Highness the Sultan of Mascate, on application being made to them to that effect, shall compel the custom-master to choose one of the two modes by which the amount of the customs to be levied is to be determined.

XIII. If it should happen that either the Queen of England or his Highness the Sultan of Mascate should be at war with another country, the subjects of her Britannic Majesty, and the subjects of his Highness the Sultan of Mascate, shall nevertheless be allowed to pass to such country through the dominions of either power, with merchandize of every description, except warlike stores; but they shall not be allowed to enter any port or place actually blockaded or besieged.

XIV. Should a vessel under the British flag enter a port in the dominions of his Highness the Sultan of Mascate in distress, the local authorities at such port shall afford all necessary aid to enable the vessel to refit and to prosecute her voyage; and if any such vessel shall be wrecked on the coasts of the dominions of his Highness the Sultan of Mascate, the authorities of his highness shall give all the assistance in their power to recover and to deliver over to the owners, all the property that can be saved from such vessel. The same assistance and protection shall be afforded to vessels of the dominions of his Highness the Sultan of Mascate, and property saved therefrom under similar circumstances, in the ports, and on the coasts of the British dominions.

XV. His Highness the Sultan of Mascate hereby renews and confirms the engagements entered into by his highness with Great Britain, on the 10th of September, 1822, for the entire suppression of slave trade between his dominions and all Christian countries; and his highness further engages that the ships and vessels of war belonging to the East India Company, shall be allowed to give full force and effect to the stipulations of the said treaty, agreeably with the conditions prescribed therein, and in the same manner as the ships and vessels of her Britannic Majesty.

XVI. It is further acknowledged and declared by the High Contracting Parties, that nothing in this convention is intended in any way to interfere with, or rescind, any of the rights and privileges now enjoyed by the subjects of his Highness the Sultan of Mascate in respect to commerce and navigation, within the limits of the East India Company's Charter.

XVII. The present convention shall be ratified, and the ratifications thereof shall be exchanged at Mascate or Zanzibar as soon as possible, and in any case within the space of fifteen months from the date hereof.

Done on the island and at the town of Zanzibar, this 31st day of May, in the year of Christ 1839; corresponding with the 17th of the month Rebeal Owal of the ul Hujra, 1255.

(Signed in the Arabic original.) (L.S.) ROBERT COGAN.
HASSAN BIN EBRIHIM.
ALLI BIN NASER.

DECLARATION made on the Part of her Britannic Majesty, on the Exchange of the Ratifications of the preceding Convention.

The undersigned, Samuel Hennel, Esquire, a captain in the military service of the East India Company, and resident in the Persian Gulf, appointed on behalf of her Majesty the Queen of the United Kingdom of Great Britain and Ireland, to exchange her Majesty's Ratification of the Treaty of Commerce concluded at Zanzibar, on the 31st of May, 1839, by Robert Cogan, Esquire, a captain in the naval service of the East India Company, on the part of her said Majesty, and by Hassan Bin Ibrihim and Mahabat Alli Bin Naser, on the part of his Highness the Sultan of Mascate, against the Ratification of the same Treaty by his Highness the Sultan of Mascate, is commanded by the Queen in order to avoid any possible misunderstanding as to the meaning of the words contained in the IXth Article of the said Treaty, "any other charge by government whatever," to declare to Syed Mahomed Ibin Syed Shurruf, appointed by his Highness the Sultan of Mascate to exchange his Highness's ratification, that the aforesaid words are by her Majesty taken and understood to mean, "any other charge whatever made by the government, or by any local authority of the government."

Mascate, this 22d day of July, 1840. (L.S.) S. HENNELL.

COUNTER-DECLARATION made on the Part of his Highness the Imaum of Mascate.

(Translation from the Arabic.)

The undersigned, Syed Mahomed Ibin Syed Shurruf, appointed by his Highness the Sultan of Mascate to exchange his Highness's Ratification of the Treaty of Commerce concluded at Zanzibar, on the 31st of May, 1839, by Robert Cogan, Esquire, a captain in the naval service of the East India Company, on the part of her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and by Hassan Bin Ibrihim, and Mahabat Alli Bin Naser, on the part of his Highness the Sultan of Mascate, against the Ratification of the same treaty by her Majesty the Queen of the United Kingdom of Great Britain and Ireland, having received from Samuel Hennell, Esquire, a captain in the military service of the East India Company, and resident in the Persian Gulf, appointed to act in this matter on behalf of her said Majesty, a declaration, stating that, in order to avoid any possible misunderstanding as to the meaning of the words "any other charge by government whatever," contained in the IXth Article of the said Treaty, the aforesaid words are by her Majesty taken and understood to mean "any other charge whatever made by the government, or by any local authority of the government," the undersigned, Syed Mahomed Ibin Syed Shurruf, being duly authorized by his Highness the Sultan of Mascate, hereby accepts and adopts the said Declaration, in the name and on the behalf of his Highness the Sultan of Mascate.

(L.S.) SYED MAHOMED IBIN SYED SHURRUF.

Muscat, this 22d day of July, 1840.
(Signed in the Arabic original.)

The subjoined official notice in regard to the treaties with Siam and Mascate, has been published by the American Department of State. American citizens have for several years been carrying on some commerce with the dominions of the sultan of Mascate, without the protection of a treaty, and relying entirely on their own

prudence and ingenuity. They will now, however, be better secured, and may prosecute their enterprises with greater confidence. But their success will mainly depend on their own superior skill and economy in attempting to enlarge the sphere of their transactions. They will encounter formidable competitors in the British, who enjoy so great advantages from the intimate, though not always amicable, intercourse that has so long existed between their India possessions and Mascate. The native trade with the coasts of Africa, of the Red Sea, and with India generally, is also pursued with considerable activity, leaving but little space for rivalry. Still, these distant and circuitous voyages are useful, and when cautiously planned are generally attended with profit.

The ratifications of the treaty with Mascate were exchanged on the 30th of September, 1835, and it takes effect from the 30th of June, 1834, the day on which the consent of the senate of the United States was given to its ratification.

ABSTRACT of the Treaty between the United States of America and Mascate.

"The citizens of the United States may enter and depart from any of the ports belonging to the sultan, with any kind of cargo, and may buy, sell, and exchange thereat, without restraint, except that in the island of Zanzibar, muskets, powder, and ball, are only to be sold to the government; but this restriction is not to extend beyond the said island. No duties of any description shall be exacted upon vessels or imports from the United States, excepting five per cent upon such part of any cargo as may be landed; and no charge whatever shall be made upon any vessel entering a port for the mere purpose of refitting, obtaining refreshments, or inquiring the state of the market. The duties paid by the respective parties in the ports of each other shall never exceed those paid by the most favoured nations.

"Citizens of the United States, who may wish to carry on trade in any of the sultan's ports, shall be permitted to land and reside there without paying any tax or imposition, other than the duties upon imports above mentioned.

"If an American vessel shall be wrecked within the sultan's dominions, the persons escaping shall be hospitably entertained, and the property saved shall be restored to the proprietors; and if a vessel of the United States shall be brought into any of the sultan's ports by pirates, the persons captured shall be set at liberty, and the property restored to the owners.

"American consuls may be appointed to reside at the ports where the principal trade is carried on, whose persons and property shall be inviolate. They shall be the exclusive judges of disputes between American citizens, and shall receive the property of Americans dying in the sultan's dominions; which they may send to the heirs of the deceased persons, after paying the debts which they may have owed to the subjects of the sultan."

MASCATE, or MUSCAT, is situated in latitude 23 deg. 38 min. N., and longitude about 59 deg. 15 min. E. The harbour, or cove, is formed by high land to the southward and westward, and on the east side by the island of Mascate, which is joined by a reef of rocks to the peninsula, on which the town of Mascate is situated, the entrance into the cove being from the northward, and is protected by forts on each side; and there is another fort close to the town, that commands the inside of the cove, where the depths of water are four and five fathoms, between the two western forts, and where a large fleet may moor in safety.

The town of Mascate is walled round, and strongly fortified. Vessels are not allowed to go in after dusk, or come out after sunset. It is the duty of the Se-

rang of the Imaum of Mascate to assist any vessel that comes to the port; and they are allowed a certain sum for this, which they are never backward in demanding, whether they attend or not. When a vessel comes near, by making the usual signal for a pilot, they will come off, otherwise they will take no notice of any one: it is best to make them attend till the vessel is secured, as they have excellent boats for carrying out warp anchors.

Mascate is the key of Arabia and Persia, and being a great commercial entrepôt, is a place of active trade. A number of large ships belong to it, and trade to the British settlements in India, to Sumatra, the Malay Peninsula, the Red Sea, and east coast of Africa. Great indulgences have long been allowed by the English to the flag of Mascate, being recognised as neutral. Mascate is resorted to by vessels from every port in Persia, the ports of Arabia within the Gulf, and from the coast as far as the Indus. It has been the usual custom for all English merchant ships in their voyage from India to Bussorah, to stop at Mascate, and in like manner on their return, and they generally sell and purchase goods here.

There is another town, about three miles to the westward, called Muttra, defended by a small fort, which is nearly as large as Mascate, with several villages in the valley between. At Muttra there is a good place to haul vessels on shore. There is a good road along the shore from Mascate to Muttra.

Independent of the commerce by sea to the British settlements in India and other places, the inhabitants of Mascate carry on an extensive trade with the Arabs in the interior.

The government of the Imaum is strict, but at the same time more courteous than any either in Persia or Arabia; and a stranger may walk the streets any hour in the night without molestation; goods are piled up in the streets, and lie night and day exposed, without any watch or guard, and there never happens an instance that such goods are robbed or pilfered, the police being excellent.

Mascate was a place of considerable trade even before the arrival of the Portuguese in these seas, at which time it was tributary to Ormus. Albuquerque summoned, and obliged it to submit in the year 1507; but a body of 2000 Arabs getting into the town, immediately raised an insurrection, in spite of all the care the governor could take to keep them quiet; upon which a bloody and obstinate action ensued, ending in a complete victory gained by the Portuguese. After the destruction of Ormus, this place became the principal mart of this part of the world, and yielded great profit to the crown of Portugal, exclusive of the prodigious private fortunes made by individuals, while they remained in possession. During that time, the city was very much improved; for besides regular fortifications, they erected a stately church, a noble college, and many other public structures, as well as superb stone houses, in which the principal merchants resided, and those who, by the management of public affairs, had acquired

fortunes to live at their ease. They afterwards treated the natives so ill, and subjected their commerce to so many restraints, that the latter, despairing of redress, had recourse to arms; and though the Portuguese acted bravely, they were reduced to such extremities as to embark with their effects on board their ships, and retire to their other settlements. This was about the year 1648. They made frequent attempts to recover a place of such importance, sometimes by force, sometimes by negotiation, but without effect. They for many years disturbed the trade of the place; but these hostilities were disadvantageous in the end; for, by degrees, the Arabs became expert seamen, excellent in the use of fire-arms, and raised a maritime force, which for a long time overawed all the European powers in India.

In 1694 the strength of the Arabs of Mascate in shipping and forces had so increased as to occasion an alarm that they would obtain the command of the Persian Gulf; they having taken several places, and apprehensions were entertained that they would attack Gombroon, the resident of which gave it as his opinion, "that they will prove as great a plague in India, as the Algerines were in Europe." The British government at that time proposed to equip armed ships to clear the Indian Seas, and "to root out that nest of pirates, the Mascate Arabs." In 1707 the Arabs adopted a more regular system of naval warfare. They obtained permission from the King of Pegu to build ships at the ports of his country; some of those ships carried from 30 to 50 guns, and their fleets in the Indian seas made descents on several towns on the Malabar coast. They continued for a long time to annoy the trade; but since the beginning of the present century, they have confined themselves principally to commerce. With the Persians they were almost continually at war; but the Imaum of Mascate always suffered the Persians to resort to Mascate with their vessels to purchase goods, for ready money, without any molestation, either at Mascate or its dependent territories, or in their voyages between Mascate and any part of Persia; but this permission only held good with regard to trading vessels. All vessels which they met trading to other ports, and all ships of war, they either did or endeavoured to make prizes of.

Accounts are kept at Mascate in gass and mamoodies; 20 gass make 1 mamoody. The coins current are—30 budgerooks, 1 mamoody; 3½ mamoodies, 1 Bombay rupee; 7½ mamoodies, 1 Spanish dollar.

Persian, Turkish, and Indian coins are generally sold by weight.

The weights are the cucha and maund; 24 cuchas making a maund, which is equal to 8 lbs. 12 oz. avoirdupois.

TRADE OF MASCATE.

The trade between the British settlements in India and the Persian and Ara-

bian Gulfs was formerly of considerable value, as carried on by individuals, exclusive of the East India Company's trade in woollens with the Gulf of Persia. The value of this trade was, for the following five years—viz.,

Since the trade with India has been thrown open to general competition, the intercourse between Mascate and the East India Company's territories has been carried on by individual merchants, and shipowners.

The following are the principal articles composing the trade of Mascate in 1841.

"*Asafœtida.*—This comes from Persia, in Arab vessels. The quantity imported annually, amounts to from 15,000 to 16,000 maunds, the greater part of which is re-exported to India.

"*Almonds.*—These come from Persia. They arrive at Mascate in September, and the following months to the amount of 40,000 maunds, in sacks of 20 maunds each. They are re-exported to India, Mauritius, Bourbon, and Zanzibar.

"*Raisins.*—Are imported from Persia at the end of September, to the amount of 60,000 maunds, and are re-exported to Calcutta and Bombay.

"*Fistachio-nuts.*—About 100 bags are imported annually, which are re-exported to Bombay and Calcutta.

"*Aloes from Socotra.*—These are imported in Arab vessels in May and September, to the amount of 4000 maunds. An inferior quality comes from Mocha and Macula. This article is almost entirely re-exported to India.

"*Gum Ammoniac.*—Comes from Persia to the amount of 3000 or 4000 maunds per annum. It is re-exported to Bombay.

"*Sulphur.*—This article comes from the south of Persia and is re-exported to Bombay.

About 1500 or 2000 maunds of the best quality, and 100,000 of inferior are annually imported.

" *Gum Copal.*—Is imported from Zanzibar, and re-exported to India, America, and France.

" *Saltpetre.*—Is imported from Persia, and re-exported to India, America, and France."

The following articles are also imported into Mascate, and thence re-exported to various countries:—Frankincense, gall-nuts, coffee, gum galbanum, hides, cotton, wool, mother-of-pearl, gum from Persia and Bassora; silk, raw, indigo, tortoiseshell, pepper, cochineal, cinnamon, sugar, rice, sandal-wood, dates, saffron, corn, &c. &c.

" The stuffs which are imported into Mascate are white cottons, British and American; printed cottons and cloths, British; India shawls, silk manufactures of China, &c.

" The money usually employed in the country is the Austrian piaster of Maria Theresa. It is worth 11¼ mahmondis. The value of almost every thing is estimated in mahmondis.

" CUSTOMS TARIFF.—The duties levied on imports is 5 per cent on articles imported from Arabia, America, and England; and 4 per cent on Bourbon vessels. There are no export duties at Mascate.

" In the interval from May 7, 1838, to April 20, 1840, eight French vessels three of which were vessels of war, arrived at Mascate. There were also six American trading-vessels, and ten British from the Mauritius, the Persian gulf, Bombay, and Calcutta."—*French Consular Return.*

The country near Mascate is steril, but provisions, fruits, and vegetables are to be had in plenty. Bullocks, sheep, and fowls are good and reasonable. From April to September the market is extremely well supplied with grapes, melons, mangoes, oranges, limes, pomegranates, and other fruits; greens, pumpkins, onions, and abundance of other vegetables. It is always well supplied with delicious fresh fish, which is the principal food of the natives.

CHAPTER XXIII.

TRADE OF ARABIA AND NAVIGATION OF THE RED SEA.

THE Red Sea has, along its coast, reefs of, generally, coral rocks, leaving sufficient space between them and the shore for vessels of small tonnage to pass. There are also several islets and detached ledges especially on the south-west coast, and some lay off Mocha, and within the entrance near the straits of Bab-el-Mandeb. The British steamers navigate the *great canal*, or the broad, middle channel of the Red Sea, which channel varies from 40 to 100 miles in breadth. The length of the Red Sea from the entrance to Suez is about 1418 miles. Its breadth varies from 20 miles at the entrance to 100 and 230 miles. It is generally deep, and notwithstanding the islets and ledges, experience proves that the navigation is not more dangerous than that of most seas.

The Hindostan, one of the largest steamships in the world, has, during the last year, navigated the Red Sea, with extraordinary speed and success to and from Suez and its entrance, and thence to and from Calcutta.

The direction of the winds on the Red Sea is generally N. W., from the isthmus of Suez to 200 miles on this side of Bab-el-Mandeb, except in the months of October, November, and December. From hence to the strait, S.E. winds generally prevail, except in the months of June, July, and August, when the N. W. winds extend from Suez to the gulf of Aden, and sometimes as far as the limit of the S. W. monsoon in the ocean.

From January to May east winds prevail in the gulf of Aden, at which time vessels arrive from India. The currents appear to be directed by the winds. The end of December and the beginning of January is the most favourable time for trade. The pilgrimages to Mecca, &c., take place at this period.

The navigation of the Red Sea is important, exclusive of foreign vessels and of the Bombay steamers, and of the line, of which the Hindostan is the first established, between Suez and Calcutta. The Arab vessels are numerous: more than 400 are employed in carrying across the pilgrims for Mecca and Medina, and a great many are employed in carrying slaves, grain, and various products.

Seaports of the Red Sea.—The following are, after Massaoua, the principal ports of the Red Sea.

Port Morningtон, in lat. 18 deg. 16 min. N., and long. 38 deg. 32 min. E.; the N.E. side of the harbour consists of islands; the N.W. side is protected by a peninsula. The only entrance for large vessels is at the northern extremity of the harbour; though *dows*, or coasters, enter at the southern. The passage is rather narrow, but the whole navy of England might lie within, protected from every wind, in 5 to 7 fathoms, with a bottom free from every danger. On the west end of the large island, in the middle of the bay, there is a village.

Suakin.—The town is situated on a small island, in lat. 19 deg. 5 min. N., and long. 37 deg. 33 E.; it was formerly very important and opulent.

The port is deemed one of the best in the Red Sea; it is sheltered from all winds, and the waters are smooth and the tides scarcely perceptible. It is capable of containing more than 200 large ships, and more than a thousand small vessels. Ships come up close to the shore, quite round the city, and may be laden, by laying a plank from them to the warehouses of the merchants.

Its trade formerly extended to the peninsula of India, the Arabian and Persian Gulfs, and other countries. Since the time it fell under the dominion of the Turks it lost its commerce and consequence, and has only been kept from total ruin by the pilgrim caravans which still come annually from the interior of Africa, in their way to Mecca. The town, which is nearly in ruins, covers the whole of a small island, as it did in former times. Some trade is carried on with Hodeida, Mocha, and Jedda, for slaves, horses, and elephants' teeth.

Provisions, such as cattle, sheep, poultry, and fish, may be procured, and the

water is tolerably good and clear; it is to be got from wells and tanks in skins, 25 for a dollar. Fish are in plenty and cheap. Sheep 1½ to 2 dollars each.

Cosseir, although formerly a place of considerable importance, as being in the route to Arabia and India from Egypt, and for the export to Arabia of grain carried from the Nile, has no harbour, and but an indifferent roadstead. The surrounding country is a dreary desert.

Suez is situated at the head of the western branch of the Red Sea. There are three channels, running near the east end of the town, that form a curve uniting into one branch, which runs westward to the back of the town, receiving at spring tides, *dows* and other small vessels. It is nearly two miles and a half from the town to the bar; below which large vessels and the Bombay and Calcutta steamers anchor, and from which downwards, the gulf of Suez to its confluence with the gulf of *Akaba*, and the broad part of the Red Sea, the water is very deep. The country surrounding Suez, and from Suez to the Mediterranean is a dreary desert, and along the route to Cairo, on which there are now several convenient stations, the country is arid, and in many parts rocky. Suez must, however, soon become a place of importance.

The Gulf of Akaba is 120 miles long, 8 to 16 miles broad; but from the high mountains on each side appears like a very narrow strait. Its waters are very deep, and its shores in many places skirted with coral reefs. It is subject to sudden squalls, and Akaba, at the head of the gulf, from whence Solomon's ships are said to have sailed to Ophir, is the only well-sheltered harbour in this gulf. Mount Sinai rises in the wild promontory which separates this gulf from the gulf of Suez.

In December and January, the pilgrims assemble here to proceed to Mecca.

Yambo, is the seaport of Medina, where pilgrims land, and the port from which the communication is more immediately carried on between Egypt and Arabia. It is the resort of most of the Arab vessels on the Red Sea, and has a safe harbour for protection against bad weather. Its situation behind a chain of shoals and breakers, secluded it from the knowledge of European navigators till 1777, when a vessel bound to Suez was inveigled into the harbour, seized, and subjected to heavy exactions previous to her liberation. The town at the bottom of the harbour is in a ruinous condition.

Djeddah is situated on the eastern coast of the Red Sea, in latitude 21 deg. 29 min. N., and longitude 39 deg. 15 min. E. This port, which is considered the centre of the trade of the Red Sea and Abyssinia with Arabia, has long been of considerable trade; in consequence of position, and of the numerous pilgrims who come from the various Mahometan countries to visit Mecca, which is about 21 miles inland. The entrance to the road is full of shoals, and difficult to enter without a pilot; if signals are made with two guns, the native pilots will meet a ship outside, and carry her to the anchorage, which is in 12 fathoms, three miles

distant from the shore, the town bearing about E. by S. The houses are built of large blocks of Madrepore; the streets are very narrow, which is considered an advantage, as they are consequently shaded from the great heat of the day. The landing-place is in front of the vizier's palace; which is pleasantly situated close to the sea; the custom-house is a handsome lofty building, facing the harbour, from which the ground rises, and imparts to the town an imposing appearance.

The English formerly carried on a considerable trade here; but for the last forty years it has declined, in consequence of the numerous extortions under the head of presents, &c., and the insolence and ill-treatment to which all Christians are subject in Arabia.

The Produce of the Persian Gulf, and of most eastern countries, passes through this place, as does almost all the trade carried on between Cairo and Arabia, by means of the caravans from Egypt and Syria, which make annual pilgrimages to the Holy Cities.

GENERAL STATEMENT OF IMPORTS AND EXPORTS IN 1839.

"*Imports.*—The imports into Djeddah during the year 1839, amounted in value to 461,600*l.* This amount is 34 per cent less than in 1814, according to Burckhardt.

"The decrease is attributable to insecurity, and to the military invasions to which Arabia has been subjected.

"The custom-house revenue of Djeddah, which is on the average about *one-tenth of the total imports*, amounted in 1814 to 84,000*l.*, and in 1839, to only 56,000*l.*

"The following are the countries whence the greater part of the imports came:

	£
India and China	207,880
Persian Gulf and Eastern Countries	56,800
Arabia Felix, and Coast of Africa, from the Straits of Bab-el-Mandeb	39,920
Yemen	24,320
Abyssinia, &c.	31,800
Suez	84,720
Yambo, and Arabia-Petrea	16,160
Total imports into Djeddah	461,600

"*Exports.*—The value of exports from Djeddah is supposed to be nearly equal to that of the imports, as this city consumes very little, and is little more than a place of entrepôt.

"A large portion of these exports goes to Suez, from whence they are spread over the countries of the Levant.

"The value of exports from Djeddah to Suez, amounted in 1839 to 70,840*l.*, and that of exports to Massaoua and Abyssinia to 20,000, consisting chiefly of coral, tissues of cotton and flax of Egyptian manufacture; sword-blades, flint guns and matchlocks, razor-blades and hardwares, morocco, red and green, and mirrors.

MOCHA.—This is still the principal port in the Red Sea that is frequented by Europeans. It is situated in latitude 13 deg. 20 min. N., and longitude 43 deg. 20 min. E., about 40 miles to the northward of Cape Bab-el-Mandeb; and built between two low points of land, which project from the shore, so as to form a

bay. Small vessels are sheltered by anchoring within a mile of the shore. Large ships lie much further out, where they are exposed, in an open road.

Mr. Milburn says,—"Mocha is built so near the sea, that when the wind blows strong from the west, it washes against the walls. It lies due north and south, and is near a mile and a half long, but of unequal breadth; at the north end it is more than half a mile broad, and becomes gradually narrower to the south end, where it is not quite half a mile. It is strongly walled round with hewn stone, and the walls are kept in good repair: there are loopholes for arrows and musketry at about five feet distance from each other.

"At the extremity of the two points of land which form the bay, is a circular castle, strongly built of stone: on the semicircle towards the sea, are six 24-pounders, and on that fronting the land, are six 12-pounders. There is another such castle nearly in the middle of the sea walls, near which is the only gate by which goods or passengers can enter from the sea. Here is a station for the custom-house officers, where all goods that are imported or exported, are examined and registered. From this gate there runs out a pier 150 yards due west, which is built of stone, and strongly supported at the end and sides by plank and piles, and is very serviceable for loading and unloading goods.

"At about a quarter of a mile from the north end of the town, on the sea walls, is a battery of 12 guns pointing due west; and at the south end a round castle with twelve embrasures, and six guns mounted: the embrasures are placed at equal distances, to any of which the guns can be shifted occasionally. At equal distances round the city are built round towers on the walls, which add much to the beauty of the whole. There are two land gates, one at the north, and the other at the south end of the town.

"The houses fronting the sea, are all very lofty, built with stone, and whitewashed without as well as within. There are four large mosques, and six smaller, the minarets of which greatly improve the view of the town from the sea, especially the great mosque, which being elegantly built, and very lofty, serves as a landmark for ships coming into the road. The best anchorage is in six or seven fathoms water, the grand mosque bearing E.S.E. and the south fort S. by E., distant about two miles from the shore."

Mocha was first visited by an English fleet, under Sir Henry Middleton, in 1610, having letters and presents from the king to the pacha and aga, and was received with all possible marks of distinction and friendship. The civilities of the Arabs were intended to insnare the admiral, and to allure him and his officers on shore, as well as to entice the ships into the harbour; but not succeeding in the latter part of their perfidy, they attacked the admiral on shore, killed eight of his men, wounded himself and fourteen men, and after stripping and putting them in chains, confined them in a dungeon. They next made an attempt upon one of his ships, but were repulsed with great loss. Finding that force could not bring the ships into their power, they threatened the admiral with death and the torture, if he did not order them to surrender: but he preferred submitting to the most excruciating tortures than to an ignominious life, and the loss of honour. After six months' imprisonment, he found means of escaping with some of his men, and succeeded in securing the ships which had taken refuge in a harbour on the Abyssinian shore. He returned to Mocha, and sent a message to the aga, "that if he did not instantly release the remaining prisoners, and render ample satisfaction for the damages he had received, he would sink all the ships in the road, and batter the town about his ears." This menace had full effect; his men and a pinnace were delivered up,

and 18,000 rials paid him for damages, after which he proceeded with the fleet to India.

In 1618 the English obtained a firman from the governor, by which they were allowed freedom of trade, and protection to their persons and property. A factory was afterwards established; after that period commercial intercourse continued to be generally carried on between Mocha and the British settlements in India.

During the last century the principal maritime states of Europe, Asia, and Africa, sent ships and merchandize to Mocha, as the chief mart of the trade of Arabia Felix. English and Dutch vessels traded to Mocha from their settlements in India. Other vessels arrived during every monsoon from Goa, Calicut, Mosambique, and Ethiopia, &c., richly laden: and a great trade was carried on with Suez and with Aleppo, &c., by the caravans which arrived at Mocha annually in March. These caravans usually joined, and formed into one on entering Arabia. They carried to Mocha spices to a large amount,—velvets, satins, gold, Levant stuffs, camlets, cloths, saffron, quicksilver, vermilion, and *merceries* and toys from *Nuremburg*. A *royal ship* was laden annually on the Grand Seignior's account at Suez for Mocha, with similar commodities to those brought by the caravans, and with about 400,000 dollars in silver, and 50,000 ducats in gold.

The goods carried back in return by the caravans, and by the sultan's ship, and by foreign ships, were partly the products of Arabia, and partly those which had been brought to Mocha by the ships from India, Africa, and Europe. The Arabian products were incense, myrrh, aloes, balm, cassia, ambergris, gum arabic, dragon's blood, coral, medicinal and odoriferous plants, precious stones, &c. Coffee, however, was the most valuable produce, and with this article several ships were annually loaded.

Mocha was long a general entrepôt and magazine, to which ships from all parts of the world came in great numbers.

We have little that is statistical relative to the present trade of Mocha; but, from the anarchy that has prevailed, and the greater insecurity of property and person since Mehemet Ali has surrendered the Holy Cities, Mocha has certainly declined. The following account of money, weights, and measures, and mode of doing business, condensed from Mr. Milburn's account, is still considered the customary practice, with probably greater irregularity.

"Accounts are kept in Spanish dollars and cavears, 80 cavears being a Spanish dollar; 80 cavears are also reckoned a Mocha dollar, which is an imaginary coin.

"The current coins of the country are only carats, and commassees, which rise and fall considerably, according to the quantity of silver there is in them: the usual divisions are, 7 carats make 1 commassee; 60 commassees make 1 Spanish dollar.

"One hundred Spanish dollars were equal to 121¼ Mocha piasters. The latter have of late years greatly depreciated.

"Most goods are sold for Mocha dollars, except China ware, China silks, olibanum, and some few other goods, and even these are sometimes sold for them.

"Of the foreign silver coins, which are in circulation here, the Spanish *pillar* dollar is most esteemed: next to that, the old Mexican, in which all bargains are made payable. German crowns *pass in tale*, and in the interior for a weighty Spanish dollar. The old French crowns are 2 per cent more in value than Mexican dollars.

"Gold coins of all sorts are worth more or less, according to the demand.

"The long measures are the guz of 25 English inches, the hand covid of 18 inches, and the long iron covid of 27 inches.

"The custom-house weights are only stones sewed up in bags. The weights are seldom exact, and the smaller they are, the greater the difference, though they annually rectify them by the weights of the Imaum's shroff, whose business it is to examine them; under which cover he has an opportunity to add something to the money weights, for which he is well paid by the Banians, who are the principal exporters of silver."

American ships have appeared since 1800, at Mocha, for coffee.

The greater part of the foreign trade of Mocha is transacted by the Banian merchants, to whom it has always been safer to sell than to either the Turks or Arabs. When a Banian became a bankrupt, the other Banians have usually contributed, according to their ability, to pay his debts, to prevent his being imprisoned or tortured.

The trade which has been carried on between the British settlements in India, and the different ports in the Red Sea, was for a long period very considerable, and brought a large quantity of specie into India. The following is an account of the trade carried on between the Red Sea and Madras and Bombay, for five years, 1802 to 1806 inclusive. The statements of exports and imports at Bengal to and from the Red Sea, as well as those to and from the Red Sea and India generally, are, since 1806, blended with those to and from the Persian Gulf, and will be noticed hereafter.

" During the same period, the trade carried on between Bengal and the Gulfs of Arabia and Persia, was in favour of Bengal 108,53,394 Sicca rupees; of that amount one half may be considered to arise from the trade with the Gulf of Arabia, which will make this trade in favour of British India in five years, 252,21,380 Sicca rupees; which at 2*s.* 6*d.* sterling per rupee, is 630,53,910*l.* per annum."

These calculations by Mr. Milburn, taken from the East India records, may appear correct in figures, but the trade, no doubt, was carried on to nearly a reciprocal advantage between India and Arabia; or at least, the money paid in Mocha for coffee exported to other countries than India made up any real balance against Arabia.

The purchaser pays brokerage, cooly, and boat-hire, &c., and charges for all goods brought here the same as on landing.

Port Charges.—The following are the particulars of the general port charges to be paid to the government of Mocha, by three-mast vessels on their arrival.

	Mocha dollars.
Anchorage	121.40
Bashkaleb	60.60
Emir of the Mizan	36.36
Mirbhar	30
Writers of Government	60
Cady	12.12
Mufti	10
Mirbhar's writers, &c.	10
Porters at Custom-house	5
Sheik of the boat people	1.17
Ditto weighers	5
Ditto seapoys	1.17
Muccadum of the boat people	4
Master of the Vakella	2.08
Muccadum of the hamauls	6.06
Governor's porter	8.40
Ditto writer	8.40
Ditto shroff	1.44

The above amount to 384 Mocha dollars, one half of which only is paid by two-mast vessels.

DISBURSEMENTS, Port Charges, &c., paid on account of a Brig before she went up to Jedda, and on her return from thence.

	Mocha dollars.
The Governor's music, as customary	11.46
The country boats from the Government	3
The Governor's servants	35.2
The customary presents on the brig's arrival, half what is paid on three-mast vessels, as per foregoing account	192
Ditto on the vessel's departure, as customary, as per following account	78.78
Bringing up the long-boat, which had fallen to leeward	2.34
A government boat, for bringing goods on shore	2
Hamallage on ditto, as customary	14
Charges at waiting on the governor	9
An Arab writer, for writing two letters to Jedda	1.17
Two shawls claimed by the Banians, as customary	48.48
Forming a total of Mocha dollars	366.35

PARTICULARS of Port Charges, &c., on two and three mast Vessels, at their Departure from Mocha.

	Spanish dollars.
To the writers at the custom-house	32
The Mirbhar	17
The Mirbhar's writers	7
The caftan, or vest	9
For permission to come on shore	11.46
Expense of watering	29
Permission to sail	82.49

ANCHORAGE.

	Mocha dollars.
To the Governor	121.40
The second	60.60
The writer	200.38
Armee Mazon	36.36
Mirbhar	30
Codjee	12.12
Muffatees	10
Custom-house porter	5
Weigherman	5
Coolies muccadum	6.06
Writer at pier-head	10
Pier-head Muffatees	5
Muffatees' servant	5
Fishing-boat muccadum	2.34
Governor's servant	2.34
Ditto muccadum boats	4.69
Custom-house porter	2.34
Governor's porter	2.34

Forming a total of Mocha dollars 768.25.

On delivery of rice, out of every tomand of rice it is customary to give half a measure to the governor; and for every 12 tomands, to the different coolies, 1 measure; besides this exorbitant demand, the governor takes from the merchant who buys the rice, 5 measures for every tomand for himself, and 2 measures for the coolies.

Provisions are usually to be had at Mocha. The prices were, and are probably

still: a fat sheep for a Spanish dollar, a milch goat and kid for the same; twelve good fowls for a dollar, and beef at three halfpence per pound.

Fish of various kinds are cheap and excellent in their quality. The sea-crabs are very large, from 3 to 4 lbs. each, at about a halfpenny each. New cheese and fresh butter are daily brought to market from an inland town called Musa.

Cape Aden is about 100 miles to the eastward of the straits of Bab-el-Mandeb, This cape is high and craggy, and forms a peninsula, with a deep bay to the westward and another to the eastward, in which the town of Aden is situated, in 12 lat. deg. 50 min. N., and long. 45 deg. 10 min. E. The harbour affords good shelter and anchorage. The best anchorage has about 7 fathoms depth of water.

The town of Aden is miserable in appearance, being, when taken possession of lately by the East India Company, nearly a heap of ruins, out of which two minarets and a mosque reared their heads. The rocky peninsula on which the town is situated, was formerly strongly fortified; the summits of the rocks being covered with the ruins of lines and forts. Fortified island was also covered with works resembling the hill forts of India; and when in good condition, must have been impregnable.

Aden was once the most opulent town in Arabia. The Portuguese, under Albuquerque, attacked it in 1513, but were repulsed. In 1532 it became tributary to the Portuguese, it was then described "very strong, standing by the sea-side, surrounded by mountains, on the top of which are little castles or forts, encompassed with ravelins on every side, excepting a little opening for a road into the country, and to the shore, with gates, towers, and good walls. To the northward there is a large port, with good anchorage, secure from all winds." In 1538 it was taken by the Turks, who retained possession for some time, but were driven out of the country by the Imaum of Sana's forces; who, desirous of attracting vessels to his dominions, fixed upon Mocha, to which he annexed so many privileges and encouragements, that Aden, notwithstanding the superiority of its harbour, and the difficulty of getting through the straits from Mocha, except during the particular monsoon, was in a great measure abandoned, and the commerce transferred to the new establishment. One of the causes that contributed most to the removal of the commerce to Mocha was, that the market for coffee being in the territory of the Imaum of Sana, he wished to have it shipped from a port within the boundary of his own states, and for that purpose laid upon the article so heavy a duty when it was taken to Aden, that the merchants, to avoid this charge, adopted the practice of shipping it from Mocha.

In 1802 Sir Home Popham was sent on a mission from Bengal to Arabia. He visited Aden and preferred it to Mocha, both in a commercial and political point of view: as a commercial port, it has manifest advantages over Mocha, it being accessible at all times of the year. Its intercourse with the coast of Africa

can be kept up at all seasons. The trade has, until lately, been carried on by about 20 families, Jews and Banians: the rest are engaged in fishing and supplying the shipping and Hadji boats with wood and water. The exports consisted of rice, tobacco, and cloth, brought by the Hadji boats. The exports and imports have been nearly the same as at Mocha; and gum arabic, and other drugs, which are brought from the opposite coast, owing to its contiguity, should be procured at a cheaper rate. This place being now under British authority it may become an important depot for the trade of Arabia, Abyssinia, and Eastern Africa. Were a regular trade carried on at Aden, the consumption of goods would probably increase considerably, as the Africans are described as having no limit to their purchases, excepting the limit of their gold, elephants' teeth, gums, and the produce of their own country. The articles suitable for the market of Aden are probably the same as those in Capt. Harris's report on Abyssinia.

Corn is sold in the bazaar at Aden, by the roubba, foummin, and kaïla; 4 roubbas = 1 foummin; 3 foummins = 1 kaïla. The roubba weighs about $1\frac{1}{4}$ lb.

The monies chiefly in use among the Bedouins are the colonnate (4*s*. 4*d*.), and the mansouriez, 160 of which = 1 colonnate. Bombay silver rupees have been circulated for some time.

The beef sold here is described as indifferent. The best water is to be procured from Back Bay; that from Aden is brackish, and brought in skins to the landing-place; generally speaking, the district is well supplied with water. Grapes and pomegranates are to be had in plenty: but few or no vegetables. Firewood is to be procured.

The inhabitants are Banian Arabs, Jews (about 300), and various adventurers. As a place of call for the Red Sea steam-ships, on their passages to and from India, and as a midway position, Aden is admirably situated.

The district of Aden is tolerably fertile, and although the mountains approach near the sea, mangoes, sycamores, pomegranates, and dates, grow luxuriantly. Wheat, dhoura, cotton, &c., are grown, and the inhabitants are described as chiefly agriculturists.

CHAPTER XXIV.

TRADE OF PERSIA AND THE PERSIAN GULF.

Our statistical information relative to the commerce of Persia is so limited that, in order to avoid repetition, we shall introduce a condensed statement of what we know of the revenue, trade, and navigation of that kingdom, and of the Gulf of Persia immediately after our account of the trade of Arabia.

Modern Persia, which comprises only a part of the *ci-devant empire*, is

considered to lie between the latitudes of 42 deg. and 59 min. N., and the longitudes of 23 deg. and 36 min. E.; bounded by the Caspian and Russia on the north; Herat, Kaboul, and Belouchistan on the east; the gulf of Oman, the ocean, and Persian Gulf on the south, and the Tigris and Turkey in Asia on the west: it is divided into eleven irregular provinces occupying a superficies (according to Balbi) of 350,000 geographical square miles; and a population of 9,000,000 inhabitants. Other statisticians estimate the number of inhabitants at 11,000,000 and as high as 14,000,000; but we have no data further than what appears to have been the data of travellers in forming estimates, and calculations in proportion to the standing armed force of the country, which is considered at least equal to 80,000 men. The Persians are chiefly Mahomedans, but among them are some Christians, and a few Parsees.

The aspect of Persia is that of an elevated, but not mountainous, country, lying between the basins of the Indus and Tigris; and in the lower parts of extensive sandy districts, considered by some geographers and travellers to occupy half the superficies of the kingdom. The plains of Ispahan and Shiraz are, however, among the most fertile in the world, and although the power and political consequence of the Persian empire has vanished, and the country might be easily overrun by a great power like Russia, yet the kingdom of Persia (or, more properly speaking, Iran) possesses, notwithstanding the sandy deserts, *fertile sources of wealth and power*. Besides the goat and camel pastures, the soil of the plains yield heavy crops of rice, cotton, and even wheat. The wines of Shiraz are greatly esteemed all over the east. The sugar-cane and mulberry thrive well in all the northern districts. A great portion of the soil, especially to the south, is impregnated with salt. All the lakes are also salt; copper and petroleum are the minerals most abundant. The agricultural and manufacturing industry of Persia will hereafter be fully detailed.

The maritime coasts of Persia, on the Caspian, the Persian Gulf, and the sea of Oman, have a sufficient number of ports for all the purposes of greatly extending commerce with other parts of the world: especially with Russia, Arabia, and India. Astrabad, on the Gourgon, 4 leagues from the Caspian; population, 40,000; Balfrouch, on the Caspian, near the large city (100,000 inhabitants) of the same name; Achrof, near to which is Farhabad, with a population of 70,000; and Bender Boucher, on the gulf, population 17,000; and Bender Abassi, on the gulf of Oman, population 20,000, are among the chief seaports.

The population of the other principal towns are estimated as follows: Teheran, the capital, 130,000; Ispahan, reduced from 700,000 to less than 200,000; Hamadan, 30,000; Karben, 60,000; Kachan, 30,000; Koum and Southamien, once so great, are now immense heaps of ruins; Kirmouath, 40,000; Zendjan, 15,000; Zair, 30,000; Tabriz, 80,000 (Chardin says 350,000); Shiraz, 30,000;

Yezel, 60,000; Chouster, 25,000; Mechid in Khorazan, 32,000. Authorities: MM. Morier, Chardin, Buckingham, Frazer, and Alexander.

Government of Persia.—The country and the inhabitants of Persia are under the most licentious military despotism, and considered the disposable property of the sovereign in authority.

The authority of the Persian monarch has ceased to have any power over the people of Belouchistan, the Nomade Arabs, Kurds, Armenians, Afghans, and several tribes, over which the schah formerly exercised absolute military and civil authority.

The present, or *Kujur* dynasty, began to reign in the person of an atrocious eunuch, Aga Mohammed Schah. He was succeeded in 1797 by the late monarch Futtei Ali Schah.*

His grandson, Mohammed Mirza,† who succeeded as heir, was opposed by his numerous rivals;‡ and military occupancy and bloodshed prevailed all over the kingdom.

A *Beglerbey* is at the head of each administrative division of Persia; and under this local despot are the inferior ones, Haikims, or governors of districts.

Persia has neither a military nor commercial navy. The late monarch had a force of 38,500 men, disciplined, accoutred, and clothed, much after the English system.

TREATY of Commerce between her Majesty and the Shah of Persia. Signed, in the English and Persian Languages, at Teheran, October 28, 1841.

PREAMBLE.—Whereas, by the benign favour of the one Almighty God, whose boun-

* For a Persian despot, he was neither considered cruel, rapacious, nor unjust; although he had murdered his uncle Saduk; tortured and blinded his faithful old minister Hajji Ibrahim, and then caused his tongue to be cut out, under which operation the old man died. Hajji Ibrahim's sons and brothers being rich, were all murdered, or deprived of their eyesight.

As to his non-rapacity, he merely got money in every way possible; that is, he bastinadoed merchants and others suspected of being rich, in order to obtain a part, or often the whole, of their property. He sold his daughters, and the women of his own harem, to rich Persians who were made to give a high price for what they did not, perhaps, like or want.

He was no warrior nor politician. He was beyond parallel sensual, and left behind him at least 70 sons, besides numerous daughters. He wrote poetry, and his manners, *in private*, have been highly praised: as a sovereign, Persia has seldom had a better.

† Mohammed Mirza served under his father, the late Abbas Mirza, in the last campaign against the Russians. In September, 1826, the Persians were completely beaten and fled in all directions, but not until they had plundered Abbas Mirza's own camp.

Mr. J. B. Frazer observes,—

The very name of the Kujurs is detested throughout the kingdom, and it is notorious that pressing petitions have been made on the part of the greater number of the chiefs and nobles, backed by the earnest wishes of all ranks for permission to throw themselves upon British protection, declaring that all they look for is peace and security, and protesting that, should their application be rejected, they will rather submit to Russia than continue any longer subject to the misrule and extortion of their present masters.

‡ Two reigns have seldom passed in Persia without competition for the succession attended with horrible cruelties and devastations: nearly every province has had its pretender to the crown, as every powerful chief considered himself possessed of claims to sovereignty. He who succeeded, strangled, blinded, or mutilated his rivals, with their children, relatives, and friends.

ties are infinite, from the day on which the treaty of friendship and attachment was concluded between the glorious states of Great Britain and Persia, the renowned and just sovereigns of the two everlasting states have, day by day, and at all times, attended to and observed the whole of its articles and stipulations, and have caused the subjects of both governments to enjoy all its benefits and advantages except the treaty of commerce, which, in the preamble of the treaty of the year 1814, the two governments engaged to conclude, and which, up to this time, for certain reasons has been postponed and left unfinished :— Therefore, in this fortunate year, that all the stipulations of the auspicious treaty may be fulfilled, her Majesty the Queen of Great Britain and Ireland, &c. &c. &c., has appointed Sir John Mc Neill, Knight Grand Cross of the most honourable Order of the Bath, her Majesty's envoy extraordinary and minister plenipotentiary to the court of Persia, to be her sole plenipotentiary; and his Majesty the Shah of Persia, &c. &c. &c., has appointed his Excellency Hajee Meerza Abul Hassan Khan, his Majesty's secretary of state for foreign affairs, to be his sole plenipotentiary: and the said plenipotentiaries having concluded a commercial treaty in these two articles, have annexed and united it to the original treaty, that, by the aid of God, it may henceforth be observed between the two governments, and be a source of advantage to the subjects of both.

ART. I. The merchants of the two mighty states are reciprocally permitted and allowed to carry into each other's territories their goods and manufactures of every description, and to sell or exchange them in any port of their respective countries ; and on the goods which they import or export, custom duties shall be levied, that is to say, on entering the country the same amount of custom duties shall be levied, once for all, that is levied on merchandize imported by the merchants of the most favoured European nations ; and at the time of going out of the country, the same amount of custom duties which is levied on the merchandize of merchants of the most favoured European nations shall be levied from the merchants, subjects of the High Contracting Parties ; and except this, no claim shall be made upon the merchants of the two states in each other's dominions on any pretext or under any denomination ; and the merchants or persons connected with or dependant upon the High Contracting Parties in each other's dominions, mutually, shall receive the same aid and support, and the same respect, which are received by the subjects of the most favoured nations.

II. As it is necessary, for the purpose of attending to the affairs of the merchants of the two parties respectively, that from both governments commercial agents should be appointed to reside in stated places ; it is therefore arranged that two commercial agents on the part of the British government shall reside, one in the capital, and one in Tabreez, and in those places only, and on this condition, that he who shall reside at Tabreez, and he alone, shall be honoured with the privileges of consul-general ; and as for a series of years a resident of the British government has resided at Bushire, the Persian government grants permission that the said resident shall reside there as heretofore. And, in like manner, two commercial agents shall reside, on the part of the Persian government, one in the capital London, and one in the port of Bombay, and shall enjoy the same rank and privileges which the commercial agents of the British government shall enjoy in Persia.

INLAND COMMERCE OF PERSIA.

FORMERLY, and down to the beginning of the present century, the inland trade of Persia was carried on to a great extent. The civil wars, and the partition of the kingdom has greatly diminished this trade.

ISPAHAN was the centre of its principal operations. Numerous caravans were laden at this entrepôt for Bender-Abassi, with merchandize purchased by foreign agents; and a great many arrived from Shiraz, Aleppo, Bagdad, Herat, Bassora, and from the Levant.

Here were settled English, French, Dutch, Italians, Spaniards, Tartars, Jews,

Arabians, Greeks, Armenians. All sorts of goods were brought to Ispahan. Silks, formed the most important article: an incredible quantity of which was at that time produced in Persia.

The provinces of *Guillan, Mesanderan, Media Bactria,* and *Georgia*, alone, are said to have produced annually about twenty-two thousand bales, each weighing 276 lbs. Of this quantity not more than one thousand bales were used in Persia; the rest being sold annually for the markets of India, Turkey, and all parts of Europe and Asia.

The manufactures of woven *stuffs* in Persia were then equal in fineness to those of Europe, excepting milled woollen cloths, of which there were none made. Of the felt manufactures they made common carpets to cover their beautiful fine carpets.

Great quantities of woven woollen cloths were brought from Europe, by the English and Dutch to *Gombron*. The woven manufactures of Persia are composed of wool, cotton, goats' and camels' hair, and principally silk, with which they often mix the four others. The spinning, winding, and milling are similar to what was formerly practised in *Lyons* and *Tours;* but they also use the distaff and spindle.

Of their silk they make taffeties, tabbies, satins, turbans, ribbons, and handkerchiefs. They also make brocades, gold tissues, and gold velvets, the latter very costly; and they still export, in greater or less quantities, porcelains, feathers, morocco leather, *shagreen* of all colours, tobacco, galls, mats, baskets. Iron and steel of *Cashin* and *Korassan*, furs, perfumes, pearls, turquoises, saffron, distilled waters of orange-flowers, roses, &c., skins, medicinal drugs and gums, wines of *Schiraz* and *Yesde*, camels, horses, and mules. But in all the above the manufactures and trade have declined, and in many cases disappeared since the year 1721.

CHAPTER XXV.

THE TRADE OF THE GULF OF PERSIA.

The Gulf of Persia has also been called the gulf of Ormus, from the island of that name; and the gulf of El-Catif, from a kingdom of Arabia Felix.

On the Arabian side of the gulf, the coast extending upwards of 400 miles from Cape Mussendom to the Bahreen Islands, has been denominated the Pirate Coast, and was but little known to Europeans till the year 1809, when the mischief done by the pirates was so great, and the cruelties they committed so atrocious, that an expedition was sent from Bombay against them.

Ras-el-Khima, the capital of the Pirate Coast, in latitude about 25 deg.

49 min. N., and longitude 55 deg. 30 min. E., is situated on a sandy peninsula, defended in the isthmus by a well-flanked battery with square towers, the sea-line defended by batteries of one gun each at regular intervals between the point and the wall, comprising a space of about 1¼ mile. It was taken by assault on the 13th of November, 1809; the enemy driven into the interior; all their guns spiked; about seventy vessels, principally dows, burnt; their magazines blown up; and considerable plunder was taken in the town.

Bahreen Islands.—These islands are situated near the coast of Arabia, and the pearl-fishery. The population are about 70,000 Arabs, and various mixed breeds. Since 1790 they have become independent of Persia. The pearl banks commence in about 25 deg. N. latitude, and extend to 26 deg. 40 min. N. Among the numerous islands in this distance there are several towns. The principal are Ruffa and Manama.

The fishery generally commences in June, and lasts about two months. It is carried on chiefly by the Persians, who are the divers. Mr. Milburn says,

"The duty on what is taken, is one third to the sovereign, which the collector receives every day, either pearls, or their equivalent in money, as the divers, or those who contract with them, can agree. It sometimes happens that a diver, or contractor, makes his fortune in a season. The boats are all numbered, and no oysters are allowed to be opened in a boat, but must be brought on shore by a certain hour, when they are opened in the presence of an officer. The pearls which are found are then carried to the collector, who receives the duty, and the day's business is concluded.

"The oyster-banks have from 15 to 30 feet water on them, and some more. It frequently happens that a man will bring up 300 to 400 oysters in a day, and not find as many pearls as are worth five shillings; as there are more which have not any, than those that have, and of these many have only small pearls, which are denominated seed pearl.

"The oyster-shells are always the property of the divers, whether they fish for themselves, or contract with others. Some of these shells are from 8 to 10 inches in diameter, nearly of a round form, and thick in proportion. The oysters are seldom eaten, as they are generally rank. The sorts and sizes vary so much, that the smallest are not two inches in diameter: these are eaten by the people on the spot. The largest shells have not always the greatest quantity, nor do they contain the largest pearls, as neither the size nor colour indicates their contents, it being mere chance. The round pearls are always found in the fleshy part of the oyster, and many of those which have an irregular shape: some adhere to the inner part of the shell which are deformed, and flat on the side attached to it.

"The shells are bought on the spot, and sent to different parts of Persia, from whence they are sent up the Red Sea, and from thence to Grand Cairo and Constantinople. Many are carried to India, and from thence to China, where they are manufactured into a great variety of neat and useful articles. The pearls produced here are not so much esteemed in Europe as those of Ceylon, having a yellowish hue; but the natives of India prefer them. They say they always retain their original colour: whereas the white will in a few years become darker, from the heat of the weather, and that of the person wearing them."

This description applies to the present fishery, which employs about 30,000 men, and the proceeds are valued at from 250,000*l.* to 350,000*l.* annually. These islands are in many parts naturally fertile, but ill cultivated. They produce dates, a little wheat, barley, and other grain and seeds, and fruits of various kinds. Under a secure and just government, the trade of these islands might

become of great importance. It is even under the government of the Sheik of considerable value, especially at Manama, the chief town of the largest island, Bahreen, which is about 7 miles broad and 15 long. The trade with India employs from 20 to 25 large vessels. The Sheik, who resides on the island of Mah-arag, assumes authority over part of the Arabian coast. He maintains a fleet of 5 or 6 ships carrying from 10 to 25 guns each, and it is stated that he can equip from 15 to 20 ships of war. The imports are rice, sugar, spices, white and coloured cloths, dyestuffs, iron, &c., from India, — coffee, grain, fruits, &c., from Mascate, Persia, &c. The exports are pearls, tortoiseshell, sharkfins, &c.

Bussorah is situated in a plain, about three miles from the Euphrates, or great river of Arabia, from which a creek runs into the city, navigable at high water for vessels of 50 or 60 tons, and is in latitude 30 deg. 30 min. N., and longitude 47 deg. 33 min. E. It is about 180 miles from the Persian Gulf, into which that river empties itself, and about 90 miles from Korna, the extreme point of Mesopotamia, where the rivers Tigris and Euphrates unite. The river is about half a mile broad from Bassora creek to the Persian shore.

The city is walled, and surrounded with a deep and broad ditch: it has four gates and a sallyport. The walls are of mud, from 20 to 25 feet thick, with parapet walls, breast high, which have small embrasures for musketry or arrows. The walls not only encircle the city on the side of the land, but likewise on those of the creek, the entrance of which is at a considerable distance, where the walls terminate on both sides, each extremity being defended by a fortification and a gate, which are three miles distance from the town. In the intermediate space are many thousands of date-trees, mixed with rice-grounds. The walls are about 12 miles in circuit: and although not half the enclosed space is built upon, yet it is a large city, and was formerly very populous.

The mosques and houses are all built of burnt brick; some houses belonging to the merchants are large and convenient, being only one story high above the ground-floor, which consists of a hall facing the gate; on each side of which, are magazines and warehouses for the reception of merchandize.

The meydan, or great square, is very large, and is not only used for exercising horses, but as the great corn-market, where wheat and all kinds of grain and pulse are sold, wholesale. On one side of the meydan, is the Seraglio, or governor's palace, which is very large, but not a handsome building.

Bassora, previous to the plague, which commenced in April, 1773, was computed to contain 300,000 inhabitants, and in September following, when it ceased, they only amounted to about 50,000. The present population is uncertain, but estimated at 40,000.

Bassora was first visited by the English in 1640, who soon after established a factory, which has been kept up ever since, notwithstanding the numerous convulsions to which the country has been subject.

From its convenient situation, Bassora has long been a place of great trade, as merchants could purchase in this city the produce of most parts of India, Persia, and Arabia at the first hand, they being imported directly from the place of their growth and manufacture. There are a number of Armenian and other merchants resident here, who carry on a considerable commerce with all the ports of India, by caravans to Aleppo and Bagdad, and from thence to Constantinople.

Monies.—Accounts are kept in floose, danims, mamoodies, and tomands.

10 floose = 1 danim; 10 danims = 1 mamoody; 100 mamoodies = 1 tomand, value about 15 rupees. Excepting the Turkish piaster, and the tomand, all other coins are taken at a disadvantage. The Spanish dollar = 7½ to 8 mamoodies, and the Bombay rupee = 3¼ to 3½ mamoodies.

The weights are vakias and maunds; the latter are of two sorts, ateree, and sophy.

24 vakias = 1 maund ateree = avoir. 28 lbs. 8 oz.; 76 vakias = 1 maund sophy = avoir. 90 lbs. 4 oz.; 117 vakias = 1 cutra = 138 lbs. 14 oz.

The maund sophy is equal to 1 Bengal factory maund, 8 seers, 5½ chittacks; and the maund-ateree to 15 seers, 4½ chittacks.

There are sundry allowances made on goods on delivery, beyond the above weight: viz.,

26 vakias per maund for ginger, pepper, and coffee; 25 ditto for cardamums, sugarcandy, and benjamin; 24 ditto, for sugar, and all kinds of metals.

The maund for cotton is equal to 2 Surat maunds, and for indigo 3 Surat maunds, 35 seers.

Gold and silver are weighed by the cheki of 100 miscals, each miscal 1½ dram, or 72 grains troy. A miscal of the finest gold is worth about 22 mamoodies; a cheki of silver, or 150 drams, is worth about 180 mamoodies.

The oka of Bagdad is 2½ vakias ateree, and weighs 266 miscals, or about 400 drams.

The preceding is the mode of reduction of weight used by the Arabians; but the Europeans at Bassora reckon the maund sophy = 3 maunds ateree; and 25 vakias ateree = 1 maund ateree. The rattle is 14½ vakias ateree.

The guz, or cubit, is about 37 English inches, 93 being = 100 English yards.

The trade carried on between British India and Persia is still considerable, and is now opened to every one; the article of woollens was formerly monopolized by the East India Company, notwithstanding it was attended with an annual heavy loss. It appears from papers laid before the House of Commons, that

	£
The average amount of sales at Bassora for 10 years was . . .	5047
The annual loss	1130
Besides which, the expense of the factory, including presents, was . .	4276
Annual loss arising from the monopoly of woollens, and the establishment	5460

The demand for British manufactures by sea, is comparatively small; the most valuable part is supplied from Europe by caravans across the desert.

The following is a statement of the trade carried on between Madras and Bombay and the Gulf of Persia in five years, 1802 to 1806 inclusive; and of the articles of which the imports and exports consisted in 1805. The trade between Bengal and the Gulf of Persia is blended with that of the Arabian Gulf.

The trade is not considered to have increased since that period, and the direct trade between England and the Gulfs of Persia and Arabia has not, during the whole of the last 10 years, amounted, in the whole value of imports and exports, to the average sum of 3000*l.* per annum.

KARAK.—This island is in latitude 29 deg. 14 min. north, about 12 leagues

from Bushire town. It is about 7 miles long and 4 broad. At the north-east end is a bay, where there is good anchorage, and near it a strong castle built on the extreme point, which commands the whole anchorage of the bay.

Bushire is the principal seaport of Persia in the Gulf, and is situated about S.S.E. from the bar at Bassora, 70 leagues distance, and about 8 leagues S.E. from the island of Karak. The town is in latitude 29 deg. N., and longitude 50 deg. 47 min. E., and stands on the north point of a low peninsula, of which Bushire Point, about 4 leagues to the southward, forms the other extreme. It stands so very low, that the houses are discovered on coming from the sea, much sooner than the land on which the town is built. The town is about 3 miles in circuit, and of a rectangular form. There is neither castle nor battery in or near the town belonging to it, but there are war galliots, and a number of small merchantmen belonging to those who trade to and from Mascate, Gombroon, and other places in the Gulf. Population about 20,000.

The entrance of the river is about 3 miles broad; yet near the town it is not navigable (even for boats at low water) a hundred yards across. Vessels that draw more than 9 feet, cannot come into the river at high water; those of less draught can go above the town. The road where ships lie, is directly fronting the river, there being 2 or 3 fathoms 3 miles from the shore.

The Portuguese had formerly a factory here, having first built a castle, and then a town, which they walled round very strongly, with only one small gate on the land side, barely sufficient for a loaded mule to pass. The castle is of great extent, situated on an eminence, and although at present much decayed, makes a noble appearance from the sea; it was taken by the Persians from the Portuguese in 1622, who, being hard pressed, left behind their cannon and mortars, which were all brass; but, being masters of the sea, carried off their moveables.

No trade can be carried on with Persia from the sea, without a regular establishment of persons constantly residing at this port and Bassora, to cultivate the protection of this fluctuating government, by making presents, and at times to a considerable amount, whenever a revolution may take place in the country.

Monies, Weights, and Measures.—Many of the European, and most of the Asiatic coins pass at the same rates as at Bassora; but the price fluctuates according to the quantity of the specie in the market.

Accounts are kept in floose, mamoodies, and tomands, 100 mamoodies making 1 tomand. Pearls are sold by the abas, a weight equal to about 3½ diamond grains, or 2,875 dec. gold grains.

Imports and Exports.—The East India Company had, when a trading company, a resident here, with a view of extending the sale of woollens and metals, of which they are obliged by their charter to take so large a quantity; all other articles are free for individuals to trade in. The annual average amount of wool-

lens sold at this residency for 10 years from 1780 to 1790, was 2608*l.*, on which the loss was about 5 per cent. This, with the expenses of the factory, which was during the same period nearly 1400*l.* a year, and advances made to the Bombay cruisers when stationed here, made an annual loss of upwards of 1800*l.* per annum. The articles sold were broad cloths, long ells and shalloons; in no year did the sale exceed 7000*l.*, and in one year, 1788, only 93*l.*

Since the commercial route from Persia to Trebisond has been re-established, the importance of *Bushire* as the entrepôt for Indian merchandize has much diminished. The exports from this place consist of *rose water* for Bombay; *wines* from Shiraz for India, Bassora, and the Red Sea, and in *tobacco*. *Cotton-stuffs* are also in demand.

Very few of the products of Persia being suitable to the Indian market, the returns have been principally made in Persian and Turkish coins, Venetian sequins, German crowns, and gold and silver in bars. About one fifth of the imports are estimated to be returned in Persian commodities, consisting of drugs of various kinds, carpets, rose-water, otto of roses, Schiraz wine, &c.

Ormus is an island not more than 6 miles long, and about 4 broad, within 7 miles of the continent, in latitude 27 deg. 12 min. N., nearly opposite to Gombroon. It was first visited by the Portuguese under Albuquerque in 1508, and was then a place of great importance. The king of the island, having heard of the conduct of the Portuguese in the neighbouring towns, which they had attacked, plundered, and burnt without provocation, made every exertion to defend the island; so that, when the Portuguese entered the harbour, there were 30,000 men on the island, and in the harbour 400 vessels, 60 of them of considerable bulk, and having 2500 men on board. Albuquerque made an attack upon the town, in which he failed, but succeeded in destroying all the shipping. In 1514 he returned with a large force, and succeeded in obtaining possession of the island, on which he erected a strong fort; and leaving a sufficient garrison, proceeded to Goa. The Portuguese encouraged the commerce of the island; they built large houses, and strengthened the fortifications; and during the period, about 120 years, of their possession, it advanced in wealth and splendour, and was considered one of the richest places in the world. The Portuguese having committed outrages on the English shipping and property, the latter agreed to join the Persians in an attack upon Ormus. The attack was chiefly conducted by the English, and the city and castle surrendered to the English on the 22d of April, 1622. On this occasion the English received a proportion of the plunder of Ormus, which was very considerable, and a grant of the half of customs at Gombroon. After it fell into the hands of the Persians the place was ruined, the trade transferred to Gombroon, and scarce any remains are left to show that Ormus was once the principal entrepôt of Indian commerce.

The natural productions of the island are sulphur, salt, black shining sand, and red earth, for which articles vessels arrive occasionally.

GOMBROON, which was formerly of great importance, is at present reduced to a fishing town, and is situated on the main, nearly opposite the island of Ormus, in latitude about 27 deg. 10 min. N., and longitude 55 deg. 45 min. E. The English obtained permission to settle a factory here in 1613. About 1620 the Dutch followed their example, and upon the capture of Ormus in 1622 by the English and Persians, numbers of merchants resorted here, and the commerce greatly increased. It was at that time strongly fortified; the houses were large and handsome, but the place was always considered unhealthy. The English remained here till 1759, when the factory, then defenceless and totally neglected, was attacked and taken by the French. This factory was afterwards re-established, but has long since been withdrawn.

The total value of exports from India to the Persian Gulf amounted (1838 to 1840) to from 156,360*l.* to 158,120*l.* The greater part of this is for *stuffs*. In 1839-40, 38,831 pieces of British dyed calicoes were imported into Bushire and Bassora, their value being 11,614*l.*: 69,421 pieces of other British *cotton tissues* of the value of 33,182*l.* were also imported, forming a total of 44,796*l.*

There is a considerable sale of tin, iron in bars, and of French wines.

One of the most important branches of the trade between Bagdad and Bombay by the Persian Gulf, consists in *horses*. The cargoes of the numerous Arab vessels trading between Bassora and Bombay, consist in a great measure of these animals. Bagdad and the surrounding country furnish two-thirds of these. A good Arabian horse is worth at Bagdad 40*l.*, and at Bombay 100*l.*

CHAPTER XXVI.

BELOUCHISTAN.

BELOUCHISTAN, formerly a part also of the Persian empire, consists at present of a confederation of petty states, lying between the latitudes of 25 and 30 deg. N., and longitudes 55 and 64 deg. E. Its principal chief is that of *Kelat*, to whom the others seem to, but do not, acknowledge submission.

The superficies of Belouchistan is estimated at 110,000 geographical square miles. The population by Balbi, at 2,000,000 inhabitants.

That of the chief town, Kelat, by some at 20,000; by others at 40,000 inhabitants. The soil is generally dry and unfavourable to agriculture; the Indus bathes part of the country; but there are no great rivers flowing through it, and the streams are nearly all dried up in summer. There are some tracts of good

land which yield indigo, sugar, cotton, grains, and various fruits and vegetables; camels and dromedaries thrive in the arid districts, and in the others are found buffaloes, and most of the domestic animals of Europe. Bees and silkworms thrive; and nearly all the wild beasts and reptiles common to Asia infest the forests and jungles: along the shores of the gulf of Oman, many varieties of fish abound. There are no towns on the sea-coast, and the thinly-scattered population live in miserable villages. The port of Thoubar, which is safe and deep, has about 300 wretched cabins; and the excellent harbour of Gouttor, or Gutter Bay, has about 150 huts to shelter its inhabitants.

Manufactures.—It is stated in a Report of the Bombay Chamber of Commerce for 1842, that the several "specimens received of the manufactures of Belouchistan consist chiefly of coarse dyed cotton cloths, of a very inferior description, and the prices attached to them are extremely high as compared with fabrics of British manufacture.

The *entrepôts* of Belouchistan are chiefly *Posmee, Churbar, Gutter Bay, Gwadel,* and *Sonmeane.*

Posmee is situated at the bottom of a small bay, formed by Cape Posmee. It is small, and chiefly inhabited by fishermen. Caravans from the interior come down to barter their commodities, consisting chiefly of dates, dried hides, and cotton, for salt fish, &c., which they carry up the country. Small coasting vessels likewise call in here, and dispose of their goods, consisting of ghee, rice, &c. Their manner of trade is, when they arrive at a town where there is a probability of selling any thing, to go on shore, build a hut, and retail their goods, taking in return, hides, cotton, &c., and then proceed to the next town. Water is to be procured by digging in the sand; but it is very indifferent. A few lean goats are to be purchased. Fish are in abundance.

Churbar Bay is one of the best harbours on the coast. The town is inside a low point, where ships may anchor in 4 or 5 fathoms. The buildings consist of straggling mat-houses. There are several Banians settled in this place, who have a bazaar. A trade is carried on in horses, the breed of which is good, and camels, for which they receive in return, rice, ghee, and other articles of food. The Portuguese once had a small settlement in this bay, the remains of the town being still visible.

Goats and sheep are to be had at a moderate price; but neither bullocks nor fowls can be got; there are some small gardens, which produce vegetables of various kinds. The water is better here than at any other place on the coast, and easily procured, being very near the shore.

Gutter Bay.—At the bottom of this bay is situated a small village, chiefly inhabited by fishermen. In crossing the bay from Noa Point, a small hill is seen on the opposite shore, near which is an island, at the mouth of a small bay, called by the natives Bucker Bunder, where they go to fish. This is

said to be one of the places where the pirate vessels from Guzerat used to lie in the fair weather season, in order to plunder the dingies, and other smallcraft which trade along this coast.

GWADEL.—Cape Gwadel, in latitude about 25 deg. 4 min. N., and longitude 63 deg. 12 min. E., is a peninsula of moderate height, joined to the main by a neck of land, about half a mile over. A wall fortified with towers formerly extended across the isthmus, from one bay to the other, to protect the town from assaults by land; the ruins of which, and of a town built with stone, are to be seen: but the few inhabitants now live in a village composed of mat-houses, situated close under the north side of the cape. They are chiefly weavers, who manufacture such cloths as serve domestic use, and consist of very narrow dark checks, and some plain carpets of different colours, but not rough. From Cape Jasques to this place, the people call themselves Braodies, and from hence to Crotchey, they take the name of Beloochees. There is some difference in their language, and perhaps in their religion, though none is to be observed in their dress or manners. A few goats, sheep, and fowls are to be purchased. The best water is to be got by digging in the sand; that which is procured from the wells in the town being rather brackish.

SONMEANE.—This harbour, which is near the frontier of Scinde, was lately (1842) surveyed by an officer in the Indian navy, who drew up a report on it. Large vessels anchor in the bay, in 6 to 7 fathom water. The holding ground being good. The Report alluded to states,

"The town or village of Sonmeane is situated on the northern side of the harbour on a low range of sandhills, it is without any defence, and the houses consist of an assemblage of mud huts having ventilators on the roofs placed towards the prevailing winds, the inhabitants appear to be wretchedly poor, with the exception of a few Hindoos, in whom all the trade of the place centres; during our stay at Sonmeane ten large buggalows arrived from the following ports, Bombay, Ghorabarree, and Mascate, laden with rice, dates, piece goods, bar iron and pig lead, all of which is taken into the interior by Affghan merchants, who come down in the fine season to Sonmeane for the purpose of trading.

"We had great difficulty in procuring the most trifling supplies. Water is found by digging pits in the sand, which is frequently brackish; the pits or holes are about four or five feet deep, and are above high-water mark; they soon become exhausted, but when they become again filled up with sand, are dug out afresh: there is one well to the northward of the town which is built with logs of wood, and yields a tolerable supply, it is used for watering the camels and other cattle belonging to the place and to the different kafilahs that halt at Sonmeane.

"The breadth at the entrance of the harbour, between the western and the eastern points is about 5400 yards, but there is a bar right across it, having breakers on it at all times; the least water we found over the part used by the native vessels, as the channel across, was 1¼ fathom at low water, spring tides, and the channel through the bar, is about 2500 yards in length, and the breadth, at the narrowest part about 300 yards; it deepens over into a channel on the eastern shore, which is about 4¾ miles in length, and at the broadest part, its breadth is about 600 yards, and at the narrowest about 200 yards, terminating at about 1¾ mile to the westward of the town of Sonmeane; the large native buggalows anchor at the northern end of it, and at high water cross over and anchor near the shore, at about 1¼ mile from the town."

CHAPTER XXVII.

STEAM NAVIGATION OF THE MEDITERRANEAN, LEVANT, BLACK SEA, AND DANUBE.

THE following table exhibits the present state of communication, by steam-vessels in the Mediterranean, Adriatic, Levant, Black Sea, and Danube. It has been carefully compiled from various authorities.

TABLE exhibiting the several Routes of Navigation within the Mediterranean Sea.

No.	Place of Departure.	Destination.	Places at which Vessels touch on their Passage.	DATES of Departure.	DATES of Return.	Average Duration of Voyage.	Companies.
1	A'exandria.	Athens.....	Syra.....	7 17 27	10 20 30	3 d. 4 hrs. going. 7d. 11 hrs. returning	French Post-office.
2	A'exandria.	Constantinople	Jaffa, Beyrout, Larnaka, Castel-Rosso, Rhodes, Scala Nova, Smyrna, Dardanelles.....	every 3 weeks	....	....	By sailing-vessels to Syrian ports, Larnaka, &c., and by steam to Smyrna, &c.

* To complete the above lines, a direct communication between England by way of Malta and Asia Minor, Constantinople and Trebisond, is stated by the merchants to be necessary; and the Oriental Steam Navigation Company has accordingly despatched a steam-ship on an experimental voyage.

CHAPTER XXVIII.

ROUTE BY STEAM TO ALEXANDRIA, AND OVERLAND TO SUEZ, AND THENCE BY STEAM-SHIPS TO BOMBAY AND CALCUTTA.

THE following information is condensed from statements prepared for us by Mr. Anderson, who has been the active promoter of that intercourse.

"The present arrangements for effecting this new communication, commonly called the 'Overland Route,' are as follow:

"Two large powerful steam-vessels, the Oriental and Great Liverpool, belonging to the Peninsula and Oriental Steam Navigation Company, ply between England and Alexandria, once a month, under contract with her Majesty's government for the conveyance of the India, &c. mails.

"These vessels depart from Southampton on the 1st of every month, and from Falmouth, where they call to take on board the mails, on the 2d of every month, touching at Gibraltar, and Malta, and receiving at the latter place that part of the mails usually despatched from London on the 4th of every month, through France, to Marseilles, and thence by a government steamer to Malta. They arrive at Alexandria generally on the 17th of every month; here the mails, passengers, and goods, in transit for India, &c., are landed, and conveyed by the canal of Alexandria, the Nile, and across the desert of Suez, to the Red Sea at Suez, where the steam-packets of the East India Company, despatched from Bombay on the 1st of every month, with the mails for Europe, are in waiting to receive the mails for all India, and the passengers destined for Bombay. Steamers of the Peninsula and Oriental Steam Navigation Company, and of the Hon. East India Company, have also now begun to ply occasionally between Suez, Aden, Ceylon, Madras, and Calcutta; and by the Oriental Company's steamers, packages, as well as passengers, are received and forwarded to and from England and Ceylon, Madras and Calcutta.

"The mails from India for Europe are despatched by the East India Company's steam-vessels from Bombay, on the 1st of every month, except the months of June, July, and August, when they are despatched about eight days earlier to allow for the greater length of the passage to Suez, occasioned by the south-west monsoon. These steamers usually arrive at Suez from the 19th to the 22d of every month; and the mails and passengers being conveyed across Egypt to Alexandria, are there embarked in the Oriental Company's vessels before mentioned. These depart from Alexandria for England about the 22d to the 26th of every month, varying according to the time of arrival of the East India Company's steamer at Suez. Touching at Malta, where that portion of the correspondence, directed '*viâ* France,' is landed, and despatched to Marseilles by a British government steamer, and usually arrives in London about two days in advance of the heavier and larger portion of the mails brought by the Oriental Company's steamers to Falmouth—these steamers, after landing that part of the mails at Falmouth, proceed to the Motherbank quarantine station; and thence, after a detention of a day or two to Southampton, where the passengers are disembarked, the cargo landed, and the vessels prepared to start again for Alexandria on the 1st of the following month.

"Such is a brief outline of the present state and arrangements of what is called the 'Overland Route to India,' which can only as yet be considered in an early stage of its infancy. Measures are in active progress for rendering the communications by this route more comprehensive, as well as more frequent; and when the vastness of the field of enterprise is contemplated, it seems presumptuous either to attempt to predict the precise rate of its progress, or to prescribe limits to its future development.

"The communications by this route have, however, already become of sufficient magnitude and national importance to render any measure, calculated to ensure their per-

manency and security, deserving of the serious attention of the government, and of the active solicitude of the public, both of this country and of India.

"The number of *covers* despatched from and received at the Bombay post-office, to and from Europe, *viâ* Egypt, during the year 1842, was upwards of one million. The correspondence by this route has quadrupled in less than five years, and still continues rapidly on the increase."

The transit through Egypt is protected by Mehemet Ali, and it is regulated in accordance with the following letter from Boghos Bey:

"To Mr. Arthur Anderson, a Managing Director of the Peninsula and Oriental Steam Navigation Company, dated Alexandria, Sept. 15, 1841.

"Sir,—The house of Briggs and Co. having transmitted to me, on the 10th inst., your memoir to his highness the Viceroy bearing the same date, together with a translation of the commission of which you are the bearer, on behalf of the Peninsula and Oriental Steam Navigation Company, I have made it my duty to submit the same to his highness.

"On the part of the Viceroy, I have the honour to inform you that his intentions are to favour, for the general interests of commerce, the transit of merchandize to and from the Indies by the Mediterranean.

"The memoir above mentioned, and to which you have subsequently added an explanatory note, may be divided into two distinct heads:—

"1. The transit duty in favour of Egypt.

"2. The means of transport, depots, and the requisite security.

"On the first head his highness declares that *he desires not to make it a question of money;* that the Peninsula and Oriental Company, honoured as it is by the Royal Charter of her Britannic Majesty, has so much of his confidence, that it shall be authorized to carry on the transit (*opérer le transit*) for one year complete from the 1st January to the 31st December, 1842,* taking note of the values; and that on the expiration of that term, the company, through the means of their agents here, may make payment to the treasury of such as it, the company, may consider to be due, which sum shall, nevertheless, be susceptible of modifications for succeeding years, in such manner as the nature of circumstances may point out.

"With regard to the second head, it is his highness's intention that the charges of transport shall be rendered as light as possible; that—necessary precautions being taken to prevent merchandize declared in transit for Europe from being opened and sold in this country or in Turkey—the hire of camels shall be fixed, and that of vessels of the country shall be regulated according to the present rates of freight on the Nile; and desiring to render at his own cost the routes between Suez and Cairo, and between Cosseir and Kenneh more practicable, his highness will attend to such indications as he may receive to that effect. His highness will also furnish such military posts and escorts as may be necessary to afford perfect security to the transit. But the arrangements connected with these objects being susceptible of considerable detail, the company's agents may be instructed as to the carrying of them out, together with such as may be pointed out by the viceroy.

"Accept, sir, the assurances of my highest consideration.

"BOGHOS YOUSSOUFF."

"Thus was an arrangement, of no mean importance to the interests of commerce, settled, through the clear-sightedness and prompt decision of Mehemet Ali, in a few days, which probably might, and would have occupied years of regular diplomatic intervention with the Porte. It is here cited with a view to show that a fair and liberal proposal for the far more important object of permanently securing the transit of the mail communications through Egypt would now, in every probability, meet with an equally prompt and favourable reception."

* The experimental period thus granted has, by a subsequent arrangement, been agreed to commence from the date of arrival at Suez of the company's first vessel stationed in the Indian Seas, and accordingly commenced on the arrival of the *Hindostan* at Suez on the 10th February, 1843. In the mean time, one or two cargoes of Indigo and other Indian produce have been brought by sailing-vessels to Suez, passed through Egypt at the *half* per cent transit duty established under Mr. Anderson's arrangement, and shipped from Alexandria to Europe, chiefly to Trieste.

The following Regulations to facilitate the transit of all sorts of merchandize through Egypt from Europe and Turkey to India, or *vice versâ*, have lately been published : viz.—

ART. 1. In order to avoid confusion, and to render the transit service more effective, the government of his highness will appoint at Alexandria, at Cairo, and at Suez, magazines apart and separate from the principal custom-house, wherein all the packages which pass through Egypt *in transitu*, must be deposited. The governor will also nominate officers specially charged to superintend this transit service.

2. All merchandize deposited in the transit custom-house must be accompanied, on the part of the receivers, by a declaration specifying the marks, contents, and value; and after having been sealed with wax or lead by the officers appointed for this purpose, the above-mentioned merchandize may be sent to its destination.

3. The merchandize *in transitu* must be transported on arrival at Cairo to the magazines reserved for this service, in order to verify whether or not the seals are intact.

4. At the port of embarkation the collector of customs will give a certificate that the exportation of merchandize has been effected, and this document will serve as a discharge for the custom-house officer where the importation may have taken place.

5. The baggage of travellers deposited at the transit custom-house, to be passed through Egypt, may be forwarded without being opened; but such baggage as shall not have been deposited in this custom-house will be subject to search should the custom-house officers think necessary.

6. The *transit duty will be one-half per cent on the declared value, and must be paid at Alexandria for the merchandize landed at this port and for that landed at Suez.* In case of fraud being manifested, either in the denomination or valuation of the merchandize, the custom-house, after having proved the fraud by opening the packages, will charge a duty of 10 per cent. It is understood that the merchandize which remains in the country will pay the duties established by treaty.

7. In order to preserve the route betwixt Cairo and Suez as free as possible from disorder and contraband, and in order that the governor may be responsible for its security, it is prohibited to any individual whatever to undertake the transport of merchandize or travellers' luggage *in transitu*, without a special authorization and a guarantee for the good conduct of those employed in this service.

(Signed) BOGHOS JOUSSOUFF.

Alexandria, May 26, 1843.

CHAPTER XXIX.

CANAL FROM THE MEDITERRANEAN TO THE RED SEA.

MEHEMET ALI has had for some years in view, the opening of a ship canal between the Mediterranean and the Red Sea; and he accordingly employed an able French engineer, M. Linant, to report on the same.

TRANSLATION of an Extract from M. Linant's Report.

"It is well known by the levellings, which were taken with great care during the occupation of Egypt by the French army, and confirmed by the engineers who have worked at the embankments of the Nile, and also by many repeated observations made during my numerous journeys through the Isthmus of Suez, that the level of the Red Sea is higher than that of the Mediterranean, and that it has, at one time, covered the Isthmus.

"This difference of height is during high water at Suez, 9.907 metres (32 feet) above the low tides (which are scarcely perceptible) of the Mediterranean.

"The topographical position of the place shows, that from the Red Sea to a distance of about 22,000 metres (about 71,500 feet), the spot where the ancient canal was re-dug by Amrou, or where the canal of the Prince of the Faithful still exists, it is only necessary to dig this canal to a depth of 2.90 metres (8 feet 10 inches), when there would be at once established a current of water towards the Mediterranean; because at the end of this distance you enter the bed of the Bitter Lakes, now dry, which are there about 5 metres (16 feet 4 inches) lower than the Red Sea. From thence the ground becomes lower and lower, as far as the point which separates the Bitter Lakes from the lake *Timsah*, where the ground for a distance of about 6000 metres (about 19,500 feet) is at its greatest elevation, 0.50 (19½ inches) above the level of the sea; the soil is here sandy. Next come the basin of the lakes *Timsah*, much lower than the Red Sea, and which is covered by the waters of the Nile during the inundations.

"The distance between this lake and the low marshy swamps of *El-Karesh* is, at the most, only 3000 metres (about 9750 feet), and the land is not more than one metre (3 feet 3 inches) higher than the Red Sea; this ground is also sandy.

"Leaving the basins of the lake Simsah, and passing behind the hill of *Chek Amedek*, near which the canal of the Pharaohs, above mentioned, must have passed, we find the ground is nearly every where on a level with the Red Sea as far as *El-Karesh*.

"From thence to near *Das-el-Cassah*, and afterwards in a direction towards *Bir-el-Divietar*, we follow the traces of the ancient canal, in a direct line from one sea to the other, the ground being all sandy and much lower than the Red Sea. From thence to the ground which is inundated, during the floods of the Nile, by the waters of the Lake of Manzaleh, there is again found a bed, or sort of excavation, or sandy valley, which may probably have been the ancient canal. From thence to the entrance of Tineh, passing between Faramah and the ruins of Pelusium, the land is 9 metres (29 feet 6 inches) lower than the Red Sea. This line should be followed in opening a communication between the one sea and the other, all this ground having been deposited by the sea, as I shall presently show, it is only necessary to create a current of water in those parts which are not already deep enough in order to cleanse them sufficiently, and get rid of the marine deposits which are formed there.

"The declivity obtained by the difference of level of the two seas, and the body of water employed, would easily form a channel through this soil. A small canal would, in the first instance, alone be requisite to ensure eventually a larger one.

ESTIMATE of the Expense of Labour necessary to Cut and Construct the proposed Canal.

STONEWORK.

Piersa and Suez, all included . . . . . 1,200,000 piasters.

EXCAVATIONS AND EMBANKMENTS.

	Cubic metres under water.	Cubic metres dry.	Labour.	Cost in Piasters.
From Suez to the Bitter Lake, a quarter under water	660,000		2,640,000	
At 2 piasters a day, superintendence included		1,980,000	2,970,000	
		Total.....	5,610,000	11,220,000
Between the Bitter Lakes and the Timsah Lakes, earth sandy		120,000	240,000	
			Total.....	480,000
Between the Timsah Lake and El-Karesh, earth sandy		120,000	240,000	
			Total.....	480,000
Dike at Onadee, 1 man completing 1 metre		2,880,000	2,880,000	576,000
Dike at Das-el-Bassah		2,880,000	2,880,000	576,000
Dike at Manzaleh		234,000	234,000	468,000
Total of excavations and embankments				13,800,000

"We ought to begin by making at Suez, at the bottom of the port, nearly to where we find the remains of the ancient jetty, made at the entrance of the canal, two embankments or piers, leaving between each an opening which should form the section of the canal to be dug. The canal to be dug to a distance of 22,000 metres (71,500 feet), at a width of 40 metres (130 feet), and at a depth of at least 3 metres (9 feet 9 inches); then to dig from the end of the Bitter Lakes to the lake Timsah.* Then to clear out the land between the Lake Timsah and El-Karesh, being, as stated before, a distance of 6000 metres (19,500 feet), leaving only a width of 10 metres (32 feet 6 inches); this land being sandy towards the west of the lake Timsah, there must be a dike to prevent the waters from spreading over the cultivated lands of Egypt. At the Das-el-Ballah there must be a similar dike, to prevent the waters spreading themselves in the canals of the same name, in the Lake of Manzaleh. Also in the inundated lands about Pelusium and Faramah there must be a dike constructed at the same time, in order to prevent the waters spreading themselves over the lake; the hollow made by forming this dike will form the course of the canal.

"These works being terminated, the canal shut between the two embankments at Suez should be opened with great precaution, only to letting the waters flow in little by little, so that they may take the course intended for them; and, forming their own bed, these waters will pass through 22,000 metres (71,500 feet) of the canal so dug, and will enter the basins of the Bitter Lakes, where the declivity of the waters will give them an impetus or swiftness, that will both deepen and widen the canal, carrying into the basin of the Bitter Lakes the earth and sand of these places; and as the bottom is in some places 16 metres (52 feet) deeper than the Red Sea, there will be no fear that the latter may be filled up. This basin being filled from the sea, the water will flow through the communication established between these basins and the lake Timsah. It will become deeper, as the canal near Suez has deepened of itself. The Timsah lake being full, the waters will flow through the communication dug between this lake and El-Karesh, and at length find their way into the Mediterranean.

"In this manner, by the Onadee or Manzaleh there is no fear of inundating Egypt; because the waters of the canal, after taking their natural course, will have nearly the same general fall as those of the Nile during its inundation; and thus, from the dike at Onadee to that of Das-el-Ballah, there will be a rise of only 2 metres (6 feet 6 inches) at the first, and less at the second. At the dike of the Manzaleh they will be at the same elevation as the river at Damietta, where a dike of 9 metre high is necessary to prevent the waters overflowing the land. At the dike of Onadee the level of the land is two metres lower than the level of the Red Sea; and in consequence of the inclination of the canal, the water will be 4 metres (13 feet) lower than the water at Suez; thus at Onadee the land will be 2 metres higher than the waters of the canal, after it has taken its natural course.

"The dimensions of this canal, between the embankments, will be—

	metres.		ft.	in.
In length, supposing it to reach to the Mediterranean	180,852	equal to	587,769	0
In breadth, at the surface	50	„	162	6
Mean breadth	40	„	130	0
Depth	9	„	29	3
Section from where the impetus is	369	„	11,993	0

"The canal through the lakes and neighbourhood will take the form which the accidental position of the land may give it; but these dimensions will be those requisite for the rise of the water, and the fall will not undergo any material alterations.

"It will be seen that by an outlay of 3,750,000 francs, and by employing paid men instead of soldiers, the work could easily be done.

RECAPITULATION.

Cost of embankments		13,800,000
Cost of works		1,200,000
Total in piasters		15,000,000
In francs	3,450,000	
	300,000	
		3,750,000 francs.
In sterling money		£ 150,000

* The ground which separates the two lakes.

"In not paying the men, but employing the army, doubling the work as before, it would only require 3,000,000 francs, and 9583 men's labour for 360 days.

"Three objections may be raised to this mode of constructing the canal.

"The first is, that the level of the Red Sea, at the bottom of the Gulf of Suez, being higher than that of the Mediterranean, the phenomenon may be but accidental, and in this case, the communication of the water being free, the level of the Red Sea would be lowered, and the current naturally disappear or diminish, as the canal became filled.

"The second objection is, that the Red Sea being so much higher than the Mediterranean, the water, if it had a free passage, would rush towards the Mediterranean, and would cause a diversion, and destroy the embankments.

"The third is, that on the Egyptian and Pelusian coast, no port or bay could be formed, and that the port of Suez being filled with sandbanks, vessels could not be navigated.

"The primary objection at first seems reasonable enough, but on reflection we see nothing to fear. Throughout the Isthmus of Suez we remark reefs of shells, which are exactly similar to the accretions or collections on the sea-shore; and from which circumstance we should be led to infer that they were deposited by the action of the sea, when there was a communication between Suez and Faramah; but as the like deposits are found in the Bitter Lakes, at the level of the Red Sea, and those at El-Karesh, Bir-el-Devietar, and Abou-rok, are much lower, it seems to prove that such deposits must have come from the lakes, when they were full of water; and also when there existed an artificial communication from one sea to the other; for if this circumstance had arisen from a natural and free communication, these reefs of shells must have followed the inclination or declivity of the Red Sea to the Mediterranean.

"The examination or survey of the land goes to show, that in remote periods, of which no history exists, that there has been a free communication between the two seas. Therefore the question is, what has formed the isthmus, and intercepted the communication? I have carefully examined the ground, and there is nothing to warrant our attributing its formation to the upheaving of the soil between the Red and Mediterranean Seas, nor between Suez and the Bitter Lakes, the only places higher than the Red Sea. It has again been said, that the interruption of the communication between the two seas is caused by the action of the easterly winds filling up the passage, and so forming the isthmus. We have always held very monstrous ideas about the encroachments of these sands, but in reality they are but in a trifling degree of an aggressive nature. They could never have had any effect, for if there has been a communication (which appears certain), wherefore is it filled up? There could have been no powerful current (and one can hardly believe this to have been the case), for wherever traces of like communications are visible, a current is invariably found; and there must have been a more powerful one here, on account of the difference of level, if these two seas have always been in their present condition. But it is to be observed, that in many places the Mediterranean has retired. In the Red Sea, at the bottom of the two gulfs of Suez and Akaba, the contrary has been remarked, especially at Akaba. There are at the latter place the remains of a town, 'Astab,' of which a portion is now under water. Besides, almost everywhere in the winding of the Red Sea there is visible, at a short distance from the edge of the water, a reef of flat stones, covered with corals, over which flows 2 metres of water; and under it (the reef being simply a projection) about 10, 19, and 20 metres, with a bottom of sand. This reef of level rocks appears to me to have been the original boundary of the Red Sea. Towards the north there is more water at the present time on this bank than towards the south. One may almost decide that the Red Sea is higher at Suez than nearer the Straits of Babelmandel; which fact may be explained by the action of the winds from the Indian Ocean, which ingulf the waters in the Red Sea, and cause them to flow towards the north; whilst the winds which prevail at the further end of the gulf, coming from the north-west, do not sweep equally over the whole length of the Red Sea, and therefore cannot counterbalance the action of the wind of the ocean forcing the waters into the gulf.

"The result of the foregoing observations may be as follows:—If the Red Sea be indeed higher at the further end of the Gulf of Suez than it is at Babelmandel, in opening for it a communication with the Mediterranean, the level will decrease, and, in fact, might become equal to that of the Mediterranean, so that there would be no declivity

in the canal of communication between the two seas, which would be a great inconvenience. But if the waters are driven back by the action of the wind to the further end of the gulf, the whole level of the Red Sea will not be higher than that of the Mediterranean. But in order that such a phenomenon might ensue, there should be an equilibrium between the power of the wind which impels the particles of water cast into the end of the gulf, and the pressure of these particles, accumulated at the end of the gulf, and raised to a height of 9.907 where they are higher than the Mediterranean. Without this occurrence the waters of the Red Sea would recover their level in the whole basin as far as the ocean, which is supposed to be at the same level as the Mediterranean; thus an open and unconfined communication being established between the two seas—if the Red Sea descend from the level, the speed would always remain the same, while the preceding calculation proceeds from the height of the Red Sea above the Mediterranean, and that this height of the accumulated waters arises from the impulse given by the winds, which would give the same speed. Therefore, whether the Red Sea may be *entirely* elevated above the level of the Mediterranean, or merely at the end of the gulf, there will be always a speed in the canal equal to that which has been calculated, as arising from the difference of the level of the water at Suez and Pelusium. As to the second objection, it has been frequently repeated, and even by persons of talent it has been explained, but without examination.

"As all the rivers which flow into this vast reservoir, carry their waters there, when swelled by winter torrents and melted snow, how, then, could a quantity of water so small, in comparison, as that which would be poured in by the projected canal, cause the slightest difference? In one year this canal would pour into the Mediterranean 8,014,253,140 metres. The surface of the Mediterranean having been computed at 2,459,343,734,475 square inches, it follows that this quantity of water would not cause an elevation of 0.0003 per annum—a mere nothing;—and again, on the supposition that the Mediterranean neither ebbs nor flows, and that the evaporation remains the same with a much larger quantity of water. We see, then, that the fears on this ground are quite puerile.

"As to the third objection—that respecting the port, it is more important. It is true that the side of the "embrachure" of the Pelusian Branch has no shelter; and that although the anchorage may be good, nevertheless vessels are not secure; but when the communication canal is open, the alteration of the course of water will force an entrance to the sea for this canal, and straits like those of the Dardanelles or Gibraltar may be formed. Even under the most unfavourable circumstances there would be sure to be a passage at least as deep as that of the branch of Damietta or of Rosetta, because the declivity of the canal will be like that of the Nile at high tides, and will continue without change like the Nile.

"The entrance to the canal will not be encumbered as the mouth of the Nile, for the canal will neither have mud nor weeds; thus in the most unfavourable circumstances we can always count upon having at least 13 feet of water. The boats of the Nile—steamers and vessels of moderate draughts, alone fit for the navigation of the Red Sea, could always enter the canal without anchoring in the bay, and without being obliged to do so. There might be a port in the canal itself—at the lakes of Timsah or El-Karesh. After all, if a port is wanted, it could easily be constructed (the canal being once established), and a stone breakwater might be placed on the self-formed bar, which would at once form a protection or shelter for such vessels as might be obliged to anchor going out of the canal. It would cost about 2,500,000 piasters. The sluices placed there to deepen the narrow channel would be useless; for if destroyed, the sandbank which is formed there would be reproduced in the sea, on account of the peculiar formation of the bottom of the sea, and the effect of tides on the Egyptian coasts: for a distance of more than two leagues from the bank the bottom is level, with not above from 15 to 18 feet of water. As to the port at Suez, the deposits being nothing but sand, when the current for the opening of the canal shall be established, those will be easily removed: in case it should be found necessary, at a later period, to dig the narrow channel on account of the tides, a dam, independently of the canal of communication, might be established."

A STATEMENT, showing the highest and the lowest Prices, per Winchester Quarter, of the several Descriptions of Corn respectively grown at each of the Places mentioned, and for each Year, as far back as can be obtained, from the Returns received from her Majesty's Consuls abroad.

SECTION XII.

RUSSIAN EMPIRE.

CHAPTER I.

PROGRESS OF RUSSIA.

The progress of Russian power since the accession of Peter the Great, has not only astonished the people of other nations, but engaged the earnest and constant attention of statesmen and of diplomatists. The advance which this empire has made during the last and present century has been unexampled, in regard to the acquisition of territory; but we consider that the adjoining kingdom of Prussia has secured greater real power, during the same period, than Russia. Great extent of territory does not constitute power. A population of thirty millions of inhabitants, with abundant employment, in a productive, compact territory, and occupying a favourable position on the world's surface, is far more powerful than a population of sixty millions, settled over a territory ten times as extensive as the country inhabited by the thirty millions. The sixty millions of inhabitants are not only less powerful by their scattered position, but are also in a further degree weakened if they consist of different races, who have neither traditional sympathies for, nor existing interests with, each other. France is a country in which nearly all the advantages of a great population, with abundant means of productive employment, with a territory compactly formed, and with a people who feel that they are, for all purposes of good or of evil, to themselves or to their neighbours, one nation. Hence arises the great power of France, and the rapid reappearance of prosperity and of force, after disasters, in that great country. England, in like manner, owes her power to the formation and geographical position of her home dominions, and to the united enterprise of her people. In respect to the traditionary sympathies, and the united nationality, of the inhabitants, we must admit that France has the advantage over the United Kingdom. Holland is an example, above all others, of the power of an united, intelligent, and enterprising population, occupying a small territory. The peninsula of Spain and Portugal is, by geographical position, and by natural configuration, as favourably adapted for power as France. Yet

the great natural advantages of that peninsula are, comparatively, (as we shall have occasion to show, under the heads of Spain and Portugal) of little value in regard to power; while the country is thinly inhabited by a people composed of various races, who have had little traditionary bonds of union; while the most industrious of those races, the Moors, have been expelled, extirpated, or debased; and, while the states of the peninsula have at all times been worse governed than those of any country in Europe.

In regard to the power and progress of Russia, ignorance and consequent misconception have long prevailed, not only in England but in other countries.

Moscovy appears to have been, long before the age of Peter the Great, a country of considerable power, abundant resources, and, within her dominions, of important trade: the latter chiefly consisted in the commerce of interchange at the fairs, especially at Novogorod, and in a periodical transit trade to and from oriental countries.

Puffendorff, in his introduction to the History of Europe written a short time before the revolution of 1688 in England, devotes in the octavo edition, only five pages to Moscovy, while a full proportion of his book is devoted to an account of Poland. He informs us that the first origin of Moscovy, and the achievements of her princes, were uncertain and obscure; but that the country was formerly divided into a great many *petty* lordships, which were afterwards united in one body; and that the Moscovites, in 989, embraced Christianity on the marriage of their prince *Wolodomir* to *Anne*, sister of the Greek emperor Basilius Porphyrogenitus. In 1237 the Moscovites were subdued by the Tartars, who slew the Czar George. In 1450, under John, son of blind Basilius, they became independent of the Tartars. This prince also subdued the dukes of Great Novogorod and Tiver, and in the city of Novogorod took a booty in gold and silver, which, according to history, loaded 300 carts. His successor took Smolensko from the Poles, but he was soon after defeated by the Astracan Tartars, who ransacked Moscow. *Basilowitz*, the tyrant, conquered Astracan and Casan, and united those kingdoms in 1533, to Moscovy. His barbarities in Livonia, caused the inhabitants of Revel and Tethland, to place themselves and their city and country under Sweden. The remaining part of Livonia joined Poland. The Poles defeated the tyrant, and captured Plotskov and several other places. In the beginning of the 17th century a pretender to Moscovy appeared as a *Demetrius* who was murdered, and who was the son of the Czar John Basilowitz. The pretender came into Moscovy, much as the Dauphin, son of Louis the XVI., would have appeared at the restoration in France. The pretender Demetrius, who was a polished adventurer, obtained the Czarship, but his government became odious, and on the celebration of his nuptials with a polish bride, the daughter of the Vaivode of Sendemir, he was surprised by a strong body of Moscovites and murdered. Others say that he escaped, and reappeared again. The Demetrius

who reappeared has generally been considered a second impostor, but whether he was the first, or another pretender, he succeeded in raising a large army, recaptured the Polish bride, who acknowledged him for her husband, and if the real heir, Basilius Zuisky, had not been succoured by a strong force sent by the King of Sweden, Demetrius would have probably secured the throne of the Czars to his own family. Zuisky, was successful and consequently proclaimed Czar; but Sweden in return secured to herself the possession of Ingermanland, the country south and west of where Petersburg now stands, and Carelia, or the country north of St. Petersburg and east of the Lake of Ladoga. The Poles at the same time reconquered their province of Smolensko; and all Moscovy was only prevented from becoming a Polish province, according to Puffendorff, by the Moscovites deposing Zuisky and offering the crown to Vladislaus, Prince of Poland, which caused some delay on the part of the Poles; and by Demetrius having been strangled by his own Tartar guards, who immediately attacked the Polish garrison of 7000 men in the city of Moscow. The Poles defended themselves with great bravery, and when compelled to abandon Moscow, set the city on fire which consumed about 180,000 houses and buildings. Many of the inhabitants perishing in the flames. The Polish soldiers fought their way back to Poland; and the irresolution of the Polish king, Sigismund, occasioned the loss of Moscovy to the Poles. After these disasters, the succession to the Czarship, was established in the person of Michael Fedorowitz, son of the Greek Patriarch, who had married a daughter of the *Czar John Basilowitz.* Between 1653 and 1658 Alexis, the son of Michael, conquered Smolensko and Keovia, devastated Lithuania, took Dorpt, and other places in Livonia. Sweden, however, compelled him to relinquish his conquests in Livonia. Previously to the accession of Peter the Great in 1696, the Cossacks of the Ukraine acknowledged the sovereignty of Russia.

This extraordinary prince gave Russia a navy, arsenals, seaports on the Baltic; conquered the Baltic provinces of Livonia and Esthonia, Ingermanland, and Carelia; and introduced arts, sciences, literature, and civilization into his dominions. In many respects, there is a striking resemblance in the successful efforts made by Mehemet Ali in Egypt, to those effected by Peter the Great in Russia.

Catherine II., Alexander, and the present emperor, have all followed the system of civilization and improvement, and of acquiring the lands of their neighbours, which was begun and so wonderfully advanced by Peter the Great. They have been eminently successful,—but we are not defenders of the means which they have frequently adopted to accomplish their ends. Nor would we justify those means by the example of acts, at least as indefensible, on the part of England in India, and as late as 1840 and 1841, in Syria.

The following summary of the condition of Moscovy and the Moscovites, drawn up by Puffendorff, forms a curious contrast of Russia 150 years ago, compared with Russia in 1843.

"Of the qualifications of the Muscovites," says Puffendorff, "nothing very praiseworthy can be said. For among them there is no such education as among most other European nations: reading and writing being the highest degree of learning among them, and the learning of their priests themselves does not go further than to be able to read a chapter out of the Bible, or to read a piece of a sermon. They are also jealous, cruel, and bloody-minded; insupportably proud in prosperity, and dejected and cowardly in adversity. Nevertheless they have such an opinion of their own abilities and merits, that you can scarce ever pay them sufficient respect. They are very fit for and cunning in the trade of usury, but are of a servile temper, and must be kept under by severity. At all sorts of games and sports their end is with blows and fighting; so sticks and whips are the usual instruments among them. They are of a strong constitution, able to undergo all sorts of fatigues, even famine and thirst. In field-fights and sieges they are worth nothing, because they are soon brought into confusion, and are themselves of opinion that other nations are their masters in this point. But they defend a fortress to the utmost, not only because they are very fit to undergo hardships and all sorts, of misery, but also because they know it is present death to them if they return home after they have surrendered a fortress by accord. Nevertheless they do endeavour to bring their soldiers under better discipline, for which purpose they make use of a great many Scotch and German officers, who are to instruct them in all manner of exercises as practised among other European nations. But they do not allow that the Muscovites should serve abroad and learn themselves the perfection of military arts and exercises, because the Grand Duke stands in fear, that if they should grow too knowing, they might be for making innovations at home.

"The territories of the present Grand Duke of Muscovy are of a very large extent, yet so that a great many parts are mere wildernesses, scarce inhabited at all. The Muscovites have at home great plenty of corn, cattle, all sorts of game, fish, salt, furs, and their precious sables, which are esteemed at a high rate among their neighbours; salt fish, caviare, hides, tallow, wax, honey, potashes, soap, hemp, and the like. But the commodities which are imported to them are silk, stuffs, gold, silver, and woollen cloths, tapestry, pearls, and precious stones, spices and wines, but the latter not in any great quantities. Tobacco is now a prohibited commodity there. They keep it for a constant custom in their way of trade, not to buy with ready money, but to exchange commodities for commodities; and it is against the constitutions of Muscovy to export any coin. Their greatest trade is at Archangel, which way the English first found out in the year 1553. But since that time the Hollanders and Hamburgers have followed their example. Before that time, this trade was carried on by the way of Narva and Reval; but though this was the shorter way, yet did the foreign merchants not care to be so much in subjection to the Swedes and Danes. There is also a considerable trade carried on with the Persians down the River of Wolga, by the way of Astracan.

"The form of government here is an absolute monarchy; the Grand Duke, whom they call in their native language Czar, being not tied up to any laws or rules; unto whom his subjects are obliged to pay obedience without reserve, so that they are no more than slaves, which also suits best with their natural constitution. And therefore this absolute power of the prince is a great addition to his strength, since he can not only raise some hundred thousands of men at the first command, but also has vast riches and prodigious revenues. These do accrue to him not only out of the taxes and income of so vast a country, but also because the Grand Duke himself has the monopoly of *sables* (fur trade); and, if I am not much mistaken, also farms out all public inns, taverns, and alehouses himself, which amounts to a prodigious revenue, in a country where the nation is much addicted to drinking. He makes also his presents to foreign princes and ambassadors in *sables*, but receives in lieu of them gold and silver. Besides this, it is a common custom with him to set a new stamp upon crown pieces, and to oblige his subjects to take them for double the value; from whence it cannot be supposed but that this prince must lay up vast treasures. Muscovy also enjoys this advantage before other states, that it is not to be attacked on the back side, because its territories are on the north-east side surrounded by a vast, unnavigable sea, and vast wildernesses.

"The neighbours of Muscovy are, on the south-east side, the Persians. These two states cannot hurt one another much, the Caspian Sea, inaccessible countries, and vast wildernesses being their common borders; wherefore it is not worth their while to extend their con-

quests upon one another. But they may be serviceable to one another by making a diversion to the Turks. The Tartars are troublesome neighbours to the Muscovites. These Tartars make no account of faith or alliances, but make a trade of robbing and plundering, against whom there is no remedy, but to kill them as fast as one can; and this is not so easily to be done, because they are very nimble. The Crim Tartars are the most mischievous. To hinder their incursions, the Muscovites are obliged to keep a considerable number of horse upon the frontiers, and they give them sometimes a diversion, with the help of the Don Cossacks, and the Nagage and Calmuck Tartars. If the Muscovites could maintain themselves in Kiovia and a part of the Ukraine, it would serve them at once to bridle these robbers, and for a bulwark against the Turks. For the Turks do not immediately border upon Muscovy, but by the country of the Crim Tartars, who, being vassals of the Turks, they make use of them like their hunting dogs. Wherefore it is of great consequence to Muscovy that the Turks do not become masters of the whole Ukraine, since thereby they would be enabled, with the help of the Cossacks and Tartars, to do great mischief to Muscovy.

"The Muscovites ought to have a watchful eye over the Poles, they being so situated that they may do the greatest mischief to Muscovy, especially since the Poles are much better soldiers than the Muscovites in the field. But the Muscovites have at present a greater advantage against Poland, since they are possessed of Smolensko, Severia, and Kiovia, which cover their frontiers on that side. Muscovy need not fear much from that side where it borders on Sweden, not only because it is able enough to defend itself there, if every thing is quiet at home, but also because the Swedes are not ambitious to make any more conquests on that side, since to maintain such large and far-distant countries, would be more hurtful than profitable to their state. The kings of Sweden have of late showed no great inclination to fight with the Muscovites; but if the Swedes, in conjunction with the Poles, should attack the Muscovites, they would put them very hard to it; whereas also the Muscovites may prove very troublesome to Swedeland. Nevertheless, the Muscovites ought not to make any great account upon an alliance with Denmark, because they are far distant from one another; and therefore cannot revenge themselves upon one another; if one of them should put a trick upon the other, and as soon as he has obtained his aim, leave the other in the lurch. Neither have the Muscovites hitherto appeared at any general treaties."

Such was the condition of Moscovy and of the Moscovites, and of the power and materials to which Peter the Great succeeded in 1689. The increase of the population and of the acquisition of territory, is stated in a work ascribed to Sir John Mac Niel, *Progress of Russia in the East*, as follows:

"At the accession of Peter I. in	1689	15,000,000 inhabitants.
At the accession of Catherine II.	1762	25,000,000 „
At her death in	1796	36,000,000 „
At the death of Alexander	1825	58,000,000 „

"Her acquisitions from Sweden are greater than what remains of that kingdom.

"Her acquisitions from Poland are nearly equal to the Austrian Empire.

"Her acquisitions from Turkey in Europe are of greater extent than the Prussian dominions, exclusive of the Rhenish Provinces.

"Her acquisitions from Turkey in Asia are nearly equal in dimensions to the whole of the smaller states of Germany.

"Her acquisitions from Persia are equal in extent to England.

"Her acquisitions in Tartary have an area not inferior to that of Turkey in Europe, Greece, Italy, and Spain.

"The acquisitions she has made within the last 64 years, are equal in extent and importance to the whole empire she had in Europe before that time.

"The Russian frontier has been advanced towards

Berlin—Dresden—Munich—Vienna and Paris	about 700 miles.
Towards Constantinople	„ 500 „
Towards Stockholm	„ 630 „
Towards Teheran	„ 1000 „

"It is to be borne in mind that the Russian tariff *of exclusion* has been extended to all those acquisitions, where formerly British merchandize was freely sent."

CHAPTER II.

RESOURCES AND STATISTICS OF THE RUSSIAN EMPIRE.

The empire of Russia, including the greater part of the ancient kingdom of Poland, Finland, and the isles of Aland, &c., which formerly belonged to Sweden; the ancient kingdoms of Astrakan and Kazan, conquered from the Tartars; the Crimea, Little Tartary, Bessarabia, and a portion of Moldavia, taken from the Ottoman empire; the encroachments over the regions of the Caucasus, on the possessions of the natives, and on the dominions of Turkey and Persia: that vast region extending east, from the confines of Europe to the Pacific and to Behrings Strait, and north from the confines of Persia and Tartary, to the Arctic circle; also a great, valuable, and undefined extent of country, along the north-west coast of America;—occupies altogether even a greater portion of the surface of the globe, than the vast but widely-spread British empire.

The natural resources in respect to soil and productions, are exceedingly varied, and in many portions of the empire, of very great importance. The severity of the climate in the most northerly parts, precludes cultivation; and, excepting in the most southerly provinces, the frost is severe during winter, and locks up the sea, river, and lake navigation, in icy fetters, from two to seven months.

Although many swampy and sandy tracts extend over the temperate regions of the empire; and although in the northern parts, grain will not ripen, Russia comprises vast plains and great valleys which may be considered eminently favourable to the cultivation of all kinds of green and white crops, and to the breeding of horses, horned cattle, sheep, goats, and swine.

The numerous and great forests of Russia produce valuable timber of different kinds.

The iron and copper mines, are not only abundant, but the ore of the very best quality. Gold, silver, platina, antimony, cobalt, quicksilver, precious stones, marble, and malachite, are found, some of which in great quantities.

Russia has several of the largest rivers in Europe and Asia flowing through her dominions; and the internal navigation of the empire has been unlocked, and the Caspian, Baltic, and the White Sea, have, since the beginning of the reign of Peter the Great, been actually united by the completion of a vast plan of canalization. Great plenty of fish abound in all these rivers and lakes.

Russia has about thirty good seaports; but most of them are for several months obstructed or closed in by frost. The port of Archangel is shut up for eight months in the year: it is, however, the outlet, by the Dwina, of the pro-

ducts of a very extensive region, yielding wheat, timber, and hemp, and it is also an inlet for the articles required from foreign countries.

The Baltic seaports of Russia, being also frozen up for some months, the armed and commercial navies of the empire would, in consequence, be paralyzed as to entering or leaving their own ports, were not the Black Sea opened to them through the Dardanelles.

For the navigation of the Pacific, the harbours of Russia on the coast of Asia, and on the north-west coast of America, are eminently convenient and, for some time past, of great consequence.

Russia can procure, by land, from Persia and India, all articles that she requires in addition to her own natural resources. All the great elements of agriculture and manufactures, and of internal power she possesses; but the geographical position and configuration of her vast territory, form natural disadvantages that enfeeble and contract her external power.

SEAPORTS OF RUSSIA WITHIN THE BALTIC.—Riga, at the mouth of the Dwina, is shallow at the town, and large ships load and unload some miles below. Revel, in the Gulf of Finland, is an intricate harbour. Arensburg, on the north side of the isle of Oesel, is spacious, but shallow; the road, where large ships anchor, is deep. Cronstadt, or the harbour of St. Petersburg, and the great naval arsenal of Russia, is deep and safe. Vessels drawing more than eight feet water cannot ascend to St. Petersburg, which is six leagues above Cronstadt. Helsingford, in Finland, is one of the best ports in the Baltic. Abo, in Finland, is shallow at the town. All these ports, with several other small harbours, are locked up by frost for at least three months annually.

Archangel is the only port of consequence on the White Sea. Large ships have to load and unload without the bar, over which there is no more than twelve feet of water. There are many anchoring places and several harbours more northerly, on the coasts of the White Sea; but all are locked up by the ice for at least eight months.

SEAPORTS OF RUSSIA ON THE BLACK SEA.—Russia has the ports of Ismael and Kilia, in Bessarabia, on the Danube, by which great outlet and inlet ships ascend to Kilia from the sea; Ackerman, Oviedopol, and at the mouth of the the Dniester; Odessa, in the province of Kherson, is with its road, safe and commodious for the largest ships, and of the utmost importance to Russia. Nikolav, also in Kherson, is safe and deep, and although the town was only founded in 1791, it is now a naval arsenal of great consequence. Kherson is a small port near the former. Sevastopol is a good port in the Crimea, strongly fortified, and the principal rendezvous of the Russian navy. Kaffa or Feodosia, is a small port, within a large bay in the province of Taurida. The vast importance of these ports to Russia, consists chiefly in their open communication at all seasons with the ocean by way of the Dardanelles.

On the sea of Asoph, which has no deep harbours, the best port is Taganrog, which admits only vessels drawing less than 11 feet water. It is often frozen up for about two months in the year.

On the Caspian, Russia has the convenient port of Astrakan, which forms the principal entrepôt between St. Petersburg and the nations south of the empire. The little port of Derbent, and several others on the Caspian, belong also to Russia. The rivers falling into the Caspian and Black Sea, and those discharging into the Baltic and White Sea with numerous large lakes, opening an internal navigation, extended and connected by canals, are of extraordinary importance to all parts of the empire.

In Asiatic Russia are several unimportant harbours; first the port of Okhotsk in 59 deg. N. latitude, with a commodious and deep road, but subject to violent tides and gales from the east, in November. Okhotsk, which is the great entrepôt for whatever goes or comes through Kamtschatka, and the chief point of communication between Russia and her possessions in America. Sixteen degrees farther south, is the small but safe harbour of St. Peter and St. Paul; it is frozen up for about two months. By the ports of Okhotsk and of St. Peter and St. Paul, Russia commands an uninterrupted intercourse from St. Petersburg and Moscow across the whole empire to the Pacific, and to the west coast of America. Russia communicates also down the Wolga to Astrakan,—and thence by the Caspian Sea to Persia and Turkistan,—and down the Pruth and Danube,—and down the Dniester, Dnieper, Don, and other rivers, to the Black Sea, and thence to Turkey, Asia Minor, Circassia, and Georgia.

The Russian territory in the north-west of America has innumerable harbours; but there is only one establishment of any great consequence, that of New Archangel, or Sitka; this port is excellent,—strongly fortified, and has a dockyard, and an active fishery and fur trade. It is frozen up for some weeks during winter. The resources of Russian America are very important in fisheries, furs, &c.

CHAPTER III.

STATISTICS.

AREA, Population, and Great Divisions of the Russian Empire.

DIVISIONS.	Square Miles.	Population.	Inhabitants to Square Mile.

					Simferopol	45 12	34 8	1458	
	Total	5,222,995	46,878,030	58,584,000					

The authorities for the above table are, Malte-Brun, Journal of the Société Française de Statistique Universelle, and Géographie von Europa, by the Baron Von Malchus. The population for 1827 is chiefly taken from Balbi, whose table nearly agrees with that given in the German Almanack, published (1832) at Weimar. It can only, however, be considered a computation which, with others, have been calculated in respect to superficies, according to geographical boundaries, as laid down in the most approved maps.

CLASSIFIED official Statement of the Population of Russia in the Year 1838.

CLASSES.	Males.	Females.	TOTAL.
1. Paying taxes	23,013,556	24,278,708	47,292,264
2. Temporarily free from the payment of taxes	88,544	75,000	163,544
3. Not paying taxes	809,734	782,991	1,592,725
4. Belonging to the military service	950,698	981,467	1,932,165
5. Not subject to revision	572,814	580,360	1,153,174
6. In the Trans-Caucasian possessions	689,157	689,159	1,378,316
7. In the Kingdom of Poland	2,077,311	2,110,911	4,188,222
8. In the Grand Duchy of Finland	663,658	708,464	1,372,122
9. In the Russian possessions of America	30,761	30,292	61,053
Total	28,896,233	30,237,352	59,133,585*

* Exclusive of the conquered and unconquered mountaineers living between the Black and Caspian Seas, who are estimated at 1,445,000 individuals, and the Kirgheses, who are Russian subjects, but live beyond the Orenburg, and Siberian frontier, together with the "Double Tributaries," whose number is unknown.

Specification of Classes.	Males.	Females.
CLASS I.—PAYING TAXES.		
A. IN TOWNS.—1. Merchants of the 1st Guild:—		
Christians, with 704 licences	2,107	
Mahomedans, with 6 do	19	
Jews, with 36 do.	218	
Total	2,344	
2. Merchants of the 2d Guild:—		
Christians, with 1439 licences	5,008	
Mahomedans, with 8 do	36	
Jews, with 68 do	440	
Total	5,484	
3. Traders of the 3d Guild:—		
Christians, with 29,912 licences	105,860	
Mahomedans, with 425 do	2,417	
Jews, with 2573 do	12,749	
Total	121,026	
Total of the three Guilds	128,854	118,520
4. Burghers and members of Corporations:—		
Christians	801,496	
Mahomedans	15,557	
Jews	484,894	
Total	1,301,947	1,399,675
Burghers of the western government	7,525	6,966
Inhabitants of towns in Bessarabia, Masyles, and Rutpasches	10,970	10,445
Persons of the low classes—Christians	30,613	45,731
Ditto, Jews	12,322	
Foreign Artisans (not included in the total)	603	
Total of division A	1,496,231	1,581,537
B.—PEASANTS.—1. Peasants on the private properties of the emperor's family	37,374	41,488
"Apanage" peasants	695,402	721,772
Peasants belonging to the service of his imperial Majesty's cabinet, of the chief intendent's office, and of the Kremlin expedition	4,400	4,693
2. Domain peasants.—*a.* Paying poll-tax and rent:—

CHAPTER IV.

GOVERNMENT AND ADMINISTRATION OF THE RUSSIAN EMPIRE.

THE Russian empire may be considered as a confederation, by compulsion, of heterogeneous states, each under the immediate rule of a local absolute government; and all held under the sway of military authorities; the chief of which is an hereditary absolute monarch.

This general form and principle of administration requires, in respect to the provincial and other local governments, some modification.*

The geographical divisions of Europe and Asia are not regarded in the administrative divisions of Russia.†

The best authorities divide the empire into 49 administrative governments, and 12 smaller provinces (oblasts), or dependent governments. To these we must add the kingdom of Poland; the grand duchy of Finland, the vassal states of Georgia and Siberia: and several petty states bordering on Asia, which are, except in a military view, perfectly independent of the general government.

The 49 administrative governments are each divided into circles, or arrondissements, and two or more of the civil governments are united under one military chief; for example, Okhotsk and Kamtschatka, are joined under the general military chieftainship of Eastern Siberia: Tobolsk, Tomsk, and Omsk, form the military government of Western Siberia.

The administrative governments of Courland, Esthonia, Livonia, and Pskov, form one military chieftainship: St. Petersburg, Moscow, and Finland, are again, of themselves, each a military government.

* This brief view of the Russian government has been carefully drawn up without any reference to mere political opinions. Malte-Brun, Balbi, Schnitzler, Hassel, Klaproth, Tolstoy, and Chodsko, have been consulted, and also several documents in the journals of the Statistical Society, Paris, which, with various manuscripts, have also been referred to. M. Balbi is nearly silent on the governments of Austria, Prussia, and Russia.

† See Provinces and Population.

The exceptions to the whole empire, being immediately, as well as supremely, under military rule, consist chiefly in the grand duchy of Finland, having a limited local constitution: in Poland, having a senate, the members of which are nominated for life; and an elective chamber of 120 members, 60 of whom are nonces, elected by the nobility, and 60 deputies, named by the people, not serfs; and, further, in Courland, Livonia, and Esthonia, retaining several of their ancient privileges. The Cossacks of the Don, and on the borders of the Black Sea, may also be considered within themselves as forming military republics.

The imperial government overrules all by its ukases, or decrees: In Russia, all power emanates from the authority of the emperor. His qualification as samoderjetz, or autocrat, indicates that he is only second to God alone. The mere act of election, in 1613, of Michael Romanoff, conferring on him and his descendants the crown of the Tzars, or Czars, consecrated, instead of limiting, absolute power; and from that period the tzars have been supreme heads of the state and church.

There is no representation of the provinces or of the people in either the local or general government.

A senate of 62 members, was, originally, formed for the efficient direction of government. This body being nominated by the sovereign, to frame and promulgate the ukases.

In regard to the laws, they must be considered generally as usages. These laws or customs frequently differ in one province from another. The ukases, or decrees, of the emperor again, are imperative laws for the whole empire. It is said that the laws are, in general, administered with impartiality; as a proof of which, it is argued that even on the nobles and their ladies, the punishment of the knout is inflicted.* M. Schnitzler says of Alexander, that "his virtues and talents placed him at the head of his age. He substituted good laws in the stead of arbitrary supreme decisions: and openly proclaimed, in 1811, the principle, that the law was superior to the sovereign. We may, in effect, say, that since that time justice has succeeded arbitrary misrule, and that the Russian empire has taken her place among the states wisely constituted."

The government is, under the emperor, directed by the following councils and officers: viz.—

The Imperial Council.—This council consists,

First, of the president of the council.

Second, of the president and members of the five departments of the council, which sit at St. Petersburg; viz.—

1. The president, members, and counsellors of the legislative department;
2. The president, members, and counsellors of the military department;

* Schnitzler—Tolstoy—Custrine.

3. The president, members, and counsellors of the civil and ecclesiastical department;

4. The president, members, and counsellors of the department of political economy; that is, strictly speaking, of trade, agriculture, and manufactures;

5. The president, members, and counsellors of the department for administering the affairs of Poland; and,

Third, seventeen members, who have no seats in the senate; one of which is a prince of the blood; two field-marshals; nine generals; three admirals; and two noble civilians.

The Ministers of State are—1. The minister of the interior. 2. Minister of the imperial court. 3. Minister of the marine. 4. Minister of finance. 5. Minister of justice. 6. Minister of war. 7. Minister of public instruction. 8. Minister for foreign affairs.*

The other head departments responsible to the state are—

1. The comptroller-general of the empire. 2. Director-general of the posts, &c. 3. Director-general of ecclesiastical affairs (not appertaining to the Greek church). 4. Director-general of roads, bridges, and public works.

The Ministerial Committee consists of the president of the imperial council, and twelve members of the senate, according to their seniority.

The Commission of Requests consist of a president and five members.

The Chief Administration of Finland is intrusted to a governor-general and secretary of state.†

The Police.‡—The power given to the police seems greater in Russia than in any other country. It may be said that they have, in all political matters, the power of imprisoning, liberating, serving, protecting, and annoying individuals.

The *personnel* of the police consists in the towns of a director-general of police, several sub-directors, and inspectors of districts and sections, besides a strong body of common policemen.

The Rural, or Urban Police, consists of—1. Decurions, charged with surveillance over every ten male persons, above the age liable to carry arms. The decurions are exempt from all labour or service to their feudal lord.

2. Centurions, with surveillance over one hundred persons.

3. Commissaries of Police, with surveillance over three hundred hearths, and in immediate communication with the inferior tribunal of the district; and all

* This department is considered of the first consequence in the Russian governments—nearly all the ministers of the empire, at foreign courts, are foreigners.

† The general infusion of military spirit and rule throughout all the administrations, will appear hereafter. (See Military Statistics.) We have no date for salaries or civil appointments in detail.

‡ This brief notice of the police and criminal and civil procedure, is reduced from details drawn up by a personage who exercised high administrative functions under the Russian government.

under the direct control of the ministers of war, finance, justice, and especially of the minister of the interior.

Criminal Process.—The proceedings in criminal cases are in the understood order, if prolonged by appeal, as follows:

1. The urban, or rural police, transmits the charge of accusation,* with its (the police's) opinion, to the tribunal of first resort, called the Territorial Court.

2. This court transmits its decision, with the opinion of the government advocate (strapezy), to the criminal chamber of the provincial, or central court.

3. The criminal court pronounces and submits its decree, with the opinion of the strapezy, to be revised by the civil governor.

4. The civil governor transmits the process, with his advice to the military governor.

5. The military governor decides, but from him the judgment is carried to the senate.

6. The committee of the senate communicates its decision to the minister of justice.

7. When he gives his opinion, the matter is carried to the senate in general assembly;

8. Then to the committee of grace.

9. From thence to a committee of the imperal council.

10. From thence to the imperial council in full assembly.

11. Finally, to the emperor.

Wealthy persons have, by following up the above course, prolonged criminal prosecutions for from ten to twenty years; but, if the accused be not noble, the decision of the military governor is final.

Civil Process.—In appealing either to the supreme court of the province, or to the senate at St. Petersburg or Moscow, where a commission of justice first examines the case. By gaining one of the members of which, however, a decision may be set aside. The process may even, when the commission of justice is unanimous, be prolonged, by addressing the imperial advocate (attorney or procureur-general), who refers the process to the court of superior resort. Or, in default of the imperial advocate doing so, it may be referred to the judgment of the minister of justice; then to the commission of grace; and, finally, to the emperor. This prolongation of a suit, or process, can only be carried on at great expense.

By referring to the Court Almanack, the Almanach de Gotha, &c., we find that in the committee of the senate; in the general assembly of the senate; in the committee of grace; and in the imperial council, the members consist of the same individuals: appealing, therefore, from one of these courts to the other,

* The leading accusations are, commonly, offending against the treasury, the government, the governor, or any person in authority.

appears similar to appealing in England, from the lord chancellor on the bench to the lord chancellor on the woolsack.

The following statement, translated and reduced from a manuscript statement,* will further illustrate the government of this empire:

The Senate.—The existence of the Russian senate dates since the reign of its creator, Peter the Great. It is purely a judicial tribunal, having nothing to do with the legislation, or with the administration of the country. The ukases are the rules for the decisions of the senate; but, as those emanations of the czar are often incomplete, the senate and magistracy often decide in processes of the utmost importance. These decisions hold the force of laws.

The senators are selected by the czar; chiefly, it is said, from among the oldest generals of divisions.

The senate is divided into eight departments, or sections, which labour separately. It is qualified, with three members present, to make decisions.

The senators enjoy a pension of 7000 rubles, or assignats, per annum. Five divisions of the senate sit at St. Petersburg and three at Moscow. The first section is charged to decide processes, in which the public treasury is interested. The second, such questions as concern fiscal territorial limits. The third section, with the determination of civil processes, between one individual and another. The fourth adjudges in processes concerning the countries taken from Sweden, and a few provinces of Greater Russia; and the fifth occupies itself with criminal prosecutions. Of the three sections of the senate, which sit at Moscow, the first (or sixth) is charged with adjudging civil processes: the second (or seventh), with matters which treat of territorial limits; and the third (or eighth) section is occupied with criminal processes. In several provinces, prosecutors or appellants resort to the sections of the senate, which sit at Moscow.

Parties have the right to remove, for consideration, the decrees of one section to the decision of the whole senate, united in one general court. In this case the senators who have previously concurred in the decree complained of, sit also in the grand tribunal.

Attributions of the Military and Civil Departments.—The chiefs of the local administration in the different provinces of the Russian Empire were called Lieutenants (Namiestniks), under the reign of Catherine II. The Emperor Paul named them Governors of War. The Emperor Alexander modified the attributions of those chiefs of the provincial administration, in attributing to them the title of General Governors (Woienny Gubernator).

They are limited in their functions by the will of the czar, by the control exercised by the senate, and by the ukases. They exercise a vigilant control over

* From materials furnished by a personage long resident in Russia.

the affairs of police, and the collection of duties, and they are actively concerned in nearly every lawsuit of any importance.

The governors-general occupy an eminent station in the social scale. Those among them who have not incurred the displeasure of the emperor, become ministers, or members of the council of the empire.

Besides the governors-general, there are in nearly all the provinces, civil governors, whose attributions have much analogy to those of the prefects of police in France. The civil governors are each assisted in their functions by two counsellors and one auditor. All the decisions are adopted in council; and in case of dissent, the order of the civil governor is executed; but the dissenting counsellors are permitted to report to the senate, on each case of dissent: on which a definitive decision is made.

The decrees of the civil governor may be overruled by the governor-general.

Public Treasury.—The officers of this department administer all matters relative to the public revenue, under the direction of the minister of finance. In the treasury are deposited all the products, direct and indirect, of the revenue; and from the same office all the expenses are disbursed, under the special direction of the minister. (See Finances of Russia hereafter.)

Codes of Law said to be guaranteed to the different Divisions of the Russian Empire.—It has been the system of the Russian government to agree to secure to the provinces, incorporated within the Russian Empire, the codes of law which they before enjoyed; reserving the faculty to modify those laws by ukases. The law of 1517, still continues in the provinces acquired from Sweden. The laws of 1816, have full force in Courland. The ordinance of the King of Poland, Sigismond I., in 1529, continues to be an obligatory law in Little Russia, an ancient Polish province; and the law of Sigismond III., in 1588, was guaranteed by the czar to Lithuania, to White Russia, and to Volhynia. At St. Petersburg, the counsellors are said to have been for some years employed in the construction of new laws, to be general in all the vast divisions of Russia.

CHAPTER V.

POLAND.

POLAND, which occupied nearly all the vast plain, anciently called Sarmatia, into which the Roman conquests never extended, appears to have been from the earliest times inhabited by the Sclavonic ancestors of the present inhabitants. The Huns and Goths, who overran the country, held the people, who at last shook off the yoke, under cruel bondage. The Tartars also harassed them, but

still the Poles maintained their independence, until the year 1772, when the then vast kingdom of Poland, comprising Great and Little Poland, Masovia, Podlachia, Volhynia, Podolia, and the Ukraine, was most iniquitously seized by Austria, Russia, and Prussia, and subjected to three partitions; viz., in 1772, in 1793, and in 1795, when the king was dethroned, and this ancient kingdom blotted out of the map of governments. The third partition gave

	Square Miles.	Population.
To Prussia	52,000	3,500,000
To Austria	64,000	4,800,000
To Russia	168,000	6,700,000
Total	284,000	15,000,000

The Congress of Vienna, in 1815, distributed the country nearly as follows:

	Square Miles.	Population.
To Prussia	29,000	1,800,000
To Austria	30,000	3,500,000
To Russia	178,000	6,900,000
Kingdom of Poland	47,000	2,800,000
Total	284,000	15,000,000

The central part of the country, consisting of the chief portion of what, from 1807 to 1813, formed the duchy of Warsaw, was placed as a kingdom, under the government of the Emperor of Russia, who, in consequence, added to his title "King of Poland." It was then divided into woiwodes or palatinates; viz.,

PALATINATES.	Population in 1823.	CAPITALS.	Population.
Augustow	465,761	Suwalki	1,181
Cracow	397,344	Kielce	2,400
Kalisch	532,671	Kalisch	7,310
Lublin	453,430	Lublin	10,500
Masovia	616,074	Warsaw	120,443
Plock	432,278	Plock	6,000
Sandomir	355,703	Radom	1,505
Podlachia or Siedlice	331,671	Siedlice	2,115
Total	3,385,022 exclusive of the army.		

The remaining parts were apportioned separately to the governments of Russia, Austria, and Prussia; but Russia retaining the sovereignty over all, excepting 59,000 square miles, of the whole superficies of 284,000 square miles.

The population of the state, called the kingdom of Poland, amounted, in 1838, to 4,298,962 inhabitants; about 900,000 of whom resided in towns, and 3,350,000 in the country.

Races.		Religions.	
Real Poles	3,100,000	Roman Catholics	3,400,000
Rusini, or Rusniacks	100,000	Greek Church	100,000
Lithuanians	200,000	Lutherans	150,000
Germans	300,000	Calvinists, &c.	10,000
Jews	400,000	Jews	400,000

The Catholic hierarchy consisted of the Archbishop of Warsaw, primate of the kingdom, and eight bishops, one for each palatinate. The number of Roman

Catholic clergy was 27,400. The Greek Catholics had a bishop at Chelm, and 354 priests. There were 274 synagogues. There is one university, that of Warsaw; and in the whole kingdom there were, in 1829, 1756 professors and teachers, nearly 30,000 students, and about 11,000 female pupils. In 1839 there were in 1159 schools about 70,000 pupils.

Occupations of the People, Live Stock, Products, &c.

Householders employed in agriculture	871,259	Tradesmen	49,888
Their families and servants	2,221,288	Their families	131,331
Manufacturers	140,377	Landed Proprietors	4,205
Their families	358,035	Freeholders in towns	41,654

Cows in 1827	694,728	Rye, 1827, korzecs (2 cwt.)	4,429,393
Oxen do.	475,949	Oats, do. do.	3,183,023
Calves do.	259,990	Barley, do. do.	1,506,062
Pigs do.	703,207	Wheat, do. do.	751,076
Sheep do. about	2,500,000	Potatoes, do. do.	4,288,185
Horses do.	369,413		

About one-half of the extent of the territory of the kingdom is stated to be cultivated; one-fourth of the remainder occupied by forests; the rest by marshes and uncultivated lands.

Constitutional Charter granted to Poland by Alexander, in 1815.*

The provisions of the Charter were generally liberal. Among the articles contended to have been totally infringed upon, or disregarded, are—

The 10th, Guaranteeing that the troops of Russia, if marched into Poland, should be maintained by Russia.

The 13th, That the property of the Catholic or National Church should not be molested.

The 16th, That the liberty of the press should be guaranteed.

The 17th, That the law should protect every citizen alike, without regard to rank or condition.

The 18th, That the ancient fundamental law should be observed.

The 19th, That no man should be arrested, except with the forms, and in the cases prescribed by law.

The 20th, That every man should be immediately informed in writing of the cause of his arrest.

* Previous to the treaty between Russia, Prussia, and Austria, it was stipulated, May 3, 1815,—

1st. That the kingdom of Poland should be re-established.

2d. That it should be irrevocably united to the empire of Russia by a constitution; and that, on that condition only, the Emperor of Russia might take the title of King of Poland.

3d. That the Emperor of Russia should have the power to give to that state a distinct administration, and the exterior extension, that he will think proper; that is to say, to incorporate the other Polish provinces submitted to his domination.

4th. That the Poles, subjects respectively of the high contracting parties, will be equally governed by liberal and national institutions, and obtain a representation.

5th. That the commerce and navigation of all lakes and canals, in all their length, of the ancient kingdom of Poland, the same as they existed before 1772, shall be free to all the Poles, without regard to the difference of the forms of their respective governments.

The 21st, That persons arrested should, at the furthest, in three days, be brought before a competent tribunal; and discharged, on the first examination, if found innocent.

The 22d, In such cases as the law directs, bail to be taken.

The 23d, No man to be punished, except in conformity with existing laws.

The 24th, Every Pole to be at liberty to remove his person and property according to law.

The 25th, Every condemned criminal to undergo the penalty of the law in his own country.

The 26th, Declaring all property inviolable.

The 29th, All public, civil, and military offices to be filled with Poles only.

The 32d, Every legitimatised foreigner to be on the same footing as the other inhabitants.

The 39th, The King to dispose of the revenue according to the budget to be drawn up and submitted to his approbation.

The 60th, The King to appoint the Senators for life.

Besides the above, several other articles relative to the Senate, Nuncios, &c. &c.; and the legislature meeting, regularly, at least once in every two years, are contended to have been disregarded. The Diet did not meet from 1820 to 1825, and only once after the accession of the present emperor.* The portions of the ancient kingdom, viz. Posen and Galicia, remain, with some additional privileges since 1815, under the respective governments of Prussia and Austria. In both these the population, especially the peasantry, have derived great advantages by the, in every other respect, indefensible partition of Poland. In Russian Poland the peasantry are, we must also admit, in a far more easy condition than they were under independent Poland.

CHAPTER VI.

RUSSIAN TREATIES WITH OTHER POWERS.

Of the treaties which Russia has negotiated with foreign states since the treaty of Vienna, those with Turkey are among the most important. By the treaty of 1774 and 1775, and 1779, Turkey ceded to Russia, Jenekel, Kirtch, Asoph, &c., and stipulates for the freedom of Russian commerce in the Black Sea, &c. By the treaty of commerce between Russia and Turkey, signed at

* By the general act of the Congress of Vienna, "The Duchy of Warsaw, with the exception of those provinces and districts which are otherwise disposed of by the following articles, is united to Russia. It shall be irrevocably bound to the Russian empire: by its constitution it is to be enjoyed by his Majesty the Emperor of all the Russias, his heirs and successors for ever. His imperial majesty reserves to himself the power of determining the extent of that part of his states, which is to be separately administered, as he shall deem fit. He will take with his other titles that of Czar, King of Poland, according to the customary formula of his other possessions.

"The Polish subjects of Russia, Austria, and Prussia, shall enjoy a representation, and national institutions, modified into such forms of government as the powers upon whom they depend may judge expedient to grant."

Constantinople in 1783, various privileges of navigation and trade are ceded to Russia. By treaty of friendship, January 8, 1784, further concessions are made by the Porte to Russia. In 1792, by a treaty of peace between Russia and Turkey, the latter ceded to Russia Oxzakov and the country between the Bug and the Dniester. Treaty between Russia and Turkey, signed December, 1798, stipulates peace, friendship, mutual succour, &c. By the proclamation of the 28th January, 1801, the emperor declares Georgia to be a Russian possession. The treaty of armistice, 1807, stipulates for peace, &c., between Russia and Turkey. By the treaty of Bucharest, signed in May, 1812, Russia acquired the Turkish provinces of Bessarabia and part of Moldavia, making the Pruth the boundary of Russia.

The treaty of Ackerman, signed in October, 1826, confirms all the articles of the treaty of Bucharest, and transfers, *de facto*, the islands of the Danube opposite Kilia and Ismael to Russia; and places Moldavia and Walachia under the tutelage of Russia, acknowledging a certain right of intervention on the part of the latter in the affairs of Servia. Perfect freedom of trade, and the free election, by the people, of their Hospodars, are stipulated for by a separate act of the treaty of Ackerman.

The treaty of peace between Russia and the Porte, signed at Adrianople, September, 1829, gives *de facto* the command of the Danube to Russia; and the sovereignty of the latter over Georgia, Mingrelia (Circassia), Imeritia, Gouriel, and the other Caucasian states is acknowledged by the Porte under the fourth article of this treaty. The tutelage of Russia over the Danubean principalities, and the utmost freedom to Russian navigation and commerce, in the Ottoman Empire, are also stipulated for in this celebrated treaty. A separate act is annexed regarding Moldavia and Walachia. The treaty of Unker-Skelessi was another remarkable convention, but its provisions are considered to have expired, or, are not admitted. Russia has negotiated treaties of peace, friendship, and commerce, with Persia, China, Austria, Prussia, France, Sweden, Denmark, the United States, Greece, jointly or separately, and with nearly all other countries.

The treaties and conventions of any consequence, which England and Russia have signed, are the following.

In 1750 Great Britain acceded to the treaty of alliance of 1746, between Russia and Austria; and in 1755 and 1761, treaties of friendship and commerce were concluded between Great Britain and Russia. The convention of commerce between England and Russia, signed 25th of March, 1793, admitted British vessels and their cargoes in the ports acquired by Russia in the Black Seas; and reduces the duties on their cargoes one-fourth. By the treaty of 1797, between England and Russia, freedom of navigation and trade between both countries was established, and perfect equality of duties to be paid on merchandize, whether

imported or exported by Russian ships or subjects, or by British ships and subjects. Treaties of alliance, &c., between Great Britain and Russia, were signed 29th of December, 1798, and June, 1799, 1801, and 1805.

Conventions, with England were signed at Orebro in 1812, and at Reichenbach and at Peterwalden in 1813. Peace, &c., and slave-trade stipulations, general treaty of Vienna 1815. Treaty, Russian Dutch loan, at London, 1815. Convention and award, treaty of Ghent, July, 1822. Convention, South-western coast of America, 1825. British orders in council, admitting Russian vessels in ports of British possessions, 1827. Convention, Russian Dutch loan, November, 1831. Acts of Parliament Russian Dutch loan and Greek loan, 1832. Convention, slave trade, St. Petersburg, 1835. Treaty with England, Austria, Prussia, and Turkey, signed at London in 1841; which was followed by England and Austria invading Syria, and causing its evacuation by Ibrahim Pacha.

CONVENTION between his Britannic Majesty, and his Majesty the Emperor of Russia; signed at St. Petersburg, February 28-16, 1825.

ART. I. It is agreed that the respective subjects of the High Contracting Parties shall not be troubled or molested, in any part of the ocean, commonly called the Pacific Ocean, either in navigating the same, in fishing therein, or in landing at such parts of the coast as shall not have been already occupied, in order to trade with the natives, under the restrictions and conditions specified in the following articles.

II. In order to prevent the right of navigating and fishing, exercised upon the ocean by the subjects of the High Contracting Parties, from becoming the pretext for an illicit commerce, it is agreed that the subjects of his Britannic Majesty shall not land at any place where there may be a Russian establishment, without the permission of the governor or commandant; and, on the other hand, that Russian subjects shall not land, without permission, at any British establishment on the North-west Coast.

III. The line of demarcation between the possessions of the High Contracting Parties, upon the coast of the continent, and the islands of America to the north-west, shall be drawn in the manner following:

Commencing from the southernmost point of the island called *Prince of Wales* Island, which point lies in the parallel of 54 deg. 40 min. N. latitude, and between the 131st and the 133d deg. of W. longitude (meridian of Greenwich), the said line shall ascend to the north along the channel called *Portland Channel*, as far as the point of the continent where it strikes the 56th deg. N. latitude; from this last-mentioned point, the line of demarcation shall follow the summit of the mountains situated parallel to the coast, as far as the point of intersection of the 141st deg. of W. longitude (of the same meridian); and, finally, from the said point of intersection, the said meridian line of the 141st deg., in its prolongation as far as the Frozen Ocean, shall form the limit between the Russian and British possessions on the continent of America to the north-west.

IV. With reference to the line of demarcation laid down in the preceding Article it is understood;

1st. That the island called *Prince of Wales* Island shall belong wholly to Russia.

2d. That wherever the summit of the mountains which extend in a direction parallel to the coast, from the 56th deg. of N. latitude to the point of intersection of the 141st deg. of W. longitude, shall prove to be at the distance of more than ten marine leagues from the ocean, the limit between the British Possessions and the line of coast which is to belong to Russia, as above mentioned, shall be formed by a line parallel to the windings of the coast, and which shall never exceed the distance of ten marine leagues therefrom.

V. It is moreover agreed, that no establishment shall be formed by either of the two

parties within the limits assigned by the two preceding articles to the possessions of the other: consequently, British subjects shall not form any establishment either upon the coast, or upon the border of the continent comprised within the limits of the Russian possessions, as designated in the two preceding Articles; and, in like manner, no establishment shall be formed by Russian subjects beyond the said limits.

VI. It is understood that the subjects of his Britannic Majesty, from whatever quarter they may arrive, whether from the ocean, or from the interior of the continent, shall for ever enjoy the right of navigating freely, and without any hindrance whatever, all the rivers and streams which, in their course towards the Pacific Ocean, may cross the line of demarcation upon the line of coast described in Article III. of the present convention.

VII. It is also understood, that, for the space of ten years from the signature of the present convention, the vessels of the two powers, or those belonging to their respective subjects, shall mutually be at liberty to frequent, without any hindrance whatever, all the inland seas, the gulfs, havens, and creeks on the coast mentioned in Article III. for the purposes of fishing and of trading with the natives.

VIII. The Port of Sitka, or Novo Archangelsk, shall be open to the commerce and vessels of British subjects for the space of ten years from the date of the exchange of the ratifications of the present convention. In the event of an extension of this term of ten years being granted to any other power, the like extension shall be granted also to Great Britain.

IX. The abovementioned liberty of commerce shall not apply to the trade in spirituous liquors, in fire arms, or other arms, gunpowder or other warlike stores; the High Contracting Parties reciprocally engaging not to permit the abovementioned articles to be sold or delivered, in any manner whatever, to the natives of the country.

X. Every British or Russian vessel navigating the Pacific Ocean, which may be compelled by storms or by accident, to take shelter in the ports of the respective parties, shall be at liberty to refit therein, to provide itself with all necessary stores, and to put to sea again, without paying any other than port and lighthouse dues, which shall be the same as those paid by national vessels. In case, however, the master of such vessel should be under the necessity of disposing of a part of his merchandize in order to defray his expenses, he shall conform himself to the regulations and tariffs of the place where he may have landed.

XI. In every case of complaint on account of an infraction of the articles of the present convention, the civil and military authorities of the High Contracting Parties, without previously acting or taking any forcible measure, shall make an exact and circumstantial report of the matter to their respective courts, who engage to settle the same in a friendly manner, and according to the principles of justice.

XII. The present convention shall be ratified, and the ratifications shall be exchanged at London, within the space of six weeks, or sooner if possible.

In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at St. Petersburg, the twenty-eighth—sixteenth—day of February, in the year of our Lord one thousand eight hundred and twenty-five.

Treaty of Commerce and Navigation between Her Majesty and the Emperor of all the Russias, signed at St. Petersburg, January 11, 1843. Ratifications exchanged at London, January 31, 1843.

In the name of the Most Holy and Indivisible Trinity.

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Majesty the Emperor of all the Russias, being desirous of extending, increasing, and consolidating the commercial relations between their respective dominions and possessions, and of thereby procuring all possible facilities and encouragements for those of their subjects who partake in those relations; and being persuaded that nothing can more contribute to the accomplishment of their mutual wishes in this respect, than the reciprocal abolition of

the differential and countervailing duties which are at present exacted and levied on the vessels or produce of either of the two states in the ports of the other, have named their plenipotentiaries for the conclusion of a treaty to this effect, that is to say:

Who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following Articles:

ART. I. There shall be reciprocal freedom of navigation and commerce for the ships and subjects of the two High Contracting Powers, in all parts of their respective dominions where navigation and commerce are at present allowed, or may hereafter be allowed, to the ships and subjects of any other nation.

II. From the date of the exchange of the ratifications of the present treaty, British vessels arriving in, or departing from, the ports of his Majesty the Emperor of all the Russias, and Russian vessels arriving in, or departing from, the ports of the United Kingdom of Great Britain and Ireland, and of all the possessions of her Britannic Majesty, shall be subject to no other or higher duties or charges, of whatsoever nature they may be, than those which are now, or shall hereafter be imposed on national vessels, on their entering into, or departing from, such ports.

III. In consideration that British ships arriving directly from other countries than those belonging to the High Contracting Parties, are admitted with their cargoes into the ports of the Russian empire, without paying any other duties whatsoever than those payable by Russian vessels; and in consideration of the advantages, which, in this respect, the present treaty specifically grants to British commerce in the Grand Duchy of Finland; it is agreed that from the date of the exchange of the ratifications of the present treaty, Russian vessels arriving from the mouth of the Vistula, the Niemen, or any other river which forms the outlet of a navigable stream, having its source in the dominions of his Majesty the Emperor of all the Russias, or passing through the said dominions, shall be admitted, with their cargoes, into the ports of the United Kingdom of Great Britain and Ireland, and of all the possessions of her Britannic Majesty, exactly in the same manner as if those vessels arrived directly from Russian or Finnish ports, with all the privileges and immunities agreed upon by the present treaty of navigation and commerce. In like manner, Russian vessels proceeding from any port of Great Britain, or of the British possessions, for the mouth of any of the abovementioned rivers, shall be treated as if they were returning to a port of the empire of Russia, or of the Grand Duchy of Finland. It is, however, understood, that these privileges shall apply to Russian vessels and their cargoes, with respect to places situated at the mouths of the abovementioned rivers, only so long as British vessels and their cargoes shall be treated at those places, on their arrival and departure, on the same footing with Russian vessels.

IV. All productions of the soil, industry, and art of the dominions and possessions of his Majesty the Emperor of all the Russias, including the said productions which may be exported by the rivers or streams mentioned in the preceding Article, and which may be imported into the ports of the United Kingdom and the possessions of her Britannic Majesty; and also all the productions of the soil, industry, and art of the United Kingdom and possessions of her Britannic Majesty, which may be imported into the ports of his Majesty the Emperor of all the Russias, shall enjoy reciprocally, in all respects, the same privileges and immunities, and may be imported and exported exactly in the same manner, in vessels of the one as in vessels of the other High Contracting Party.

V. All articles which are not the productions of the soil, industry, and art of the respective states or of their possessions, and which may be legally imported from the ports of his Majesty the Emperor of all the Russias, as likewise from those of the rivers and streams mentioned in the third Article, into the ports of the United Kingdom of Great Britain and Ireland, and of all the possessions of her Britannic Majesty, in Russian vessels, shall be subject to the same duties only as would be payable upon the same articles as if they were imported in British vessels.

In like manner, all articles which are not the productions of the soil, industry, and art of the respective states, or of their possessions, and which may be legally imported from the ports of the United Kingdom, and of all the possessions of her Britannic Majesty, into the ports of his Majesty the Emperor of all the Russias, in British vessels, shall be subject

to the same duties only which would be payable upon the same articles if they were imported in Russian vessels.

Her Britannic Majesty grants by this treaty to Russian navigation and trade, all the benefits and privileges of navigation and commerce now enjoyed, or which may hereafter be enjoyed, by the most favoured nations, under existing laws and acts of parliament, or in virtue of orders in council, or treaties.

VI. All merchandize and articles of commerce which, according to the stipulations of the present treaty, or according to the laws and ordinances in force in the respective countries, may be legally imported into or exported from the dominions and possessions of the two High Contracting Parties, either under the British flag, or under the Russian flag, shall, in like manner, be subject to the same duties, whether imported in vessels of the other state, or in national vessels: and the same bounties, drawbacks, and advantages shall be granted upon all merchandize and articles of commerce which may be legally exported from the ports of either state, whether exported in vessels of the one or in vessels of the other state.

VII. All merchandize and articles of commerce which shall be imported into, deposited or warehoused in, the ports of the dominions and possessions of the High Contracting Parties, shall be subject, while so warehoused, to the same regulations, conditions, and duties, whether imported in British or in Russian vessels. In the same manner, the re-exportation of such merchandize or articles of commerce shall be treated in the same manner, and be liable to the payment of the same duties, whether exported in British or in Russian vessels.

VIII. No priority or preference shall be given, directly or indirectly, by either of the two governments, or by any company, corporation, or agent acting in its name or under its authority, in the purchase of any production of the soil, industry, or art of either of the two states and their possessions, imported into the ports of the other, on account of the nationality of the vessel in which such article may have been imported; it being the fixed intention of the two contracting parties, that no difference or distinction whatever shall be made in this respect.

IX. In regard to the commerce to be carried on in Russian vessels with the British possessions in the East Indies, her Britannic Majesty consents to grant to the subjects of his Majesty the Emperor of all the Russias, the same advantages and privileges as are or may be enjoyed, under any treaty or act of parliament, by the subjects or citizens of the most favoured nation; subject to the laws, rules, regulations, and restrictions which are or may become applicable to the vessels and subjects of any other state enjoying the same advantages and privileges for trading with the said possessions.

X. The stipulations of the present treaty shall not apply to the coasting trade carried on between port and port in the dominions of either contracting party, by the sailing or steam vessels of the other, so far as regards the carrying of passengers, merchandize, or articles of commerce; this trade being reserved exclusively to national vessels.

XI. The vessels and subjects of the High Contracting Parties shall, by the present treaty, reciprocally enjoy all such advantages, immunities, and privileges, in the ports of their respective dominions and possessions, as are now enjoyed by the navigation and commerce of the most favoured nations; the intention being to secure, in the United Kingdom and in the British possessions, to Russian vessels and subjects, the full and entire advantages of navigation and commerce granted by existing laws and acts of parliament, orders in council, or treaties, to other powers, or which may hereafter be granted; and, in like manner, British vessels and subjects shall enjoy, in the ports of the dominions and possessions of his Majesty the Emperor of all the Russias, the full and entire advantages of navigation and commerce granted by existing laws, regulations, and ordinances, or by treaties, to foreign powers, or which may hereafter be granted. And their Majesties the Queen of the United Kingdom of Great Britain and Ireland, and the Emperor of all the Russias, engage reciprocally not to grant any favours, privileges, or immunities whatsoever, in matters of commerce and navigation, to the subjects or citizens of any other state, which shall not be also at the same time granted to the subjects of the other High Contracting Party, gratuitously, if the concession in favour of the other state shall have been gra-

tuitous, or upon giving as nearly as possible the same compensation or equivalent, in case the concession shall have been conditional.

XII. It is understood that, in regard to commerce and navigation in the Russian possessions on the north-west coast of America, the convention concluded at St. Petersburg, on the 16th—28th—February, 1825, continues in force.

XIII. Any British or Russian vessel which may be compelled by stress of weather or by accident to take shelter in the ports of either of the High Contracting Parties, shall be at liberty to refit therein, to procure all necessary stores, and to put to sea again, without paying any other than port and lighthouse dues, which shall be the same as those payable by national vessels. In case, however, the master of such vessel should be under the necessity of disposing of a part of his merchandize in order to defray his expenses, he shall be bound to conform to the regulations and tariffs of the place to which he may have come.

In the event of a vessel being wrecked at a place belonging to either of the High Contracting Parties, there shall not only be afforded to the persons shipwrecked every kind of assistance, but, moreover, the merchandize and effects which they may have thrown overboard, or which may have been saved, shall not be seized or detained under any pretext whatsoever. The said effects and merchandize shall, on the contrary, be preserved and restored on payment of the same rate of salvage, and of customs or other duties, which would have been payable in the like case of a wreck of a national vessel. In the case either of shipwreck, or of a vessel being driven into port by stress of weather, the respective consuls, vice-consuls, or commercial agents, shall be authorized to interpose in order to afford the necessary assistance to their fellow-countrymen.

XIV. The consuls, vice-consuls, or commercial agents of each of the two High Contracting Parties residing in the dominions of the other, shall receive from the local authorities such assistance as can by law be given to them, for the recovery of deserters from ships of war or merchant vessels of their respective countries.

XV. The present treaty shall remain in force during the space of ten years, dating from the exchange of the ratifications thereof; and further, until the expiration of twelve months after either of the High Contracting Parties shall have given notice to the other of its intention to put an end thereto; each of the High Contracting Parties reserving to itself the right of giving such notice to the other at the expiration of the first nine years: and it is agreed between them, that at the expiration of twelve months after such notice shall have been received by either of the High Contracting Parties from the other, the present treaty, and all the stipulations contained therein, shall cease to be binding on the two parties.

XVI. The present treaty shall be ratified, and the ratifications thereof exchanged at London, at the expiration of one month, or sooner if possible.

In witness whereof the respective Plenipotentiaries have signed the same, and have fixed thereto the seals of their arms.

Done at St. Petersburg, the eleventh day of January, in the year of our Lord one thousand eight hundred and forty-three.

SEPARATE ART. I. The commercial intercourse of Russia with the kingdoms of Sweden and Norway being regulated by special stipulations, which may hereafter be renewed, and which do not form part of the regulations applicable to foreign commerce in general, the two High Contracting Parties, being desirous of removing from their commercial relations every kind of doubt or cause for discussion, have agreed that those special stipulations granted in favour of the commerce of Sweden and Norway, in consideration of equivalent advantages granted in those countries to the commerce of the Grand Duchy of Finland, shall in no case apply to the relations of commerce and navigation established between the two High Contracting Parties by the present treaty.

II. It is understood, in like manner, that the exemptions, immunities and privileges hereinafter mentioned, shall not be considered as at variance with the principle of reciprocity which forms the basis of the treaty of this date, that is to say:—

1. The exemption from navigation dues during the first three years, which is enjoyed by vessels built in Russia, and belonging to Russian subjects;

2. The exemptions of the like nature granted in the Russian ports of the Black Sea,

the sea of Asoph, and the Danube, to such Turkish vessels arriving from ports of the Ottoman empire, situated on the Black Sea, as do not exceed eighty lasts burden;

3. The permission granted to the inhabitants of the coast of the government of Archangel, to import duty free, or on payment of moderate duties, into the ports of the said government, dried or salted fish, as likewise certain kinds of furs, and to export therefrom, in the same manner, corn, rope and cordage, pitch, and ravensduck;

4. The privilege of the Russian American company;

5. The privilege of the Steam Navigation companies of Lubeck and Havre; lastly,

6. The immunities granted in Russia to certain English companies, called "Yacht Clubs."

The present separate articles shall have the same force and validity as if they were inserted, word for word, in the treaty signed this day. They shall be ratified, and the ratifications thereof exchanged at the same time.

In witness whereof the respective Plenipotentiaries have signed the same, and have fixed thereto the seals of their arms.

Done at St. Petersburg, the eleventh day of January, in the year of our Lord one thousand eight hundred and forty-three.

CONVENTION BETWEEN RUSSIA AND THE UNITED STATES.

ART. I. It is agreed that in any part of the great ocean, commonly called the Pacific Ocean, or South Sea, the respective citizens or subjects of the High Contracting Powers shall be neither disturbed nor restrained, either in navigation or in fishing, or in the power of resorting to the coasts, upon points which may not already have been occupied, for the purpose of trading with the natives, saving always the restrictions and conditions determined by the following Article:

II. With the view of preventing the rights of navigation and of fishing, exercised upon the great ocean, by the citizens and subjects of the High Contracting Parties, from becoming the pretext for an illicit trade, it is agreed that the citizens of the United States shall not resort to any port where there is a Russian establishment, without the permission of the governor or commander; and that reciprocally the subjects of Russia shall not resort, without permission, to any establishment of the United States, upon the north-west coast.

III. It is moreover agreed, that hereafter there shall not be found by the citizens of the United States, or under the authority of the said States, any establishment upon the north-west coast of America, nor in any of the islands adjacent, *to the north* of fifty-four degrees and forty minutes of north latitude; and that in the same manner, there shall be none formed by Russian subjects, or under the authority of Russia, *south* of the same parallel.

IV. It is nevertheless understood, that during a term of ten years, counting from the signature of the present convention, the ships of both powers, or which belong to their citizens or subjects respectively, may reciprocally frequent, without any hindrance whatever, the interior seas, gulfs, harbours, and creeks, upon the coast mentioned in the preceding Article, for the purpose of fishing and trading with the natives of the country.

V. All spirituous liquors, firearms, or other arms, powder, and munitions of war of every kind, are always excepted from this same commerce permitted by the preceding article; and the two powers engage reciprocally, neither to sell, or suffer them to be sold, to the natives, by their respective citizens and subjects, nor by any person who may be under their authority. It is likewise stipulated, that this restriction shall never afford a pretext, nor be advanced in any case, to authorize either search or detention of the vessels, seizure of the merchandize, or, in fine, any measure of constraint whatever towards the merchants or the crews who may carry on this commerce; the High Contracting Powers reciprocally reserving to themselves to determine upon the penalties to be incurred, and to inflict the punishment in case of the contravention of this Article, by their respective citizens or subjects.

Signed at St. Petersburg, the 17th—5th—of April, 1824.

CHAPTER VII.

COMMERCIAL LEGISLATION OF RUSSIA.

Russia may be said to prohibit the importation of every material like those which can be drawn, by the labour of her serfs, from her mines and forests; and of every foreign manufactured article, in order that the labour of those serfs, with the aid of machinery either imported or made in the country, and directed by skilful foreign artisans, shall be made to produce articles either similar to, or that may be substituted for, those of foreign manufacture. We readily admit that this prohibitive system so generally injurious to the empire, may be very profitable to the nobles at Moscow and elsewhere, who are the proprietors of the cheaply and coarsely fed and clad serfs.

Russia, for the purpose of supplying and carrying on her manufactures, permits the importation of mathematical, optical, astronomical, and agricultural instruments, newly-invented machinery and models of machines, mules, and all the materials enumerated hereafter in Table I. of the Tariff, required in the arts.

Cotton twist, still required by her, and sheep's wool, several other articles, not enumerated, are admitted at small nominal duties.

A recent relaxation of the rigidity of her commercial legislation has been generally promulgated as a return to liberal trading principles: but on examining the prohibitions abolished, we discover that they are either of no great importance, or that the duties substituted are so high as to preclude any profitable legitimate importation into Russia of manufactured goods.

Before 1805, woollens, cottons, and silk goods were allowed to be imported for consumption generally, on paying either fixed, or *ad valorem* duties, varying from 5 to 45 per cent. On the 19th March that year, the *ad valorem* duties on woollens were changed into fixed duties, and a new tariff promulgated, admitting generally all goods for consumption. Prohibitions were afterwards substituted.

According to the terms of an Ukase, dated March, 1816, it was expected that Russia would return to a more liberal commercial system. That ukase sets forth: "After the liberal and satisfactory arrangements, political and commercial, which have been concluded between the powers of Europe (at Vienna), we have thought it for the public benefit to make some alterations in the prohibiting system of our trade. For this we appointed in the beginning of last year (1815), a committee to prepare a plan for the new tariff. Having now heard the opinion of the council of state, and ourselves having examined into all the particulars relative thereto, we have judged it necessary to allow the importation of several foreign articles prohibited by the last tariff, continuing, however, in force the prohibition of some others."

The following are the principal changes made in the Russian Tariff of Russian customs duties since the year 1816:

TARIFF, 1816.

		Import Duty. rou.	cop.
Coffee	pood	3	0
Sugar, raw	do.	1	50

* Cards may only be imported for the Imperial Foundling Hospital, which has the exclusive right of manufacturing and selling cards.

† Liquors imported in casks are reckoned in hogsheads of commercial measure: if in bottle they pay for the number of bottles at not less than 15 to a vedro; if under 15 and above 17, they must be reckoned at vedros of 16 bottles, and pay duty accordingly.

‡ Watch works, put together, pay half the duty of silver watches.

(continued)

Observations.—1. Cordage and cables are allowed to be exported free of duty to 5th April, 1842. (Permission since extended to 5th April, 1845. See "Commercial Gazette" of March, 1842.)

2. All kinds of cordage and cables, exported from the government of Archangel, by coasters, are free of duty.

1. All kinds of grain exported, by coasters, from the government of Archangel, are free of duty.

2. All kinds of corn to Prussia, through custom-houses on the inland frontier, pass free.

3. At all the other custom-houses, the exportation of wheaten and all other flour is allowed, free of duty, until 1st January, 1846, after which time it may be exported on paying half the rate of duty which is levied on the grain from which it is made.

4. Malt and grits, of all kinds, pay, on exportation, half the duty imposed on the grain from which they are manufactured.

5. On importing flour, grits of all kinds, and malt, duty, and half the duty imposed on the grain, is to be levied.

* White cotton stuffs, mixed with horsehair, pay a duty of 83 copecs per lb.

† Cotton manufactures, mixed with flax, called "drill," are to pass, if of one colour, under this head, and pay duty accordingly.

(*continued*)

* Variegated and with coloured patterns, spots, and stripes, woven and embroidered, pay this duty.

† Counterpanes, if embroidered with gold, silver, silk, or worsted or cotton, come under the rubric for goods of this description.

‡ 1. Cotton goods, mixed with silk or worsted, come under silk or woollen manufactures.

2. From the frequent disputes as to whether particular cotton goods are to be considered half or non-transparent, and especially as regard striped and spotted articles, it is laid down as a rule, that if any doubt arise thereon, only those goods are to be considered non-transparent which contain not more than 9¾ square arshines in the lb.; but if a lb. contain more than 9¾, and not above 12½, then in lieu of 2 rou. 75 cop., the duty shall be 1 rou. 66 cop. per lb. It is understood that this rule does not refer to bobbinet, pettinet, and lace, nor to such articles as pay by the tariff a duty of more than 83 cop. and 2 rou. 75 cop. sil. per lb., nor to those Turkish manufactures which are exclusively admitted in the ports of the Danube, and Black and Azof Seas.

Observations.—Manufactures of cotton mixed with silk, and Asiatic silk stuffs, imported from Asia Minor to the Crimea, and to the Ports of Theodosia, Eupatoria, and Kertsh, pay duty according to a special list.

Samples of printed goods, as muslins and quiltings equal to 1 arshine in length (28 inches) and not more than *one* of *one* pattern, are allowed to be imported for manufactures *duty* free, provided permission be obtained.

Foreign manufactures, not allowed to be imported, but which may be required as samples, may be admitted, in the requisite quantity, by the express permission of the minister of finance.

* If imported in plain boxes or cases, without ornaments, knives, razors, scissors, &c., they are to be weighed together with the box, and the duty levied as for those articles.

(*continued*)

* 1. It is immaterial whether the patterns be woven or embroidered, or of any particular colours.

2 Handkerchiefs, scarfs, pelerines, &c., allowed to be imported, trimmed with lace, blonde, &c., pay duty according to the article with which they are trimmed, if they be themselves not liable to a higher duty.

† Cotton manufactures, transparent, and semi-transparent, embroidered with white cotton, for pelerines, caps, and collars, &c., not made up, pay duty, according to this rubric.

‡ On the exportation of goods in mat-bags, the bags pay no duty.

§ Gold and silver articles allowed to be imported, must be of the proof required by the ukase of the 27th of November, 1840.

(continued)

* The duty upon the watches is levied separately.

† Oil of bitter almonds is to be destroyed on its importation, agreeably to the 639th Section of Vol. VI. of the Code of Customs Laws.

‡ Opium is to be delivered, as heretofore, free for the government use, under an authority from the Minister of Finance.

§ Russian orders, &c., prohibited.

‖ If imported in small wooden boxes, furnished for drawing, without ornaments, they are weighed with the box.

Paints prepared in oil pay the same duty as dry paints.

Samples of paints or dyes pay the same duty as the articles, according to this Tariff.

—— and chip, in tape, and plaited	do.	do.	1 25	do.	0 4 7 5-9	do.

(*continued*)

* Ribbons, scarfs, and handkerchiefs, not being themselves transparent, but having transparent borders, are to pay duty as *non-transparent* manufactures, if the border for scarfs and handkerchiefs be not above 3 vershokes (5¼ inches) in breadth; and as regards ribbons, if not above *one-third* of the whole breadth. If above 4 vershokes (7 inches) they are considered as *stuffs*.

† 1. The importation of spirits is only allowed in pipes containing 2 hogsheads of not less than 10 ankers, in vessels of smaller size it is not allowed, unless for ships' stores.

2. The duty on spirits is to be levied on the strength, as shown on the first examination, and those which are above 10 degrees, but not quite 11 degrees, will be cleared as 10; also those above 15 and not 16 pay same duty as those between 10 and 15 degrees.

‡ Vinegar made from beer—prohibited. (*See Table II.*)

§ The special permission of the Minister of Finance is necessary, to allow of their being imported.

‖ If gold or silver form the principal value of such articles, the duty is to be levied as on articles of gold or silver.

(continued)

* The following sorts are to be considered raw sand-sugars: viz.—
Yellow and red.
White, if prepared on the spot where the cane grows, even if somewhat refined, but still retaining a certain smell peculiar to raw sugar, &c. On the contrary all sugar crushed from lumps, melis, or refined, or small, prepared in this manner, is not considered raw, from whencesoever it may come.

† The importation of sugar is only permitted by sea. It is prohibited by land or by rivers. The drawback at Archangel and Revel (in virtue of existing ukases) of 50 copecs per pood is to be continued.

All the foregoing as well as those prohibited are exempt from export duty.

The importation of medicines, simple or composed, new, or already known, but not named in the foregoing table of medicinal drugs, cannot be allowed, until there has been presented a sample to the department of exterior commerce, and by its intermediation the permission of the college of medicine obtained; such medicines will be assimilated by the college, to that which in the present table of drugs is the most similar to it, so that the duties tariffed may be collected, or the article passed free of duty.

All persons having the right to trade in Russia may import the foregoing drugs and medicines.

All other drugs and medicines are prohibited except the following, which are admitted on paying a duty of 10 per cent, *ad valorem*, and 2 copecs per rouble as a quarantine duty.

1. Magnesia lozenges; 2. Acidum citri concretum (essential salt of lemons); 3. Pasta altheæ; 4. Pasta liquiritiæ; 5. Pasta jujubæ; 6. Pastillæ menthæ piperitæ (peppermint lozenges); 7. Species pectorales Helveticæ; 8. Pannus ceratus antarthriticus; 9. Emplastrum ad fonticulos (Sandwell's issue plaster); 10. Essentia zingibires (essence of ginger); 11. Essentia synapis (essence of mustard); 12. Eau pectorale (aqua menthæ piperitæ spirituosa); 13. Trochisci ipecacuanhæ; 14. Ching's worm-lozenges; 15. Paregoric lozenges; 16. Stear's opodeldoc; 17. Roob antisiphilitique de Laffecteur; 18. Ceratum sabinæ; 19. Pomade vésicatoire végétale de Büchner; 20. Baume d'Holland; 21. Créosote, oleum hyssopi et oleum beristici; 22. Sel de Kreutznach, Kreutznacher Mutterlaugensalz.

ABSTRACT, showing the difference between the old and the new Customs Duties at the Russian Ports and Frontiers in Europe, on most of the commodities supplied by England and her Colonies, and on some of the Articles furnished by other Countries.

An additional duty of 1¼ per cent has been levied since January 1, 1843, on all foreign goods imported into St. Petersburg. This duty is to be appropriated to the expense of erecting a new bridge across the Neva.

Regulations for collecting the Duties on Merchandize, rated *ad valorem*, as stated in the General Tariff annexed.

Section I. The declarations presented to the customs for the calculation of duties on merchandize rated *ad valorem*, must be signed by the proprietor of such merchandize, or by his *consignee* or agent: the price or value should also be in his handwriting, in *full letters and in figures*. It is expressly forbidden to state in the said declarations any other article of merchandize except those rated *ad valorem*.

II. These declarations, which the owner of the merchandize or his agent must deliver personally to the Chamber of Customs assembled, is to be read aloud by the director or another member of the administration, who asks the proprietor or agent if the declaration is signed and the prices marked by him, as stated. On the latter answering in the affirmative, this is endorsed on the declaration, by the director, or in his absence, by the senior member present of the customs, who affixes his signature opposite.

III. The price of each article of merchandize must be separately stated in the declaration.

IV. This declaration is equally obligatory on the proprietor as if affirmed by him on oath.

V. Any *employé* of the bureau of the customs has the right to take cognizance of this declaration while the formalities are going through which are prescribed for such payment of duties.

VI. If, during the course of these formalities, any such clerk of the customs considers that the valuation of such merchandize is too low, he is required, without delay, and before the duties are *acquitted* (which on articles *ad valorem* cannot take place until eight days after the declaration has passed its final revision) to make known the undervaluation to the Chamber of Customs, which transmits, immediately, a detailed report of the same to the department of Exterior Commerce.

VII. The Chamber of Customs is by law to seize, immediately, merchandize undervalued, and if it decides that the declared value is below the price current, and prejudicial to the interests of the crown, the chamber has authority to take, after the report made of such undervaluation, such merchandize on account of the customs, paying to the owner or agent the declared value, with ten per cent in addition as full indemnification.

VIII. This payment is made, by virtue of an order of the customs, from the funds in possession of that department. The customs are authorized to sell merchandize, so seized and paid for, by auction, according to a regulation prescribed by law, as to the circumstances and time considered most favourable for the sale, announcing to the public through the medium of the Gazettes or other publications, the terms fixed for the sale, with a detailed statement of the quantity and quality of the merchandize.

IX. When the sale has taken place, they deduct from the proceeds the money due to the crown—viz., the amount of the payment made to the proprietor of the merchandize, and the entrance duties due to the customs, calculating them according to the declaration whatever be the produce of the sale. They also retain the expenses of sale.

X. The surplus is deposited in a particular bank, under the immediate inspection of the Chamber of Customs. This bank is visited and its accounts verified every month conformably to the customs' general regulations. These deposits remain until the end of the current year.

XI. The distribution of the deposits in this bank, must take place at latest on the 10th of January of the following year, and the amounts are divided between the chief officers of the precincts, the director, and all the members and *employés* of the customs attached to the division of entrance duties: the first officer, or the clerk of the customs, who detected the fraud, receives the quarter of the profit of the sale of the said merchandize; the other three-quarters are distributed to the *employés* above named, in proportion to their grade of appointment. The *employé* who discovered and reported the fraud, participates again in this last distribution, as well as the other *employés*.

XII. If any member or *employé* of the customs, having a right to his share of the distribution, leaves his post before the expiration of the year, he does not consequently lose the amount coming to him; if he dies, it is accounted for to his legitimate heirs. The mem-

bers and *employés* of the customs cannot in any case be deprived of the recompence which is thus assured them by law.

XIII. As the crown does not receive any profit from these operations, it ought also not to sustain any loss. If the sum derived from the public sale of seized merchandize be insufficient to pay the owner the amount of his declared valuation, augmented ten per cent, with the duties of entry to the crown, and also the expenses of sale, the deficiency to the crown is made up by all the participators of the proceeds of sale, without any exception, and in the proportions fixed for their respective shares of profit.

General Rules to be observed in executing the Stipulations of the General Tariff.

Section I. The present tariff extends to all the customs and European barriers, by land and by sea, through which the importation or exportation of merchandize is permitted, to the exclusion of those which are on the Asiatic frontiers, and which have particular tariffs. In the Trans-Caucasian provinces, the operation of the present tariff is fixed by the regulations of the 3d of June, 1831, which established the organization of the customs and commerce of those provinces. Tariffs and particular regulations have been published for the commerce of Russia with the kingdom of Poland, and with Finland. Those for the commerce of Finland are dated the 1st of August, 1822, and the 23d of January, 1834; those for the commerce with the kingdom of Poland are of the 1st of August, 1822, and the 12th of November, 1831.

II. *In respect to the authority of the customs relative to the importation of foreign merchandize, and the collection of duties,* all the customs and barriers through which are transacted the European commerce of Russia, are divided into *three classes.*

III. The *customs of the first class* are those by which may be imported all foreign merchandize, of which the entry is not prohibited by the present tariff, or which is subjected only to light restrictions. The terms of six and eight months are allowed those customs for the acquittal or discharge of the duties collected, and a few of them enjoy the privilege of warehousing and forwarding merchandize to other customs for them to collect the duties. According to these regulations, the customs of the first class are thus separated into two divisions.

IV. *The customs of the first division of the first class,* by which the importation of foreign merchandize is permitted with the privilege of warehousing, and the acquittal of duties within the space of six and eight months, and which are authorized to forward merchandize to be deposited at other customs, are the following:

St. Petersburg, Archangel, Riga, and Reval. — The *custom-house of Reval* has the right of warehousing, on making the merchants discharge the duties every six months on merchandize imported by sea, direct from foreign countries, and not exclusively destined for any other ports specified in the annexed tariff.

In cases where foreign vessels are obliged to take shelter at Reval in the event of damage received at sea, or in the spring or autumn in consequence of the ice preventing their sailing for St. Petersburg; and if their cargoes consist of merchandize, which is not admitted on paying the duties at the port of Reval, the *minister of finances* is authorized, after the verification of documents which prove an urgent case, to permit the acquittal at Reval of the duties on the said merchandize: under all other circumstances the prescribed regulation must be strictly adhered to.

Libau and Odessa.—The maritime custom-house of Odessa is directed according to particular regulations published for the free ports: it is permitted to import through this custom-house in general, all kinds of merchandize except salt and articles of iron, steel, and cast-iron. There is collected on merchandize imported for the consumption of the town (and the importation of which is permitted according to the actual tariff) one-fifth part and 12½ per cent additional duty; upon prohibited merchandize, the duties are collected according to the tariff of 1819. There is deducted on liquids for drink, as arrack, rum, and shrub, not the one-fifth part, but the total duties, determined by the present tariff. The importation of other drinkables, prohibited by the same tariff, extends equally to

Odessa as to the other ports. The total duties specified in the present tariff, are collected on merchandize imported, in order to be sent into the interior of the empire.

Theodosia, Taganrog, and Kertch.—These customs have to conform, for the importation of foreign merchandize in the sea of Azof, to particular rules, according to the supreme sanction of the 10th of October, 1829, and the 9th of June, 1833.

Ismael, Moscow, and Berditcheff.—At these customs are collected duties on merchandize imported to be warehoused.

V. The *customs of the second division of the first class*, are those at which a term of six months is fixed for the payment of duties on foreign merchandize without the privilege of warehousing, nor that of sending merchandize, the importation of which is permitted, to other customs to collect the duties. In this category are comprised the customs of *Dolangen, Yourbourg, Tauroggen, Radzivilow, Novosselitz, Skouliani*, and the *continental custom-house of Odessa*.

Four-fifths of the duties are only collected on foreign merchandize imported into the *free port of Odessa*, to be forwarded into the interior of the empire, the entry of which being permitted by the present tariff. It is generally allowed to persons of all conditions to import merchandize through this custom-house, accompanying the same with a written declaration: verbal declarations are only received once every month on the part of each individual, and only when the duty on merchandize for exportation does not exceed 10 roubles in silver, and for merchandize free of duties, when the value does not exceed 100 roubles in silver. Merchants, their clerks, and their agents, and all persons belonging to the commercial classes, are not allowed to make verbal declarations. The continental custom-house of Odessa will pass merchandize by the line of the free port, immediately after having examined and complied with the formalities of the customs.

VI. All *foreign merchandize* that is permitted to be imported, and which is not exclusively destined according to the present tariff for any port or custom-house, may have the duties paid at any of the abovementioned customs.

VII. *Merchandize* which, according to this tariff is destined exclusively for any one port or custom-house, ought to be simply imported to the places indicated by the tariff, and there to pay the duties; the re-exportation of such merchandize to other customs for payment of the duties, also their importation by any other port, are prohibited.

VIII. The duties imposed upon merchandize to which is attached in the tariff, the words "*By the ports of the Black Sea and Azof*," are payable only in these ports. In cases where such merchandize should be imported by other customs, they will be subjected to the general provisions of the tariff.

IX. The *customs of the second class* are those for *declarations*. It is permitted to enter through them all merchandize the importation of which is not prohibited, nor limited specially to certain customs. Such merchandize includes those articles in the table marked letter A, and annexed to the tariff, on these the duties may be paid at these customs; but all other articles, not indicated in the table, must be sent to the warehousing customs. The time fixed for such re-exportation, and for collecting the duties upon merchandize specified in the table, letter A, is two months, commencing from the day of their importation. The customs of declaration are, *Brest-Litowsky, Oustilong*, and *Eupatoria*.

X. To these general rules of the customs of the second class there are the following exceptions:

The custom-house of Brest-Litowsky, may receive the duties of importation, not only on goods specified in the table, letter A, but on all those that are not, the importation of which is permitted by the land frontiers, and conveyed by vessels which navigate upon the Niemen, and the Bourg, and that are destined, according to the bill of lading, for Brest-Litowsky, and put on board the said vessels, at the places where they are directed for that town: the customs to verify the documents to be produced, as well for the merchandize as for the vessels. In the contrary case—namely, if the lading had not been made in the place of exportation for Brest-Litowsky, the merchandize must be sent back to the *warehousing customs* for payment of duties.

By the *port of Eupatoria*, there may be imported merchandize not exclusively destined for any other port, and which are not of a nature to communicate the plague; nevertheless, it is ordained, that after the quarantine regulations have been observed, the duties are to be

paid at the custom-house of Eupatoria, or the goods may be forwarded conformably to the order established at the warehousing customs.

XI. The *third class* comprises all the other customs and barriers by which the importation of foreign merchandize is permitted, by paying the duties, within the space of one month, but which are interdicted to transport foreign merchandize to other customs. These customs and barriers are divided, according to their privileges, into two divisions; viz.,

The *customs of the first division of the third class*, are those which have the authority to acquit duties on all merchandize allowed to be imported by the customs of the first class, with the exception of those specified in the table marked letter B.

In this category are comprised the customs of *Narva, Pernau, Goussiatinsk*, and *Issakovetz*.

The *customs and barriers of the second division of the third class* are authorized to collect the duties only on the merchandize designated in the table, letter A. These customs and barriers are—*Onega, Hapsal, Arensbury, Windau, Korsun, Gorgodarsk, Grodno, Khorochtchensk, Tzekhanovetsk, Goniondsk, Jeltkorsk, Nowretzk, Preborofsk, Dronch Ropalsk, Volotchisk, Nicolaef, Kherson, Ovidiopol, Balaklava, Bougas, Marioupol, Ackerman, Reni, Leova, Lipkansk*, and *Kunda*.

At these the importation of *salt, herrings*, and *coal* only are permitted.

XII. By the *customs and barriers of the third class*, there cannot be imported by the ports of the *Black Sea, Azof*, and the *Danube* (except by the barriers of Bessarabia), any but those which are not of a nature to communicate the plague, and the importation of which is permitted by the quarantine regulations.

XIII. By the general principle, pursuant to which the customs of the third class may acquit duties within one month, the duties on imported merchandize have but one exception of payment. Foreign salt imported into the governments situated on the shores of the Baltic Sea, pays the duties within three months, and at the custom-house of Windau, within six months on salt imported from the 1st of January to the 1st of July.

XIV. Besides the customs and barriers, as above classified, there are also either for the importation and exportation of merchandize, or having a particular destination, others which belong to no class. These are, the *custom-house of Cronstadt*, under the direction of the *custom-house of St. Petersburg*. It collects duties only on the *luggage of passengers*, and on *coal* and *chalk*, imported with gravel in the quality of ballast. For exportation, it is limited to collect the duties on luggage belonging to captains of vessels and passengers.

The barrier of *Belostrow*, the barrier of *Korkomiak*, the barrier upon the *Lissi-noss*, on the frontier of Finland, are established to prevent clandestine importation of merchandizes from that province into the rest of the empire. They conform to particular regulations for the commerce between Russia and Finland.

The barrier of the Baltic ports, or an advanced barrier dependant on the custom-house of Reval, is destined for the first entry and last clearance of vessels merely to prevent smuggling between the sea and the port.

The barrier of *Magnerbury*, is another advanced barrier, dependant on the custom-house of Narva.

These barriers do not collect taxes on any merchandize imported, but they forward goods to the customs, under the direction of which they are placed, according to the instructions given them on exportations, they collect the duties on the luggage of the masters of vessels, and of their passengers.

The barrier of *Mitau*, is established for its officers to visit Russian vessels arriving at Mitau from Russian ports.

The *custom-house of Meretsch* watches the commercial relations between the inhabitants of the Russian empire and those of Poland.

The *custom-house of Tiraspol* has the right to pass all merchandize of Russian origin belonging to any class of individuals, and accompanied with written declarations, and with verbal declarations to the value of 300 roubles or bank paper. Foreign merchandize may be delivered to travellers on foot, or in equipages, without verbal declarations, and payment of the duties; viz.—The merchandize tariffed as high as a duty of 10 silver roubles, and those which are free of duty, when their value does not exceed 100 roubles in bank paper.

The officers of the interior barrier of the free port of Odessa inspect and verify the

seals and *leads* placed on merchandize declared at the custom-house, and destined to be re-exported from Odessa to another Russian port: it is also under their inspection that vessels take on board their cargoes.

Otschakow, and *Yalta*, for the forwarding of Russian produce, in the ports of Russia, and for the entry of vessels loaded with Russian produce, imported from the ports of Russia.

The custom-house at the quarantine of *Sevastopol* is established for the entry of merchant-vessels, and *longboats*, which arrive from the Russian ports of the Black Sea and Azof, whose state of health satisfies the quarantine officers, and loaded with Russian or foreign produce, the duties on which have been paid at other customs, or barriers. It is prohibited to enter at the port of Sevastopol vessels arriving from foreign ports.

The *custom-house of Anapa*, although in Asia, is not under the commercial system of the *Trans-Caucasian provinces*, but under that of Europe, and managed according to particular regulations published the 3d of June, 1831. It is permitted to carry to this custom-house all goods which, according to the commercial tariff with Europe, may be imported by the customs of the first class, with the exception of those destined for ports specially denominated. The term fixed for the payment of duties at the custom-house of Anapa is six months.

XV. *Merchandize for Exportation.*—All merchandize, the exportation of which is not prohibited, may be exported and forwarded, by all the customs and barriers of the first, second, and third classes.

XVI. *Deduction of Tare.*—The rate of *tare* to be deducted from liquids imported, and from all Russian produce exported, is arranged by the two tables annexed to the present tariff. There is no invariable rate fixed for the tare to be deducted on dry goods imported; the table marked letter B, in which several articles specified will serve as a general rule; but all importers, who are not satisfied with the deduction stated in this table, are authorized to demand a verification of the real weight of their merchandize. The weights of all other dry goods imported, not marked in the said table, even those the weight of which is indicated in the bills of lading, and declarations, must be stated when weighed.

XVII. Cotton, silk, linen, and woollen goods, folded or rolled upon bobbin rollers, boards, or imported in wrappers, cases, or particular covers, to be weighed on their importation, together with the bobbins, rollers, boards, wrappers, covers, &c., and pay the duties without deducting the tare.

XVIII. *Duties.*—There are two kinds of duties to be collected on the importation and exportation of goods.

First. The duties on the weight, measure, or quantity of goods.

Second. The duties on goods tariffed at value, and to be collected conformably to the special rules annexed to the present tariff.

The duties calculated in the silver money of Russia will be rated in value according to the terms officially fixed to the coin each year.

XIX. Besides the duties fixed by the present tariff, it is ordained—

First. In virtue of the supreme sanction of the ukase of the 7th of July, 1800, to collect for the benefit of quarantines, on imports and on exports, 1 copee per each rouble, collected according to the general tariff.

Second. In virtue of an ukase of the 11th of November, 1831, 12½ per cent additional duties on merchandize imported.

Third. In virtue of an ukase of the 22d of March, 1818, on the raw produce to be exported, 10 per cent additional of the duty of exportation fixed by the tariff, for the improvement of internal navigation.

XX. Besides the general duties, there are collected on goods imported and exported from the undermentioned ports, for the benefit of the towns, and for other purposes—viz.,

At Archangel.—For the benefit of the town, upon all merchandize, imported and exported, ½ per cent of the value. (By virtue of the ukase of the 30th of May, 1817.)

For the maintenance of the wheat magazine at Archangel: on rye, wheat, and on oats and barley, 10 copees, paper money, per tchetvert. (By virtue of the ukases of the 26th of January, 1817, and the 11th of January, 1824.)

At Odessa.—For the benefit of the town: on wheat exported by sea, 5 copecs in paper money, per tchetvert. (By virtue of the ukase of the 27th of July, 1812.)

For the maintenance of the Lyceum at Odessa: on all kinds of wheat exported, 2½ silver copecs, per tchetvert. (By virtue of the ukases of the 15th of March, 1817, and the 16th of January, 1819.)

At Theodosia.—For the benefit of the town: on wheat exported, 3 copecs, and on barley, 2 copecs, in paper money, per tchetvert. (By virtue of an ukase of the 15th of April, 1806.)

At Taganrog.—For the benefit of the town: on all merchandize imported, on which the duty is collected by weight, 2 copecs, and on merchandize exported, ½ copec per pood: and on wine imported, 1 copec, in paper money, per vedro. (By virtue of the ukase of the 14th of September, 1807.)

At Ismail.—For the construction of barracks: on wheat exported, 10 copecs, and on corn of all other sorts, 5 copecs, in paper money, per tchetvert. (By virtue of the ukase of the 19th of June, 1830.)

The Russian government published on the 1st of December, 1834 two ukases of commercial importance.

The *first* permits the exportation of coloured cloths for soldiers, by Kiachta, a town which is the sole channel of commerce with China. Thus, the cloths that the tariff of 1800 prohibited the exportation of, will now serve as an article of exchange for the merchandize of China.

The *second* establishes a duty on the anchorage of foreign vessels entering and leaving the ports of Redout-Kalé and Soukoum-Kalé. This duty is 50 copecs per last, on merchandize imported, and 25 copecs on merchandize exported.

The government has also published in the Gazette of the Senate, a new tariff of duties upon merchandize manufactured in Russia and in the kingdom of Poland, on their importation from one country to another, conformably to the ukase of the 12th of November, 1831, and to the changes which have taken place up to the 1st of October, 1834.

And, lastly, by a recent decision the Russian government has authorized the public banks to receive during the year 1835, as well for the acquittal of the customs duties as for the payments to be made to the treasury, the rouble of gold on a par with 3 roubles 65 copecs, and that of the silver to 3 roubles 60 copecs, paper money.

GENERAL REGULATIONS to be observed by the Masters of all Foreign Ships arriving at the Ports of Cronstadt and St. Petersburg, according to the Rules prescribed (in pursuance of an ukase) by the *Imperial Customs* of Russia for the Government of Ship-masters, dated St. Petersburg, 1st of March, 1833, (no alteration having taken place since).

SECTION I.—*Arrival at the Exterior Brandewache.* (A *Customs Guardship.*)—Every master of a ship arriving from a foreign country, is directed to *heave to* abreast of the *Exterior Brandewache.* On failing to observe this regulation, the Brandewache will fire at the foreign arrival, and the master will be subjected to a fine of 5 silver roubles for each shot fired.

II. The customs officers stationed on board of the *Brandewache* will demand, and the master of said ship will deliver, in duplicate, the usual papers relative to the ship and cargo, which shall be put together under an envelope and sealed by one of the customs officers: the master of the ship endorsing on the envelope the number of cockets and other papers enclosed, with his own name and that of the ship. The commandant of the *Brandewache* is also directed to demand, and the master of the foreign arrival to deliver, for examination, the passport through the sound, the bill of health given at Elsineur, and the passport of each passenger. When these are examined and endorsed, and the ship's papers returned to the master, under a sealed envelope as stated above, the master of said ship will be at liberty to continue his voyage. On refusing to conform to this regulation, the master will be subjected to a fine of 100 roubles, and if on delivery of the ship's papers he fails in presenting a duplicate of each document, he will be liable to pay two roubles in silver for each defalcation.

III. Each ship-master arriving for the first time will receive from the Exterior Brandewache, the regulations of the port printed in Russian, and in the language of the country to which the ship belongs,* which the said master shall be scrupulously bound to observe.

IV. Each master is also bound under a penalty of 21 roubles, to take from the Brandewache a pilot to conduct his ship to Cronstadt.

V. It is forbidden to anchor in the roadstead without buoys being attached to the anchors, and it is also required that ships will anchor at such distance from, as may prevent them damaging each other, under penalty of 28 roubles in silver.

VI. *Arrival in the Roadstead.*—Foreign ships intending to enter the port of Cronstadt, may anchor between the commercial port and the fort; but this is strictly forbidden to those ships which intend ascending to St. Petersburg, or which are descending to the Baltic, all which must anchor in the road on the side of the imperial marine port. The masters of ships failing to observe this rule have no claim for damages occasioned by other vessels sailing or anchoring in the road; but are, at the same time, liable to the payment of all damages to which their vessels subject other ships.

VII. On anchoring in the roadstead, with the intention of entering the port, the captain is required to attend to the officers of the customs, who will place one or more officers on board of his ship, and who, if they judge proper, may close and seal the hatches. Passengers desirous to land, are forbidden to take ashore parcels, letters, or luggage. They may receive their luggage at Cronstadt, in which they must make a true declaration of their effects at the customs, and at the consulate of their respective countries.

VIII. *Letters.*—The masters of ships, sailors, and passengers are required to deliver all letters which they bring for persons residing in Russia, or to be sent by post, to the officers of the customs on their boarding the ship. 20 copecs to be paid by the said officers for each letter, and a fine of 25 roubles, for each letter, not so delivered, will be exacted from the masters or others who carry them. Letters of introduction, not sealed, excepted. (It would appear that this rule has been departed from, as an order has, according to a despatch from the vice-consul of France at Cronstadt, been promulgated by the direction-in-chief of the Russian post-office, ordering the delivery to the customs officers of all letters, without exception, even letters of introduction, without seal, and unfolded.)

IX. *Powder.*—Every captain is required to deliver to the interior Brandewache all the powder on board his ship. After which, and the foregoing regulations are exactly attended to, the ship may enter the port, and the captain and passengers may land.

By an ukase of the 9th of August, 1833, masters of ships are to be served with a written notice not to conceal any powder on board, but to deliver whatever they may have to the officers of the customs. "If in contempt of such notice any ship-master conceals powder equal to the weight of 2 lbs. on board his vessel, the said master will be fined at the discretion of a court of law, and the powder confiscated."

X. *Arrival in the Port.*—Each vessel on entering the port is required to receive on board a pilot to conduct the ship to the place which it is to occupy, from which place no master can remove his ship without receiving permission from the commandant of the Brandewache, nor without taking on board another pilot, under penalty of fifty roubles in silver.

* I am not positive if in more languages, than English German, and French.

XI. The master of the ship is then required to attend with his clearances, cockets, sound passport, bill of health, and other papers (put under seal by the officers of the exterior Brandewache), at the first branch of the interior Brandewache, in the office of the captain of the port, where he makes the necessary declarations, and deposits his certificate of registry, his sound passport, and also the passports of his passengers. He will then proceed to the second branch of the interior Brandewache, and there deliver up his paper as aforesaid under seal. It is understood that his passengers will accompany him.

XII. *Consuls and Vice-consuls.*—It is usual, to prevent irregularities, for the masters of foreign vessels, after they have gone through the customary formalities with the port officers, to proceed to the consulate or vice-consulate of their respective countries, to deposit there such papers as manifests of cargo, muster roll of the crew, &c.

XIII. Letters written by and to be forwarded from masters of vessels either for St. Petersburg, or to foreign countries, should be left for that purpose at the consulate or vice-consulate.

XIV. *Passengers.*—Passengers are required also to present themselves at the consulate or vice-consulate of their respective countries at the Russian ports, where they arrive, and to make a declaration of the effects which belong to them, under penalty of ten silver roubles for each article not declared. This declaration must be signed by the passengers and annexed to that which the master of the vessel delivers to the customs.

These formalities being fulfilled, the passengers will then present themselves at the office of the military governor, there to receive new passports. Their luggage will then be delivered them after the proper customs officers have visited the vessel.

XV. *The General Declaration.*—Every ship-master must present himself at the custom-house, within twenty-four hours after his arrival, and make his declaration, within forty-eight hours, under a penalty of ten silver roubles.

XVI. The declaration of the cargo and ship's stores, should be made by the master at the consulate or vice-consulate. Every article should be stated, and also the number of his crew.

XVII. The master is required to read his declaration over carefully before he signs it, and then to deliver it at the custom-house, with his other papers, sound passport, and Elsineur bill of health.

XVIII. The master has the privilege of amending his declaration in twenty-four hours. Should he wilfully fail to correct an inexact declaration, he will be subjected to the provisions of Article 33 (hereafter).

XIX. *Ships' Stores.*—The imperial government of Russia decrees that one oxhoft of wine and spirits, provided the latter does not exceed two ankers or one-third of the oxhoft, (see weights and measures of Russia hereafter,) 40 lbs. of sugar, 10 lbs. of coffee, and 1 lb. of tea, shall be allowed for each man, including the masters of foreign vessels arriving from ports without the Baltic. Any surplus found on board will be subjected to duty, with the privilege allowed of re-exporting or selling the overplus. Eatable provisions are not limited as to quantity.

XX. The customs have the right to put in *entrepôt*, until the ship's departure, all those provisions liable to waste and left on board; if such waste be proved, the captain may, by the interposition of the port officers, have them replaced.

XXI. *Tonnage.*—The tonnage of the vessel to be declared according to the enregistered measurement—an inexact declaration under 10 lasts, subjects the captain to a fine of 2 silver roubles.

XXII. *Protests.*—Protests should be made within seven days after the ship's arrival, and the nature of the damage should be indicated on the declaration first made at the customs.

XXIII. *Bank Notes.*—Masters of ships should have sufficient coin to pay contingent expenses until they can be supplied by their agents in the port where they arrive, as all paper-money which may be found with them will be seized and confiscated by the customs.

XXIV. *National Flags.*—After the master has made his declaration at the customs, he will return on board and hoist the flag of his nation at the head of the main flagstaff, and he will then remain on board waiting the visit of the customs officers.

XXV. The national flags of foreign ships will, it is expected, be also hoisted on holidays, whether religious or civil.

XXVI. *Visits of Customs Officers.*—Every ship-master must be found on board his ship at the time when the officers of the customs visit the ship for the purpose of search and examination. The ship-master is, if required by the customs officers, bound to open all trunks, drawers, boxes, or other packages, under a penalty of 100 roubles.

XXVII. *Departure of Ship-masters from Cronstadt to St. Petersburg.*—It is strictly forbidden to masters of ships to leave their vessels for St. Petersburg until they have first received on board the officers of the customs; and those masters whose vessels remain at Cronstadt, must not depart for the capital without a special passport, which will be delivered them by the military governor of Cronstadt. The same formality must be observed by his ship's crew.

XXVIII. *Departure of the Ship for St. Petersburg.*—When the captain intends ascending with his ship to the capital, he must not sail before he has, *first*, made his declaration at the customs; *secondly*, had his ship a second time visited by the port officers, who will deliver him a pass; *thirdly*, taken on board a custom-house officer and a pilot to accompany him, under penalty of 100 silver roubles. No vessel drawing more than eight English feet are allowed to ascend to the capital.

XXIX. *Tolls on passing the Bridges.*—On passing each bridge on the *Neva* a toll of 2 roubles for a sloop, 5 roubles for a brig, or schooner, and 10 roubles for a three-masted ship, will be exacted at the bridge.

XXX. *Lighters and Discharging the Cargo.*—When a lighter is placed at the disposal of a ship-master for the purpose of landing his cargo, he is required to examine whether the said lighter is in proper condition, and afterwards properly stowed, and not loaded to draw more than seven feet water English measure.

XXXI. As soon as the lighter is loaded, the ship-master or his first mate is required to deliver the custom-house officer in attendance an exact note of the package stowed in the lighter, without which it cannot depart for St. Petersburg. Each ship-master who ascends with his ship to the capital must first lighten his vessel to the draft of eight feet, English, and also conform to the 28th section of these regulations.

XXXII. If on discharging the cargo, it appears that part or the whole of the goods are damaged, the captain or his mate must, with the officers on board, take the exact marks and number of all damaged packages. In taking down the marks, measures, or weights of the packages discharged, the master or mate's account must correspond with that of the custom-house officers, and that of the skipper of the lighter. In case of dispute, the packages must be taken out of the lighter, at the expense of whoever is found, on re-measurement, re-weighing, or re-examination, to be in error.

XXXIII. *Penalties (all in Silver Roubles).*—For discharging goods before the custom-house officers attend, according to the customary regulations, a penalty will be incurred of five times the actual duty, besides confiscation of the goods; and twice the whole value, with confiscation of prohibited goods. On goods exempted from duty 10 per cent on their value, without compensation.

XXXIV. The same penalties will attach to removing goods from one ship to another without permission.

XXXV. For working during *undue* hours, a penalty of 50 roubles.

XXXVI. For discharging a cargo in an improper place, a fine of 100 roubles: should such discharge of cargo appear to have been effected with an intention to defraud the revenue, all the penalties of Article 33 will be strictly enforced.

XXXVII. For having the port-holes or places open in the vessel, forbidden by port-officers, during the discharge of the cargo, a penalty of 25 roubles.

XXXVIII. For placing goods in concealed or subterfuge places, besides incurring the penalties of Article 33, a fine of 100 roubles.

XXXIX. For opening bales or packages of goods on board, 100 roubles.

XL. For any packages inserted in the declarations and cockets, and not found on board, a penalty equal to double the actual duty on such goods will be exacted; but if the said packages are only inserted in the declaration, the penalty for each package will be 200 roubles.

XLI. All the penalties of Article 33 will be enforced for taking on board goods without a permission from the customs.

XLII. Each ship-master entering prohibited goods to order, and not being able to name the owner, will be fined two roubles for each pood gross weight; for which he will be delivered a receipt to serve him in case of need.

XLIII. Ships sailing from the port without a pass or clearance will be subjected to confiscation.

XLIV. *Working on Shipboard.*—It is permitted to load ships every day except Sundays and holidays, and on the latter late in the season before winter sets in.

XLV. It is permitted only to work on shipboard between sunrise and sunset, on urgent occasions a permission to work at night may be obtained. In default of this regulation the penalties of Article 33 will be enforced.

XLVI. *Employes of the Customs.*—Whoever obstructs the orders prescribed by the *employés* of the customs, or counteracts them in their functions, will be fined 500 silver roubles.

XLVII. *Ballast.*—Every ship-master before taking on board or discharging ballast, must address the captain of the first interior Brandewache, who will deliver him a written permission to obtain a lighter destined for carrying ballast.

XLVIII. On receiving a ballast-boat, the mate of the ship must guard those who discharge the ballast as to the proper place, and also that the lighter is not loaded above the number of lasts marked on a board nailed to each lighter. He will also sign a note of the exact number of lasts put into the lighter, which he will deliver to the master of the latter.

XLIX. A ballast-lighter must not remain longer than three days alongside a vessel. For every day additional a fine of 25 paper roubles will be enforced. The regulation of not loading beyond the proper depth, not allowing ballast to drop alongside, under a fine of 29 roubles 40 copees in silver, and also for each shovel full of ballast thrown in the water, 140 silver roubles.

L. When taking ballast on board, or discharging it, is completed, the captain must pay the captain of the interior Brandewache 2 roubles in paper money for each last of two tons. This should be done without delay to prevent future inconvenience.

LI. If there should fail to be a ballast-lighter, provided by the commandant of the interior Brandewache, the ship-master may then procure such as he may deem fit. In which case he only pays the commandant 20 copees paper money per last.

LII. *Visit of Customs Officers after the Ballast is discharged.*—When the ballast is discharged, the ship-master must acquit the customs officers, who will then research the ship, on which occasion the master will hoist his flag at the mizen.

LIII. It is strictly forbidden to take any article on board before this visit of the customs officers.

LIV. *Permits.*—It is strictly prohibited for a ship-master to take on board any article of merchandize or any article of ship stores without a permit (*yerlick*) under all the penalties of Section 33.

LV. It is equally forbidden to take on board any article under sanction of *yerlicks* which appertains to others.

LVI. *On receiving Lighters' Cargoes from St. Petersburg.*—On lighters arriving with cargoes from St. Petersburg, a note from the consulate or vice-consulate of the country of foreign ship, stating the packages and goods they contain, without which it is forbidden to take on board their cargoes.

LVII. The captain will present the said note to the port-officers, who will give him the necessary permit, with officers to attend to unsealing and opening the hatches of the lighter.

LVIII. *Damaged Packages.*—When packages are damaged, the ship-master is required immediately to report the same to the consulate or vice-consulate of his country, when prompt measures will be adopted to remedy such damage. It is not allowed to endorse such on the bills of lading.

LIX. *Preparations for Departure.*—When the ship has taken on board nearly all her cargo, the ship-master will be careful in examining whether the customs officer who attends the loading has all his accounts in order and in correspondence with those of the ship-

master and with the bills of lading. The ship-master when the cargo is completed, will proceed with his manifest, bills of lading, and other papers, to his consulate. The general clearance will then be made out in the custom-house at St. Petersburg.

LX. *Ships descending from St. Petersburg and completing their Cargoes at Cronstadt.*—In the case of vessels, which descend from St. Petersburg to complete their lading at Cronstadt, the consulate or vice-consulate, if there be such at the latter port, should be informed personally or by letter of the same. If the vessel be completely loaded on descending, the master will, on arriving at Cronstadt, repair to the second branch of the interior Brandwache, where he will deliver the permit received from the port officers of St. Petersburg, and will receive a note which he will take with him to the consulate or vice-consulate, together with his clearance, bills of lading, &c.

LXI. *Stores for Sea use*—All eatable provisions for the voyage free of duty, and may be shipped without permits, provided they do not exceed the quantity allowed. Articles of merchandize, &c., which the master brings for his own use, pay export duty, and must not be taken on board without permits.

LXII. *Labourers.*—Ship-masters who require labourers on board, are required to make them pass, on going to or landing from the ships before the small revenue or police tender, moored within the port. He will also be careful that they steal no article, to prevent which, he may search them before leaving the ship.

LXIII. *Repairing Foreign Ships.*—No ship-master is allowed to scrape tar or repair his ship in the port without permission from the interior Brandewache.

LXIV. *Rubbish Boats.*—In case of repairing ships, or otherwise, no rubbish must be thrown into the water; the same must be put into the rubbish boats, which make the circuit of the port three times a week among the shipping; every transgression of this regulation will incur the penalties of Section 49.

LXV. *Landing-place.*—Every ship-master on landing in his ship's boat will proceed to the place indicated by the police, and marked by a sign.

LXVI. *Cookery.*—The particular rules relative to the places and boats for cooking, as pointed out by the police, must be attended to.

The custom-house of Cronstadt, on the 19th of July, 1841, laid upon all shipping, both foreign and Russian, for the use of the cook-house, dedicating the amount to the profit of the town of Cronstadt.

Every vessel trading to this port is to be charged 3 copees silver per last each voyage.

Every coaster, with one mast, 2 roubles silver, and with two or three masts, 3 roubles silver for one summer.

Every *rodorick*, or decked boat, employed in carrying iron and deals, 50 copees silver, each voyage.

Every cutter, employed in transporting goods, 1½ rouble, for one summer.

Every ship proceeding on to St. Petersburg without entering this harbour are exempted from paying.

That it is the intention of government to request the vice-consuls of the different nations to collect this revenue.

Taking the tonnage of last year as a criterion, the British ships (74,238 lasts) would produce, at 3 copees, 2,227 roubles silver, 4 copees, or 7,794 roubles copper 99 copees=£360.

POLAND.

SEVERAL discriminating alterations have been made in the general tariff in regard to Poland, chiefly with the view of favouring the manufacturing industry of Russia, at the expense of that of Poland. These alterations have been published in the official paper, the *Gazette du Sénat*, St. Petersburg, and the official

Gazette of Warsaw, Dziennik-Powszechni, agreeable to the ukases and ministerial orders of the 12th of November, 1831; 13th of December, 27th of December, and 30th December, 1833; 1st of October, 1834; and 17th of June, 1835; together with various customs regulations.

From these it appears that the *importation* of the following articles into Poland is totally prohibited except through Russia, and in some instances by special licence from the supreme department of customs at St. Petersburg, on paying from 250 to 450 per cent. *ad valorem*, duty.

Animal and all essential oils and perfumery; apparel, wearing,—except what may be actually necessary and carried along with travellers; beer, cyder, and all fermented liquors; bronze work of all kinds; cards, playing; chicory (after the 27th of December, 1834); cheese; coral, raw or wrought; clocks, watches, or other time-pieces; earthenware and porcelain, painted, or in any way ornamented with colours; embroidered articles of every description; fruits, dried, or otherwise preserved, and all sweetmeats and confectionary; glass, plain, stained, or painted (except mirrors); gloves of every description; household furniture of every description; hops and essences for making beer; iron, and articles of iron; imitation articles of jewellery, coral, pearls, &c.; liquors (spirituous, vinous, or syrops); leather; ornamental articles and boxes of paper *maché*, leather, feathers, gilded wood, or metal; oil cloths and waxed cloths of all kinds; meats, salted or otherwise preserved; millinery of every description; pens and quills; phosphoric boxes for lighting fire; pinchbeck articles; plated articles; saddlery; Salt, mineral; skins, all kinds; spirits, distilled, of every kind, except spirits of wine (rendered undrinkable by specific mixtures); soap; steels, for striking light; tin, and articles made of tin; tobacco, raw and manufactured; umbrellas; vinegar; worsted, plain and ornamented.

Articles, the exportation of which is prohibited.—Acorns, rough or ground; asses and mules; bark of all kinds for tanning; horses; minerals, all kinds, after the 31st of January, 1836, and until then on paying a duty of 5 gros per 35 *garnice*; money, gold and silver of Russian coinage; paper, all materials for making.

Articles imported duty free into Poland.—Cotton wool; fruit, and all exotic trees; glasses, optical, and for physical uses; machinery, and models of instruments for the purposes of agriculture, and manufactures; mathematical, surgical, and other scientific instruments; silk, raw.

Articles exported free of duty.—Aniseed; blankets; bristles and all kinds of hair; candles; cards, playing; chalk; corn, all kinds; flour and meal; frames for pictures and looking-glasses; glass, all descriptions; horns, all kinds, not manufactured; instruments, musical; lime; paper and rags, or other materials for making paper; pearlash and potash; resins; seeds, all kinds; sheep; snuff; soap; thread, cotton,—provisionally only; tobacco; wood, deals, and logs of oak, except the transit duty to Warsaw by the Vistula; woollens—provisionally only.

The trade between Russia and Poland, and the internal trade, have been subjected to various impositions and strict surveillance, the effect of which has been the removal of numerous manufacturers (chiefly Germans), who were settled in Poland, to Russia, where much encouragement has been held out to them, especially at Moscow, Riga, and various parts of Courland.

The ministerial order of the 13th of March, 1833, fixes a *transit duty* on all kinds of timber, whether cut within or without the limits of Poland, brought down the Vistula to Warsaw: *i. e.* on staves, planks, deals, spars, masts, square timber, joints. This duty varies from ¼ of a Polish gros, or ½ a copec, on a single stave, to 2 Polish florins of 15 copecs on a mast. The amount of duty so

collected goes towards maintaining the *Russian municipal administration of Warsaw*. From the latter town downwards on the Vistula, there is no transit duty on wood; but the above is considered a great burden by the timber dealers of Poland.

The order of the 13th of December, 1833, imposes a duty of 3 silver copees per lb. on all surgical instruments made in Poland, on being imported into Russia.

1834, January 31. An order was issued which fixes 6 silver copees per pood on brimstone imported from Russia into Poland, and 8 silver copees per pood on the dyestuff, called Czerlen (mumia).

1835, June 8. A customs order fixes a duty on hand-organs imported from Poland to Russia, at 9 silver roubles.

By a decree published the 17th of June, 1835, the following reciprocal duties have been fixed between Poland and Russia:

		fl. grs.
Alum	per quintal	1 10
Amber, rough		free
—— prepared		6 per cent
Arms imported into Russia from Poland		prohibited
Baskets and sieves	per lb.	0 2
Bone articles, made of the bones of the marmot fish	ditto	0 4½
Books, bound	ditto	0 18
Braces in sheep's leather, and forms for cravats	ditto	1 0
Bricks and tiles	per pood	0 10
Casks, empty	per quintal	2 20
Chemical productions, not specified in the tariff	ditto	1 10
Chip, woven, for ladies' bonnets	per lb.	0 2
Copperas (of Hungary)	per quintal	0 13½
Colours, blue, green, yellow, and white	ditto	1 10
Counterpanes, white, with coloured and embroidered borders		prohibited
Cravats, silk	per lb.	1 0
Crystal articles	per quintal	18 0
Down, goat's, purified	ditto	0 15
Feathers for beds	per lb.	3 0
Glass, window, white	per quintal	1 20
—— ditto, green	ditto	0 20
—— polished, for mirrors	ditto	12 0
Hats, men's, made of whalebone or cane	per lb.	5 10
—— ditto, silk	ditto	0 12
Horns, cattle, not manufactured		exempt
—— articles made from	per lb.	0 6
Iron, in bars, and plate	per quintal	0 22½
—— cast, rough articles pay the ordinary duty—as per general tariff.		
—— ditto, articles of luxury	per lb.	0 7½
Knives for cutting straw	per quintal	0 22½
Kremserwasser (colour) for manufactures, reduced from, per 100 lbs.	50 to 20	0
Lace, blond, silk, cotton, thread, &c.	per quintal	80 0
Matter, sheep's, for inoculating		exempt
Mineral waters		ditto
Mustard		ditto
Plaster, articles in	*ad valorem*, 6 per cent	
Portfolios, with or without details, except chirurgical articles	per lb.	0 18

		fl. gros
Resin	per quintal	1 10
Saltpetre, not purified		exempt
Sieves, horsehair		ditto
Skins, hare	per quintal	1 0
Tallow, not melted		exempt
Teher cassien, a stuff of wool and cotton, the importation		prohibited
Thread, cotton; white or dyed	per lb.	1 10
Turpentine	per quintal	1 10
Verdigris (Grynsz pan)	ditto	1 10
Wool cards, or wire fixed in leather for the usage of manufactures		exempt
Zinc, flat	per quintal	1 9½
—— sulphurous acid	ditto	1 10

All other articles manufactured in the kingdom of Poland are subjected to the duty established by the general tariff on importation into Russia. Articles which are not specified in the general tariff of the customs bureaux by which the importation passes, the assimilation of such article is left to be judged by the officers of the customs. This is the rule observed at all the Russian frontiers, and from the ignorance, especially of the officers at the land barriers, accompanied with much delay and unequal payment of duty.

On the 1st of July, 1835, a convention between Russia and the Republic of Cracovie was entered into, and said to be of some importance to the latter.

On the 7th of August, 1835, a customs order states at great length the regulations to be specially adhered to, under pain of confiscation, on carrying linen and hemp thread from small to large towns.

28th of August, 1835, an order of the customs subjects molasses, syrups, and water in which sugar or saccharine matter is dissolved, to the same duty as refined sugar by the general tariff.

16th of September, 1835. By a decree of this date, the duty on importing wines from the Austrian states into Poland, was fixed at per bottle, 1 fl. 20 gros: and per garniec, 2 fl. 8 gros.

There do not appear any further alterations in the duties on goods either on importation, exportation, or transit, down to the close of the present time.

MONIES, WEIGHTS, AND MEASURES, OF THE RUSSIAN EMPIRE.

Monies.—Accounts are kept in copees and roubles. 100 copees = 1 rouble. The relative value of silver and paper roubles occasions much perplexity to foreigners. The metallic currency varies also in its relative value to the money of other nations like that of all countries, according to the rate of exchange. By a recent ukase, the depreciated paper roubles are all to be replaced by new government bills or notes.

The value at par of the half imperial gold coin of five roubles is about 15*s.* 8*d.*, and of the silver rouble, 3*s.* 2½*d.*

Platina.—Pieces of the value of 3 and 6 roubles in silver were coined of this metal in 1827.

There are besides, pieces of 5, 10, 15, and 20 copees in silver, and pieces of half 1, and 2 copees in copper.

The paper-money consists of bank bills, or notes of 25, 50, 100, and 200 roubles on

white paper; of 10 roubles on red paper; and of 5 roubles on blue paper. These obligations have no fixed value, but depend on their rise and fall in their relative current value as to the plenty or security of specie.

All payments are made in silver and paper roubles; the latter bearing nearly the relative proportionate decimal value to the former of 113 silver roubles, being sufficient to purchase 345 paper roubles.

In French decimal weights it should contain 17.977 grams, and in specie value, 3.9951 francs, or about 3*s*. 2⅔*d*. sterling.

At Riga and Reval, the *livonin* of 112 copecs, is still current.

Weights.—The Russian pound is the same for gold, silver, and all kinds of merchandize; and is divided into 32 loths, and 96 zolotniks; viz., 3 zolotniks = 1 loth, 32 loths = 1 pound, 40 pounds = 1 pood, 10 poods = 1 berkowitz. 100 lbs. Russian weight = 90.26 lbs. English avoirdupois weight. 1 pood Russian weight = 36 lbs. 1 oz. 10 dr. English avoirdupois weight.

In commercial transactions the pood is usually calculated at 36 lbs. avoirdupois weight.

Dry Measure.—2 garnietz = 1 tchertverka, 2 tchertverkas = 1 tchetverik, 2 tchetveriks = 1 payak, 2 payaks = 1 osmin, 2 osmins = 1 tchetvert, 16 tchetverts = 1 last, 100 tchetverts = 74.4 quarters English measure; 1 tchetvert = 5.952 English bushels.

Liquid Measure.—The standard liquid measure is the vedro, formerly divided into 8 krushkas, and 88 tcharkeys; but by the ukase of January 1, 1819, into 100 tcharkeys, or 240 bottles.

The oxhoft, divided into 6 ankers, 12 stekars, and 18 vedros, still remains in commercial and custom-house usage. The vedro contains 3.246 English wine gallons; the oxhoft 58.428 ditto.

Long Measure.—The English inch and foot, and the arshine or arsheen (or cloth measure of 16 verchocks, or 28 English inches, are in common use in Russia, except as regards measuring of all kinds of timber, for the export duties. The Russian foot = 13.75 English inches; the Moscow foot = 12.17 English inches; the sarchine = 7 English feet.

The English and Rhenish foot (the latter 12.115 English inches) are generally used at St. Petersburg for freights; 63 poods of hemp, flax, copper, iron, ashes, or tallow = 1 ton; 44 poods wax, bristles, isinglass, and leather = 1 ton; 5 dozen deals, 8 tchetverts (seed or corn), 60 botts of canvass, 3500 hare-skins = 1 ton.

The Russian verst = 500 sarchines, or 3500 English feet, or 5 furlongs 12 poles.

Riga and Reval.—The customary measures at Riga and Reval vary from those of the empire. At the former, the commercial pound is divided into 2 marks and 32 loths. 20 lbs. = 1 lispund, and 1 lispund = 20 ship pounds. 100 lbs. of Riga = 92.17 lbs. avoirdupois

The loop, or loof, is the corn measure in use. 48 loops = 1 last of wheat, barley, or flax-seed. 45 loops = 1 last of rye and oats. 1 loop = 1.937 English bushel.

The liquor anker = 5 viertels, or 30 stoofs. 1 anker = 10.33 English wine-gallons.

The ell, 2 feet, and the clafter, 6 feet; the Riga foot of 12 inches = 10.79 English inches.

Masts and spars are measured by the palm of 3 Riga, or 2.7 English inches.

10 Russian arshines = 13 Riga ells; equal to 18 barrels, or to 45 cwt. avoirdupois weight.

Liverpool, or fine salt, in barrels, is calculated 16 to a last. Ditto, in bulk, 18 to a last, or in weight equal to 45 cwt. avoirdupois weight.

At Reval the pood is also divided into 32 loths. 100 lbs. of Reval = 95.03 lbs. avoirdupois.

The last of wheat contains 24 tons of 3 loofs, and the Reval wheat ton contains 3.356 bushels English corn measure. 1 last of salt is measured by = 18 tuns of 4 lofs. 1 last of herrings = 12 tuns of 4 lofs. 1 stoof, liquid measure = 1.375 English wine-quart. Oxhoft of Reval = 67.03 English wine-gallons.

In long measure, 2 feet = 1 ell, 3 ells = 1 fathom. The Memel foot = 10.53 English inches.

The weights and measures of Reval are in common use at Hapsal, Wesenburg, Weissenstein, and other parts of the government of Esthonia.

At Odessa, Kertch, and Taganrog, and also at Archangel, the imperial monies, weights, and measures, are established, in all revenue matters, and commercial transactions; although among the people in their common dealings, much as is still the case in France, weights and measures of older and more customary usage, are still said to prevail.

POLISH MONIES, WEIGHTS, AND MEASURES.

Monies.—Accounts have been kept at Warsaw and over all the kingdom of Poland, in *florins* or *gulden* of 30 gros: 4.666 of which to a mark of Cologne, or 1 florin = 30.079 grams = 0.6183 franc, a minute fraction more than sixpence English. By a recent ukase it is decreed that the monies of Russia shall be those of Poland.

The old gold ducats of Poland and Warsaw, originally as nearly as possibly of the same weight, are still current but rare, and are in value about 11 fr. 80 centimes, or 9*s.* 7½*d.*

The silver old rix thaler, old original value, 5.1891 francs, or 4*s.* 1½*d.*, but vary since the new coinage in value.

The coinage established in 1815 may now be considered that which enters into calculations, as the other coins vary in price like old silver and gold rather than as current coin.

The modern gold coins are pieces of 50 and 25 guldens or florins.

Weights and Measures.—1 lb. = 16 oz. = 32 loth = 128 drams = 1 schiffpfund = 13 stein = 416 lbs. 1 korsec = 4 ewiers = 32 garniec. 1 garniec = 4 kwarta = 16 kwatorks. 1 foot = 12 inches = 144 spopys. 1 prenty = 15 feet. 1 lockei, or ell = 2 feet. 1 degree = 20 Polish miles. 100 lbs. Polish = 89.993 avoirdupois. 100 feet = 94.686 English feet. 100 korsecs, corn or dry measure = 44.033 English quarters. 100 garniec, liquid measure = 88.066 English gallons.

CHAPTER VIII.

NAVIGATION AND TRADE OF THE RUSSIAN EMPIRE.

The great extent of Moscovy, even before the time of Peter the Great, and the wants of the population and of the inhabitants of the adjoining countries, created a trade in Russia of considerable value and extensive intercourse. *Novogorod* was an emporium of important trade for three centuries before it was sacked by John, Tzar (or king) of Moscovy, in 1470. The Hanse Towns had long before established a factory in that city, to which they traded as far back as 1272, for furs and other articles, and the surrounding country had then been famed for its corn, flax, hemp, ivory, and the city was even celebrated for its manufacture of fine Russian leather.

Sir Walter Raleigh says the English traded with Russia by way of Narva before the passage round the North Cape was known. After the sacking of Novogorod, the Hanse Towns removed their factory to Reval, and afterwards to Narva. When the Moscovites conquered Kasan and Astrakan, a trade through Russia was opened, from her fairs, to Persia, and other eastern countries. Before

1553 the English traded with Russia by the way of Narva, but this trade being interrupted by the wars of Sweden with Moscovy, Sir Hugh Willoughby, under the auspices of a company for making discoveries, of which Sebastian Cabot was governor, sailed round Norway and the north cape of Europe, and was driven into a place in Russian Lapland, where he and the crews, seventy in number, of two of his three ships, were frozen to death during winter. They were discovered in the spring by some fishermen who annually frequented the place. Sir Hugh was found sitting in a frozen state in his cabin, with his journal and other papers on a table before him.

The third ship, commanded by Chancellor, was driven farther east, and thence south into the White Sea, where no ship had ever been before. He landed at the small castle or abbey of St. Nicholas, now Archangel. He travelled with the governor's licence, on sledges to Moscow, where he saw the Tzar, Bazilowitz, and obtained from him the privilege for eight merchants to open a trade with Russia by way of the White Sea. A charter (confirmed afterwards by acts of parliament) was granted to the "merchant adventurers," to trade there, by Philip and Mary in 1554. Sebastian Cabot was (for life) appointed the first governor. The Bristol merchants, encouraged by him, began to trade to Russia about this time. In 1555 the Russian Company sent two ships, with agents and factors to the White Sea, where they arrived safely, and sailed up the Dwina nearly 400 miles into the province, some say to the city, of Vologda, from whence Mr. Chancellor travelled a second time by sledges to Moscow, where he obtained several privileges, insuring the safety of the persons and property of Englishmen who might be engaged in the trade with Russia.

In 1556 the Russian Company sent two ships to the White Sea. They returned with an ambassador, with presents, from the Tzar to Queen Mary. The ship in which the ambassador was in was wrecked on the coast of Scotland, and the presents were lost. He returned to Russia in 1557, with rich presents for the Tzar. Crews which were sent out by these ships succeeded in bringing back the two ships frozen up in Lapland, in 1553: in one of which was brought the body of Sir Hugh Willoughby. This company was animated by the boldest spirit of adventure, and despatched a ship, under the command of Captain Burrows, towards Nova Zembla, with instructions to discover the mouth of the great Tartarian river Obi. He was prevented by the ice from passing the straits east of the White Sea, and consequently returned.

In 1557 the Russian Company sent four ships to Archangel, with the Russian ambassador, accompanied by Mr. Jenkinson, the company's agent.

When we consider the dangerous navigation of the voyage to the White Sea and Nova Zembla, in the present state of improved naval architecture, and our knowledge and charts of the coasts, compared with the wretched small vessels and

limited knowledge of navigation and science at that early period, the undaunted spirit of English enterprise appears extraordinary.

In 1558 Russia conquered Narva, and established an emporium for trade in that port for the trade of Russia with Europe. During the same year, the chief agent of the English Russian Company, Mr. Anthony Jenkinson, penetrated Moscovy beyond Moscow, to the Wolga. He sailed down that river to Nijnei-Novogorod, and thence down to Kasan, Astrakan, and the Caspian, and across that sea to Persia. He visited Boghar, in the latter country, where he met at its fairs merchants from "*Cathay* (China), India," Russia, Persia, &c. We presume that this city *Boghar*, was the city of Bokhara. Mr. Jenkinson returned in 1560 to Colmogro (Kholmaghory, on the west bank of the Dwina, above Archangel), in the bay of St. Nicholas. He returned soon after to England, and published the first map of Russia, of which none existed before. It would appear that he made the voyage to Boghar seven times. The Russian company, in 1563, sent agents to the Persian court, then held at Kashir, on the subject of opening a traffic. They carried with them English woollen cloths, and found the Venetians in Persia, with woollen cloths and kerseys, which they had brought by way of Aleppo: carrying back in exchange raw silk, spices, drugs, &c. The English sent a more extensive adventure through Russia to Persia, in 1573, and it would, according to Hakluyt, have been turned to good profit, had not the returns, which were valued at that time at 40,000*l*., and consisting of raw silk, wrought silks, carpets, drugs, spices, precious stones, &c., been taken from them by the Cossack pirates in the Caspian. Part was retaken by vessels fitted out at Astrakan.

In 1573 Sir Thomas Randolph was sent as ambassador to Russia; he landed at St. Nicholas (now Archangel). He says, "it was only an abbey with three or four houses besides; that Colmogro was 75 miles farther up the Dwina; and that Vologda, a town of great trade, was 750 miles from its mouth; and that he travelled from the latter 500 miles to Moscow through a country well inhabited, and that after much waiting and ceremony he obtained the following year from the czar his whole demands in favour of the company." The practice at that time was to convey goods in boats (or canoes) scooped out of one entire tree, up the Dwina to Vologda, from thence overland, in seven days, to Jaroslov, thence down the Volga, in thirty days, to Astrakan, and thence across the Caspian Sea to Persia, where they landed, and travelled over deserts to the cities of Kashir and *Teverin* (Teheran); from whence they hoped to have finally opened a trade to Cathay, or China. According to Camden, "the wars between the Persians and Turks, and the robberies of the barbarians discouraged the Londoners (the Russian Company) from pursuing this glorious enterprise."

In 1576 the company made efforts, continued for several years, to find a

passage north-east to Cathay, but were always obstructed by the ice, at the strait of Waigat, or Waigatch, which separates Nova Zembla from the continent of Europe.

In 1578 the Russian Company complained of the Dutch trading for fish and train oil to Kola in Russian Lapland; from which place the Dutch Russian Company were said to carry home, besides oil and other fish, sometimes 10,000 salmon.

In 1583 armed ships were sent out regularly to protect the companies' ships in the north seas against the pirates, and Queen Elizabeth obtained a treaty from the King of Denmark to allow, during both their lives, the ships of the company to navigate the sea without interruption, round Norway, to the port of St. Nicholas in the White Sea; and to take shelter in case of distress in the ports of Norway and Iceland. An annual sum being paid to the King of Denmark for the privilege during the whole of this period; and for the first years of the seventeenth century the affairs of the company, sometimes profitable, often disastrous, seem to have been on a precarious footing in Russia.

In 1611 the Russian Company sent thirteen ships to Spitzbergen, and the Dutch eighteen ships, four of which were ships of war, to protect their fisheries against the exclusive right assumed by the Russian Company.

In 1623 a treaty of amity and commerce was agreed to between James I. and Michel Feodorowitz, Tzar of Moscovy, but its privileges were confined to those licensed (*i. e.* the company) to trade to Russia. All interlopers to be seized and delivered up to justice, &c.

In 1636 King Charles prohibits the importation of whale-fins by any but the Russian Company, and by the latter only, in their joint stock capacity.

In 1649 the Dutch trade by licence to Archangel, the Russian Company being deprived of the exclusive privileges of trading, on account, as some affirm, of their belonging to a nation who had murdered their king. The reason was a contract with the Dutch entered into more than a year before the execution of Charles I.

In 1651 a fleet of merchant vessels sailed to Archangel, with William Prideaux, who called himself "The Lord Protector's Messenger to his Imperial Majesty the Czar;" he stated in his letter to the governor, that the English not having for a distance of time had commerce with Archangel, came now with their ships laden with goods, and requested to know if freedom of trade should be allowed, and upon what terms. The governor replied, that the English Company were allowed by the emperor to trade to the port of Archangel, on paying the same customs as other strangers, and as soon as they had done trading at that port they must go beyond sea (return home) and not as formerly, be permitted to go to Moscow. Mr. Prideaux, requested, however, to be permitted to go to Moscow to acquaint his Majesty of his commission from the Lord Protector. The trade is

afterwards described by the protector's messenger, as unprofitable at Archangel, owing to strangers not being permitted to go into the interior, and to the war between the Czar with Poland, and also to the Dutch competition at that port. It does not appear that the commerce of England, or of other western European countries with Russia amounted to any important value, from this period, until Peter the Great founded Petersburg, and opened, by the Baltic, a general trade and navigation between Russia and the West of Europe.

In 1699 the Russian Company was, *de facto*, created a regulated company by the statute 10 and 11 of William and Mary, cap. v., which declared, "that after Lady-day, 1699, every subject desiring admission into that fellowship should pay no more than five pounds for the same." The commerce of England with Russia increased rapidly after 1710, when Peter the Great added Reval, Livonia, Pernau, &c., permanently to his dominions, and after 1713, when he made St. Petersburg the capital of the empire. While Archangel was the staple port of Russia, the foreign merchants resided at Moscow, except during the summer, when they spent the open season at the Port of Trade. In 1721 the emperor ordered the seat of commerce to be removed to St. Petersburg, to which place the merchants also removed from Moscow; and, in 1735, a new treaty of navigation and foreign commerce was signed between England and Russia, securing general freedom and protection of commerce, and the transit trade through Russia to Persia.

We consider the mere calculation of the profit or loss of trade between two countries, to be liable to extensive fallacy, by the mere representation of the balance of the direct trade being for or against a country, inasmuch as the indirect trade generally makes up for the apparent loss. It may, however, be remarked, that the balance of the direct trade between England and Russia has always been greatly in favour of the latter. According to Busching, in his work on Russia, the trade between London and St. Petersburg stood as follows, in 1749:

	Roubles.
Exports from St. Petersburg to London	2,245,573
Imports into St. Petersburg from London	1,012,209
Balance in favour of St. Petersburg	1,233,364
Exports from St. Petersburg to all countries	3,184,322
Imports into St. Petersburg from all countries	2,942,242
General balance in favour of St. Petersburg	242,080

The rouble at that time was 4*s.* 2*d.* sterling.

In order to present a general view of the commercial resources and usages during the middle of the last century, and the progress of Russian trade and manufacturing industry down to the present time, we have abstracted the following curious account from Postlethwaite's edition of Savary's *Commercial Dictionary*.*

* From the edition published in 1775.

"Though the industry of the people of Muscovy is really scandalous (at least it was before their prince fired their minds with the expectation of getting great things from trade), and that their manufactures were very few, yet now no single country (take it complexly) has so many, and such valuable things for exportation, as the Muscovite dominions, and those both of land produce and manufactures, and which, consequently, bring a prodigious return to the country in money; but till the late czar settled his court at St. Petersburg, opening a trade by the Baltic Sea, and bringing his subjects to clothe after the German and French manner, they had no great consumption of British and French manufactures among them, and consequently no great commerce this way; but now their exports and imports are exceedingly increased, and are daily increasing; and certain it is that the balance of trade is greatly in their favour. The produce of the European part of this country is as follows: viz.—From Russia and North parts of Muscovy, tar in prodigious quantities; honey and bees' wax, leather, deer, bear, and elk skins, pot-ashes, timber and plank, iron, copper, hemp, and flax, linen, and linen yarn, furs, raw silk by the Wolga, Persian, Indian, and China goods. From Russia, by the port of Wiborg, conquered from the Swedes: tar, deal, timber, masts, iron, and copper.

"From Livonia, Esthonia, Narva, and Lower Russia: hemp, flax, corn, sturgeon, pitch and tar, linen yarn, linen cloth of several sorts, Russia linen (so called), diaper, a late manufacture, sail-cloth, canvass, and duck, pot-ashes.

"From Siberia: rich furs, such as sables, ermines, black fox, white bear, beaver, &c.

"From Circassia: tobacco.

"All these are extraordinary exportations, and the more so as they are exported in extraordinary quantities; but their manufactures are but small in proportion to the others, except their linen, linen yarn, and Russia leather; and these, it must be acknowledged, are articles which are increasing rapidly.

"The late czar was, as the czarina now is, the sole merchant of tobacco. It is principally exported from Archangel and Wiborg. The czarina is likewise said to be the only merchant in the tobacco of Circassia. Tobacco it seems was once prohibited to the Muscovites, that is to say to smoke; the reason was, that it effected their heads, and made them drunk; and they say of a Russian, that if he is drunk he becomes mad; and the quarrels and murders among them were such, in consequence of smoking, that it obliged the late czar to prohibit the use of tobacco; but as the people were brought gradually under a new discipline, and became more civilized, they were allowed the use of it again, and as it grows plentifully in their own country, they are supplied from thence wholly, and the government derive a very great revenue from it. The country of Circassia, they say, yields about sixty thousand hogsheads of tobacco yearly, and they vend a considerable quantity of it in the Baltic, and in Sweden and Poland, to the great detriment of the English and Dutch merchants, who had all that trade before.

"Between the port of Astrakan and the coast of Persia, there is a very large commerce carried on.

"From Siberia, the czarina's share alone of the sables and rich furs taken there, is said to amount to 150,000*l.* sterling; and the duty paid upon the rest to about the same amount; by which some guess may be made of the value of these furs, the whole trade of that kind being in her dominions.

"The hemp, flax, and naval stores, shipped off every year from Riga, Reval, Narva, Wiborg, and St. Petersburg, are so exceedingly great, that the Dutch only are said to load 300 ships a year at St. Petersburg, and nearly as many at Wiborg.

"The tar being a monopoly in the czarina's own hands, brings in about 250,000*l.* sterling profit to her Exchequer, occasioned chiefly for the following reasons:

"1. Because of the excessive tyranny of the nobility and boyars, the labour of the people is of no great value; and their masters being obliged to yield the czarina so many barrels of tar, according to the lands and estates they hold, they again oblige their vassals to produce it to them, so that the cost to the czarina and the nobility is little or nothing—except the consumption of timber.

"2. Because of the great quantity produced, which gives so large a revenue. The late czar created two or three foreign trades, out of the way of all Europe besides, and in which

none could disturb him, nor does any one yet pretend to it; the one is a trade by caravans to China. This trade he long strove to accomplish; and because the distance is prodigiously great, and the most part of the way desolate and dangerous, he erected stages at proper distances on the way, so that travellers might subsist at a reasonable expense, and likewise be secure against the attacks of the Tartars, who rove about and plunder passengers when they have any opportunity, and sometimes murder them. In some places, he even built cities, as Janisea on the river Janisea; Abassin, or Albaza, on the Tamour; Schelinga on the river Schelinga; Argun on the river Argun, &c. If due notice is here given of apprehended danger from the Tartars, the Russian authorities at these cities and stages are obliged to send troops to convoy the merchants and caravans from one stage to another, without being paid in the slightest degree for such protection.

"The caravans, or companies of merchants, sometimes consist of several hundred horses and camels, and bring a very large quantity of rich goods; and would the Chinese emperor have done his part towards opening a trade with Europe that way, as the czar would have done, it would have redounded to the advantage of both.

"There are several rivers capable of being made navigable, whose course running eastward have their beginnings in the Muscovite dominions; and were due methods taken to clear those rivers of the obstructions which prevent their navigation, half the journey might be turned into a voyage performed by water. There are likewise other rivers more southward, which rise on the frontiers of China; some take their course directly into China, and passing by or through some of the greatest trading cities and provinces in that country, empty themselves into the Chinese ocean. Other rivers rising on the same frontiers, and not very remote from the first, take a contrary course, and empty themselves into the Caspian Sea. So that, were both monarchs to agree, goods might come even from Pekin to St. Petersburg nearly all the way by water.

"Whether the journey to China may be shortened by the convenience of water-carriage, it may be considered that the way which travellers from Moscow to China now take is this:—they go north to Jeraslow upon the Wolga, 200 miles; then to Wolagda, on the Russian Dwina, 188 miles farther, the same river which runs to Archangel; then north to the latitude of the Arctic circle (to avoid a great desert of 800 miles), then south-east to Tabolski, on the river Irtisch, which some make out to be in 54 deg., but which Sanson places in 66 deg. north latitude; and this is 3000 miles from Moscow, if we may believe the journal of Isbrand, who travelled as the czar's minister from Moscow to Pekin. From hence they cross the river Oby, and travel east to the river Janisea, which, by the account of Isbrand, held them 67 days.

"On the eastern side of Russia, on or near the bank of the Great Kama, they have great quantities of rock-salt, which they dig out of the earth, then dissolve it in its own brine, as it may be called, that is, in the salt water which rises out of the mines of salt, and then boil it up again so as to make a very fine, white, and strong salt. They drive a considerable trade in this salt, and it is customary to employ about 20,000 persons in making it. They bring it down the river Kama, and then by the Wolga and the Ocea to Moscow and down the Wolga to other cities, even as far as Astrakan.

"They cure also vast quantities of fish in the great lakes at the head of the Oby, the Janisea, and other lakes on the frontier of Cathay; which fish is brought down those rivers to Casan, and so into the Wolga, and up to Moscow.

"The bringing corn to St. Petersburg employs a prodigious number of vessels and boats upon the river Neva, and upon the great lakes of Ladogo and Onega, to and from all the towns on every side of these lakes; all which part of the country is now exceedingly enriched and prosperous to what it was before St. Petersburg was built. The lands are wonderfully improved and very great quantities of corn raised. But, even this part of the country does not supply sufficient corn for the capital:—but a great number of ships are employed in bringing it from the coasts of Livonia and Esthonia, and even from Dantzic.

"The fishery employs a great number of vessels in the Gulf of Finland, as also in the great lakes of Ladogo and Onega, which are covered with fishing-boats.

"Abundance of smallcraft are also employed on the Wolga, and men and carriages for carrying from the Wolga to St. Petersburg goods such as tobacco, honey, wax, leather, &c., the growth and produce of the southern parts of Muscovy.

"The trade from St. Petersburg to Moscow alone is very great, that ancient and prosperous city having all its supply of manufactures and other goods from St. Petersburg either by land carriage or by the Wolga. Commerce has wonderfully increased, which is shown by the numbers of shopkeepers, manufacturers, artisans, &c. The building a new capital in a place where there was no town of note before, and bringing together such a body of people, where formerly there were so few, naturally accounts for the great activity and bustle observed, and for the increased prosperity of the inhabitants of the adjoining country. Of this the famous city of Novogorod was an example, which was once so prodigiously great, populous, and rich, that it was called the golden city, by which the whole correspondence between the Russian empire and the rest of Europe was carried on, and it was likewise the mart of the whole trade. While it flourished, the country around it did so in a very great degree. The czar found a great clog to trade until he conquered Ingria and the mouth of the Neva, which he could not come at before. His ancestors had endeavoured to open the way to the Baltic by Narva, but though they had several times conquered that city, yet they could never keep it. The czar, however, not only secured the Neva, but conquered Narva, and all the coast of Livonia, and also Wiborg, on the other side, so that the whole Gulf of Finland became entirely his own. He secured these conquests by a peace with Sweden and his other neighbours.

"But the czar had another great obstruction to his projects, this was the passage of the sound being kept by the King of Denmark, the great key to the navigation of the Baltic, and no ship could pass in or out without paying such toll as he thought fit to exact. This rendered the Muscovite commerce into Europe tributary to the Danes; and it being now the only impediment to the trade of the Muscovites induced the czar to form the design of cutting a canal from Husum to Sleswic, or some other port in Holstein, and thereby have joined the two seas, and opened a back door into and out of the Baltic, and which the King of Denmark *had no power or right to interrupt*; nor would the rest of the trading world be displeased thereat.

"The late czar resolving to reform and civilize his people, who, before his time were little better than savages, determined to make a general change in their apparel, and brought the Russians, especially those about his court, to clothe themselves after the German fashion; this change put his subjects to a new expense, and the manufactures of England and Scotland were introduced at St. Petersburg and Moscow in large quantities. He also resolved to introduce the manufacturing of these cloths into his own dominions, so that his poor subjects might be employed in the work. He likewise determined to bring manufacturers from France to settle in St. Petersburg to manage and carry on the silk trade, furnishing them with silk from Persia by the navigation of the Caspian; by which means the silk itself is so cheap and the labour of the people more particularly so.

"The Russians have had also for some years past a royal foundry. Having a sufficient quantity of iron ore in the country about Kexholm, which is brought to St. Petersburg by water, the late czar resolved to supply foreign countries with cannon, bombs, shell, shot, and all sorts of military stores made from iron.

"This foundry is kept continually at work, and the czarina, his successor, gave directions for enlarging and encouraging the works, and procured good and skilful workmen from Prussia. It has proved of very great advantage to the empire."

The following extract from Mr. Hanway's view of the British trade with Russia, during the middle of the last century, may be added to the foregoing sketch.

"Russia," says Mr Hanway, "has made great strides in the improvement of her commerce for several years past, enjoying some advantages beyond any other nation: the number and greatness of her rivers, and the abundance of timber, iron, and hemp: of the last no country can boast more. Timber, Great Britain has in her American colonies, though not hemp; but if we have occasion for the commodities of Russia, that empire has the greatest source of her revenues in the trade which this island carries on with her subjects. Hemp has increased to double the value since 20 years ago.

"It is not 40 years since the Russians began to open iron mines, and yet, in the year 1750, they exported 20,000 tons.

"The total value of the general exports from St. Petersburg is computed at 3,000,000 roubles. In 1750 they amounted to 4,000,000 roubles, or 880,000*l.* sterling. Of these exports British subjects purchase principally, hemp, flax, iron, hogs' bristles, hare-skins, hempen and flaxen manufactures, Russian leather, and other articles.

"The ordinary importations amount to about 2,000,000 roubles, consisting of indigo, cochineal, lead, pewter, tin, wrought silks, gold and silver lace, toys, cotton and linen manufactures, woollens, and wines. The Russians receive the balance in their favour in silver and gold, of which part there is a sum of about 500,000 rix-dollars of the coin of the United Provinces; these do not however pass current in Russia, but the duties on goods must be paid in them, at a certain rate, according to weight. The consumption of the Russians is much increased, and their imports are more than usual, yet the balance against the English is still about 1,000,000 roubles.

"It seems to be a maxim established in all countries where commerce has made any progress, that the value of the exports must exceed that of the imports, for otherwise the balance must be paid for in money. *against this the Russians have taken the precaution of making it death to export their coin, nor is any plate or bullion exportable without express permission.*

"The augmentation of the revenues of Russia ought to be imputed in a great measure to the increase of her trade; the balance of which in her favour is about 1,000,000 roubles (220,000*l.* sterling). The interior trade of Russia is certainly very much augmented, and the commerce they carry on with the Tartars and other frontier nations is a considerable object, as Russia sometimes receives a large quantity of foreign silver and gold from these nations, in exchange either for her own or foreign productions.

"I think there is scarcely any article of our production but Russia could import beneficially to herself.

"As our Russian trade is well conducted, I shall pass it over, observing only, that in whatever light it is considered, it ought to be a means of establishing a perpetual friendship between this nation and the Russian empire."

CHAPTER IX.

IMPORTS AND EXPORTS OF RUSSIA DURING THE WHOLE OF THE EIGHTEENTH CENTURY AND THE FIRST FOUR YEARS OF THE NINETEENTH CENTURY.

THE total official values (taken from the British customs returns) of the importations and exportations of Great Britain to and from Russia, from 1700 to 1785, were, for the following years: viz.—

Years.	Imports.	Exports.	Years.	Imports.	Exports.	Years.	Imports.	Exports.

The whole importation by sea and land is 56,730,994 roubles, the exportation 43,215,752 roubles. The *exportation exceeds the importation* by 6,747,665 roubles.
Mr. Oddy says, "It is generally reckoned that the imports should be 10 per cent more, and the exports 10 per cent less, in which case Russia has a losing trade
It would then be in *imports* 62,403,403 roubles, and in exports 56,911,981 roubles. The *loss to Russia* 5,491,419 roubles.

It is said that 4071 vessels sailed from all the ports of the Russian empire in 1803, but which cannot be accounted as correct. In 1837, 3022 vessels sailed from all parts of the empire.

CHAPTER X.

TRADE OF RUSSIA WITH FOREIGN STATES, FROM 1801 TO 1842 INCLUSIVE.

The peace between England and Russia in 1803 revived the direct trade; but the war which followed rendered the trade between Russia and foreign states uncertain and circuitous,—and the statistical values of imports and exports are unknown. Notwithstanding the Milan and Berlin decrees, and the tariff of Russia, British manufactures to a large amount found their way by the Dardanelles and other channels into the heart of the Russian empire.

An official defence, published in 1835, in the State Gazette of St. Petersburg, of the prohibitive and restrictive system of commercial legislation adopted by Russia for raising up manufactures in that empire, contains the following very plausible statements, which may well be contrasted with the sound views contained in our introductory view of the trade of Holland:

"We are aware," says that defence, "of the attacks to which, both at home and abroad, our commercial and custom-house regulations have been subjected. Several writers, espe-

cially those of periodical works, have kindly laboured to prove that they retard and injure the prosperity of Russia.

"Our enlightened government has adopted this system, not in following visionary theories, but in studying the essential interests of the empire, and have accordingly persevered in sustaining and in strengthening it; whilst those by whom it is attacked, show, either that they are uninformed as to the true interests of Russia, or that they seek their own, at the expense of our interests; or indeed, that they fear the prosperity of our country. Facts only, can disabuse persons thus prejudiced against our commercial and custom-house system. These facts shall be furnished from the results of our commerce for a fixed period, where the system in question has had time to develop itself, compared with periods which preceded. They are supplied by official documents from 1824 to 1834, compared with the 10 years from 1814 to 1824.

"*Importations.*—From 1824 to 1834 the value of foreign merchandize, imported into Russia, amounted to . . . . . 1,951,844,619 roubles.

From 1814 to 1824 they amounted to 1,646,904,710 „

Increase . . . . 304,939,909 „

"The customs revenue produced,

From 1824 to 1834 . . . . . 673,339,401 roubles.

From 1814 to 1824 . . . . . 396,126,285 „

Increase . . . 277,213,115 „

"In the last 10 years, scarcely one has passed without events which have been injurious to the commerce of the empire.

"In 1824 a dreadful inundation of St. Petersburg, rendered it necessary to afford such indulgences as injured the revenue of the customs 3,894,322 roubles.

"In 1826 and 1827 the war with Persia suspended all commerce with the Caspian Sea, and with the southern provinces of Caucasus.

"In 1828 and 1829 the war with Turkey arrested all commerce by the Black Sea, the Sea of Asoph, and in Bessarabia.

"In 1829, 1830, and 1831, the irruption of the cholera into different provinces of the empire, greatly interfered, as well with external commerce, as with that of the interior.

"In 1831 and 1832 the war with Poland, and the trouble since the governments of the west, caused a cessation of all commercial affairs in those countries.

"Finally, in 1833, a failure of crops in several of the governments, diminished the exports of grain, and consequently the demand for foreign merchandize.

"This exposé shows,

"1. That the imports have increased 300,000,000 roubles, and *consist principally in objects necessary for our manufactures.* Among those objects the import of silk alone has decreased, because that which was received from abroad is in part replaced by the silk received from within the Caucasus. In general, other articles have doubled.

"2. The number of manufacturing establishments has increased almost one fourth, without counting the *extension* of those which previously existed, and the workshops erected by the peasants of the villages.

"3. Our exports have increased 125,000,000 roubles. Among those, hemp shows a diminution, which is in part replaced by the increased export of yarns, cables, and cordages. It is principally in tallow, flax, wool, leather, and even grain, that the augmentation is perceptible, notwithstanding the great progress which agriculture has made in other parts of Europe, and in the United States.

"4. Finally, the number of vessels arrived in ballast in our ports has been 5000: the value of bills to bearer has advanced 10 per cent; the public funds have experienced nearly an equal rise; the course *even of assignats* has improved: the customs have produced an increase of 277,000,000 roubles. What then, are the conclusions to be drawn from this exposé of the results of our commercial and custom-house system? The principal, and the most important are,

"1. *That the system has not impoverished Russia*; for, if she can pay 300,000,000 rbls.

for foreign articles (which are not of indispensable necessity), more than she paid for the preceding 10 years, she has certainly found means to convert into capital her own surplus.

"2. *The comfort and happiness of the people generally have made rapid progress.* Every one knows, that if long before the introduction of the present system, the *higher classes were accustomed to the use of articles of luxury* (composed principally of imported goods), an increase so considerable in the importation of such merchandize, can only be caused by the inferior classes. Daily experience confirms this.

"3. *The increase in the importation of articles to sustain our manufactures, produces great economy of capital, and very considerable advantage;* for, if foreigners employed those articles to manufacture goods for us, the price of purchase would necessarily augment, since, independently of the raw material, we would have to pay for the workmanship. Now, the sums paid for materials benefit Russian operations, and supply them not only with the means for paying their taxes, but for improving their condition. Let it be added, that the employment in manufactures checks those *irregular habits in which the operatives would be tempted to indulge in our long winters*, when the works of agriculture are suspended, and would thus have a salutary effect upon morals.

"4. *Our system of commerce is not injurious to agriculture;* for, notwithstanding the reproaches made to us by those who know not Russia, in assuring us that her prosperity depends upon her devotedness to *agriculture*, the exportation of its produce has augmented. To judge of this by the tallow, the leather, the wool, which has been exported from Russia, the produce of our pastures has surpassed all expectation, whilst that of manufactures advance regularly in its progress.

"5. *The formalities of our custom-houses are not so vexatious as foreigners profess to believe.* If these complaints were well founded, foreign vessels would not voluntarily enter our ports, *especially those in ballast.* Now, on the contrary, 5000 *vessels in ballast for the last*, more than for the preceding 10 years, have entered our ports, exporting our products, and animating our commerce and our industry.

"6. *Although the rates of bills to bearer, and those of assignats, and of public funds, have improved, this result inadequately presents the importance of those which flow from commerce and manufactures.* But we must contemplate the difficult circumstances in which Russia was placed during the last 10 years; three considerable wars, the cholera, and, finally, a famine! Similar circumstances have, in other countries, been most extensively felt; with us, their influence has been comparatively weak. Can there be a stronger proof of the solidity of our credit?

"7. *Finally, the great increase of revenue from our customs, whilst filling our treasury, has been productive of general advantage;* for, after having supplied government with the means of defraying an important part of the indispensable expenses of the empire, it has given to it the power, without augmentation of taxes, to alleviate the condition of the industrious poor on one hand, and on the other, to cause those to participate in the public expenses who are exempt from direct taxes. It is thus, that the tariffs of Russia have a double advantage; that of encouraging internal industry, and of imposing a charge as just as it is imperceptible for those who have to pay it, and of whom the collection is alike easy and uncostly.

"From all these facts the general and certain conclusion may be drawn, that the present system secures to the empire great and certain advantages, which completely justify the measures taken by the government to sustain and strengthen it."

We have introduced the foregoing statement, from its specious and fallacious defence of a vicious system. The peculiar circumstances, various climates, and valuable productions, of the widely-spread regions of Russia, are of themselves sufficient, if there were no other people, nor countries in the world, to enable that empire to become an infinitely greater and more prosperous manufacturing country than Russia is at present, or will for centuries become; and what we have said of England, and of France and Germany, applies with equal force to Russia.

The agriculture and manufactures of that empire have advanced to their pre-

sent state, not by the aid, but by the necessity of working against and struggling through the entanglements of a vicious system.

Great pains, however, are and have been taken, to show that the prosperity of the trade and manufactures of Russia, are owing to a PROTECTIVE SYSTEM; and we have translated the following comparative statement from a Russian official source lately published in French at St. Petersburg.

"The import trade of Russia, at two different periods, will not be without interest. We have compared the average rate of the years 1793, 1794, and 1795, to the *numbers* of the years 1837, 1838, and 1839.

Annual Imports:	1793—95.		1837—39.
1. Sugar	poods	341,356	— 1,675,806
2. Coffee	do.	74,811	— 119,164
3. Tea	do.	69,975	— 201,797
4. Wines	eads	4,658,450	— 13,275,625
5. Rum, arrack, brandy			— 371,236
6. Oil of olives	poods	42,239	— 345,455
7. Machines and instruments of every kind	sil. rbls.	111,300	— 1,025,264
8. Cloth	do.	3,978,000	— 570,000
9. Raw cotton	poods	10,000	— 315,000
10. Twisted ditto	do.	50,000	— 600,000
11. Cotton tissues	sil. rbls.	2,600,000	— 3,866,000

"1. *Sugar.*—In the first of these epochs, the quantities imported were principally refined sugar: the number of refineries in Russia, being at that period very limited. In the second epoch the imports were entirely of raw sugar. It is seen that the consumption has augmented in very rapid progression. At the present time it is stronger even than it was thought, according to the import table, as about 125,000 poods must be added of *red beet* sugar, annually produced by the fabrics of Southern Russia.

"3. *Tea.*—We have in the first column (in default of the quantity of the years 1793—95), reproduced that of 1800. The consumption of this provision is at present three times, that of the wine four times, and that of the oil eight times as considerable than at the end of the last century.

"7. *Machines.*—During the first of the two epochs here spoken of, Russia imported from foreigners but instruments of small dimensions. It is only about twenty years that one has began to import complete machines for the use of the fabrics and manufactures.

"8. *Cloth.*—Until a very recent period, the fabrics and manufactures of Russia, limited themselves to the sole manufacture of cloth for the *army*; exceptions were very seldom, and they were of such very little importance, that it is not worth while to think of them. It was therefore necessary to import cloth of a better quality, not only for the interior of the country, but for exportation into Asia. Fifteen years has completely changed this state of things; our manufactures have made such rapid progress, that the necessity of importing cloth for the consumption of the interior of the country has nearly ceased, and only cloth which is manufactured in Russia is now exported to Asia, and particularly to China. This article amounts yearly to 2,000,000 silver roubles, in the tables of our trade with the Oriental countries.

"9—11. *Raw and twisted Cotton, Cotton Tissues.*—Thanks to our thread and cotton manufactures, established in the environs of Moscow, and in the bordering governments; the importation has increased since 40 years, in proportion as 1-12 of twisted cottons; that of cotton, increased even in proportion as 1-32; and yet the importation of cotton manufactures has *still increased*, although in a progression less sensible. But although Russia still imports cotton tissues from Europe, it exports annually for the value of 2,000,000 silver roubles, to Asia, which could not have taken place at the end of the last century.

"It is seen that the importation of colonial provisions has augmented, as well as the first necessary materials and machines for our fabrics. If the augmentation which has taken place, in the importation of these latter articles, is a proof, not equivocal, to the immense

developments which the national industry has acquired since some time; the increase, which is remarked in the consumption of provision arriving from America or China, can only be attributed to the national wealth; as we must conclude that the number of persons whose resources will allow a similar luxury, have increased in a very sensible proportion. It is principally the comparative importance of the trade of cotton manufactures and of cotton, at the two epochs here spoken of, that we think it worth while to bring it under the consideration of our readers. It has been seen in our days, (although the manufactures established in the country, absorb annually nearly 1,000,000 poods of cotton, twisted or raw,) the importation has become more considerable than it had been when there were neither thread manufactories nor cloth manufactories: the consumption then in 40 years must have augmented prodigiously.

"Including some articles too unimportant to be here remarked separately, the value of the importation has amounted annually, during the *first* of these epochs, to 27,886,000 silver roubles. During the *second*, to 61,756,000 silver roubles.

"The total value of the duties of the custom-house has also increased in like manner, so as to present at the present period four times as much as at the end of the eighteenth century. In 1790, the year of the decennial epoch of 1788 to 1798, which gave results the most advantageous, these duties had not exceeded a total of 6,958,291 silver roubles; in 1840 they amounted to 26,572,000 silver roubles."

"In 1816 the number of ships which arrived in all the ports of Russia was 3977; sailed 3880. In 1817 there arrived 6609; sailed 6457.

"In 1816 the total declared value of imports = 172,705,053 roubles; of exports = 205,015,016 roubles.

"In 1817 the total declared value of imports = 254,065,841 roubles; of exports = 285,090,651 roubles.

"In 1816 the revenue of customs = 27,917,684 rbls; in 1817 = 37,440,528 rbls.

OFFICIAL Account of the Russian Trade and Commerce in 1841, as compared with the Ten preceding Years.

The following has been the value in silver roubles of the import and export trade of Russia during the year 1841 : viz.—

	Value of Exports.		
EXPORTATION.—To Foreign countries . .	86,382,179	roubles.	
Finland	1,349,192	,,	
Poland	2,034,739	,,	
Total . . .	89,766,110	,,	=£14,480,017
	Value of Imports.		
To Foreign countries . .	79,429,490	roubles.	
Finland	551,558	,,	
Poland	820,541	,,	
Total . . .	80,801,589	,,	= £13,032,191
Balance in favour of Russia . .	8,964,521	,,	1,445,890

During the three undermentioned years the total value of exports from Russia has been as follows :

	1838.	1839.	1840.	
To Foreign countries . . .	85,718,930	94,857,788	82,731,386	roubles.
Finland	1,118,815	829,076	992,217	,,
Poland	2,741,022	1,998,473	1,914,285	,,
Total . .	89,578,767	97,685,337	85,637,888	,,
,, sterling	£14,448,188	£15,755,699	£13,812,562	,,

The above variations in value, will appear less striking if we deduct from them the value of the corn and flour, exported in each of the three years; which was—

			Total Value.		
In 1836:	Wheat	3,946,821 tchetvs.	18,733,616 sil. roubles	=	£3,021,551
	Flour, &c.	471,887 roubles			
In 1836:	Wheat	1,677,039 tchetvs.	7,285,128	,,	1,175,020
	Flour, &c.	394,179 roubles			
In 1837:	Wheat	2,685,807 tchetvs.	11,122,850	,,	1,794,008
	Flour, &c.	610,882 roubles			
In 1838:	Wheat	3,269,543 tchetvs.	15,156,678	,,	2,444,625
	Flour, &c.	661,199 roubles			
In 1839:	Wheat	4,754,743 tchetvs.	25,217,027	,,	4,067,262
	Flour, &c.	1,038,131 roubles			
In 1840:	Wheat	1,411,497 tchetvs.	14,026,415	,,	2,262,325
	Flour, &c.	1,068,457 roubles			
In 1841:	Wheat	1,765,236 tchetvs.	10,382,509	,,	1,674,598
	Flour, &c.	785,482 roubles			

During the years from 1830 to 1841, both inclusive, the leading exports, from Russia to foreign countries, of raw produce and manufactures, have been as follow :

1. Brandy, fish (salted and fresh), meat, fruits, honey, &c.

	Value.		Value.
In 1830 . . .	1,070,020	roubles =	£172,583
1836 . . .	1,256,950	,,	202,733
1837 . . .	1,191,610	,,	192,195
1838 . . .	1,023,475	,,	165,076
1839 . . .	1,107,733	,,	178,666
1840 . . .	970,564	,,	156,542
1841 . . .	1,108,603	,,	178,807

2. Cattle, skins, feathers, bark, &c.

	Value.		Value.
In 1830	2,029,895	roubles =	£ 327,402
1836	3,708,726	„	598,181
1837	3,313,976	„	534,512
1838	3,509,008	„	565,969
1839	3,686,338	„	594,570
1840	3,167,902	„	510,952
1841	4,359,709	„	703,178

3. Raw Produce—such as flax and hemp, flax and hemp seed, oil, tallow, hides raw, wool, bristles, wood for building and cabinetmakers' use, metals, &c.

In 1830	44,928,111	roubles =	£ 7,246,469
1836	57,927,472	„	9,665,721
1837	49,545,569	„	7,991,220
1838	59,326,075	„	9,568,721
1839	58,183,638	„	9,384,457
1840	57,133,085	„	9,215,013
1841	59,773,354	„	9,640,863

4. Products of Russian Factories—viz., cloths, cordage, woollen and cotton stuffs, wax and tallow candles, soap, and cloths, exported to China, &c.

In 1830	4,998,611	roubles =	£ 806,227
1836	6,846,128	„	1,104,214
1837	6,180,564	„	996,865
1838	6,527,220	„	1,052,777
1839	6,501,046	„	1,048,555
1840	7,226,973	„	1,165,640
1841	10,259,209	„	1,654,711

To the above figures may be added the value of merchandize passed in transit, of which was exported,

In 1830	566,735	roubles =	£ 91,409
1836	384,568	„	62,027
1837	292,072	„	47,108
1838	176,474	„	28,463
1839	212,006	„	34,194
1840	206,447	„	33,298
1841	498,795	„	80,450

It may be remarked that the apparent insignificance of this branch of Russian commerce, as compared with what it formerly has been, may be accounted for, by the great progress which the woollen and cotton manufactures of Russia have lately made: this trade is consequently now almost reduced to the transit of skins and furs, which are imported by the Russo-American Company from the north-west of America, to be afterwards exported to China.

The *total* value of the export trade of Russia, with foreign countries—deducting therefrom the value of the exports of corn and grain—will consequently stand thus during the undermentioned years: viz.—

In 1830	58,091,339	roubles =	£ 9,369,570
1836	73,785,794	„	11,900,934
1837	64,415,767	„	10,389,640
1838	70,562,252	„	11,381,008
1839	69,640,761	„	11,232,380
1840	68,704,971	„	11,081,445
1841	75,999,670	„	12,258,011

The augmented value in 1841 is attributable to the greatly increasing trade with China; the quantity of tea forwarded from the latter country to Russia, in this year, being the largest on record, although the amount received during the preceding years was very considerable.

The following figures exhibit the value of the imports of tea from China during the undermentioned years:

		Total Value.	
In 1835 . .	Total 154,554 poods „ 161 cases	... 1,789,151 silver roubles	= £ 288,572
1836 . .	„ 169,229 poods „ 79,455 packs	... 2,463,745 „	397,378
1837 . .	„ 135,809 poods „ 58,161 packs	... 2,317,441 „	373,786

	Tea in Cases.		Tea in Packages.	
In 1838 . .	2,015,789 rbls.	= £ 325,127	134,238 rbls.	= £ 21,651
1839 . . .	2,295,339 „	370,216	100,724 „	16,245
1840 . .	2,366,522 „	381,697	129,453 „	20,879
1841 . . .	7,042,776 „	1,135,931	359,223 „	57,939

The quantity of tea imported by Kiakhta, in 1841, shows, as compared with the trade of the preceding year, an increased importation of 18,630 poods (5980 cwt.), and also an augmentation in the value, equal to 4,676,254 roubles, contrasted with that of the year 1840. The quantities imported by the Siberian frontier and the Caspian Sea, are comparatively trifling.

The increasing value of the export trade with China, as regards articles of Russian production and manufacture, will be seen by the following statements for the same periods: viz.—

	Furs.		Russian Leather.		Hides and Skins, various.	
In 1838 .	740,290 rbls.	= £ 116,176	87,392 rbls.	= £ 14,095	101,804 rbls.	= £ 16,420
1839 .	695,328 „	112,149	80,503 „	12,983	115,772 „	18,672
1840 .	691,303 „	111,500	75,654 „	12,202	114,229 „	18,424
1841	1,811,267 „	292,140	214,974 „	34,673	219,605 „	35,420

	Linens.		Cottons.		Woollens.	
In 1838 .	53,481 rbls.	= £ 8,626	123,537 rbls.	= £ 19,925	801,497 rbls.	= £ 129,273
1839 .	58,916 „	9,502	230,065 „	37,107	984,200 „	158,742
1840 .	70,297 „	11,338	263,109 „	42,406	984,403 „	158,742
1841 .	185,356 „	29,896	975,119 „	157,277	1,282,401 „	206,839

Taking also into consideration, on the one hand, various other articles of Russian merchandize exported, and contrasting these with the value of silks, &c., imported from China, the advancing prosperity of the commerce between the two empires, is sufficiently manifest, during the above periods: the value of *all other* descriptions of Chinese produce, &c., imported by Kiakhta, where the commerce is entirely carried on by a system of barter (which therefore causes an equivalent exportation of Russian merchandize), may be considered as follows for the above years: viz.—

In 1838	2,227,182 rbls.	= £ 359,223
1839	2,474,421 „	399,100
1840	2,493,669 „	402,204
1841	7,537,596 „	1,215,741

It may be here remarked, that this increased activity in the commerce between Russia and Asia is by no means solely limited to the market of Kiakhta, but is equally carried on along the whole line of her eastern frontier; and cotton and woollen goods, hides, &c. &c., are forwarded across the Siberian frontier, for the steppes of the Kirghises and the distant countries of Central Asia, as well as by the Caucasian provinces and the Caspian Sea, into Persia.

The value of this increasing trade has been as follows during these years: viz.—

	Exports.		Imports.	
In 1838	3,154,427 rbls.	= £508,777	6,015,254 rbls.	= £970,202
1839	2,932,505 „	472,984	5,995,809 „	967,082
1840	3,515,130 „	566,956	6,892,953 „	1,111,766
1841	4,027,420 „	649,583	7,555,827 „	1,218,681

The cotton trade has especially derived great benefit from this growing commerce: the value of the exports of cotton goods, in 1838, having amounted to only 931,356 roubles, whereas, in 1841, the value rose to 2,144,790 roubles.

The exports of the principal articles of Russian produce and manufacture, to European markets, during 1830 and 1841, have been—

		Value.	
Hogs' Bristles exported:			
In 1830	73,629 poods	1,012,255 rbls.	= £ 163,266
1839	86,786 „	1,706,131 „	275,182
Hemp exported:

IMPORTATION.—The import trade of Russia, during the year 1841, when compared with the *three* preceding years, offers the following results:

I.—Articles of Food—such as rice, sugar (raw excepted), coffee, tea, oil, wine, and foreign fruits.

	Value.	
In 1830	12,952,102 rbls. = £	2,089,018 sterling.
1836	16,137,484 „	2,692,820 „
1837	16,542,083 „	2,668,078 „

	Value.		
In 1838	16,691,889 rbls.	= £2,692,240	sterling.
1839	17,842,473 „	2,877,818	„
1840	21,793,832 „	3,515,134	„
1841	26,766,363 „	4,317,155	„

II.—Raw Sugar (which may be separately viewed as an article of the first necessity for use in the Russian sugar-refineries).

	Poods.	Value.		
In 1830	1,347,100	9,465,332 rbls.	= £1,527,311	sterling.
1836	1,367,674	7,892,086 „	1,272,594	„
1837	1,798,303	9,727,669 „	1,565,753	„
1838	1,634,908	8,448,720 „	1,362,700	„
1839	1,594,207	7,076,657 „	1,141,396	„
1840	1,810,869	7,835,387 „	1,263,772	„
1841	1,714,394	6,935,494 „	1,118,628	„

III.—Various Merchandize—pearls and precious stones, books and engravings, furs, horses, and cattle, imported from Asia.

	Value.		
In 1830	2,124,126 rbls.	= £342,600	sterling.
1836	4,022,883 „	648,852	„
1837	4,395,309 „	708,920	„
1838	4,275,142 „	689,539	„
1839	4,533,905 „	731,275	„
1840	4,558,514 „	735,247	„
1841	5,555,286 „	896,013	„

IV.—Articles, the Produce of Foreign Manufactories—viz., silks, and cotton and woollen stuffs, &c.

	Value.		
In 1830	10,270,594 rbls.	= £1,656,545	sterling.
1836	11,304,482 „	1,823,303	„
1837	12,683,316 „	2,045,696	„
1838	12,971,806 „	2,092,226	„
1839	13,449,745 „	2,169,313	„
1840	15,205,472 „	2,452,495	„
1841	14,874,286 „	2,399,078	„

V.—Raw Materials to be used in Russian Manufactories—viz., cotton raw, and cotton yarns, raw silk, dyestuffs, &c.

	Value.		
In 1830	18,699,995 rbls.	= £3,016,128	sterling.
1836	27,449,054 „	4,427,266	„
1837	27,332,116 „	4,408,405	„
1838	27,306,267 „	4,404,204	„
1839	27,090,809 „	4,369,484	„
1840	27,332,387 „	4,408,449	„
1841	25,298,061 „	4,080,332	„

In the total of importations for the last year, may be reckoned—raw cotton, 311,000 poods; cotton yarn, 560,799 poods; 11,224 poods of raw silk; and 26,380 poods of wool; as well as dyestuffs to a value of 5,771,013 silver roubles.

The total value of merchandize imported from foreign countries into Russia, during the undermentioned years, was,

	Value.		
In 1830	56,318,668 rbls.	= £9,083,655	sterling.
1836	67,786,058 „	10,933,073	„
1837	71,930,622 „	11,601,713	„

	Value.		
In 1838	69,693,824 rbls.	=	£11,240,939 sterling.
1839	69,993,589 „		11,289,288 „
1840	76,726,111 „		12,407,437 „
1841	79,429,490 „		12,811,208 „

The imports of bullion are not included in the above returns, but in 1841, the value of that exported amounted to 4,023,728 roubles; and the imports of the same, to 9,347,867 roubles.

Wool trade.—The quantities of wool exported from Russia, have been as follows during the undermentioned periods: viz.—

	Poods.
From 1800 to 1813 average amount exported	19,713
1814 to 1823 „	35,173
1824 to 1833 „	111,546
1834 to 1837 „	300,100
1838 to 1841 „	375,680

Or, in detail:

	EXPORTED. Poods.	IMPORTED. By European Frontier.	By Asiatic Frontier.
In 1822	18,856	unknown	unknown
1823	18,243	13,235	95
1824	34,355	18,703	3
1825	117,706	3,388	372
1826	63,292	10,726	323
1827	87,811	11,017	651
1828	38,038	3,652	359
1829	23,144	5,289	788
1830	94,672	1,019	505
1831	166,573	2,715	85

	EXPORTED. Poods.	IMPORTED. By European Frontier.	By Asiatic Frontier.
In 1832	196,899	4,459	1,372
1833	297,937	2,339	4,801
1834	281,450	2,067	12,451
1835	341,799	3,406	5,199
1836	320,025	1,494	3,241
1837	257,127	3,136	4,958
1838	363,219	3,201	5,628
1839	412,802	6,161	6,085
1840	290,521	7,408	4,595
1841	436,181	8,791	9,031

It was not until 1831, that the exportation of wool became an object of great importance; previously to that year (with the exception of 1825) the quantities exported did not reach 100,000 poods. Since 1831, the increased exportation has been most rapid, having become threefold greater in 1841, than at the former period. The value of the 436,000 poods exported in the latter year, was 4,430,000 silver roubles.

England takes annually above one quarter of the total exports from Russian ports; and the great increase in this branch of commerce between the two countries, may be seen from the following figures:

WOOL EXPORTED TO ENGLAND.

	Poods.
Between 1814 and 1818 an average annual quantity of	5,640
1833 and 1836 „	75,720
1837 and 1841 „	126,716

The exports to France and Belgium have not been at all considerable, although those to France are increasing.

The quantities sent to Prussia have been steadily augmenting as follows:

	Poods.
Between 1833 and 1837 average quantity	4,970
In 1838 „	13,057
1839 „	23,528
1840 „	27,770
1841 „	51,417

The importation to the Austrian territories has been,

	Poods.
Between 1833 and 1836	54,286
1837 and 1841	65,359

NAVIGATION IN 1841.

The General Navigation has been rather less active in 1841, than during the preceding year:—

	Ships with Cargoes.	Tons.
The total number of Arrivals in all the Ports of the Empire, being	2596	452,760
Ditto in ballast	2174	410,164
Total	4770	862,924

	Ships with Cargoes.	Tons.
The number of Vessels which departed from Russian Ports, during 1841, being	4582	819,232
Ditto in ballast	312	58,046
Total	4894	877,278

With respect to Steam Navigation, there have been 82 arrivals at St. Petersburg, *i. e.* from Lubec, Stockholm, London, and Havre:—27 voyages have been made in the Black Sea, between Odessa and Constantinople, as well as 54 between the former of these cities and the southern shore of the Crimea.

The Coasting Trade in the North Sea has been more active this year, although it has somewhat diminished in the Black Sea; in the trade of the former, 2007 vessels have been occupied, and 5275 in the latter.

CUSTOMS DUTIES.

	Roubles.	Cop.
Total amount of Customs Duties	26,543,066	67
Duty on Salt, from the lakes in the Crimea	124,981	91
Warehouse charges	173,448	31
Additional Duties levied in various cities	545,997	99
	27,387,491	88

The expenses of collecting which amounted to 7¼ per cent upon the general receipt.

CHAPTER XI.

TRADE OF THE SEAPORTS OF RUSSIA ON THE WHITE SEA.

ARCHANGEL.—The greater part of the province of Archangel, which in extent exceeds double the surface of the United Kingdom, is a country of almost perpetual sterility. The southern parts are covered with fir-forest, marshes, swamps, barrens, and poor pastures, except along parts of the Dwina where cattle are fed, and the calves sent to St. Petersburg. Some hemp, flax, and a little rye are raised in the southern districts, and coarse linen is woven and some cordage is made, by the inhabitants. Fishing, hunting, ship-building, preparing tar, making mats, tanning leather, cutting wood and floating it down to Archangel, constitute the principal occupations of the people. The town of Archangel is

chiefly built of wood, and is situated about 30 miles above the mouth of the Dwina. The entrance to this river is interrupted, for large vessels, by a bar, over which vessels drawing more than 14 feet of water cannot pass. Larger ships take on board, or discharge a great part of their cargo without this bar. There is at Archangel a sugar refinery, royal dockyard, some shipyards for building merchant-ships and coasting vessels, rope-walks, &c. The population does not exceed 24,000 inhabitants. The produce shipped at this port is carried down the Dwina and its branches, chiefly from the province of Vologda, and floated down on rafts, or in boats which are afterwards broken up. The trade of Archangel extends as far as Siberia, and along the coasts of the White Sea, east and west. As far back as 1655, the exports amounted to 600,000 roubles. The annual average exports, to England alone, amounted, for each of the ten years 1691 to 1700, to 112,210*l.*, and the imports to 58,881*l.*

The Dwina is connected by canals with the Wolga and Neva, and although the port of Archangel is frozen up for nearly nine months, this outlet is of great importance. The following extracts from an official account drawn up in 1840, will be found interesting, as bearing upon the trade of Archangel and the White Sea:

"As regards the district bordering the White Sea, it has, since the annexation of Finland, been the policy of the Russian government to direct all its energies to Finmarken. The whole population of 40,000 to 50,000 inhabitants are more or less seamen, and 10,000 to 12,000 actively engaged on the coasts of Finmark. The government, to attain this object, has given them facilities only possessed by merchants of the first guild: the commercial community in Russia being divided into three classes, each with peculiar privileges. The *first*, the most enlarged, possesses the right of importing and exporting, and selling in the towns and interior; the second class cannot import or export except through the medium of the first class, and the third class are now mere local retailers. To encourage the peasantry of the district of which the towns of *Kola, Kandalaska, Ken, Suma, Soroka, Skuja*, and several large villages, on the coast of the gulf of Kandalaz stand pre-eminent, the privileges of the first class were granted to them, with some few exceptions, on condition of their carrying on the fisheries—besides those situated on the gulf of Kandalaska, Mezen on the opposite side, Onega, and the monks of the celebrated monastery of Solovetski, on the White Sea, fit out considerable numbers of vessels, for the Whale shore, and between 500 and 600 craft of one description or another; 200 to 300 of which proceed as far as Finmark: a navigation of some difficulty late in the year, and although they cannot be called able seamen, to use a nautical phrase, they have "*their sailors' legs aboard*," are daring and active, daily improving, and must be viewed as a formidable body. In other respects Russia has but few resources in the White Sea: every thing, except *timber, planks, pitch, and tar*, are drawn from the interior, but at a cheaper rate than even at St. Petersburg, there being natural water communication, by the Dwina and Wolga, with the exception of *about 30 miles* of a canal, all the way to the Black Sea.

"They have generally two or three men-of-war on the stocks at Archangel. Last summer one seventy-four, the *Revision*, and two large transports were launched; and they have generally a body of 5000 to 6000 seamen stationed at Archangel and the neighbourhood, and have their magazines well filled with horses and provisions. There is no other arsenal either naval or military in the White Sea, except at Archangel; but there are public granaries at *Kem, Kola*, and *Mezen*.

"The White Sea being closed up so many months in the year, it never can be of much benefit as a maritime part of the empire: her sole endeavours therefore, now are, to make the inhabitants of the coast *seamen*, accustomed to the shores and fisheries of Finmark; so

that when the opportunity occurs there will be no difficulty in colonising her new acquisition, and drawing seamen from that source. Another, a collateral proof, if I may so call it, of her views in the north, is a road which is now constructing along the borders of the White Sea through Keni to Tornea, from whence the communication to the coast of Norway is easy. A party of sixteen Russian engineers, were the whole of last summer surveying the "*terrain*" to the northward of Tornea, fording the rivers and extending their surveys as far as to the Norwegian frontiers. The same party resume their labours this summer and are to proceed north towards Finmark.

"There are other causes of a more natural and simple character which will assist Russia materially in carrying her views into effect: that is to say, the nature of the trade itself and the relative situation of Finmark and its present dependency on the Russians in the White Sea for their supplies; which the Russian cabinet have contrived to consolidate in a treaty concluded last year, and which is to remain in force for ten years, and by which she has acquired immunities and exemptions possessed by no other power. In 1809 the Finlanders were transferred to Russia, and that they are still far from satisfied with their position, is evident from the circumstance that it became necessary in 1831 to disband six regiments that were recruited there, and the fortresses were then all garrisoned by Russian troops. The Finlanders are nearly all Lutherans, accustomed to direct their own affairs, and in civilized habits superior to the Russians; they have few sympathies alike, and seldom intermarry. By an ukase dated June, 1831, they are deprived of the privileges guaranteed to them in 1809; still it is but justice to say that their condition hitherto has been as favourable as when under the Swedish dynasty. It has been the policy of Russia with regard to this province to attach all the authorities and the clergy by giving them double pay, besides various exemptions from impositions they were formerly subject to."

TRADE OF ARCHANGEL.

THE extent of the navigation and trade, and the products exported and imported during the last 120 years will appear in the following tables:

ACCOUNT of the Navigation, Imports, and Exports to and from Archangel during the Years 1724 to 1804 inclusive.

Years.	Ships arrived.	Ships sailed.	Imports.	Exports.	Years.	Ships arrived.	Ships sailed.	Imports.	Exports.

Amount of exports by this list from Archangel is, in sterling, 481,071*l.*; whereas in the statement of the quantities in a separate return, the amount is 501,958*l.*, this arises from the exports in coasting vessels, chiefly to Norway, having been included in the latter return. Of the difference, 18,750*l.* is for rye flour alone.

EXTRACT.—"The imports are generally limited to the town and neighbourhood. Sugar forms an exception to this rule, there are only two sugar refineries in the town, and they have a drawback granted them of 2¼ roubles currency per pood (equal, at 12*s.* per rouble, and 36lbs. English per pood, to 7*s.* 9¼*d.* per cwt.), on all the refined sugar they deliver. But for this drawback this branch of import would also necessarily fall off, as much of the refined sugar is sent to the interior towns trading with Archangel, whose supply would otherwise be drawn from St. Petersburg. The only expedient which seems adapted to throw some life into the import trade, is a partial drawback of the duties imposed on the various articles of importation of foreign manufactures, the consumption is so trifling and precarious, that all the wants are supplied from St. Petersburg.

The export trade shows a larger amount, being 501,958*l.* against 393,006*l.* last year. Holland has taken more than usual of linseed and rye. The stocks of goods remaining here on the spot, after the close of navigation, is rarely very great, as the native merchants who bring the articles to the port regulate themselves as to quantity by the demand in winter, and being moreover, with few exceptions, not rich, the amount of goods they bring down depends upon the advances made to them by the exporting houses during the winter, when their purchases are made in the interior. The transport by water, except in very small craft, being only practicable on the first opening of the rivers in spring. In this way, at least two-thirds of the amount of the trade may be said to be on foreign capital."—*Archangel, 31st December*, 1838.

NAVIGATION and Trade of Archangel and Onega for 1839.

ONEGA.								
British	8	1916	92	ballast	8	1916	92	1,723

The total amount of exports is 671,022*l.* including coasting vessels.

Compared with 1838, the exportation this year from Archangel presents an increase of about 170,000*l.* The increase principally occurred in the articles of corn, hemp, and flax. Corn will not, however, form so important a feature in the exports for 1840, on account of the partial failure of the crops in many of the districts, whence it is brought to Archangel.

The exports from Onega, are deals, battens, and deal ends.

The average number of days which the navigation of Archangel is open, has been for the last 40 years, 190 days. The greatest number was 214 days, in 1836, and the least number 159, in 1824. The earliest arrival from the ocean has been twice, by British vessels, on the 1st of May, and the latest departure has been one, on the 20th of October, by a Danish vessel.

Navigation and Trade of Archangel and Onega during the year 1840.

REPORT ON THE TRADE OF ARCHANGEL IN 1841.

"THE import trade remains in the same state, being confined in a great measure to the articles required for local consumption: of these the principal is raw sugar, for supplying the only refinery in the town; a considerable portion of the refined sugar is sent hence to the interior.

"The coasting traders bring fish, furs, some salt, and other articles from Norway, which are afterwards sent to various inland towns. There are no factories in this neighbourhood, therefore articles used for manufactures are not required, nor is there a population to consume foreign articles, which are looked upon as luxuries.

"The export trade shows a gross amount of about 2000*l.* more than that of 1840, which was nearly 100,000*l.* less than in 1839.

"The articles which varied most, were linseed, oats, and wheat—of the former (linseed) there is an increase of 52,000*l.*, of which 11,000*l.* to Great Britain, and 40,000*l.* to Holland; whilst there is a decrease in oats of 49,000*l.*,—so much less being exported to to Great Britain,—and also in wheat of 7000*l.*

"The trade with Great Britain, compared with that of 1840, has been—

British Ships employed.		Amount of Exports to *Great Britain.*		
In 1841	178 ships.	In 1841 . .	193 ships.	£431,172
1840	256 „	1840 . .	266 „	475,939
Less in 1841 .	78 ships.	Less in 1841 .	73 ships.	£44,767

"The falling off in the number of the British ships employed, may be attributed chiefly to the diminished exportation of corn to Great Britain, there being only 29,500 quarters against 103,000 quarters in 1840; which, calculating an average of 1500 quarters to a cargo, would have required 50 more ships. And of tar there was 26,000 barrels less exported than last year, which would require, say 18 more ships. And of mats, the difference is about 309,000 pieces less than in 1840, say 12 more ships. Total 80.

"The increase of linseed to Great Britain is more in sterling amount than in quantity, owing to the high prices prevalent during this year.

"Several large orders for wheat were sent out hither from Great Britain in summer, and the exportation of this grain would have been considerable, had not the peculiar uncertainty of the English markets deterred the Russians from laying in stocks in the interior during winter, to come down in the spring: as in summer (after the swelling of the rivers, on the melting of the snows, has subsided) goods cannot be brought down to this port to any extent.

"The exportation of linseed from Archangel is more influenced by the demand for Holland than formerly.

"Rye is dear in the interior, but will be brought hither to answer the regular demand for Norway, and the consumption of the government of Archangel.

"Hemp is brought down chiefly to supply the dockyards here.

"Deals, owing to the continued restrictions of the forest laws, are nearly neglected; they formerly employed about 80 to 100 ships, instead of seven or eight as of late years. The government is turning its attention to the falling off in this branch of trade.

"The production and consumption of tar is also affected by the increased excise duties, which raised the price here from about 7*s.* per barrel to 10*s.* and 11*s.*; the exportation has also decreased in consequence."—*Archangel, 31st December*, 1841.

AMOUNT of Exportation and Importation at the Port of Archangel in 1841.

Arrivals.—Of the 153 British arrivals 1 vessel had fruit, oil, and wine, 1 books and 1 coals: 150 were in ballast.

Departures.—Of the 153 British departures 12 had wheat, mats, and deals, 33 linseed, oats, &c.; 32 tar, pitch, candles, &c.; 29 oats, wheat, mats; 4 mats, deals, and tow; 32 flax, tow, &c.; 2 tallow and deals; 1 beef, &c.; 2 tow, &c.

Three British vessels were wrecked on the White Sea.

Coasting Trade and Fisheries of the White and Arctic Seas.—The inhabitants of the different settlements of Russia, on the White and Arctic Seas, and near the mouths of the rivers falling into those seas—viz., those of Mezen, at the mouth of the river Mezen; of Archangel and Kholmogory, on the Dwina; of Onna, Pouchlacta, Onega, Kouch, and Keni; and of the gulf of Kandalask and Kola, in Russian Lapland, are very generally engaged in a coasting trade and in the fisheries. Their vessels are rudely constructed and rigged: yet they navigate those seas during boisterous seasons with extraordinary intrepidity, and they are seldom lost or wrecked. They carry on the fisheries chiefly on the coast of Swedish Finmark; a country extending from Varanger Fiord, in longitude 31 deg. E., and 70 deg. N. latitude; thence west to the north cape of Europe, in longitude 25 deg. 50 min. E., and latitude 71 deg. 20 min. N., and thence west and south along the Atlantic, to the confines of Finmark. Above 300 Russian vessels resort to these fisheries, and return before winter to the Russian ports of the White and Arctic Seas. For an account of the fisheries of Finmark, see Norway hereafter.

CHAPTER XII.

NAVIGATION AND TRADE OF RUSSIAN PORTS IN THE BALTIC.

In the year 1558 the English first opened a trade to Russia by the gulf of Finland; and four years afterwards we find that the King of Poland threatened Queen Elizabeth of England with his resentment, if she suffered her subjects to continue it. The trade with Reval, Narva, and Riga, was carried on long before the building of St. Petersburg, which port afterwards drew the principal part of the Russian trade thither, for, during the year in which the piles were driving into the marsh, on which was laid the foundation of St. Petersburg, 292 ships with cargoes sailed from the port of Riga.

The navigation of the Baltic Sea is always closed during the winter, and its navigation is rendered dangerous by tempestuous weather some time before the winter closes the ports.

The navigation of the Baltic ports is open and shut nearly as follows:

OPEN		SHUT	
At Reval in the month of	February or March	At Reval in the month of	November or Dec.
Riga "	March or April	Riga "	October or Nov.
Pernau "	February or April	Pernau "	November or Dec.
Arensburg "	February or March	Arensburg "	November or Dec.
Hapsal "	February or March	Hapsal "	November or Dec.
Baltic Port "	February or March	Baltic Port "	November or Dec.
Narva "	April	Narva "	October or Nov.
Cronstadt and St. Petersburg "	sometimes May	Cronstadt and St. Petersburg "	October or Nov.
Wyburg "	April	Wyburg "	October or Nov.
Fredericksham "	April	Fredericksham "	October or Nov.

Excepting Reval, the whole of the ports are more or less dangerous for the loading and landing of goods. Between St. Petersburg and Cronstadt there are frequent accidents. From Narva, into the roads, there is but little danger; and the same remark applies to Riga.

Betwixt the years 1773 and 1777 the gross amount of the trade of Russia by the Baltic Sea is stated—imports, 10,790,918 roubles; exports, 14,724,610 roubles.

In 1788, when the French had the benefit of a treaty, and the English none, the proportion of this trade with Great Britain and that of all other nations, was—

	Exported.	Imported.
To and from the British dominions . .	10,088,489 . .	1,423,070
" all other nations	16,089,521 . . .	16,460,458
Roubles	26,172,010 . .	17,883,528
In 1794.	Exported.	Imported.
With Great Britain	16,125,744 . . .	3,399,520
" all other nations	17,275,927 . .	15,646,189
Roubles	33,401,671 . . .	19,045,709

In the year 1795 Courland came under Russian dominion, and its revenues were added to those of the empire.

CHAPTER XIII.

TRADE OF ST. PETERSBURG.

St. Petersburg lies at the mouth of the Neva, upon its several branches, just as it falls into the gulf of Finland, or rather the estuary of Cronstadt. After the long winter animated scenes of business commence: ships are then arriving in fleets from abroad, and rude long barks are dropping down the Neva from the interior, loaded with the produce of the country.

Those loaded with hemp and flax generally go direct to one of the warehouses appointed for their reception, where they are unloaded. The barks discharge into the warehouses, where the hemp and flax are bracked into the following different descriptions:

Hemp is packed into bundles of clean, outshot, pass, and codille. Flax is packed into what are called bobbins (12 heads, 9 heads, and heads), and shipped off in galliots to be carried down to Cronstadt, or stored in the warehouse.

The tallow, hempseed and linseed oil, have warehouses purposely allotted to them, and brack solely for those articles. Tallow consists of three sorts, called yellow, white candle, and soap.

Linseed and grain generally remain above the city, in the barks which carried those articles down the Neva, until sold or shipped off.

Although these articles generally come down by water, yet, in winter, when the sledge roads commence, all sorts of goods are brought by that conveyance; sometimes hemp or flax from Novogorod; peltry, wax, and less bulky articles generally by that conveyance.

Cronstadt, which is the port of St. Petersburg, stands on a small island in the middle of the gulf of Finland, about twenty English miles below St. Petersburg: the port is on the south-east side, from whence there is a constant communication with the opposite shore. Population during summer, and including those employed on the river, about 45,000. The houses, except about 180 stone buildings, chiefly belonging to the government, are constructed of wood.

At Cronstadt, which is strongly fortified, are the principal dockyards of Russia. The merchant-ships have a haven particularly allotted for them, which will contain 600 ships, distinct from that for the men-of-war. Although the docks communicate with each other no intercourse is suffered, unless any vessel requires such repairs as renders it necessary for her to go into the royal docks.

It has a naval hospital with 2500 beds; a school for pilots, in the Italian palace, which formerly belonged to, and was inhabited for some time by, Prince

Menchikoff. Two great canals divide the town; the first, that of Peter the Great, nearly half a mile long and 30 yards broad, lined with mason-work, communicates with a dock walled with granite, and capable of containing for repairs 10 ships of the line. The second, Catherine's canal, leads to the commercial port, and is chiefly used for landing purposes. The Imperial Port will accommodate 35 ships of the line and several smaller ships of war. Most ships load and unload at Cronstadt, and merchandize is conveyed to and from St. Petersburg in lighters.

There are good regulations observed on the merchants' quay for the shipping, and they are very well accommodated.

The carrying trade betwixt St. Petersburg and Cronstadt, by water, is safe; it however sometimes happens that strong westerly winds will prevent the river craft working down, and over the bar.

Vessels not drawing more than 8½ feet water proceed up to the city, there being little more than this depth of water on the bar. During a long continuance of easterly winds, the water becomes much lower than usual, and with strong continued westerly winds (in autumn in particular), the water will rise suddenly very high, and cause considerable damage both at Cronstadt and St. Petersburg.

Men of war built at the dockyards of the latter city, are floated down over the bar by means of camels, or floating machines constructed for that purpose. We have heard it stated, by scientific men in the service of Russia, that the water might be deepened at, comparatively, little expense over the bar above Cronstadt, so far as to allow large ships, with their cargoes, to ascend to and descend from St. Petersburg. The reason given for not deepening the water over the bar was, that it would be injurious to those now employed loading and unloading ships at Cronstadt.

Great Britain has a consul-general at Cronstadt; likewise a factory, to regulate all affairs relating to the British trade.

The merchants settle certain rates of charges amongst themselves, to be paid on all merchandize, for defraying the expenses of the establishments. Goods are usually sold on credit, and Russian produce is often paid for in advance.

The charges agreed to by the merchants of St. Petersburg, are as follows:—Commission on sales and purchases, 2 per cent; Extra charge on all goods, 1 per cent; Commission and extra charges for goods delivered up, 2 per cent; Brokerage on sales and purchases, ½ per cent; Commission on freight per ton, 60 copecs; Stamps, ⅝ per cent; Charges on duty paid inwards, 4 per cent; Charges paid outwards, 4 per cent; Commission for collecting freight, or average, inwards, 3 per cent; Commission for procuring freight outwards, 2 per cent; For clearances, 40 roubles; Dues to be paid to the Church, 10 roubles each vessel; Clearing of ships, of or under 25 lasts, 40 roubles each; 25 to 50 lasts, 60 roubles each; 50 to 75 lasts, 80 roubles each; 75 to 100 lasts, 100 roubles each; 100 to 150 lasts, 150 roubles each; 150 lasts or upwards, 200 roubles each.

For port regulations and police, see general and special regulations which are annexed to the general tariff of Russia.

1803	31,963,092	21,838,202	1,007,510	7,079,396
1804	29,565,641	20,856,169	....	6,972,520

The exchange ranged during the above period at from 2*s.* 1*d.*, the lowest, to 3*s.* 2*d.* the highest value of the rouble.

* The falling off of the customs, in 1793, was owing to the general prohibition of articles of import in that year, the trade by land with China being begun: particularly in the article of tea, the diminution of customs was great to the trade opening in the Black Sea, and to the importation of goods, paying duty *ad valorem*, being removed chiefly to Reval and Pernau, on account of their being entered at those places at an inferior value.

The real value of the imports may be estimated at 10 per cent more, and the exports at 10 per cent less than as rated, about that time. For contraband trade and jewels may be reckoned three or four millions more.

VALUE of the Goods exported and imported at St. Petersburg by Merchants, &c, of different Nations, in 1800.
